Peter's chubby brown little hand patted the soft earth over it. That first season he watched the green shoot break through and send out a few leaves. The next season it was tall enough for Peter to jump over it. The next it was so tall he couldn't.

When Peter was 8 years old there were seven peaches on his tree—one for each of the family, and not one of them had ever tasted anything so good before. He planted all the stones.

Today Peter is a big boy. He has eight well grown peach trees, which carry health and delight to all the neighborhood. And he has a young orchard coming on which will some day bring more money than all his father's crops.

At the trial of the latest English constructed torpedo boat destroyer, the Dragon, a speed of over thirty-three miles an hour was attained, but even this tremendous rate apparently does not satisfy the authorities, for with some new vessels that have been ordered, practically the same as the Dragon, though with more boiler power, they are looking forward to accoomplishing over thirty knots, which is equivalent to 34.5 miles an hour. The Dragon is 200 feet long, 20 feet broad and her engines are of 4,500 horse power.

When the devil brings the oil, bring thou vinegar. The way to be safe is never to be secure.—Quarles.

ATE RAW BIRDS.

Ordered to Keep Three Miles From Shore.

REFUSED SHELTER, FOOD, WATER.

Drifted Nine Days Along the Coast of Japan Begging to be Allowed to Land.

James Townsend, a seal-hunter, William Runbeck, his boat-puller, and Gus Johnson, a boat-steerer, who shipped on the sealing schooner Alta, were among the crew of the schooner Sophia Sutherland, which arrived at San Francisco from Hakodate last week, and they tell a story of suffering and privation in an open boat on the sea in which they were obliged to live for nine days before help came.

Townsend, in telling the story, said they were out hunting from their schooner about twenty miles off the northern end of Japan when a fog hid the vessel from sight. That was early in the forenoon of April 22d, and an effort was made at once to regain the vessel. The boat was headed in the direction where the vessel was last seen, and although guns were fired and every signal made to attract attention, nothing more was seen of it. About midnight the search was given up and the boat pointed towards the shore. It was near noon before an effort was made to land through the surf, and as the keel grated up on the beach a native policeman, who spoke English fairly well, ordered them away unless they could show passports. "Explanations were of no avail," continued Townsend, "and the officer called for assistance and the boat was shoved back into the water and we were forced into it.

"We asked for food, but it was refused, and were ordered to keep three miles from the shore or take whatever punishment they wished to inflict upon us. We scraped some mussels from the rocks near the shore, and on those we lived until toward night, when a duck was shot and that was eaten raw.

"Next morning some more ducks were killed and we attempted to make a landing again to cook them, but a second time we were forced back into the boat without being allowed even to procure a little food or water. For two days after that we drifted along the coast, hoping to be rescued by some passing vessel, but none hove in sight, and again we determined on trying to get on shore. It was blowing heavily at the time and the boat was swamped as it was carried through the surf. We got on the beach all right and saved the boat from any injury, but we were in the custody of the police again, who demanded that we either show passports or get back in the boat and away from land.

"We tried to get the boat back through the surf, but it was impossible even with the assistance of the police and, seeing the position we were in, some of the Japanese merchants interceded in our behalf and became responsible for us until the weather moderated and the boat could be launched. They sent us some food and the police watched us through the night while we camped on the shore, but we were not allowed any more food than we could eat at one meal, and the few ducks we had in the boat were taken away for fear they might tempt us to light a fire and cook them. The next morning the boat was launched for us and we were obliged to put to sea again.

"Towards night a schooner was sighted and we pulled for it as hard as we could. It made no attempt to change its course at our signals of distress, but we got close enough to make it out as a sealer belonging to the Japanese. Those on board apparently made out what we were, for they turned and ran away, not wishing to have any Americans on board.

"Twice after that we endeavored to land to cook some of the seabirds we shot, but were ordered away from the shore by native policemen who both times pointed a rifle at us in anything but a pleasant way.

"We were getting so weak then that we could hardly manage the boat and on the ninth day after losing the schooner we decided to make for the shore and take any punishment the Japanese might give us. We had rowed and sailed about 100 miles toward the south from where we first attempted to land and we hoped that the natives would be more kindly disposed toward us.

"The wind was increasing in strength as we neared the shore, and a heavy surf was rolling up on the beach. We were too weak to manage the boat in the breakers, and it capsized, throwing us all out. The natives came to our assistance and we all were helped out of reach of the waves, but the boat was so badly damaged that it was of no further use. We were placed in prison and given food while the native carpenters attempted to repair our boat to send us to sea again. They found after working a day at it that it was a hopeless task, and then they began determining our fate. After about a week of councils of the wise men of the neighborhood it was decided to send us to Hakodate, and we were several days making the journey on foot and by train with a guard of police. "The American Consul took charge of us, and a day or two afterward the Sophia Sutherland came into port and we joined her crew."

The sealers in Japanese waters have been very unfortunate so far this year. None of them have made good catches and many of them have lost boats and men from their crews. The Bonanza lost two of her boats in a fog and the night after they missed the schooner a gale capsized one of them, drowning all three of its occupants. A hunter named Oscar was in charged of it. The other boat, with a hunter named Talbot in command, was picked up several days afterward by a Japanese schooner.—Examiner.

THE SUMMER YOUNG MAN.

Golf and bicycling, the two latest fads imported from Great Britain and France, have added two more picturesque costumes to the wardrobe of the summer man. The gaudy blazer has gone the way of the cummerbund, although in England these two discarded articles last summer enjoyed a revival which promised, or threatened—and the last word is the best—to re-establish them in favor. The cummerbund was an importation from India, and was all very well in its way and in its place. But when fat men living in town were seen on Wall street in bright-hued sashes it was high time that the fashion should be relegated to the Bowery. Both the blazer and the sash are still seen in minstrel shows and in performances by strolling troupes in farce comedies.

Tennis is now played with white duck trousers, turned up at the bottom, tennis-shoes, and a gray sack-coat. A blazer is occasionally used, but it is generally of white flannel with a delicate blue or black stripe running through it. The straw hat has taken the place of the Tam o'Shanter. This year it is not as prodigal of brim, but it allows much scope for color in the survival of the detachable hat bands. Red, blue, college colors of all kinds, will be seen on the straw hat, and with a dozen or so of bands the summer young man can make himself still appear as a human butterfly. For the wheel a simple Scotch mixture, gray and black, being most appropriate, is the prevailing mode. The shoes are of russet leather, and the golf stockings or hose are used.

Of course one wheels and "golfs" in knickers. In fact, the "knicker" is the most comfortable and most seemly of all neglige costumes. It has become so much the rage in London, that men have been seen in the best clubs during the winter in their knickers—or mufti, as they are there called. You are supposed to have just come in from the golf links or from your wheel. In fact, men drive these days in knickerbockers, and no less authority than Dr. Seward Webb, one of the best whips in the country, and one of the most carefully dressed men, was seen coaching in them last summer at Newport. With the knickers are worn, both for wheeling and for golf, heavy worsted hose in browns, grays, tans and black mixtures. There are all colors and combinations imaginable for sale in the haberdashers' and hosiers' shops on Broadway and Fifth avenue. For golf and for wheeling soft hats or caps are used to match the costume, says Harper's Bazar.

A black leather belt with two nickel rings, through which is passed a leather thong, has been invented for golfers and wheelmen in America, and is a very sensible device. An English tailor has recently sent out a suit of clothes to a friend of the writer, which are to be for either golfing, whelling, shooting or holiday keeping. The wearer tells me that at Brighton every other man you meet is dressed in this particular mufti, which consists of drab knickers and a drab three-buttoned sack-coat, with a cap of the same material. The four-in-hand tie is long and narrow, and is of a bright Turkey red. The stockings are two shades darker than the clothes, and the shoes are of light yellow tan. Gloves are worn of undressed kid of the same color as the shoes. This will give an idea of the popular "sporting"—using the term in the best sense—rig for the summer of 1896.

MARK YOUR BICYCLE.

Don't imagine that the name on your bicycle will simply help you to find it when lost. Of course, this is important but did it ever occur to you that a conspicuous name somewhere on the frame of your machine may prevent it from being stolen? A thief is not likely to take a wheel that could be easily identified. One of our correspondents describes a plan for etching the name on the frame. It may also be done upon the handle bar. Some perfer to paint the name on one of the enamel tubes. Still others prefer a name plate. Any plan of marking is better than to let it go unmarked. The manufacturer's number is important, but the figures are necessarily small. The most useful mark is one which may be read without attracting the attention of the person who has possesion of the wheel.—L. A. W. Bulletin.

A LONG LIFE.

Sir Benjamin Richardson, M. D., of England, thinks that the normal period of human life is about 110 years, and that seven out of ten average people could live that long if they lived in the right way. They should cultivate a spirit of serene cheerfulness under all circumstaces and should learn to like physical exercise in a scientific way. No man, he says, need be particularly abstemious in regard to any article of food, for the secret of long life does not lie there. A happy disposition, plenty of sleep, a temperate gratification of all the natural appetites, and the right kind of physical exercises, will insure longevity to most people.—N. Y. Trbiune.

Two forgers, giving their names as William McMahon and H. A. Sloan, and claiming to be representing a publication called Laird's Industrial Gazette, have been arrested at Butte, Mont., on charges of swindling a large number of big firms on forged contracts for advertising.

LADY-BIRDS.

Quarantine Officer Craw Has Been Distributing Them.

GREAT SAVING TO ORCHARDISTS.

Remarkable Work Done by These Insects in the Pest-Infested Orchards of Our State.

Alexander Craw, the quarantine officer of the State Board of Horticulture, has just returned to San Francisco from the southern part of the State, where he has been for the past five weeks distributing black-lady birds. These beneficial insects are the deadly foe of the black scale that is doing so much damage in the orchards in the coast counties especially.

The scale is of the lecanium family, and came from Europe in infected plants. The black ladybirds were imported from Australia two years ago by Elwood Cooper, whose orchard was nearly ruined by the black scale. The two dozen ladybirds increased at a marvelous rate, and soon cleared Mr. Cooper's trees of the pest. A colony of them was sent to E. W. Harold, whose orchards are near Saticoy, Ventura county.

It was from Mr. Harold's place that Mr. Craw has just distributed nearly 800 colonies of insects, averaging fifty to a colony, too as many orchardists in the State. The reports received show that the ladybirds arrived in good condition and at once attacked the black-scale pests. Each colony was accompanied by instructions as to the care of the birds.

Mr. Craw stated that the pest had obtained a good hold in the orange orchards of Los Angeles, San Bernardino, Orange and Riverside counties. County Commissioner Scott in Los Angeles sent the insects to all the infested places and then distributed colonies in the native trees in the foothills. Now the trees, fruit and native, are practically free from the pests.

The black scale is not as destructive as the red or scarlet scale. The latter is not molested by the black ladybirds, and another variety has been imported for its destruction. As an example of the benefit of these and similar insects Mr. Craw stated that Mr. Cooper spent from $3,000 to $5,000 a year spraying and fumigating his fruit trees. The cost of propagating the ladybirds is nominal and the trees are healthier now than ever before.

In San Benrardino county thousands of dollars were spent annually by the Supervisros to rid the orchards of scale pests by spraying and fumigating, and since the introduction of ladybirds the cost of protection and preservation has been very small.

The experience with the cottony cushion scale in Los Angeles county a few years ago was disastrous. Since ladybirds have been placed in the orchards the trees have been kept free from that destructive pest.

Mr. Craw states that the red scale has caused much damage in the orchards in many parts of the State, and it took a long time to learn what insect is its foe. At last the steel blue ladybird was discovered, and a small colony was sent to L. N. Kercheval's orchards in Los Angeles county. The newcomers did not mulitply rapidly until recently. Now they are taking hold of the red scale and threaten to exterminate it before long. The steel blue ladybird will soon be distributed all over the State.

Mr. Craw has received two new varieties of ladybirds from Professor Koebele, who is now traveling in Japan for the Hawaiian Government. They are destructive to several scale pests on this coast.—S. F. Call.

DAUDET ON LONDON.

The Paris Figaro has sent a correspondent to London to obtain M. Alphonse Daudet's first impressions of England, and this is what M. Daudet says: "The first and most striking impression which I experienced on arriving here, in spite of the enormous and unparalleled activity in the streets, the fantastic stir of the omnibusses sparkling with gay colors, the numberless cabs, wagons and carts, in spite of the ever-streaming crowd hastening in all directions, was the silence. A perfect silence—for the monotonous roar of the sea is not noise: a disquieting silence—for millions of taciturn automata seemed passing on a stage in a dream, on an India rubber floor. But how many other different and unexpected things also strike one! Take that tower bridge, that gigantic mass which every moment, just as you open the barrier of a level crossing, opens and rises to the sky to let ships pass. I was looking at it the other day—that mass of timber and iron slowly and fearfully parting and then falling back and resuming its original place. It is the most colossal symbol of what human effort can accomplish. The characteristic of London is abundance—an extreme, senseless abundance. Look at their monuments; there are too many. You have the sensation of an immese box of stupedous toys scattered pell-mell over a plain. Look, there are one tower, two towers, ten towers, and still more and more, pedestals and statues and palaces and colonnades and cupolas and belfries, and never big enough, never lofty enough, never imposing enough. Paris seems to me like a pearl, very delicate and artistic. I think of the harmonious entirety of its quays, the fine porportions of the Louvre, of the beginning of the Champs Elysees. Oh you do not find that sensation here."

The farmers and planters of this country number over 4,000,000.

INYO INDEPENDENT.

Irv. H. Mulholland,
ITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY, AUGUST 16.....1895

The infusion of young blood into a time-honored but silurian institution is seen in the activity of Mose Gunst as a police commissioner in San Francisco. A terrible howl was raised when Gunst was appointed, but he is stirring up the dry bones in the Police Department and trying to inaugurate a degree of discipline and efficiency that has been lacking under the easy going direction of the super-respectable old gentlemen who have been serving their fellow men as police commissioners with ease and dignity in an office from which they believe death alone can remove them. "Mose Gunst has went" and "Mose Gunst has came," but he is hustling up the sleepy and lazy "cops" of San Francisco, just the same, and that was needed.

The formation of sanitary districts under a law passed by the Legislature at its last session is attended with insuperable difficulty in Santa Clara county where the "good" people have daily been waging war on the saloon interest for three years. It was expected that in that county, if any where in the State, such districts could be organized, but the ultimate power lodged in the trustees of such districts. To control or suppress the liquor traffic as they may see fit raises up so much opposition in a district that was supposed to be most favorable to the "good" people's interests that the vote was four to one against the scheme. The people are learning to place more reliance in education of the people than in cast iron laws to make them temperate and moral.

If there ever was a case that is calculated to bring the law into disrepute it is the Durrant trial as it is being conducted in San Francisco. Though the trial has hardly commenced, it appears to be already in such a tangle that Durrants attorneys can safely count enough technalities to keep him from the gallows for an indefinite period to come. What a refreshing thing it would be to see the law so administered as to protect society and right, instead of, as is too often the case, being used to protect the evil-doer and to defeat justice.

Ex-President Harrison has assumed the role of prophet in oracularly declaring that "when the Republican party comes into power again" it will remain in power a long time, and that he does not believe he is the man to lead the party back into power. Republicans will generally be much more inclined to share his belief than they will to put confidence in his prophecy. Son Russell's "pa" is not likely again to be President of the United States.

And now it is told that the great full stomach or after dinner orator, Chauncy M. Depew, has forbidden the sale of "Coins Financial School" on the cars of the New York Central railroad. The "School" contains too many truths and facts to suit the gold men, and they do not want the people educated, as that would cause them to lose too many votes in the next presidential campaign.

One of the best proofs that President Cleveland does not desire a renomination is the circumstance that Charles A. Dana of the New York Sun declares that he is scheming for a third term. Dana falsely attributes more unworthy purposes to Mr. Cleveland than any other man in the United States, and he is always wrong.

The shipment of one thousand tons of iron from Youngstown, Ohio, to England shows how much needed is protection for this product. When America can undersell the English iron-makers in their own market after paying freight across the ocean, we need not fear competition.

William Fredericks, who was recently hanged, will be pained to learn that the appeal in his case has been dismissed. But the courts are to be congratulated upon having established a meritorious precedent by hanging Fredericks first and considering his appeal later on.

NEW ADVERTISEMENTS.

DELINQUENT SALE NOTICE.

INYO MARBLE COMPANY OF CALIFORNIA.

Location of principal place of business: San Francisco, California. Location of works, Inyo, Inyo County, California.

NOTICE—There are delinquent upon the the following described stock, on account of assessment No. 27, levied on the 5th day of July, 1895, the several amounts set opposite the names of the respective shareholders, as follows:

NOTICE OF COMMISSIONER'S SALE ON FORECLOSURE OF MORTGAGE.

O. I. MAIRS, Plaintiff, vs. JOHN ALEXANDER, Assignee of John Barnes, an Insolvent Debtor, and as Assignee of M. V. Barnes, an Insolvent Debtor, Defendant.

Under and by virtue of an order of Sale and decree of foreclosure issued out of the Superior Court of the County of Inyo, State of California, on the 7th day of August, 1895, in the above-entitled action, wherein, O. I. Mairs, the above-named plaintiff, obtained a judgment and decree against John Alexander, as Assignee of John Barnes, an insolvent debtor, and as Assignee of M. V. Barnes, an insolvent debtor, defendant, on the 2nd day of August, 1895, which said decree was on the 5th day of August 1895, recorded in Judgment Book No. 1 of said Court, at page 506, I was appointed commissioner to sell and I am commanded to sell:

All those certain lots, pieces and parcels of land situate, lying and being in the town of Keeler, County of Inyo, State of California, and particularly described as follows, to wit: Lots numbers 1, 2, 17 and 18, in Block No. 4 in the said town of Keeler, as the same are commonly known and designated and as the same appear by the map of said town, made by James Oliver in the year 1883.

Notice is hereby given that on Saturday, the 31st day of August, 1895, at twelve o'clock, noon, of that day, in front of the Court House, in the town of Independence, in said Inyo County, I will, in obedience to said order of sale and decree of foreclosure, sell the above described property, or so much thereof as may be necessary to satisfy plaintiff's judgment, with interest thereon and costs, to the highest and best bidder for cash in gold coin of the United States.

Dated, Independence, Cal., August 9, 1895.

J. D. MAIRS,
Commissioner.

P. H. MACK, Attorney for Plaintiff.

NOTICE.

SCHOOL BOND ELECTION NOTICE.

NOTICE is hereby given to the electors of Taboose School District, in the County of Inyo, State of California, that, in accordance with the provisions of the Political Code of the State of California, as set forth in Section 1880, to and including Section 1888 of said Code, an election will be held on the 17th day of August, A. D. 1895, at the Public School House, in said Taboose School District, at which time will be submitted to the electors of said District the question of issuing bonds of the District and selling the same, for the purpose of raising money for purchasing school lots, and for building or purchasing one or more school houses in such District, and furnishing the same.

The polls will be opened and the election held at J. H. Miller's House, in Taboose School District, on the 17th day of August, 1895, and the polls will be open from 1 o'clock p. m. of said day until 6 o'clock p. m. of said day.

D. E. Smith, Inspector. J. H. Miller and George Calvert will act as Judges of said election to conduct the same.

The amount of bonds to be issued is One Thousand dollars, of the denomination of One Hundred and twenty-five dollars each, and to bear interest at the rate of eight (8) per cent per annum.

Said bonds are to be numbered consecutively 1 to 8 inclusive, and are to mature as follows to wit:

1. to mature, inclusive, One year from date.
2. " " " Two years from date.
3. " " " Three years from date.
4. " " " Four years from date.
5. " " " Five years from date.
6. " " " Six years from date.
7. " " " Seven years from date.
8. " " " Eight years from date.

Said election will be held in conformity with the provisions of the Political Code of California governing such elections.

A. L. CONKLIN.
J. W. CALLOWAY.
W. B. MOORE.

NEW FEE BILL.

CHAPTER CCVII.

An Act to establish fees of county, township and othe. officers, and of jurors and witnesses in this State.

[Approved March 28, 1895.]

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. The following county, township, and other officers shall charge and collect the following fees.

COUNTY CLERK.

On the commencement of any action or proceeding in the Superior Court, except probate proceedings, or on appeal thereto, to be paid by the party commencing such action or proceeding, or taking such appeal	$5 00
On the filing of a petition for letters of administration, testamentary, or guardianship five dollars, to be paid by the petitioner; *provided*, that at the time of filing the inventory and appraisment in any such proceeding there shall be an additional deposit of one dollar for each additional thousand dollars of the appraised valuation, in excess of three thousand dollars.	
On filing the petition to contest any will or codicil	3 00
On the appearance of any defendant, or any number of defendants answering jointly, to be paid upon filing the first paper in the action by him or them	2 00
On placing any action, except a probate proceeding, or default case, on the calendar for trial or hearing, to be paid by the party at whose request such action or proceeding is so placed	2 00
For every additional defendant appearing separately	1 00
The foregoing fees shall be in full for all services rendered by such Clerk in the cause, to and including the making up of the judgment roll.	
On the filing of any notice of motion to move for a new trial of any civil action or proceeding, the party filing same must pay to the Clerk, in full for all services to be rendered in connection with said motion, except as hereinafter in this section provided	2 00
For issuing an execution or order of sale in any action	1 00
In all proceedings begun or acts performed prior to this Act becoming a law, such and charges as were provided by the law at the time such proceedings were begun or acts performed.	
The Clerk shall also charge and collect the following fees and compensation not above provided for:	
For any copy of any record, proceeding or paper on file in the office of the Clerk relating to any civil action pending in said Court, when said copy is made by him, per folio	10
For each certificate of the Clerk, under seal of the Court	25
For filing each claim in probate or insolvency proceedings	15
No fees shall be allowed or charged by the Clerk for services rendered in any criminal case.	
For services rendered by the Clerk, not in connection with civil actions or proceedings in Court, he shall charge and collect, for the benefit of the county, the following fees:	
For issuing marriage license, one half to be paid to the County Recorder	2 00
For filing and indexing articles of incorporation	1 00
For filing and indexing certificates of copartnership	1 00
For filing and indexing all papers to be kept by him, other than papers filed in actions or proceedings in Court, and official bonds and certificates of appointment, each	25
For issuing any license required by law, other than marriage licenses	1 00
For examining and certifying to a copy of any paper, record, or proceeding prepared by another, and presented for his certificate, fifty cents, and one cent per folio for comparing the said copy with the original.	
For making satisfaction of or credit on judgment	25
For receiving and filing remittitur from Supreme Court	50
For administering each oath, without certificate, except in a pending action or proceeding	10
For taking any affidavit, except in criminal cases	25
For taking and approving each undertaking and the justification thereof, except in criminal cases	50
For searching records or files, for each year	50
For taking acknowledgement of any deed or other instrument, including the certificate	50
For filing notices of appeal and appeal bonds, each	25

SHERIFF.

For serving any process, writ, order, or paper, except as hereinafter provided, required by law to be served by the Sheriff	50
For serving a writ of attachment, execution, or order for the delivery of personal property	1 00
For taking any bond or undertaking	50
For serving an attachment or execution on any ship, boat, or vessel	3 00
For keeping and caring for property under attachment or execution, such sum as the court may fix, *provided*, that no greater sum than two dollars per day shall be allowed to a keeper when necessarily employed.	
For a copy of any writ, process, or paper actually made by him, when required or demanded according to law, per folio, ten cents; *provided*, that when correct copies are furnished to him for use, no charge shall be made for such copies.	
For advertising sale of property and posting notice, exclusive of cost of publication, or furnishing notice for publication, each	50
For publication of notice in newspaper, the reasonable cost of publication, subject to the approval of the Court.

ALIAS SUMMONS.

Action brought in the Superior Court of the County of Inyo, State of California, and the complaint filed in said County of Inyo in the office of the Clerk of said Superior Court.

Adolph Gerckens Plaintiff, vs. Annie J. Gerckens Defendant.

The people of the State of California send greeting to Annie J. Gerckens, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Superior Court of the County of Inyo State of California, and to answer the complaint filed therein, within ten days (exclusive of the day of service), after the service on you of this Summons—if served within this Inyo County, or, if served elsewhere, within thirty days.

The said action is brought to obtain judgment against you and a decree dissolving the bonds of matrimony heretofore and now existing between the plaintiff and defendant as will more fully appear by reference to the complaint on file herein.

And you are hereby notified that if you fail to appear and answer the said complaint, as above required, the plaintiff will apply to the Court for the relief demanded therein.

Witness my hand and the Seal of said Superior Court of the County of Inyo, State of California, this 18th day of June, A. D. 1895.

[SEAL.] D. J. HESSION, Clerk.

P. W. BENNETT, Attorney for Plaintiff.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY, the 8th day of March, 1892, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit: Commencing at the South-east corner of south-east quarter of North-east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M. and running thence West eleven chains and 98 100; thence North-east following the meanderings of the bed of the Creek along its North branch to Edwards street, in the town of Independence; thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hannah, deceased, at the time of his death.

Lots Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate, lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dispricada Lode."

That certain lot, piece, or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the North-west quarter and the North-east quarter of Section No. twelve (12), and the South-west quarter and the South-east quarter of Section No. one (1) in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South sixty-eight and eleven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence North-westerly along a small branch or swale to a point twenty-four (24) rods North of the general corner of the North East quarter and the South-east quarter, and the North-west quarter and the North east quarter of the North west quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres: Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at any place, or at the office of the District Attorney at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice and before the making of sale.

The Executor reserves the right to reject any and alls bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court. Deed at the expense of purchaser.

WILLIAM L. HUNTER
Executor of the Last Will and Testament of John Allen Hannah deceased.

KENDALL'S SPAVIN CURE.

STAR, LANE CO., OREGON, Feb. 8th, 1892.
DR. B. J. KENDALL CO.,
Dear Sirs:—I have used your KENDALL'S SPAVIN CURE for the last twelve years never being without it but a few weeks in that time and I have made several wonderful cures with it. I cured a Curb of long standing. Then I had a four year old colt badly Sweenied; tried every thing that promised any benefit, so I tried your liniment, and in a few weeks he was well and his shoulder filled up all right, and the other, a four year old that had a Thoroughpin, and Blood Spavin on the same joint, and to-day no one can tell which leg it was on. These statements can be proven, if necessary; the four year olds are now seven and can be seen any day at Cottage Grove, Or. S. Z. PAXTON.

—Price $1.00 per bottle.—

Religious Services.

Rev. S. W. Albone will conduct services until further notice as follows: Independence, every Sunday evening at 7:30 o'clock; Lone Pine, every Sunday morning at 11 o'clock, except the second Sunday in the month.

Fort School House, the second Sunday in the month, at 11 o'clock a. m.

Georges Creek, first Sunday in the month, at 2:30 o'clock p. m.

METAL MARKET.

Following are the latest prices quoted in the San Francisco metal market:

Refined silver, per oz	$ .66¼
Antimony	10
Borax, refined, in car lots	5½
Pig lead	3.90

BORN.

McLEAN—At Lone Pine, August 10, 1895, to Mr. and Mrs. Niel McLean, a daughter, weighing 10 pounds.

George Mead spent several days in town this week.

Mrs. A. M. Lubken of Lone Pine was in town last Monday.

Hay is reported plentiful at three dollars per ton in the stack.

Charles and John Collins of Warm Spring spent the week in town.

Nothing has been done at last report toward holding a fair at Bishop this year.

J. J. Gunn went to Bishop on Saturday's train, returning Monday evening.

Mr. Frazer, Superintendent of the marble quarry at Invo, was in town last Monday.

Mr. and Mrs. John E. Jones Jr. were down from Round Valley during the week.

Mrs. J. R. Moffitt went to Lone Pine on Wednesday's train for a short visit with friends.

S. G. Sneden Esq came down from Bishop on Monday, returning yesterday morning.

Mrs. M. McSweeny arrived home Wednesday evening from a visit to San Francisco.

E. Robinson is reported to have any amount of grapes for sale at two cents per pound.

A. W. Eibeshutz arrived home on Wednesday evening after a short visit to San Francisco.

Paul Houard is in charge of Chenot's store while the latter is enjoying an outing in the Sierras.

Miss Eugenie Meysan came up from Lone Pine on Wednesday and is visiting with friends in Independence.

Horace Bellows of Haiwai spent several days in town this week on business connected with the Matschke estate.

John Strohmeyer, Mrs. H. Glade and three children of Mr. and Mrs Albers left here on Sunday for Long Valley.

Mrs. Maggie P. Goodale, accompanied by her daughter, came down from Fish Spring last Sunday, returning Monday.

The price of beef cattle is steadily advancing in the eastern markets. Prime beef is quoted at Omaha at 4½ cents.

It is stated on good authority that Brown is taking out a thousand dollars a day at the Hardscrabble mine at Soda.

Fred Holbert has purchased three hundred head of cattle from Frank Shaw which he will fatten for the Los Angeles market.

Miss Elsie Eibeshutz will start for San Francisco to-morrow morning, where she will remain for some time vititing with relatives.

From present indications there will be good quail shooting this fall. The birds paired off well this season and appear to be unusually plentiful.

Abe Church resumed his duties as engineer on the C. & C. last Tuesday morning, after a pleasant vacation of two weeks spent in this vicinity.

P. H. Mack Esq. will start for Los Angeles this evening. going south by way of Mojave. He expects to visit Bakersfield before returning and will probably be gone about ten days.

Harmon Hankhammer got back Wednesday evening from Long Valley. He confirms the report that the accident to the Albers—Fehrman party was a very serious affair and will likely result in the death of one or more of the parties injured.

THE MAMMOTH ACCIDENT.

The *Index* gives a complete account of the recent frightful accident at Mammoth and the following statement is given of the condition of the sufferers:

"Dr. Dorrance started immediately to the relief of the party, making the distance in less than seven hours, changing the teams three times.

Through the kindness of the Doctor we are able to give a full account of the inujries received by the individual members of the party.

MINERAL PARK,
SUNDAY MORNING,
Aug. 11, 1895.

EDITOR INDEX:—The following will give you an idea of the injuries of the unfortunate campers, Mr. and Mrs. Fred Albers and three children, Mr. Strohmeyer, Mr. Fehrman and Mr. Boyd.

MR. ALBERS—Right shoulder blade broken. Right shoulder dislocated, Sternal end of right collar bone pulled off. Both bones of right arm just below elbow smashed to a jelly. Three ribs broken. Back badly wrenched. Right wrist badly sprained and minor bruises all over the body, especially two severe ones in right thigh. Recovery possible—but doubtful.

MRS. ALBERS—Severe internal injuries. Left wrist splintered. Right collar bone broken. One thigh badly bruised. Back badly bruised Recovery—very doubtful.

EMMA—Severe sprain of one wrist. Face badly scratched and bruised generally.

SOPHY—Escaped almost uninjured, but the most badly frightened of all.

CHARLIE—Severe internal injuries and one knee badly bruised.

FRED STROHMEYER—Bad scalp wound on top and right side of head. Face badly bruised and back strained.

HENRY FEHRMAN—Severe scalp wound at back and base of brain. Back severely injured and minor bruises and scratches.

WM. BOYD—Escaped with only a wrenched back.

C. E. DORRANCE, M. D.

A letter from Dr. Dorrance dated Monday morning, 8:30 a. m. states that at present their little hospital of six patients has only two confined to their beds, Mr. and Mrs. Albers. The remaining ones improved beyond his expectation, so that all are out of danger save Mr. and Mrs. Albers. They too have improved wonderfully within the last twenty-four hours, still there is danger of complications—other diseases setting in—from the internal injuries of Mrs. Albers and injury to the thorax of Mr. Albers.

Dr. Dorrance has remained by their bedside night and day since he reached them, but thinks by Tuesday he may be able to leave them for two or three hours, and if they continue improving may be able to start Wednesday for Bishop.

Dr. Dorrance returning last evening reports Mr. and Mrs. Albers steadily improving. From present indications, should no adverse symptoms supervene, their complete recovery is almost assured.

Dr. Woodin will remain with the injured during the unavoidable absence of the former until next Thursday. Dr. Dorrance will then assume charge until the patients are considered out of danger.

An entertainment will be given at the M. E. Church on next Monday evening ning, the 19th instant, for the benefit of Rev. S. W. Albone, who expects to leave on the following morning for Winnemucca Nevada, to attend the Methodist Conference. A fine programme has been prepared embracing all the musical talent in this section, as well as choice recitations, etc. An admission fee of 25 cents will be charged at the door, and lemonade will be sold at a reasonable charge, all receipt being for the benefit of Mr. Albone. Children under ten years free. Come one, come all.

C. R. Scott, Walter Hammond and William Hammond of Tulare arrived at Independence last evening by way of the Kearsarge trail. The gentlemen are out on a month's camping trip, and having come over by way of Kings River canyon. they will return by way of Kern River and Mineral King, ascending Mt. Whitney on the way.

A special car was attached to Wednesday's regular train to Keeler. On board were I. J. Valentine, president of the Wells, Fargo Company. J. S. Bunnell, auditor of the same Company, and R. J. Laws and D. A. Bender of the C. & C. R. R. The party was on a pleasure trip and wanted to see what the Eastern Slope looked like.

Hon. N. D. Arnot left yesterday morning for his home in Alpine county. He expects to return here about the 11th of September to preside in the Superior Court during the trial of several cases. The Judge is quite a social favorite and meets with a warm welcome whenever he visits here.

Mrs. Moore and famify expect to start for Bakersfield on Monday next, where her oldest son, Lafayette, is living. The children were treated to a surprise party last evening by their little friends about town, and judging by the noise, they must have had a glorious time.

John Strohmeyer got back from Mammoth last evening bringing with him all the Albers children except Maggie. He confirms the *Index* report of the affair and states that the recovery of Mr. and Mrs. Albers is very doubtful. Mr. Fehrman is recovering rapidly.

A post-office inspector arrived here on Friday evening, remaining until Tuesday. He found the local office under the care of George S. Wood in good working order.

J. E. Dunlap came down from Bishop at the end of last week and started on a camping trip through the mountains Sunday morning. John A. Stroud will travel with him as far as Fresno.

E. W. Flenniken came down from Bishop on Monday, returning next day. His presence was necessary to complete some probate business in the Superior Court.

Col. Sutherland has resumed operations at Candelaria. There is quite an extensive force of men employed, which will be increased in the near future.

COURT NOTES.

HON. N. D. ARNOT, Presiding.

TUESDAY, Aug. 13, 1895.

Espitallier et al vs. J. S. Gorman—Motion for new trial taken under advisement by the Court.

Wise et al vs. Rhine—John L. Collins submitted as defendant in place of Bertrand Rhine.

Estate of August Matschke, deceased—The hearing of the exhibit heretofore rendered by the executors herein came on regularly to be heard, the executors appearing in person and by their attorneys, F. E. Densmore appearing for executor Rhine, W. A. Lamar for executor Bellows and P. W. Bennett for absent heirs. Exector Rhine is further examined and his attorney, F. E. Densmore, makes a statement under oath concerning the matters, at the same time the Court considers the answer of executor Rhine to the order to show cause heretofore made why his letters testamentary should not be revoked. The Court then directs executor Rhine to deposit with the Clerk the sum of $287, the balance in his hands belonging to said estate, and also directs him to deliver to the Clerk all other property in his hands belonging to said estate as required by the order of the Court.

The Court then ordered that the order to show cause why letters testamentary of the executor Bellows should not be revoked to be vacated, but directs said Bellows to give security for the faithful performance of his duty and fixes his bond at $4000.

The Court further orders that the hearing of the exhibit of executor Rhine in this matter and the order to show cause why his letters testamentary should not be revoked, to be continued until Sept. 12th, at 10 o'clock a. m., and the Court directs executor Rhine to pay into the Court at that time the sum of $2000 alleged to have been loaned to one J. S. Collins.

With respect to the conduct of said attorney Densmore, as the attorney for said Rhine, in this the Court announces that he will make the proper order at 2 o'clock p. m. of this day.

2 O'CLOCK p. m.

The Court now directs that F. E. Densmore Esq. be and appear in this Court Saturday, the 14th day of September, 1895 a 10 o'clock a. m., then and there to show cause, if any he has why he should not be suspended or removed as an attorney and counsellor in this Court, for reasons given in order handed down by the Court.

Estate of Sallie M. Bell, deceased—Final account allowed and administrator discharged.

WEDNESDAY, Aug. 14, 1895

Woodin vs. Anthony—Hearing of demurrer set for September 12th,

County of Inyo vs. Pedro Erro—Time for arguing demurrer set for Sept. 13th.

County of Inyo vs. Juan Inda—Same order as in above case.

Lacey vs. Rossi—Trial set for Friday, Sept. 20, 1895.

Frederika Rhine vs. Ah Joe et als—Aplication of Plaintiff to strike out the answer of Defendants Charley Ling and Ah Foo and to have their default entered herein is denied as to Ah Foo, and Charley Ling is permitted to file answer within five days.

Estate of August Matschke deceased—Horace Bellows filed bond and was reinstated as executor and clerk directed to deliver to him the property of said estate.

Coolgardie.

Rich new finds are being constantly reported from Coolgardie gold fields. Coolgardie, Australia, is an accessible point, reached by steamer to Fremantle, thence by rail to Southern Cross and team to destination. The trip to Australia on the fine steamers of the Oceanic Steamship Company via Honolulu, Samoa, and New Zealand is pleasure sailing the day long. This line tickets passengers to Cape Town, South Africa. Map of Coolgardie district and Pacific ports reached by the Oceanic Steamship Company is mailed free to any address by the O. S. S. Co. 138 Montgomery St San Francisco.

Estray Notice

There came to my place on July 22, 1895, a grey mare, weight about 1100 lbs. no visible brand, large scars on back, swelling in knee of left front leg, gentle animal and a persistent gate breaker. Owner will call and prove property and pay charges.

ORDER TO SHOW CAUSE WHY ORDER OF SALE OF REAL ESTATE SHOULD NOT BE MADE.

IN THE SUPERIOR COURT OF THE COUNTY OF INYO, STATE OF CALIFORNIA.

In the matter of the estate of James Daley, deceased.

H. H. Howell, the Administrator of the estate of James Daley, deceased, having filed his petition herein, duly verified, praying for an order of sale of the Mayflower mine and mining claim, and the decedent's mill-site, being a portion of the real estate of said decedent, for the purposes therein set forth,

It is therefore ordered by the Judge of said Court that all persons interested in the estate of said deceased appear before the said Superior Court on Saturday, the 17th day of August, 1895, at 10 o'clock a. m. of said day, at the Court-Room of said Superior Court, at the Court House, in the County of Inyo, State of California, to show cause why an order should not be granted to the said Administrator to sell the said mine and mining claim and the said mill site.

And that a copy of this order be published at least once a week for four consecutive weeks in the Inyo Independent, a newspaper printed and published in said Inyo county.

GEO. M. GILL,
Judge of the Superior Court.

Dated July 1, 1895.

ABSOLUTELY PURE

HOW HE APOLOGIZED.

A neighborhood quarrel sprang up in one of the suburbs of Dallas a few years ago, in which almost the entire population became involved. So hot did the feud rage that the members of the different factions ceased to speak to each other except when prompted by anger and numerous fisticuffs resulted. One day a lieutenant of one faction administered a severe castigation to the leader of the other side and soundly denounced him as the biggest liar in the state of Texas. Things rolled along for a while and presently this lieutenant fell out with the leader on his own side. Meeting his old adversary, who was a preacher, one day, he stopped him and remarked:

"Mr. W., I want to make an apology to you."

"Certainly, my brother," responded the good-hearted preacher, "I am glad to know the Lord has softened your heart."

"Yes," said the man, I have done you an injustice and I am ready to apologize." "Well, brother," said the minister, extending his hand, I always knew you had a good heart and I thank the Lord that you see where you were wrong."

"Yes, I see it now," he replied, I told you that you were the biggest liar in the state and I am ready to take it back. I have found another man who is just as big a liar as you are.

And he passed on, leaving the minister wondering whether he had anything to be thankful for or not.

THE VERVAIN HUMMING-BIRD.

The vervain humming-bird is the smallest bird in existence. It is very little larger than our familiar bumble bee. Its plumage is very brilliant in coloring. Two specimens are on exhibition in the National Museum at Washington, and the tiny balls of bright-colored feathers average about 2 1-3 inches in length. The nest is a frail and almost perfect piece of bird architecture. It is composed of mosses, vegetable fiber and wild cotton, with a delicate lining of spiders' webs. In gathering the latter material it is no uncommon occurrence for the little birds to become ensnared in the webs of the largre spiders, by which they are killed. The size of the vervian's nest is three-fourths of an inch in diameter across the cavity, and slightly more than an inch in total diameter. The eggs, always two in number, are pure white. They never measure more than one-third of an inch in length by one-fifth of an inch, in width. These diminutive birds are found only in the island of Jamaica. — Philadelphia Times.

Little Bertha, 3 years old, was spending the afternoon with her auntie, who wanted her to stay for tea, but Bertha said her mamma would "stold."

"Oh, no," auntie said, "mamma won't scold; she isn't dangerous."

Bertha replied: "Oo des ought to be panked wif her once."

Improvements depend far less upon length of tasks and hours of application than is supposed. Children can take but a little each day; they are like vases with a narrow neck; you may pour little or pour much, but much will not enter at a time.—Michelet.

ONE ENJOYS

Both the method and results when Syrup of Figs is taken; it is pleasant and refreshing to the taste, and acts gently yet promptly on the Kidneys, Liver and Bowels, cleanses the system effectually, dispels colds, headaches and fevers and cures habitual constipation. Syrup of Figs is the only remedy of its kind ever produced, pleasing to the taste and acceptable to the stomach, prompt in its action and truly beneficial in its effects, prepared only from the most healthy and agreeable substances, its many excellent qualities commend it to all and have made it the most popular remedy known.

Syrup of Figs is for sale in 50c and $1 bottles by all leading druggists. Any reliable druggist who may not have it on hand will procure it promptly for any one who wishes to try it. Do not accept any substitute.

A DEADLY DILEMMA.

By GRANT ALLEN.

Till that second the idea had never even so much as occurred to him. In the first wild flush of horror at Netta's situation he had thought of nothing except how best to save her. He had regarded the engine only as a hateful, cruel, destructive living being. He had forgotten the passengers, the stoker, the officials. He had been conscious only of Netta and of that awful thing, breathing flame and steam, that was rushing on to destroy her. For another invisible second of time Ughtred Carnegie's soul was the theater of a terrible and appalling struggle. What on earth was he to do? Which of the two was he to sacrifice? Should it be murder or treachery? Must he wreck the train or let it mangle Netta? The sweat stood upon his brow in great clammy drops at that dread dilemma. It was an awful question for any man to solve. He shrank aghast before that deadly decision.

They were innocent, to be sure, the people in that train. They were unknown men, women and children. They had the same right to their lives as Netta herself. It was crime, sheer crime, thus to seek to destroy them. But still—what would you have? Netta lay there all helpless on the line—his own dear Netta. And she had parted from him in anger but half an hour since. Could he leave her to be destroyed by that hideous, snorting, puffing thing? Has not any man the right to try and save the lives he loves best, no matter at what risk or peril to others? He asked himself this question, too, vaguely, instinctively, with the rapid haste of a life and death struggle; asked himself with horror, for he had no strength left now to do one thing or the other—to remove the obstacle from the place where he had laid it or to warn the driver. One second alone remained and then all would be over. On it came, roaring, flaring, glaring, with its great bullseye now peering red around the corner—a terrible, fiery dragon, resistless, unconscious, bearing down in mad glee upon the pole—or Netta.

Which of the two should it be—the pole or Netta?

And still he waited, and still he temporized. What—what could he do? Oh, heaven! be merciful! Even as the engine swept, snorting and puffing steam, around the corner, he doubted yet—he doubted and temporized. He reasoned with his own conscience in the quick shorthand of thought. So far as intent was concerned he was guiltless. It wouldn't be a murder of malice prepense. When he laid that log there in the way of the train he never believed—nay, never even knew—it was a train with a living freight of men and women he was trying to imperil. He felt it to be merely as a mad engine unattached. He realized only Netta's pressing danger. Was he bound now to undo what he had innocently done—and leave Netta to perish? Must he take away the post and be Netta's murderer?

It was a cruel dilemma for any man to have to face. If he had half an hour to debate and decide, now, he might perhaps have seen his way a little clearer. But with that hideous thing actually rushing, red and wrathful, on his sight—why—he clapped his hands to his ears. It was too much for him—too much for him.

CHAPTER III.

Reunited.

And yet he must face it and act or remain passive, one way or the other. With a desperate effort he made up his mind at last just as the train burst upon him, and all was over.

He made up his mind and acted accordingly.

As the engine turned the corner the driver looking ahead in the clear evening light saw something in front that made him start with sudden horror and alarm. A telegraph pole lay stretched at full length, and a man, unknown, stood agonized by its side, stooping down, as he thought, to catch and move it. There was no time left to stop her now; no time to avert the threatened catastrophe. All the driver could do in his haste was to put the brake on hard and endeavor to lessen the force of the inevitable concussion. But even as he looked and wondered at the sight, putting on the brake meanwhile with all his might and main, he saw the man in front perform, to his surprise, an heroic action. Rushing full upon the line, straight before the very lights of the advancing train, the man unknown lifted up the pole by main force, and brandishing its end, as it were, wildly in the driver's face, hurled the huge bulk back with a terrible effort to the side of the railway. It fell with a crash, and the man fell with it. There was a second's pause, while the driver's heart stood still with terror. Then a jar—a thud—a deep scratch into the soil. A wheel was off the line. They had met with an accident.

For a moment or two the driver only knew that he was shaken and hurt, but not severely. The engine had left the track and the carriages lay behind slightly shattered. He could see how it happened. Part of the pole in falling had rebounded on to the line. The base of the great timber had struck the near side wheel and sent it off the track in a vain effort to surmount it. But the brake had already slackened the pace and broken the force of the shock, so the visible damage was very inconsiderable. They must look along the carriages and find out who was hurt. And, above all things, what had become of the man who had so nobly rescued them? For the very last thing the engine driver had seen of Ughtred as the train stopped short was that the man who flung the pole from the track before the advancing engine was knocked down by its approach, while the train to all appearance passed bodily over him. For good or evil, Ughtred had made his decision at last at the risk of his own life. As the train dashed on with its living freight aboard his native instinct of preserving life got the better of him in spite of himself. He couldn't let those innocent souls die by his own act—though if he removed the pole and Netta was killed he didn't know himself how he could ever outlive it.

He prayed with all his heart that the train might kill him.

The guard and the driver ran hastily along the train. Nobody was hurt, though many were shaken or slightly bruised. Even the carriages had escaped with a few small cracks. The Holmbury smash was nothing very serious.

But the man with the pole? Their preserver, their friend. Where was he all this time? What on earth had become of him?

They looked along the line. They searched the track in vain. He had disappeared as if by magic. Not a trace could be found of him?

After looking long and uselessly, again and again, the guard and the driver both gave it up. They had seen the man distinctly—not a doubt about that—and so had several of the passengers as well. But no sign of blood was to be discovered along the track. The mysterious being who, as they all believed, risked his own life to save theirs had vanished as he had come, one might almost say by a miracle.

And indeed, as a matter of fact, when Ughtred Carnegie fell on the track before the advancing engine he thought for a moment it was all up with him. He was glad of that, too, for he had murdered Netta. He had saved that train, but he had murdered Netta. It would dash on now unresisted and crush his darling to death. It was better he should die, having murdered Netta. So he closed his eyes tight and waited for it to kill him.

But train passed on, jarring and scraping, partly with the action of the brake, though partly, too, with the wheel digging into the ground at the side; it passed on and went over him altogether, coming as it did so to a sudden standstill. As it stopped a fierce joy rose uppermost in Ughtred's soul. Thank heaven, all was well. He breathed once more easily. He had fallen on his back across the sleepers in the middle of the track. It was not really the train that had knocked him down at all, but the recoil of the telegraph post. The engine and carriages had gone over him safely. He wasn't seriously hurt. He was only bruised and sprained and jarred and shaken.

Rising up behind the train as it slackened he ran hastily along the off side toward where Netta lay still and unconscious on the line in front of it. No body saw him run past, and no wonder, either, for every eye was turned toward the near side and the obstruction. A person running fast by the opposite windows was very little likely to attract attention at such a moment. Every step pained him, to be sure, for he was bruised and stiff, but he ran on none the less till he came up at last to where Netta lay. There he bent over her eagerly. Netta raised her head, opened her eyes and looked. In a moment the vague sense of a terrible catastrophe averted came somehow over her. She flung her arms around his neck. "Oh, Ughtred, you've come back!" she cried in a torrent of emotion.

"Yes, darling," Ughtred answered, his voice half choked with tears, "I've come back to you now forever and ever."

He lifted her in his arms and carried her some little way off up the left hand path. His heart was very full. 'Twas a terrible moment. For as yet he hardly knew what harm he might have done by his fatal act. He only knew he had tried his best to undo the wrong he had half unconsciously wrought; and if the worst came he would give himself up now like a man to offended justice.

But the worst did not come. Blind fate had been merciful. Next day the papers were full of the accident to the Great Southern express; equally divided between denunciation of the miscreant who had placed the obstruction in the way of the train, and admiration for the heroic but unrecognizable stranger who had rescued from death so many helpless passengers at so imminent a risk to his own life or safety. Only Ughtred knew that the two were one and the same person. And when Ughtred found out how little harm had been done by his infatuated act—an act he felt he could never possibly explain in its true light to any other person—he thought it wisest on the whole to lay no claim to either the praise or the censure. The world could never be made to understand the terrible dilemma in which he was placed—the one sided way in which the problem at first presented itself to him—the deadly struggle through which he had passed before he could make up his mind, at the risk of Netta's life, to remove the obstacle. Only Netta understood, and even Netta herself knew no more than this—that Ughtred had risked his own life to save her.—Strand Magazine.

Provident.

Dora—How is it that Sadie Swinger is going to take such a short wedding trip?

Cora—She says she wants to get back in time to change her wedding presents.—New York Press.

YE OLD TIME DOCTOR.

Physicians a Hundred Years Ago Were Men of Marked Importance.

At the universities medical students were not permitted to go out without their scholastic cloaks, a regulation that still obtains in Spain. That the number of students has enormously multiplied may be seen from the fact that the little University of Giessen, with scarcely any medical school at all, has always more students than had Haller in the days of the famous Hoffmann. In the middle of the last century Wurzburg had at one time but three medical students, while today it has in the neighborhood of 500. Even then it was complained that on account of the number of students there was an educated proletariat arising, and in 1791 it was proposed, in Austria, that the rush for study should be repressed.

Among the continental students the revels and bad behavior of past centuries were not to any extent corrected. Fights and debauchery were very common, and all sorts of orgies and bacchanals prevailed. The professors were, in a large measure, independent of the state, and a single individual often represented a number of branches now taught by special chairs. When indisposed to lecture, they simply posted upon the blackboard "Hodie non legitur," and this was the end of the matter. In 1777 Vienna had 147 medical teachers, and in Germany there were two to every 39 students. That in the last century one man often accomplished more than a great number of average teachers do today is amply demonstrated by the lives of Boerhaave, Haller and others. Then, too, the Latin tongue was generally employed for purposes of instruction, though surgeons for the most part lectured in the vernacular. Cullen, in 1770, was the first in Great Britain to deliver purely medical lectures in English, and as the clergy gradually retired from the ranks of the profession Latin more and more fell into disuse. Strange to say, as the clerical influence waned the Jews began to enter medicine, the movement beginning about 1791 in France, under the promulgation of "civil equality" ideas. Previously the Hebrews had been an almost universally suppressed people, and in Berlin were permitted to enter and leave the city by only one gate and were forbidden to learn or write pure German, in consequence whereof their dialect was a Hebraic Teutonic jargon that even today prevails in some portions of western Europe. Educated Jews were few in number, since attendance upon universities was ordinarily denied them, although long before they had been admitted at Salamanca, Toledo, Salenum and Montpellier. In Austria the prohibition was not removed until 1789, and even then so bitter was the prejudice against the Semitic race that the clergy protested vigorously. It was the same clerical body that in 1667 protested with the greatest vehemence against allowing Hebrew physicians to pass through the gates of Wurttemberg without paying toll, declaring that it was "better to die with Christ than be cured by Jews who were aided by the devil."

The physician of the last century was, at least on occasions of moment, very different from other men, and to be recognized by his dress. A cap was placed upon his head when he graduated, in recognition of the fact that physicians at an earlier period belonged to the learned or clerical profession, and in later life he wore a purplish or scarlet cloak to distinguish him from lawyers, whose professional color was yellow, and, from theologians, who then as now sported the somber black.

The regulation full dress costume of the English physician of the last century demanded a well powdered wig, silk coat, knee breeches with stockings, buckled shoes, lace ruffles, cap and gold headed cane, to which, in cold weather, was added a muff—to preserve his delicacy of touch.—Medical Age.

The Wonderful Human Fish.

One of the oddest human freaks that ever saw the light of day in the United States or possibly in any other country is Herman Schedler, who was born at Cleveland in 1884. At last accounts the little fellow was living with his parents on St. Clair street in the above named city and was as bright and happy as boys of his age usually are. Herman has a handsome, intelligent looking face and shapely, sun burned hands. In fact, to all outward appearances he is an ordinary boy, but those who know him best say that the only parts of his anatomy that are covered with common human skin are his face, neck, hands and feet, and that the other portions of his body are literally incased in tiny dark blue fish scales. From the neck to the ankles this wonderful coat of mail so thoroughly covers the body that not the slightest section of skin bearing any semblance to that of the human being is visible.

The family were perfectly horror stricken when the little "fish baby" was born, and for more than seven years managed to keep the matter a profound secret. However, little Herman's playmates finally learned that their companion was a veritable fish. This soon leaked out, and the matter became public. I understand that doctors and professors who have recently examined the boy are unanimous in pronouncing him to be the "eighth wonder of the world."—St. Louis Republic.

An Astor Who Lectures.

The world of thinking women now counts Miss Margaret Livingstone Chanler among its lecturing enthusiasts coming out boldly for female suffrage.

She is the second sister of William Astor Chanler, the returned explorer of Africa, who is now with his sisters at the family country seat, Ardmore, at Barrytown - on - Hudson. How would their gracious grandmother, Margaret Armstrong Astor, marvel at their strange departures! Fortune gave them opportunity to be idlers, but they show the energy of good stock well developed. On the 22d of June the youngest sister of the family became of age. The event was duly celebrated at "Rokeby." The formalities of the legal settlements incidental to the coming of age of the youngest of the Chanler family will be adjusted on the other side. Miss Margaret acquired her fearlessness of public speaking through association with her aunt, Mrs. Julia Ward Howe.

You can carry the little vial of Doctor Pierce's Pleasant Pellets right in the vest-pocket of your dress suit, and it will not make even a little lump. The "Pellets" are so small that 42 to 44 of them go in a vial scarcely more than an inch long, and as big round as a lead pencil.

They *cure* constipation.

One "Pellet" is a laxative; two a mild cathartic. One taken after dinner will stimulate digestive action and palliate the effects of over-eating. They act with gentle efficiency on stomach, liver and bowels. They don't do the work themselves. They simply stimulate the natural action of the organs themselves.

THE ENGLISHMAN'S NEATNESS.

Americans are often puzzled to account for the neatness of attire which distinguishes most English gentlemen. Few will deny that as a rule Englishmen are always well dressed. The following information comes directly from an English source, and has the weight of preponderent logic on its side:

"Most Americans buy one suit and wear it until they buy another—that is, after the first is worn too much to appear genteel. In Enlgand we do the thing differently. Instead of one suit we buy three or four, or perhaps, half a dozen, at the same time. We wear one suit to day and another tomorrow, changing as often as the fancy takes us. Result, neatness and variety, what is called being well dressed. It costs a little more to start with, but it is economy in the end. After the first cost it takes no more to keep up the supply than to buy single suits, as it is only necessary to add a single suit at a time.—Washington Post.

A little maid of 5, who had been listening quietly to the puzzles and conundrums of the older children, seemed at last to divine the method of their construction, and, after some thought, said:

"What could you get on a very high steep mountain?" The answers were ice, snow, rocks, eagle's nests and the like, to all of which the little one persistently shook her head. When asked to tell the answer she triumphantly cried: "Nothing!"

"But why" asked the others in a breath. "Because you couldn't get up there after it," was the demure reply.—Youth's Companion.

Time is the most undefinable yet paradoxical of things; the past is gone, the future is not come, and the present becomes the past, even while we attempt to define it, and, like the flash of the lightning, at once exists and expires.—Colton.

HOITT'S SCHOOL.

DEAFNESS CANNOT BE CURED

By local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure Deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube gets inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by catarrh which is nothing but an inflamed condition of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars, free.

THE KEYSTONE OF THE ARCH

In the edifice of health is vigor, which means not merely muscular energy, but an active discharge of the various functions of the body such as digestion, secretion of the bile, the action of the bowels, the circulation of the blood. Nothing more actively and thoroughly contributes to the united performance of these functions than the renowned tonic and regulator, Hostetter's Stomach Bitters. The result of its use is a speedy gain in strength, together with the agreeable consciousness that the tenure of life is being strengthened—that one is laying up a store of vitality against the unavoidable draughts which old age makes upon the system. The fortifying influence of the Bitters constitute it a reliable safeguard against malaria, rheumatism and kidney trouble. Appetite and sleep improve through its use, and it protects the system from the effects of cold and damp.

Piso's Cure for Consumption relieves the most obstinate coughs.—REV. D. BUCHMUELLER, Lexington, Mo., Feb. 24, 1894.

"I guess," said a sharp-nosed girl, "that I will take the wind out of her sails." "Why," asked the fluffy girl, "don't you be up-to-date and say take the wind out of her tires?"—Cincinnati Tribune.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

DOCTORED WINE.

Many Varieties of Wine From One Vat.

THE PROCESS OF ADULTERATION.

The Manufacture in France of Spurious Brands Sent to America.—Deleterious Substances.

The action of France, Germany and other European Governments in placing an embargo on American cattle and swine and their products, upon alleged sanitary grounds, naturally suggests retaliation on the part of the United States authorities. Inspection and analysis by French and German officials have demonstrated the absence of any suspicion of disease in American beef and pork, a fact which tends to establish that the act of exclusion is predicated upon a feeling of resentment toward the United States on account of tariff laws and customs regulations. If the United States should seek reasons and justifications for resenting this unjust discrimination against American meat products, no difficulty would be experienced in finding them.

It is notorious here that the wines of France and Germany, exported to the United States, are "doctored" and adulterated with deleterious and unhealthful substances, and to an extent that will surprise American consumers. Apart from the merely commercial principle involved in the controversy over European discrimination, the United States authorities should insist, out of regard for the health of the people of the country, that the wines of France and Germany shall undergo careful inspection and analysis for being shipped to America. I have given the subject of wine-making in this country considerable investigation, and can establish to the satisfaction of intelligent and fair-minded people that the wines sent to America are systematically adulterated and thereby rendered unhealthful.

To go back to the days when the "doctoring" of the wines of France became a real science we must revert to the phylloxera period, and, as a good starter from that point, I will quote from a well-known French writer, whose book, "Le Vin de France" is lying before me. In the first years of the phylloxera the ways of manufacturing wines without grapes were multiplied. There was, in the poverty of the crops, a very alluring inducement to 'falsification.' They went far in this art—a little 'ticklish,' but excessively lucrative. Unfortunately, they went too far, and the public soon discovered that it drank all sorts of things in place of wine. The learned bodies became interested in the question. Very suggestive analyses were published—widespread reports, which left no manner of doubt.

"All this publicity in regard to the 'falsification,' or at least suspected 'medication,' produced among the consumers two states of mind, differing according to the individuals. Some became alarmed, broke off the habit of drinking wine and attempted to replace it with beer or cider. If you would estimate this zone of dissatisfaction, you have only to think of the vogue, sudden, unprecedented, excessive, for white wine; very much encouraged, besides, by the doctors and the chemists, who denounced the presence, in many of the red wines, of poisonous or suspicious coloring matters. Others—and this was most grave—became readily resigned to the giving up of natural wines. They became habituated to strange mixtures which retain only the name and color of wine—no more."

Granted that these abominations, which have such a large sale in Paris, do not find their way to America. What do we get for our money? I can make a very shrewd guess at that conundrum. The phylloxera lasted for ten years in France, and our author, quoted above, very candidly admits that in that time the "doctoring" of wines and their fabrication out of other substances than grapes had developed into an advanced science. Now I do not mean to assert that the French wines which go to America are innocent of any connection with grape juice, but they are doctored, and very much doctored, for the American market, I have no manner of doubt.

Let us go back to our author for facts and with him follow the vicissitudes of the young, pure and innocent wine of France from the time it leaves its native village, finds its way to the center of commerce for red wines (Bordeaux, Cette, Dijon, Bercy, Chalons-sur-Marne, etc.) and thence to Paris and the rest of the world. Let us say that our young wine has finished the first stage of its journey around the world and is arrived, say at Cete in the department of the Herault. "What is this Cete" asks our author, and he answers his own question, "A canal with its banks bordered with storage-rooms. Here the sea deposits its low-priced wines of the Mediteranean litoral; wines heavy with alcohol and deep in color, and which will serve to remonter (this is the techical word to 'set up') the weak wines of the French lands."

Remonter is a very comprehensive word when applied to wines, and the French dealers treat their wines as liberally as does a Tamany or other politician treat his connstituents when election time comes around. They set 'em up, and set 'em up and set 'em up again. The wine merchant, like the politician, has many various ways of "setting 'em up," but for the purpose of this article I shall refer only to the three principal and best methods of improving (?) the wines of France. These are the Coupage, the Mouillage and the Platrage. Coupage is the mixing with other wines or water, and is the first setting up. Mouillage is the wetting down of the wine, which is water work, pure and simple. Platrage is the "plastering" of the wines with sulphate of lime—the plaster of Paris of commerce—and is intended to correct acidity. As the methods are practically the same in the different centers of the wine commerce—ab uno disce omnes—we will go to Cette or Bordeau—as you please—and take a front seat for the grand transformation scene.

The heavier wines of Spain, Portugal, Italy, Austro-Hungary are all utilized for the first operation, but by far the most used are the Spanish wines. Our author gives the reason. "The wine of Spain is indispensable. It reanimates the depressed in (spirit), corrects the surly (sour) and sustains the weak. It is the regulator of their energy. To what does it owe its tyrannical qualities? To the alcohol which it contains." Just so. It was found that the alcoholic strength of the Spanish wines more than doubled that of the French. This was a curious fact, and more curious still, year after year these wines arrived in France with an unvarying degree of strength that finally attracted the attention of the French authorities.

Surprise, curiosity, investigation, protestation succeeded, the one the other, in regular order. It was discovered that the sun and the soil of Spain were not so specially favored by Providence as one might be led to suppose. Providence had nothing to do with it. Investigation revealed the not so very astounding fact that the Spanish wines were not what one might call exactly natural wines. They were dosed with alcohol to the maximum degree authorized by the excise for wines circulating in France.

The French wine is weak in it. natural state. It must be strengthened. The Spanish wine is strong, but not strong enough; it must be made stronger. How? That was the mystery the French authorities unraveled. In 1887, for example, France imported 7,000,000 hectolitres a (hectolitre equals twenty-two gallons) of Spanish wine, and in the same year Spain imported 800,000 hectolitres of alcohol from Germany. The alcohol of commerce is like a child that does not know its own father. It might be the simple product of the grape, and then again it might not, with the accent on the "not." The foundling has many reputed fathers—corn, rice and other grains, potatoes, beets, honey, starch, etc., all produce alcohol—alcohol that may be used to strengthen the wines of France, which, by the way, is not always to be taken as the juice either of the pure and tender grape or of grape "mixtures." "When the lions" skin falls short we eke it out with the fox's."

When the harvest fails wine can be made of dried raisins, figs, locust beans, etc., etc. Thousands and thousands of boxes of poor quality raisins, figs and beans annually find their way to French territory from Eastern lands, but we will leave them out of the reckoning and confine ourselves to the wine of France. Nor will we take to the water just yet. But, my friends of the clubs, you who have your special fancies in brands of wine, can you believe that your Macon, Lioburne and Benajolais all come out of the same vat? That your Bordeaux and your Burgundy are brothers, with their birthmarks slightly altered in the cradle? You are not compelled to believe me if you do not wish to, but Magna est veritas et praevalebit." Truth lies at the bottom of a well and knows a great deal about the wine business.

And now I will give you one of our author's definitions of coupage. "To take mediocre or bad wines, wines artificially alcoholized or poor, unite them in the bonds of a close carriage with the wine of Spain, and make a wine of agreeable taste and of a nature to give satisfaction to the consumer." And he adds, "It is a veritable art, that of mixing wines." I can easily believe it when I see those rows of enormous vats, containing from 300 to 1,000 hectolitres, where repose so many different wines. I think, not without melancholy, of the days when my father would say to me, "Little one, we will take some wine today." In that happy time the consumer was not what he is now; he knew and appreciated mine; he had not a misguided and depraved palate.

Mouilage explains itself. A wetting down is a wetting down; it may be a little more or a little less, but it is always a wetting. There is a simple equation which the wine concoctors are continually solving, to their own satisfaction, at least. It is, two casks Spanish wine plus one cask water equals three casks Bordeaux. That is simple, too simple, in fact, for it leaves the French wine out altogether, and it must be brought into the reckoning of what becomes of the home products. Let us start again: One cask Spanish wine equals two casks Bordeaux. That is a begining and the pump is near. Two and one make three. Now we have three casks of the "Improved" wine.

But there are two empty casks waiting to be filled. We have it. "Here you, Gustave, bring up another cask of improved wine." Now we have four full and two empty casks. Each cask contains 225 litres We will draw off 75 litres from each. Seventy-five plus 75 equals 150. Put it into empty cask No. 1. Again 75 plus 75 equals 150. Put it in No. 2. Now we have six casks and each containing 150 litres. But what is the matter with the pump? Nothing! Good! Pump, pump, pump. Now we have six full casks—4 equals 6. Oh, the wonders of arithmetic—in the wine trade. Here is a man's stock in trade increased 33 1-3 per cent. by simple addition and subtraction, with a slight twist of the wrist around the old pump handle. If, peradventure, there is added a little too much pump water, a little more alcohol will remedy that, and a little coloring matter to bring back the blush to the not quite ruby wine.

With so much mixing and meddling and stiring up and setting down and watering and correcting, it is not surprising that the wine should become a little acid in its disposition, but poon, pooh! My dear boy, that is nothing at all. A little plaster of Paris, as prescribed by law, will cure all that. By act of Assembly, the Chamber of Deputies and the Senate, a certain quantity is allowed to each liter—a spoonful more or less, I think, and that is platrage.—C. H. G., in Philadelphia Ledger.

DECLINE OF NATURAL GAS.

The first rolling mill that used natural gas exclusively was the Etna Iron Works of Spang, Chalfant & Co., in Allegheny county, a few miles above Pittsburg, and this establishment has been one of the last to abandon this fuel in the Pittsburg district. After twenty years of dependence upon natural gas the proprietors of this plant have removed the pipes and are now returning to the use of coal, long after most of the other mills had surrendered to the cheap bituminous fuel which has always been the chief foundation of Pittsburg's great industrial prosperity. The diminishing supply and the constant increase in cost have necessitated the abandonment of natural gas by most of the large manufacturing establishments in Pittsburg district, and its use is being more and more restricted to domestic purposes. Pittsburg has again become the smoky city of fifteen years ago, alleviated in some measure by the use of fuel oil and manufactured gas, which have assumed importance with the decline of natural gas in the last four or five years.

Natural gas was not a factor of very great importance in the Pittsburg district until early 80s, and the point of greatest consumption was reached in 1888, after which the decline began. It has ever been feasible to ascertain with accuracy the quantity of natural gas consumed each year, but Mr. Joseph D. Weeks of Pittsburg has prepared for the United States Geological Survey an estimate of the value of the coal displaced by natural gas, which has been accepted as the most practical measure of the consumption of gas. In the period of its largest use the natural gas consumed in Pennsylvania, measured on this basis, was valued as follows:

1885, $4,500,000; 1886, $9,000,000; 1887, $13,749,500; 1888, $19,282,375; 1889, $11,593,989; 1890, $9,551,025; 1891, $7,834,016; 1892, $7,376,281; 1893, $6,486,000.

In Ohio the supply of natural gas has failed even more rapidly than in Pennsylvania. The largest consumption in Ohio was in 1889, when it amounted in value to $5,215,000; but in 1893 it had fallen to $1,510,000. The suddenness of the failure of the supply has caused much inconvenience and loss to manufacturing establishments, which in many instances were deprived of fuel almost without warning. While the supply of natural gas in Pennsylvania and Ohio has been diminishing a new productive region has come into prominence in Indiana, and interest in natural gas is now centered in that State. In 1886 the value of the gas consumed in Indiana was estimamted at only $300,000; in 1888 it was figured at $1,320,000, and in 1893 the value was placed at $5,718,000. The opening of this new field has stimulated the development of iron and steel and glass enterprises in Indiana in a marked degree. Notwithstanding the abundance of the present supply in Indiana, there is no assurance of its continuance for a longer period than in other States, and a return to fuels more stable, if less convenient, is merely a question of time. In fact, it is claimed by geologists and gas experts that the point of greatest supply has been reached. While it lasts there is no fuel that posesses so many advantages as natural gas. The uncertainty of its duration is its only disadvantage.—Philadelphia Record.

AN IMPRISONED BIRD.

Nature is a very loving and careful mother, and it is seldom, within a civilized community, that any accident befalls her little ones for which her higher creation, man, is not directly responsible. In view of this fact, the following little incident seems interesting:

A lady of New Orleans relates that some days since the first humming-bird of the season made its appearance in her garden, sipping indiscriminately from the wealth of sweets. Late in the afternoon she observed the little fellow hovering around a spike of Annunciation lillies which had shot up perfectly laden with bells. The next morning early when she went out for a matitudinal stroll through the garden she heard a fluttering and faint cheeping from the neighborhood of the lily bed. For some time she could see nothing to account for the faint sounds, but at last was astonished to discover that one of the lily bells had closed its petals, imprisoning the humming-bird within. It is probable that the bird had buried its beak too far in and extracted so much honey as to cause the already fading flower to colapse suddenly, thus holding the little fellow close-bound all night on.—Philadelphia Times.

The widow of Gen. Anderson, who lives in Washington, treasures as a sacred relic the famous flag which was on Fort Sumter when the rebels attacked it. It was draped about the casket of her husband when he was carried to his final rest.

MENAGERIE MAKING.

Over Forty Years With the Wild Beasts.

STORY OF CARL HAGENBECK'S LIFE.

A Large Collection of Animals Bought in Thirty Minutes.—Making an Elephant Drunk.

Herr Carl Hagenbeck, the animal collector and trainer of Hamburg, who is organizing the great African show at the Crystal Palace, has had forty years' experience of wild beasts, and has many stories to tell of the manner in which the menageries of Europe and America and the zoological gardens of the world are supplied with elephants, lions, tigers, snakes, etc. The business, which he entered upon when quite a boy, was started by his father in a curious way. Hagenbeck, Sr., was in the fish trade, and in 1848 he bought a lot of live seals which the fishermen had caught in the mouth of the Elbe. He took the seals to Berlin and there exhibited them, but unfortunately the revolution broke out and he had to sell his seals to a showman on credit and never got his money for them.

Four years later a whaler brought from Spitzenbergen a large polar bear, which Hagenbeck the elder bought for 350 thalers, and the animal was exhibited at 4d admission. An old striped hyena, acquired from Jamrach in Hamburg, was added, together with other animals which different vessels brought in the course of the year, and out of this modest beginning rose the great establishment, which at the present time possesses a larger, more varied and more valuable collection of elephants, hippopotami, lions, tigers, panthers, jaguars, pumas, hyenas, wolves, camels, kangaroos, snakes, alligators, crocodiles, monkeys, ostriches, gazelles, llamas, etc., than that owned by any zoological society in the world.

A vast range of buildings is used for the stabling of these animals, and a large circus is utilized for the training of the elephants, horses and wild beasts. A gigantic cage in the open air is called the "Monkeys' Paradise," to which entrance is gained by a number of doors which the monkeys open and close themselves, passing from their warm quarters inside to the outer air as they please, even in the hardest frosts.

Recalling some of his earlier adventures, Mr. Hagenbeck says: "My first journey to see animals was when I was a boy of 11 years, in 1855. I accompanied my father to Bremerhaven, and bought a collection of monkeys and parrots, together with a large raccoon and some opossums. "We took the whole of them back from Bremerhaven on the top of a crazy old stagecoach. On the road the raccoon gnawed a hole in his box a d made off. About two years afterward the animal was shot in the vicinity of Lemberg, but only my father and I knew how it was that such a beast was at large in that locality.

"A few years afterward I took charge of a lot of small animals for a dealer on a railway journey, the station-master having refused to let them travel unattended, and on the trip I sold £300 worth more of our stock, which pleased my father greatly, and I was encouraged to continue the animal business. I had to make up my mind very rapidly in emergencies. Once I had only half an hour left me to catch the night express to Crelfed, where I bought up the whole menagerie, which had been offered by telegram for sale. But we found new sources of supply, too. Cassanova, the explorer, was employed by us to bring animals from Africa. In 1865 he came back with three fine elephants, several lions, hyenas, leopards, antelopes, gazelles and ostriches.

"One of the elephants was intended for Berlin, but it was not easy to get him away from the others. He walked, perhaps, for a quarter of a mile, when his comrades commenced to trumpet, and thereupon the huge beast trotted back to them at the railway station. Nothing could stop him, so we had to tie him up there. I fetched the other elephants out and provided myself with a quantity of sugar and biscuits and enticed all three elephants safely to the Zoological Gardens, and after the big one had been put comfortably into his stable I led my two elephants to the railway station and they arrived just in time to catch the night train to Hamburg. The next day I sold both of them to the London dealer, Rice, and one of the two he disposed of to the Zoological Gardens in Regent's Park. It was the one known as Alice, Jumbo's wife."

It appears that keen competition existed among the various dealers to obtain animals that were for sale. The Frankfort collection was on offer, and Hagenbeck made a hazardous journey thither, arriving on the day of the battle of Aschaffenburg during the Austrian war. Thousands of troops were passing through the town. He then went back to Cologne and there saw his rival Jamrach, who was on the same errand, but could not get to his destination, as no direct trains were then going to Frankfort. On another occasion a good deal of trouble was caused to young Hagenbeck by a troop of elephants, which he was conveying by rail, taking the colic. To cure them he administered grog. One of the beasts took too much and began to play tricks with his fellows. It was necessary to keep him quiet, so his master gave him another and a stronger dose of ardent spirits, with the result that the elephant grew intoxicated and lay down and slept for six hours without a break.

One day Hagenbeck received news of the arrival of Casanova at Trieste in a steamer which was placed in quarantine. On shore another dealer was waiting his chance to buy up the whole stock which the hunter had brought with him, but Hagenbeck Sr. concluded a bargain while the seller was still in the lazareto, behind iron bars. Scarcely had the prices been settled when the London competitor offered an advance of £1200 on the whole lot, at which profit a resale was made. But the animals, while in quarantine, had to be fed during seven days, and as they included thirteen elephants, the difficulty in obtaining sufficient quantities of food was very great, and the anxieties of the position were rendered keener by the sudden illness of the father of the young animal dealer, which led to a hurried departure from the port.

"On the railway journey," says Carl Hagenbeck, "some of the little elephants were tired out, so I hired a big stable and gave them a two days' rest. On starting afresh I took the seven smallest elephants to lead them first. They were hardly outside the stables when the elephants began to cry, and the bigger ones answered, and in a minute the six which were still in the stables broke loose. What was I to do? I ran ahead of the small elechants to the railway station, and they followed me into the cattle pens, the larger beasts coming close behind, and I felt very thankful when the door was safely closed upon the last of the truants."

Another and still more trying experience occurred at Suez, whither the dealer had gone to meet Cassanova, who lay ill at that place. The Greeks were hostile, and threatened him in many ways. They attempted to set the railway station on fire, and in the confusion the door of the yard in which the ostriches were was left open and fifteen of the birds went off into the desert. Hagenbeck seized one by the wing and tried to hold him, but the ostrich dealt him such a blow with his foot that he tumbled back. The birds were recovered in singular fashion. One of the keepers drove all the goats out to follow the ostriches. When the goats came near to them the birds began to dance with open wings, jumping about in a peculiar manner, coming nearer and nearer the goats, until at last they followed them home. The explanation given was that the ostriches and the goats had always traveled together and were firm friends and really attached to each other.

Cassanova died and he was buried during an earthquake. Since his death Herr Hagenbeck has employed other agents, pioneered by Josef Menges, the scientific traveler, who has in Somaliland collected the animals for the representation of wild African life which is to be given at Sydenham.

The association of natives with the animals which are to be found in their country has been on several occasions successfully carried out by the organizer of these exhibitions. He began with a family of Laplanders, with whom came forty-two reindeer. The Lapps lived in their huts. They were followed by the Esquimaux, with seals, Polar bears, etc.; the Kalmucks, with camels and sheep; the Nubians, with wild animal caravans; the Cingalese, with elehpants, snakes and cattle; and Hindoos, Australians, Hottenotts, Patagonians and other races have been similarly presented to the public.

The Somalis are to make their first appearance in England, and visitors will have an opportunity of seeing them build their mat huts, cook their food, receive and hold festivities in honor of the European hunter, defend themselves against the raids of hostile tribes, indulge in native sports and dances, race on horses and camels, and, lastly, capture or buy, nurse and train wild animals, of which there will be 200, including twelve lions, four zebras, ten elephants, twenty dormedaries and many leopards hunting panthers, hyenas, ostriches and pythons. Herr Hagenbeck has made a study of forming "happy families," lions, tigers, leopards, bears and dogs all living comfortably together in one cage and it may be recollected that one such group was exhibited a year or two ago at the Crystal Palace Unfortunately the whole of these animals died at Hamburg of glanders a few weeks after their return, entailing a loss of £10,000 upon their proprietor, while another group, which was hastily formed, was almost decimated by cholera, sixty-three out of eighty valuable beasts succumbing to the disease.—London Telegraph.

IT IS A NICE CROWD.

The Austrian empire is composed of quite a number of different nationalities, among them Poles, Hungarians, Bohemians and Croats, the characteristics of which are portrayed in the following anecdote:

Four Austrian soldiers were quartered over night at the house of a peasant.

In the morning after they had resumed their march the Pole remarked:

"Comrades, that peasant had a very fine watch."

"We should have taken it along with us," observed the Hungarian.

"I've got that watch," observed the Bohemian.

"You did have it, but I've got it now," remarks the Pole, closing the debate. He had already stolen it from his comrade.—Texas Siftings.

Some time ago the Prince of Wales visited a factory where a great number of men were employed. The Prince asked one of the workmen: "What wages do you receive here?" "Well," replied the honest workman, scratching his head and partially lifting his cap with the same hand, "that depends on what they is. A chap like you would get about 18 bob a week.—Tit-Bits.

COAST MINING NEWS.

Men With Capital Bonding Very Good Prospects.

A RICH FIND IN THE SHENANDOAH.

Law Governing Preliminary Work on a Quartz Location.—Gossip From Many Points.

To make a quartz location hereafter the prospector must sink a hole at least ten feet deep to solid formation, must have at least one well defined wall, and must stake his ground so that the stakes can be found. The notice of location must be placed in a conspicuous place at the discovery shaft, where it can be seen—not on some stump or tree in the neighborhood. He is allowed ninety days to do this work. If he relocates an old prospect hole, he is required to sink it at least ten feet deeper than when he first found it, and state and record his location the same as though it was an original discovery. If he runs a tunnel it must be at least ten feet long, so as to determine the fact that a vein supposed to carry the precious metals has been discovered.

Sutter Creek Record: Messrs. Freedman and Caldwell, who bonded Peter King's quartz claim for $5,000, have started the tunnel and are making good headway. Some very fine prospects have been found on this ground and the present parties feel sanguine that they will succeed in developing a good mine.

These same parties have also bonded Mrs. M. Blackwell's place, further up Sutter Creek, for $4,000, and will in a few weeks begin operations there.

The "company store" causes threats of shutdown on the part of the Broadwater Company, and a boycott on the part of the miners at Neihart, Montana. The monthly pay-roll is $12,000.

The Bay State mine at Plymouth has been bonded to parties for $200,000, who have gone east to float the stock. The ten-stamp mill is crushing regularly and is paying over expenses.

D. Guttman, the well-known mining operator, has bonded the Massa quartz claim, near Jackson Gate, for $10,000. It is the intention to begin operations on the property at an early day.

The South Eureka Mining Company has purchased the twenty-stamp mill at Volcano, owned by R. C. Downs and will move it down here and rebuild it on their property right away.

Stockton parties have bonded the old Italian quartz claim in the vicinity of Upper Rancheria for $4,000, and it is understood they will begin operations soon. Some very rich rock is said to have been taken from the ledge at different times.

T. D. Valentine and other mining men of this city recently paid a visit to Sutter Creek to inaugurate operations in the Mechanics' mine, in which they are interested.

Redding Free Press: A very rich strike was recently made in the Hart mine at Old Diggings. It consists of a two-inch seam in the ledge, and is about one-half gold.

The Eureka Tellurium Gold Mining Company contemplate the erection of a Huntington mill on their property known as the Cleveland mine.

R. G. Hart recently shipped through the Bank of Shasta county, to the refiners in San Francisco, a gold brick valued at $1,850. This brick represented the resut of two weeks' run, but did not represent the output of the mine, as the suphurets are shipped to the smelters, and the returns amount to about $12,000 per month.

E. P. Connors has discovered a ledge of soap stone in the vicinity of Centerville. The ledge is four feet in width and the stone is of excellent quality. Soap stone is used largely in the manufacture of paper. The output of this ledge can be placed on the cars in this city for $5 per ton. The present market price of soap stone is $40 per ton. Mr. Connors and Senator Gleaves are now trying to obtain contracts to furnish the paper mills of this State with all the soap stone they require.

Quincy Bulletin: From S. K. King, superintendent of the Shenandoah mine, it is learned that he now has a well-defined ledge of soft quartz eight feed wide that will yield $18 per ton, free milling. The whole vein is full of sulphurets, and an assay of these shows them to contain $300 per ton. It is estimated that in sulphurets the ledge will verage 30 per cent. The ore vein is reported to be enlarging as development work progresses, and to be looking better every foot.

The company has adopted a new method of working the ore. By means of a furnace, it will first be roasted, then milled and the gold amalgamated last. The furnace is now in course of construction, and other machinery will be shipped as soon as the roads are open via Oroville. With very little repairing, the mill will be ready to run.

Oroville Register: About twenty thousand pounds of supplies and new machinery have been purchased for the Aurora mine and will be shipped there at once. J. D. Campbell has a contract to complete the work of running the tunnel to reach the old works and this will be pushed ahead with as much energy as possible.

H. K. Vail of Forebstown was in Oroville the other day and said while things had been rather quiet of late, yet there were some encouraging signs. The big Golbank mine is employing a hundred men and paying out large sums for wages and material every week. The new tunnel is in between 700 and 800 feet. The work progresses at the rate of 100 feet a month. The incline is down 1,300 feet and if the ledge is struck in the big tunnel it will be 1,100 feet lower than the lowest level in the mine, or 2,400 feet below the surface.

Nevada City Transcript: H. W. Morris, the principal owner in the Boss mine, near Sweetland, has been over looking at the property and seeing how operations are progressing. He will return to San Francisco and arrange to send up more machinery, so that the capacity of the mill can be increased to twenty stamps. The mine is looking well, there is an abundance of ore in sight, and with facilities for handling larger quantities of it the property will pay handsomely.

Adolph Weber, M. E., W. T. Smith of the San Fracnisco Union Savings Bank, John M. Harper, mining expert, and Charles Stepp, president of the Cadmus Mining Company, arrived here from San Francisco for the purpose of inspecting the company's property in this district, which is situated on Deer creek, just below the Home mine. A very important strike was made there about two weeks ago, but the fact thereof was kept quiet until the arrival of the gentlemen named, only the officers of the company being notified.

It seems that while Charles Kahl, Superintendent, was aiding in constructing a ditch from the Home mine to the Cadmus he cut through a blind ledge only a few feet below the surface. It was two feet and a-half wide and the quartz was exceedingly rich, some of it being filled with free gold. In some of the pieces shown by Mr. Stepp the gold hung to the quartz in regular leaves, while the precious metal also extended through the rock. After this strike was made a tunnel was run into the hill a distance of 65 feet and 40 feet further down towards the creek. The ledge was cut and the prospects obtained were of such a flattering character that it is the company's intention to sink a perpendicular shaft 300 feet, for the purpose of opening up and developing the ledge. Hoisting and pumping works capable of sinking 1,500 feet will be erected without delay. This new ledge has been named the Odea, in honor of one of the stockholders.

In the Cadmus mine the developments made have been very encouraging indeed. What is known as the footwall ledge has been prospected for 300 feet and looks well the entire distance. There are several ledges in the mine, some pitching east and some pitching to the west. It is thought that these ledges are all feeders to a larger ledge which will be encountered when the proper depth is reached and that will prove remarkably rich. The Cadmus gives every indication of proving a paying mine before long, and as soon as is practicable a large force of men will be employed. The company propose to rush work there this summer.

Visalia Delta: Clark Moore of Sampson Flat has sold three mines to Judge Stanton L. Carter, C. H. Wolcott and Mark Walser. The properties are the "Homestake," "The Poor Man's Friend" and a location adjoining. The first two named were sold outright and the latter bonded. The mines are said to be valuable and easily worked.

Northwest Mining Review, Spokane, Wash.: There has never been a time in the history of the Northwest when development of the mining sections progressed so rapidly, and to this fact more than to any other is due the general inquiry by eastern people for good mining property. Within the year there will be a marked advance in all northwestern investments.

Platinum has been discovered about three miles from Oregon City, on the Clackamas river, on the land of William Lewthwaite. Preparations are being made to work the ground.

Frank Lewthwaite, nephew of William, is the discoverer and is the first one to take out the mineral, which consisted of a few grains of platinum. The assayer at San Francisco to whom the mineral was sent for assay, says the find is worth looking after.

SOME FAMOUS OLD PEOPLE.

Sir James Bacon, the distinguished jurist, is now living the busy life of an English country gentleman at the age of 97.

Dr. David Brown, principal of the Free Kirk College, Aberdeen, is one of the most active and influential members of the Scotish clergy at the age of 92.

Jules Verne, in his 79th year, still spends six hours per day regularly in severe literary work and has five stories now in press.

Senator Morrill, of Vermont, and Justice Stephen J. Field, are among the distinguished octogenarians still active in public life in this country.

Sir Henry Besemer, "the steel king," 83 years of age, continues to take a keen interest in scientific matters and keeps himself up to date. His peculiarity is that he will not give any one his autograph.

Verdi, with his four score years, at the head of the great Italian romantic school, has developed a new stlye of operatic composition, and is now at work upon the score of his second interpretation of Shakespearean comedy.

Bismarck at 80, Pope Leo at 85 and Gladstone, 85, influence public opinion more powerfully than any other three men in Europe. Gladstone continues one of the most prolific writers of the day, and the Pope finds time to compose the most exquisite Latin sonnets.

Baroness Brudett-Couts, in her 82d year, is still one of the most influential leaders in London society. Her Piccadilly house is thronged with artists, singers and people of fashion all through the season. She is as lively and brilliant as ever and devotes a large share of her time to the philanthropic enterprises with which her name is lastingly associated.

INYO INDEPENDENT.

ITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.
FRIDAY, AUGUST 23 1895

Secretary Whitney thinks that during the next twelve months President Cleveland will grow in popular esteem from the fact that he will soon have a Republican Congress on his hands, and will be the only check on the extravagance which has always characterized Republican Congresses. Mr. Whitney looks for the occasion to bring out the candidate for next year and solemnly declares that he is not to be the man, while promising to be there when the selection is made. In the determination not to be a candidate himself Mr. Whitney disappoints a great many people who recognize in him a thorough and patriotic American, with the intelligence, courage and moral purpose necessary to fit him peculiarly to discharge the greatest trust the people can put in the hands of one man. It is much for the Democratic party that it has as one of its foremost leaders such a man as William C. Whitney.

The wind up of the Bannock Indian scare shows that a great deal of smoke was caused by a very little fire. As with every Indian outbreak that has resulted in the loss of human life, there is much that could be said in extenuation of the actions of each side, and there is always a great deal that can be said on the red man's side of the question. Until this government adopts a policy of absolute extermination, than which there could be nothing more barbarous, or treats the Indians as true wards of the government and protects them in their rights, we may look for an outbreak every time the cupidity and rascality of the white agents and contractors exceed the limits of an Indians idea of decency.

Every law, upon its passage by the Legislature and upon receiving the signature of the Governor, should be submitted to the Supreme Court that they may pass upon its constitutionality says a California exchange. This would obviate any amount of trouble and expense. Business enterprises could be carried on under the laws without the fear that they would be declared unconstitutional after an expenditure of large sums of money, as in the Wright irrigation act. It is probable that slavery to custom will prevent the adoption of such a course, as it prevents the Chinese from adopting the common conveniences of modern civilized life.

The people of Berlin have been afforded an opportunity to study the vast range of California productions. An exposition has been opened in that city for the purpose of showing what the Golden State can do in the way of producing material things. The list of products shown is a long one and fully warrants the statement made by a Berlin paper that it seems more like an enumeration of the products of a whole continent than a mere relation of what a single political subdivision of the American Union can do.

The attempt to wipe silver off the face of the earth as a circulating medium and to deprive it of its purchasing power, means an increase of the indigent elements in our midst. These will fall back for support not upon the rich but the middle classes. It means the conversion of half-way sober men into vagrants and conscience less tramps ready to rob a hen roost or burn a barn for a glass of bad whisky. If you do not want to see universal vagabondage, stand up for silver.

We ought not to lightly contemplate the abolition of the jury system, but should rather endeavor to see that it is reformed and made more in keeping with modern social conditions than it is. Jury reform, not the abolition of juries, is what is needed, and the student of history does not need to be told that such reforms have been made from time to time, as occasion demanded, during the last eight hundred years at least. No good reason exists for thinking reform impossible.

The attitude of the Board of Equalization in raising the assessment of counties and the attitude of the same board in assessing the property of railroads would make good subjects for an artist who likes to paint striking contrasts.

NOTICE OF COMMISSIONER'S SALE ON FORECLOSURE OF MORTGAGE.

O. I. MAIRS, Plaintiff, vs. JOHN ALEXANDER, Assignee of John Barnes, an Insolvent Debtor, and as Assignee of M. V. Barnes, an Insolvent Debtor, Defendant.

Under and by virtue of an order of Sale and decree of foreclosure issued out of the Superior Court of the County of Inyo, State of California, on the 7th day of August, 1895, in the above entitled action, wherein, O. I. Mairs, the above-named plaintiff, obtained a judgment and decree against John Alexander, as Assignee of John Barnes, an insolvent debtor, and as Assignee of M. V. Barnes, an insolvent debtor, defendant, on the 2nd day of August, 1895, which said decree was on the 5th day of August 1895, recorded in Judgment Book No. 1 of said Court, at page 506, I was appointed commissioner to sell and I am commanded to sell:

All those certain lots, pieces and parcels of land situate, lying and being in the town of Keeler, County of Inyo, State of California, and particularly described as follows, to wit: Lots numbers 1, 2, 17 and 18, in Block No. 4 in the said town of Keeler, as the same are commonly known and designated and as the same appear by the map of said town, made by James Oliver in the year 1883.

Notice is hereby given that on Saturday, the 31st day of August, 1895, at twelve o'clock, noon, of that day, in front of the Court House, in the town of Independence, in said Inyo County, I will, in obedience to said order of sale and decree of foreclosure, sell the above described property, or so much thereof as may be necessary to satisfy plaintiff's judgment, with interest thereon and costs, to the highest and best bidder for cash in gold coin of the United States.

Dated, Independence, Cal., August 9, 1895.

J. D. MAIRS,
Commissioner.

P. H. MACK, Attorney for Plaintiff.

NOTICE.

SCHOOL BOND ELECTION NOTICE.

NOTICE is hereby given to the electors of Taboose School District, in the County of Inyo, State of California, that, in accordance with the provisions of the Political Code of the State of California, as set forth in Section 1880, to and including Section 1888 of said Code, an election will be held on the 17th day of August, A. D. 1895, at the Public School House, in said Taboose School District, at which time will be submitted to the electors of said District the question of issuing bonds of the District and selling the same, for the purpose of raising money for purchasing school lots, and for building or purchasing one or more school houses in such District, and furnishing the same.

The polls will be opened and the election held at J. H. Miller's House in Taboose School District, on the 17th day of August, 1895, and the polls will be open from 1 o'clock p. m. of said day until 6 o'clock p. m of said day.

D. E. Smith, Inspector. J. H. Miller and George Calvert will act as Judges of said election to conduct the same.

The amount of bonds to be issued is One Thousand dollars, of the denomination of One Hundred and twenty-five dollars each, and to bear interest at the rate of eight (8) per cent per annum.

Said bonds are to be numbered consecutively 1 to 8 inclusive, and are to mature as follows to wit:

1. to mature, inclusive, One year from date.
2. " " " Two years from date.
3. " " " Three years from date.
4. " " " Four years from date.
5. " " " Five years from date.
6. " " " Six years from date.
7. " " " Seven years from date.
8. " " " Eight years from date.

Said election will be held in conformity with the provisions of the Political Code of California governing such elections.

A. L. CONKLIN,
J. W. CALLOWAY,
W. B. MOORE,
Trustees of Taboose School District.

Dated July 15th, 1895.

NEW FEE BILL.

CHAPTER CCVII.

An Act to establish fees of county, township and othe officers, and of jurors and witnesses in this State.

[Approved March 28, 1895.]

The People of the State of California represented in Senate and Assembly, do enact as follows:

SECTION 1. The following county, township, and other officers shall charge and collect the following fees.

COUNTY CLERK.

On the commencement of any action or proceeding in the Superior Court, except probate proceedings, or on appeal thereto, to be paid by the party commencing such action or proceeding, or taking such appeal $5 00

On the filing of a petition for letters of administration, testamentary, or guardianship five dollars, to be paid by the petitioner; *provided*, that at the time of filing the inventory and appraisment in any such proceeding there shall be an additional deposit of one dollar for each additional thousand dollars of the appraised valuation, in excess of three thousand dollars.

On filing the petition to contest any will or codicil 3 00

On the appearance of any defendant, or any number of defendants answering jointly, to be paid upon filing the first paper in the action by him or them 2 00

On placing any action, except a probate proceeding, or default case, on the calendar for trial or hearing, to be paid by the party at whose request such action or proceeding is so placed 2 00

For every additional defendant appearing separately 1 00

The foregoing fees shall be in full for all services rendered by such Clerk in the cause, to and including the making up of the judgment roll.

On the filing of any notice of motion to move for a new trial of any civil act on or proceeding, the party filing same must pay to the Clerk, in full for all services to be rendered in connection with said motion, except as hereinafter in this section provided 2 00

For issuing an execution or order of sale in any action 1 00

In all proceedings begun or acts performed prior to this Act becoming a law, such and charges as were provided by the law at the time such proceedings were begun or acts performed.

The Clerk shall also charge and collect the following fees and compensation not above provided for:

For any copy of any record, proceeding or paper on file in the office of the Clerk relating to any civil action pending in said Court, when said copy is made by him, per folio 10

For each certificate of the Clerk, under seal of the Court 25

For filing each claim in probate or insolvency proceedings 15

No fees shall be allowed or charged by the Clerk for services rendered in any criminal case.

For services rendered by the Clerk, not in connection with civil action or proceedings in Court, he shall charge and collect, for the benefit of the county, the following fees:

For issuing marriage license, one half to be paid to the County Recorder 2 00

For filing and indexing articles of incorporation 1 00

For filing and indexing certificates of copartnership 1 00

For filing and indexing all papers to be kept by him, other than papers filed in actions or proceedings in court, and official bonds and certificates of appointment, each 25

ALIAS SUMMONS.

Action brought in the Superior Court of the County of Inyo, State of California, and the complaint filed in said County of Inyo in the office of the Clerk of said Superior Court.

Adolph Gerckens Plaintiff, vs. Annie J. Gerckens Defendant.

The people of the State of California send greeting to Annie J. Gerckens, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Superior Court of the County of Inyo State of California, and to answer the complaint filed therein, within ten days (exclusive of the day of service), after the service on you of this Summons—if served within this Inyo County, or, if served elsewhere, within thirty days.

The said action is brought to obtain judgment against you and a decree dissolving the bonds of matrimony heretofore and now existing between the plaintiff and defendant as will more fully appear by reference to the complaint on file herein.

And you are hereby notified that if you fail to appear and answer the said complaint, as above required, the plaintiff will apply to the Court for the relief demanded therein.

Witness my hand and the Seal of said Superior Court of the County of Inyo, State of California, this 18th day of June, A. D. 1895.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY the 8th day of March, 1892, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise, acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit Commencing at the South-east corner of the south-east quarter of North east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 98-100; thence North-east following the meanderings of the bed of the Creek along its North branch to Edwards street, in the town of Independence thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hallnah, deceased, at the time of his death.

Lots Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate, lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dispricada Lode."

That certain lot, piece, or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the North-west quarter and the North-east quarter of Section No. twelve (12), and the South-west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South sixty-eight and eleven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence North-westerly along a small branch or swale to a point twenty four (24) rods North of the general corner of the North East quarter and the South-east quarter, and the North-west quarter and the North east quarter of the North-west quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres: Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney, at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court Deed at the expense of purchaser.

WILLIAM L. HUNTER.
Executor of the Last Will and Testament John Allen Hannah deceased.

KENDALL'S SPAVIN CURE.

STAR, LANE CO., OREGON, Feb. 8th, 1892.
DR. B. J. KENDALL CO.,
Dear Sirs:—I have used your KENDALL'S SPAVIN CURE for the last twelve years never being without it but a few weeks in that time and I have made several wonderful cures with it. I cured a Curb of long standing. Then I had a four year old colt badly Sweenied; tried every thing without any benefit, so I tried your liniment, and in a few weeks he was well and his shoulder filled up all right, and the other, a four year old that had a Thoroughpin and Blood Spavin on the same joint, and to-day no one can tell which leg it was on. These statements can be proven, if necessary; the four year olds are now seven and can be seen any day at College Grove, Or. S. Z. PAXTON.

—Price $1.00 per bottle.—

Antimony	10
Borax, refined, in car lots	5½
Pig lead	4.00

MARRIED.

FRAZER—LUBKEN—At Lone Pine, Cal., August 19, 1895, by Rev. S. W. Albone, Mr. S. A. Frazer and Miss Amy Lubken.

R. P. Hession of Big Pine is in town.

J. D. Lewis, Esq., and Albert Lewis are in San Francisco.

John Baxter has about five tons of new honey ready for market.

N. E. Conklin, Esq., is Deputy District Attorney of Kern county.

Misses Eugenie and Adeline Meysan are visiting friends in town.

Bell's Flour Mill is now running and all orders will be promptly filled.

Elegant and stylish line of woolen dress patterns, no two alike, at Eibeshutz'. *

Irving Wooden has returned to school at Belmont, going north Tuesday morning.

Supervisor Eldred came down from Big Pine last Sunday, returning Monday morning.

While on his camping trip J. C. Irwin succeeded in killing a bear at Horsecoral Meadows.

Mr. and Mrs. Mike McSweeney and John McSweeney are enjoying a camping trip at Onion Valley.

The *Index* states that a full programme for the coming fair at Bishop will be published next week.

Miss Elsie Eibeshutz has gone to San Francisco, where she will spend some time visiting with relatives.

Henry Fehrman has returned from Mammoth and has almost entirely recovered from his recent shaking up.

Mrs. Julia Church and her three children returned to their home in Hawthorne Thursday after a fishing trip of a few weeks.

Felix Meysan left here yesterday morning for Round Valley, where he will remain for some time doing assessment work on his mine.

Arthur Robinson and Bill McCown got back early this week from their camping trip to the Kern River country. Arthur has very much improved in health.

The Schobers passed through town last Sunday with their big team loaded with ten tons of freight. They will load at Mojave with merchandise for various points in the valley.

A new stock of Fall and Winter goods, including every line of men and women's wear, in endless variety, was received and opened at Eibeshutz' during the past week. Call and inspect them. *

Harry Cook came down from Long Valley last Monday and expects to return in a day or two. He says that the cattlemen from this vicinity who drove their steers to Bridgeport will succeed in marketing their cattle at good prices.

John Clarke arrived from Bishop last Tuesday morning with Mr. and Mrs. Albers. The injured people stood the trip very well and are quite likely to recover. Dr. Dorrance accompanied them, returning Wednesday. Dr. I. J. Woodin is now in charge of the case.

A Chinaman was arrested at Keeler on Tuesday and examined in Justice Davidson's Court yesterday morning on a charge of selling whiskey to an Indian. The complaining witnesses were Oscar Dearborn and William Kiby. The coolie was held for trial in the superior Court, and his bail fixed at $500.

There was evidently error in the statement published some time ago that the running horse "Bronco" was dead. It was reported that he had fallen dead on the Oakland track. It now appears that Prof. Gleason, the noted horsebreaker, has him in charge. He started in a race at San Francisco last week and was badly beaten.

CERRO GORDO NOTES.

CERRO GORDO, Aug. 21, 1895.

This is a poor place to get news from, but if anything turns up I will let you know.

Jack Dunphy is going to Lone Pine in a few days. He will likely go down below again to his brother; he has improved in health.

Pat Clinton expects to ship two car loads of fine ore in a few days. The mine is looking fine.

Tom Boland expects to start up the Union mine in a short time, and will put a large number of men at work.

Mr. J. Morton was in town to-day, and he says that he expects to reopen his saloon at Keeler in a few days.

JIGGER.

Farewell Benefit.

On Monday evening an entertainment was given in the M. E. Church for the benefit of the departing pastor, Mr. S. W. Albone. The young folks under the supervision of Mr. H. E. Wilkinson had prepared a most interesting programme, and proved that our local talent is of no mean order. The programme consisted of two parts with an intermission of fifteen minutes. During the intermission a fair Rebecca was disclosed near an ivy-covered well drawing up lemonade which a corps of fair maids distributed among the audience. At the close of the evening Mr. Wilkinson made some remarks containing more truth than poetry, and Mr. Albone followed with a few words of farewell. Then followed a social time during which Rebecca dispensed more lemonade and all bade Mr. Albone good-bye. Among those who helped to make the evening a success, were Mr. Wilkinson, Miss Nellie Densmore, accompanist, Miss Maud Cook, who gave the use of her piano, and Miss Margie Bell as Rebecca. The proceeds of the evening amounted to forty-three dollars, and were presented to Mr. Albone as a substantial token of regard.

Wedding At Lone Pine.

A very pretty wedding took place at Lone Pine last Monday noon, the contracting parties being Mr. S. A. Frazer and Miss Amy Lubken. The young lady is a native of Inyo and is well known hereabouts. The young gentleman was superintendent at the marble works. The bride was dressed in cream colored silk with gloves and slippers to match. She wore the conventional bridal veil and wreath of orange blossoms and made a beautiful picture to linger in the minds of those who witnessed the ceremony. The bridesmaid, Miss Effie Roeper, wore a lace trimmed white dress. Mr. John Lubken acted as best man. The young couple left in the afternoon for Olancha, where they took the stage for Mojave. They will spend their honeymoon in Los Angeles and San Francisco. The best wishes of a host of friends followed them on their wedding journey.

The Fair Assured.

To show those material things whose production, use and sale makes the living and business of our valley, we must gather together the fruits of our industry, and show our people, strangers, and the world our resources. If well handled it promises to afford a fairly complete exhibit of what we have accomplished and should count on liberal patronage. Some four hundred dollars have been subscribed by our townsmen with the ranchers yet to hear from. It is proposed that the prizes be of generally utility, such as carts, harness, agricultural implements and domestic articles. The time is favorable and the revival of business ought to make the Fair an object of special interest. It is the determination of the promoters to meet the expectation of the public and make it a success. The occasion the circumstances and our people are in accord, and we may reasonably look forward to a Fair that will afford us not only enjoyment, but also the satisfaction of meeting and seeing evidences that we are on the road to prosperity, and that our ambition and desire to come to the front in making money are in a fair way to be realized.—*Index.*

From Candelaria.

Colonel William Sutherland, the mining man returned last evening from a visit to Candelaria. He says the work of getting things about the old camp in readiness for operation has been somewhat retarded on account of getting water into the town. Workmen are engaged in digging ditch and laying pipe and have completed the line as far as Basalt, several miles from Candelaria. He says, however, that everything is progressing as well as could be expected under the circumstances. When the water works are in running order no time will be lost in getting everything else on the move. He speaks encouragingly of the prospects, and thinks good times are in store for the people of Esmeralda county. He continued on to San Francisco but will return within a week or ten days.—*Hawthorne Bulletin.*

The Stevens Ditch has again broken its banks near the bridge on the road to Citrus. For about a mile the ditch is constructed along the edge of a high bank, and as the grade is very slight whenever a little more water than usual is turned in at the headgate a break occurs. Supt. Jack Davies is engaged with a strong force cutting an entirely new channel this side of the bridge, which went down in the washout. This will allow the constraction of a better grade for the road down the bank.

J. C. Irwin and Arthur Smith accompanied by John Broder and Morris Power of Visalia arrived at Independence last Monday. On Tuesday Mr. Broder went to Fish Spring to visit his uncle, Scott Broder, whom he had not seen for many years. Mr. Power is ex-District Attorney of Tulare County and an old schoolmate of W. A. Lamar, who has been doing him the honors of the town.

The Board of Education is holding its regular meeting this week. A committee on Course of Study was appointed Monday and will report to-morrow. The following are applying for Grammar Gaade certificates; Miss Clara Eldred of Big Pine, Miss Mildred Gregory of Bodie, Miss Clara Reynolds of Georges Creek, Miss Katie Arcularius of Round Valley and Mr. G. J. Dixon of Bishop.

Observer.

Coolgardie.

Rich new finds are being constantly reported from Coolgardie gold fields. Coolgardie, Australia, is an accessible point, reached by steamer to Fremantle, thence by rail to Southern Cross and team to destination. The trip to Australia on the fine steamers of the Oceanic Steamship Company via Honolulu, Samoa, and New Zealand is pleasure sailing the day long. This line tickets passengers to Cape Town, South Africa. Map of Coolgardie district and Pacific ports reached by the Oceanic Steamship Company is mailed free to any address by the O. S. S. Co. 114 Montgomery St San Francisco.

Estray Notice

There came to my place on July 22, 1895, a grey mare, weight about 1100 lbs. no visible brand, large scars on back, swelling in knee of left front leg, gentle animal and a persistent gate breaker. Owner will call and prove property and pay charges.

Camp Independence, July 26, 1895.

News and Notes.

Italian bees are now conceded to be the best bees for this country.

The area of the new wheat crop is reduced at many points, in a few enlarged, with some probable reduction in the average.

A large proportion of the cider consumed in England is of American manufacture.

The average apple crop of 1894 is the poorest in quality of any year for the last seven.

A bounty on foxes is desired in many sections of the country.

The painting of house and whitewashing or painting of outbuildings, fences and gates should be looked to and renewed as often as needed for appearance's sake as well as for the sake of preserving the wood.

The western farmer is beginning to find out that successive corn and wheat crops are too exhaustive of the soil. When he sows more clover, he will find, after a few years, that his soil will better retain moisture, and this will supply his crop in the destructive droughts which now prevail.

The supply of evaporated apples has been much larger this fall than usual, but an active demand has kept the market well cleared.

California growers will next try shipping fruit in tight cars filled with carbonic acid gas, which, it is claimed, will preserve the fruit without damage to its flavor. It is expected to prove cheaper than cold storage.

The returns relative to the feeding of wheat to stock are not sufficient to justify a report at this date.

At the Cincinnati garbage furnace works, ashes are sold at $8 per ton for fertilizer.

The Farm Pond.

Farm, Field and Fireside says that every farmer ought to make a pond for keeping fish and for irrigating purposes.

It will help to hold the dam in place, will furnish shade and serve other useful ends if the lower side of the pond is planted with willows and similar trees. For places of this sort Professor F. A. Waugh of the Oklahoma experiment station especially recommends the Babylonian willow which grows more rank and vigorous than any of the native species. All the willows grow easily from cuttings, and a few stuck into the bank in the spring will soon make a fine showing.

Odd Mention.

The use of artificial manures is spreading westward. Farmers should make a careful study of the subject of manures. This knowledge lies at the foundation of their business.

A mixed ration of wheat and corn ground makes a desirable feed for milk cows.

Professor Shelton says that farmyard manure should be hauled to the field in the spring.

ORDER TO SHOW CAUSE WHY ORDER OF SALE OF REAL ESTATE SHOULD NOT BE MADE.

IN THE SUPERIOR COURT OF THE COUNTY OF INYO, STATE OF CALIFORNIA.

In the matter of the estate of James Daley, deceased.

H. H. Howell, the Administrator of the estate of James Daley, deceased, having filed his petition herein, duly verified, praying for an order of sale of the Mayflower mine and mining claim, and the decedent's mill-site, being a portion of the real estate of said deceased, for the purposes therein set forth,

It is therefore ordered by the Judge of said Court that all persons interested in the estate of said deceased appear before the said Superior Court on Saturday, the 17th day of August, 1895, at 10 o'clock a. m. of said day, at the Court-Room of said Superior Court, at the Court House, in the County of Inyo, State of California, to show cause why an order should not be granted to the said Administrator to sell the said mine and mining claim and the said mill site.

And that a copy of this order be published at least once a week for four consecutive weeks in the Inyo Independent, a newspaper printed and published in said Inyo county.

GEO. M. GILL,
Judge of the Superior Court.

Dated July 1, 1895.

By DAVID DWIGHT WELLS.

CHAPTER I.

She had fainted.

Most men regard five o'clock teas as an unmitigated nuisance, and class them, together with house cleanings, shopping tours and sewing circles as necessary evils imposed by society and dear to the hearts of women. One cause of this feeling may arise from the fact that here, if nowhere else, the lord of creation is put in the background, and is of no use whatever, except to fill up pauses in conversation and throw into bolder relief by his plain attire the more striking costumes of the fair sex. This tea drinking, moreover, seems to many men a useless waste of time, because it is of no practical value in the sight of the world.

Let it be understood once for all, then, that to give a successful five o'clock tea requires great talent and is an art acquired by few, implying as it does the ability to get just the right people together and to let them eat, drink and be merry at the time when the majority of mankind wishes to be doing something else. Mrs. X——, as is well known in Cambridge, possesses this talent in a marked degree, and happy is he who is favored with one of her invitations. I, myself, never fail to attend, and from the crowds that throng her parlors I do not think that I am any exception to the general rule. I do not know whether it is the pleasant people you always meet there, or the beauty of the house, or the delicious wafers you are treated to, or the eggshell cups out of which you sip your chocolate; or last, but by no means least, the grace of the hostess herself; but it is charming and soothing and restful, and you go away feeling that you have spent a very delightful half hour. I, indeed, have good reason to remember one of these teas at least, for it was there I first met Miss Ormsby.

She impressed me as soon as I saw her, for she combined qualities unusual in a woman. Tall and slender, with golden brown hair and a fair skin just tinged here and there with a suspicion of the brunette, she presented externally the appearance of a woman easily moved and easily influenced. When you heard her talk you changed your opinion, for you knew that she meant what she said. Miss Ormsby never said, "I think such a thing is so;" it was always, "I know it is so," and this was a key to her whole character. Like Pilate, her motto was, "What I have written, I have written;" and her will was as the law of the Medes and Persians, unalterable. Her purpose might be crushed by the force of circumstances, but it was never changed. Without, and to the world as a whole, she was as docile as a kitten; within, and to herself, she was a tigress in strength and brutality. The world at large does not know this and probably will not believe it, for Miss Ormsby is a leader in society and society does not like a tigress; she is like a wolf in a fold of conventional lambs, and is called by the world a strong minded woman. So well, however, did the kitten conceal the tigress that no one has ever suspected her, nor would I if I had not seen her claws.

As I said, I was introduced to her at Mrs. X——'s five o'clock tea, and I at once became interested in her. It is considered a fine thing for a man to be able to size up mentally and morally any woman that he meets; but it is very unpleasant when a woman turns the tables on you and does the sizing up herself. So it was with Miss Ormsby; I knew before I had been talking with her five minutes that she had taken my measure, so to speak, and I also had an unpleasant conviction that the result was not complimentary to myself. Nothing in her conversation, which was confined to social commonplaces, betrayed the fact, and after awhile we drifted apart and I did not see her again that afternoon.

I saw her quite often after that at dinners and teas, and though we talked together on these occasions I never knew her better than on the first day I met her. I often wondered why she tolerated me, for I felt sure she disliked me, but I had to take it out in wondering.

I started into Boston on a warm afternoon in June to attend to a matter of business. Taking a Park square car I got to Beacon street and from there across the Common. When I had half of the way I saw something from the opposite side was bewitchingly even more fascinating than usual. I was lazy, for it was a hot day, and did not feel energy enough for a protracted conversation; so it was with a determination of not stopping if I could help it that I advanced toward her.

"Ah, Mr. Cummings," she cried, as I greeted her, "you are the very man I want to see. I was looking for some knight to serve me and here he is."

"I have done nothing to deserve that title as yet, Miss Ormsby," I replied, "but I shall be delighted to win my spurs in your service."

"Very prettily answered," she returned laughing, "but do not be fearful, I am not going to set you fighting any dragon or indulging in any tournament; it might spoil your clothes."

I winced; she was making fun of me, and hugely enjoyed my discomfiture.

I put the best face I could on the matter, however, and replied that I should be delighted to slay all the knights and dragons in creation, if she so commanded.

"Why," she said laughing, "it's not quite so bad as all that, but I would be very much obliged to you if you would leave this little package at the ribbon counter at Jordan & Marsh's for me. I know it's a good deal to ask this hot day, and it will be a dreadful bore to you to do it, but you see I have to be in Cambridge in half an hour and can't possibly go myself." I protested that I should be delighted to execute the commission, and asked if there was any message to be delivered with the packet.

"Message! no, indeed! Do you think I know you men so little? Why, I would no more think of giving a man a message than I would of flying. There is a little note inside that explains everything, so all you will have to do is to leave it," and she departed laughing. I stood for a moment or two watching her and then laughed myself. She was certainly very original, and the whole episode rather pleased me.

I sauntered up Tremont to Boylston and did two or three small errands on the way. Then I started down Washington street, but only got as far as the Adams House, where I saw a friend in the office, and just dropping in to chat with him for a minute stand nearly half an hour. Suddenly I remembered the packet, and my conscience smote me; perhaps Miss Ormsby wanted it delivered in a hurry, and I had forgotten all about it.

I was soon at Jordan & Marsh's, and after some trouble found my way to the ribbon counter. Speaking to the first girl that confronted me I said: "I was requested to leave this little package here. I suppose it is expected." The girl hesitated for a minute, and while she did so another young woman came hurriedly up and taking the package said: "Yes, it is all right—the purchase was made from me; I am expecting it." I handed it to her and turned away, saying as I did so that the message was inclosed within.

I had scarcely gone more than a step or two when I heard something heavy fall, followed almost instantly by a cry of dismay from the girls at the counter.

Turning around I saw that the girl to whom I had given the packet had fallen to the floor, and a moment sufficed to discover that she had fainted. A little crowd had gathered around her, but she was at once carried away to a dressing room near by, where she received such assistance as was necessary.

The crowd followed as crowds do, and I was left alone by the counter. Before me lay the package, which she had let fall when she fainted. It was opened and I saw that it contained a sample of purple ribbon and no writing of any kind whatever; evidently it could have had nothing to do with her faintness, which I supposed was caused by the heat of the day.

It was a bore anyhow, and I hated scenes. Why could she not have fainted a little later, and have given me a chance to have got out of the way? Most of the people who saw it, I suppose, thought I had something to do with it, and if I stayed here much longer I should make a fool of myself. I accordingly moved off to another part of the store; but before I could get to the street I was met by several of my lady friends, who seemed much amused to see me in Jordan & Marsh's. I was glad they had not seen the little episode; I should never have heard the last of it. My little conversation with these ladies, however, took up some time, and when I reached the main entrance I was annoyed to find that the girl who had fainted was just being helped into a cab. I followed her out of the store, saw her put into the carriage and heard the driver directed to a house in a poor but respectable part of South Boston.

CHAPTER II.

I had scarcely noticed the girl when I gave her the ribbon, but as she left the store I looked at her more closely and saw that she was singularly refined for her position, besides being remarkably handsome. I determined to follow her and find out something about her if I could. Waiting, therefore, till she was well out of sight I called a cab and ordered the driver to take me to the street in which she lived. I soon stood before the house; it was very plain and unpretentious, being built of red brick, with green blinds, and having a door in the center. Within the door a very unattractive servant girl was scrubbing the floor of the little hall. I made up my mind that this must be a cheap boarding house and determined to interrogate the girl concerning the lodgers.

"Does Miss Mason live here?" I asked; I had learned her name at the store.

"Yes," returned she snappishly. "What's that to you?"

"Nothing in particular," I replied, a little disconcerted at this unexpected question. "She was taken ill at the store and I fear I may have been the cause of it. I only wished to inquire how she was."

"Oh, I reckon she's all right," replied she of the scrubbing brush, and returned once more to her task, which my question had interrupted.

"Is she at home?"

"No; she just went out. Did yer want to see her?"

"But I thought she was ill?" I said, surprised at this piece of information.

"Not much, I guess; she ain't been gone more'n a minute."

"Did she say where she was going?"

"Yes; Malden. That's where her folks used to live. She said she wouldn't be back tonight."

Evidently I could find out nothing more from this source, and I was just about to turn away when a gentleman brushed by me up the steps and started to go into the house.

He turned very pale and staggered like a drunken man.

I recognized him as Frank Holden, whom I had met several times in Boston and Cambridge society. In his hurry he had not recognized me, and I was about to pass out when his conversation caused me to stop. As he went by the girl she caught him by his coat and said, "It ain't any use goin' in, Mr. Holden, she ain't there."

"What! isn't Miss Mason at home?"

"No, I guess she's got tired of waiting for you, you ain't been here in so long;" this last remark with a coarse laugh.

"Oh, come, Lizzie, my good girl," he replied, "I've been busy, and could not help it. I think I will wait, however; she may be back soon."

"I guess she won't."

"I think she will. But tell me, Lizzie, is she well?"

"No, she ain't. She came home from the store this morning sick."

"Sick!" he exclaimed, and started violently.

"Yes, had a fainting turn; she cried, and"——

I had been standing by all this time, wondering how the deuce the fashionable Frank Holden knew anything about this girl, and what he wanted to see her for. I now joined in the conversation, and stepping forward interrupted Lizzie, and said, "Excuse me, Mr. Holden, but as I happened to be at Jordan & Marsh's when Miss Mason fainted, perhaps I can give you the information you desire." He recognized me and thanked me, though at the same time I could see that he was annoyed at my presence.

"The illness is nothing to be alarmed at or startled about," I said, "merely a little fainting attack, the result of a shock; she must be much better, as she has gone out."

"Yes, of course. Excuse me if I seem inquisitive, but I am very much interested in Miss Mason's welfare. May I ask what caused the shock?"

"Why, certainly," I replied, growing more and more surprised as the conversation continued. "She received a package the contents of which seemed to startle her."

"Yes, I know; it was a sample of ribbon."

How the devil did you know it though? thought I to myself, but I did not say so.

"Red ribbon, wasn't it?" he continued.

"But of course it was."

"No," I replied, "it was purple."

If I had struck him a blow in the face he could not have been more startled. He turned very pale and staggered like a drunken man. I looked at him, too astonished to speak. "Purple?" he gasped; then, without giving me time to speak, he continued: "There must be some dreadful mistake; you say she went out?"

"Miss Mason? Yes."

"Where did she go? Do you know?"

"I was told she had gone to Malden on business by this girl here."

"Good God! she'll kill herself if I can't get there first to stop her! Where can I get a cab? Tell me quick."

"Here's mine—you are welcome to it; can I give you any assistance?"

"No, nothing; I am the only one who can save her. This is an awful sort of marriage day for her though, poor girl."

"Marriage day! Who was going to marry her?"

"I was," he cried, and jumping into the cab rattled away up the street and out of sight in a moment.

I was astonished. I am not generally—it takes too much exertion. I looked at the servant and saw that she was as astonished as I was, for she stared after the carriage for a moment and then laughed. That was the difference between her astonishment and mine. I tried to think out some solution for the mystery, and she, like all uncultivated people, and the majority of women, laughed at what she could not understand.

Her laughter grated on me, and I said somewhat sharply: "I see nothing to laugh at. Do you?"

"The young gent used to be mighty sweet on her a while ago, but he hain't been near her for more'n three months, and now jist because she ain't at home he gets riled," she replied and laughed again.

I walked away thinking and very much puzzled. I was already becoming suspicious of the whole matter. Were all these things that had happened coincidences? I thought not. But if they were not then they depended on each other, and how that was possible I could not understand. Could it be that I had been used as a tool in this matter by Miss Ormsby, and that the package contained something more than I knew of? But what possible connection could there be between the beautiful Miss Ormsby and the little shop girl? Why should Mr. Holden be going to marry a girl whom he had not seen for three months? Why should she kill herself, and how could he prevent it? And lastly, what had the scrap of purple ribbon got to do with the affair, anyhow? For there was no doubt in my mind that it was the link that bound the whole mystery together.

The saying that if there is any mischief brewing there is always a woman in the case, is trite enough to be sure; and I have invariably found it to be true.

Who was the woman?

Every indication so far pointed to but one, and that was Miss Ormsby.

There was but one break in the chain of the evidence that marked her out as being at the bottom of the matter, and that was the absence of any motive for getting rid of the shop girl in Jordan & Marsh's.

Evidently I must try to find out what I could from Miss Ormsby. That, however, was no easy matter, for I knew her character well enough to know that I could not make her tell me what she did not choose to, though I began to have an unpleasant feeling that she might be responsible for a— Well, I would wait till I heard something more from Malden, and meantime I would make a party call that I owed to Miss Ormsby.

CHAPTER III.

She was carefully searching every nook and corner of a small lot.

Eight o'clock found me before her house, clad in my dress suit and otherwise equipped for an evening call. In front of the door stood a carriage, evidently waiting for some one. I determined to wait also and see who was going out. Perhaps five minutes had elapsed when the front door opened, and Miss Ormsby, clad in a light gray traveling dress, came out and stepped into the carriage. She carried a small bag in her hand, and gave her directions to the driver in so low a tone of voice that I could not catch what she said. I drew back into the shadow lest she could see me when she drove off; but no sooner was she gone than I rang the bell and inquired of the maid who answered it if she was at home.

I was told that she was not, but had gone out to a large ball that was to be given that night in Boston, and to which I also had been invited. I overstepped the bounds of conventionality so far as to ask whom she had gone with, and was not a little surprised to learn that it was none other than Mr. Frank Holden.

I walked away a few steps from the house and then stopped to think. Mr. Holden I had good reason to suppose was in Malden—at least I was very sure that he was not in the carriage with Miss Ormsby. Young ladies, moreover, were not in the habit of going to evening parties in traveling dresses, or for that matter of traveling alone at night and unprotected. I thought I began to see a clew.

Just then an empty herdic passed me and I hailed it. "I want to go to Boston and to get there as quickly as possible," I said; "drive fast and I will give you a dollar extra."

But though the cabman obeyed his instructions well I did not overtake Miss Ormsby. When we reached Charles street he stopped and inquired where he should go next. I thought a moment and then told him to take me to the Providence station. Telling the man to wait I hurriedly scanned the faces of the crowd in the waiting room, but she was not among them.

We then drove as fast as we were able to the New England and Boston and Albany depots, but had no better success. I then tried the Fitchburg and Eastern; and finally, tired out and almost despairing, drew up before the Boston and Maine. As I entered the waiting room I saw a figure in gray just going out on the platform, and dashing after her recognized Miss Ormsby. I saw her get into a train, and then asked the porter standing by where it went to. He rattled off a number of places; but among them was a name that convinced me that I was at last on the right track, and returning to the office I bought a ticket for Malden.

The ride thither was uneventful enough, for I had nothing to do but keep myself out of Miss Ormsby's sight. As I had anticipated, she left the train there, and I followed her. It was by this time nearly half-past nine, and but few people were on the station platform. She hesitated for a minute or two, and then going up to the baggage master had a little conversation with him, after which she took a carriage, and I heard her direct the driver to take her to the best hotel.

As soon as she had gone I approached the official she had spoken to and asked him if a young lady answering the description of Miss Mason had arrived in Malden that day.

"Why, that's the young woman that the lady who has just gone was asking about," he said.

"Yes, I know. Did you tell her that she had come?" I replied, delighted at finding my suspicions prove correct and feeling sure that I was on the verge of a discovery.

"Why do you want to know?" he asked.

(To be continued.)

THE BEEF MARKET.

N. H. A. Mason tells the Reno Gazette that the outlook for the beef market the coming fall is very bright. He says the Eastern market is bound to want Nevada beef and that the indications are very flattering for a stiff market West. He says Nevada has disposed of all her surplus beef and a demand for Nevada cattle will be made early in the summer and continue until the close of the year. Stock cattle are looking up a little.—Carson City Appeal.

A PECULIAR CASE.

Physicians Puzzled by the Experience of Mrs. Bowen.

The Episcopal Hospital Said She Had Consumption.

(From the Record, Philadelphia, Pa.)

Last July the Episcopal hospital admitted a woman whose pale and emaciated face and racking cough proclaimed her the victim of consumption. She gave her name as Mrs. Sallie G. Bowen, wife of Wm. G. Bowen, residence, 1849 Meighan St., Philadelphia. The case was diagnosed and she was told plainly that she was in an advanced stage of consumption. The examining physician even showed her the sunken place in her breast where the cavity in her lung was supposed to exist. She went home to her family a broken, disheartened woman with death staring her in the face. That was the beginning of the story, the end was told by Mrs. Bowen, who no longer expects to die, to a reporter who visited her home.

"The first symptoms of consumption came in the form of terrible sweats, both night and day. From April until September I was constantly cold and kept wrapped up in blankets through the hottest weather. A terrible cough took possession of me, my breast was sore to the slightest touch, and my limbs were like cold clay. The hardest rubbing with the coarsest towel would not create the slightest flush, and the least exertion would so exhaust me that I could barely gasp for water.

"I went to the hospital in July and they diagnosed my case as above stated. It was when the clouds were the darkest that the first glint of sunshine came. Mr. Shelmerdine, a friend, who lives around at 1844 Clementine St., said to me one day, Mrs. Bowen did you ever try Dr. Williams' Pink Pills for Pale People? I had never heard of the medicine, but in my condition could not turn a deaf ear to anything that offered relief. It was after considerable thought and investigation that I concluded to discontinue all the medicine I was taking, including cod liver oil, and depend entirely upon Pink Pills. I began to take the pills, at first with but little encouragement. The first sign of improvement was a warmth and a tingling sensation in my limbs. Finally the cough disappeared, my chest lost its soreness and I began to gain flesh until I was fifteen pounds heavier. All this I owe to Dr. Williams' Pink Pills and I cannot praise them too highly."

Mrs. Bowen is a kindly faced lady of middle age, a church member well-known and highly esteemed. She looks today well and strong and it seems almost impossible that she was ever given up by eminent physicians as an incurable consumptive. Yet such is the case beyond all dispute.

Dr. Williams' Pink Pills contain all the elements necessary to give new life and richness to the blood and restore shattered nerves. They are for sale by all druggists, or may be had by mail from Dr. Williams' Medicine Co., Schenectady, N. Y., for 50c. per box, or six boxes for $2 50.

A NOVELIST'S REVENGE.

A certain well-known lady novelist recently took possession of a new villa in a popular metropolitan suburb. To her dismay she found that the walls, staggering under the weight of the paper on them, refused to support any pictures or other adornments, and that she had to study, if not a "concrete" social problem, at any rate a "mortar" domestic crisis. In revenge she wrote to the landlord and asked if she might bestow any name she liked on the house, and as he replied giving his sanction, she promptly had the title of "The Jerry-built Hut" painted upon the portal. And now the landlord says she has taken a much too liberal view of his consent.—London Telegraph.

There are three important birthday celebrations in the Russian imperial family this month—the Czar reaching his twenty-eighth year, the Czarewitch his twenty-fifth and the Grand Duke Sergius, an uncle of the Czar, his thirty-ninth.

Piso's Cure is the medicine to break up children's Coughs and Colds.—MRS. M. G. BLUNT, Sprague, Wash, March 8, 1894.

HOITT'S SCHOOL.

Nowhere are boys better cared for and more thoroughly taught than at Hoitt's School, Burlingame, San Mateo county, Cal. The school is in charge of Ira G. Hoitt, Ph. D., and will reopen August 6th.—*S. F. Chronicle.*

"I'm doing nothing at all just now," he said in reply to a query. "I have a little money to invest in some business enterprise, and I am looking around for an opening." "Why don't you start a new paper in Chicago as every one else is doing?"

THE KEYSTONE OF THE ARCH

In the edifice of health is vigor, which means not merely muscular energy, but an active discharge of the various functions of the body, such as digestion, secretion of the bile, the action of the bowels, the circulation of the blood. Nothing more actively and thoroughly contributes to the united performance of these functions than the renowned tonic and regulator, Hostetter's Stomach Bitters. The result of its use is a speedy gain in strength, together with the agreeable consciousness that the tenure of life is being strengthened—that one is laying up a store of vitality against the unavoidable draughts which old age makes upon the system. The fortifying influence of the Bitters constitute it a reliable safeguard against malaria, rheumatism and kidney trouble. Appetite and sleep improve through its use, and it protects the system from the effects of cold and damp.

California diamonds are found in all the colors, from a brilliant white to a clear black, together with rose, pink, yellow, blue and green.

DEAFNESS CANNOT BE CURED

By local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure Deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube gets inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by catarrh which is nothing but an inflamed condition of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars, free.

IT LURED MINERS.

Mass of Copper in Lake Superior Region.

IT WAS WORSHIPED AS A MANITOU.

It Weighed Three Tons and Was Exhibited in New York for a Small Fee a Generation Ago.

In an obscure corner of the National Museum at Washington a boulder of native copper, weighing, perhaps, three tons, rests on a plain wooden base. No inscription bears record as to the origin or the history of this copper fragment, the size of which alone would make it notable.

Worshiped as a manitou by the superstitious Indians during uncounted years, the siren of mining adventurers while yet the flag of England floated over the lake country, the objective point of hazardous expeditions by explorer and scientist, the Ontonagon boulder has never, says the Washington Star, been so left to itself as it has been during the half century that has elapsed since it was brought to the national capital, where the expectation was that all eyes might gaze upon it as the representative of national wealth and enterprise.

In 1771 lured, doubtless, by the mass of copper at the forks of the Ontonagon, Alexander Henry and his associates undertook to pierce the bluffs of clay and red sandstone which border that stream, in the hope of finding the vein whence the boulder came. Only complete ignorance of the geology of the Lake Superior region can explain what Dr. Houghton calls "these quixotic trials," and complete failure was the natural result.

In 1819 Gen. Lewis Cass made the first explorations of the Lake Superior region that were undertaken by this government. Turning from their path, his party ascended the Ontonagon River for thirty miles to visit the mass of copper, whose existence, he says, had long been known. "Common report," he writes to John C. Calhoun, Secretary of War, "had greatly magnified the quantity, though enough remains, even after a rigid examination, to render it a mineralogical curiosity. Instead of being a mass of pure copper, it is rather copper imbedded in a hard rock, and the weight probaby does not exceed five tons, of which the rock is much the larger part. It was impossible to procure any specimens, for such was its hardness that our chisels broke like glass. I intend to send some Indians in the spring to procure the necesary specimens. As I understand the nature of the substance we can now furnish them with such tools as will effect the object. I shall, on their return, send you such specimens as you may wish to retain for the government or to distribute as cabinet specimens among the various literary institutions of the country."

Until the report made by the State geologist of Michigan, Dr. Doulgass Houghton, in 1841, there had been no authentic or trustworthy statements in regard to the copper-bearing rocks of Lake Superior, but within four years from the date of that report the mineral lands from the tip of Keweenaw Point to the Ontonagon River were overrun with prospectors, the great majority of whom left dollars where they found pennies. It is in Dr. Houghton's report that the best scientific account of the copper rocks is to be found. "I have thus far," he says, "omitted to allude particularly to the large mass of native copper which has been so long known to exist in the bed of the Ontonagon River, lest perhaps this isolated mass might be confounded with the veins of the mineral district. That this mass has once occupied a place in some one of these veins is quite certain, but it is now perfectly separated from its original condition, and appears simply as a loose, transported boulder.

"The copper boulder is associated with rocky matter, which in all respects resembles that associated with that metal in some portions of the mines before described, the rocky matter being bound together with innumerable strings of metal; but a very considerable portion of the whole is copper in a state of purity.

"Prior to 1843 not a pound of copper had been shipped commercially from Lake Superior. The billion and a-half pounds which have been taken from that region have been mined since that year, and more than half that product has been taken from a mine discovered since the war of the rebellion ended. The Ontonagon boulder was not regarded primarily in a commercial light; for its market value as ingot copper could not have exceeded $600. Mr. Eldred's object in transporting it to the lower lakes was to exhibit it for money in the various cities of the East. It was a curiosity. As Senator Woodbridge said, it was a splendid specimen of the mineral wealth of the 'far West.'"

In 1841, Mr. Eldred arranged with Samuel Ashman, of Sault Ste. Marie, to act as his interpreter in the purchase of the copper rock from the Chippewa Indians, on whose lands it was situated. Obtaining a trading license from Mr. Ord, the government agent, the two men set out for the mouth of the Ontonagon, where they met the chiefs and concluded the purchase for $150, of which sum $45 was paid in cash at the time, and the remainder in goods two years later. The party then proceeded about twenty-six miles up the river; climbed the high hill which intervened between the main stream and that point on the fork where the rock was situated, and raised it on skids. More than this they could not do; nor did they have greater success the following summer.

In 1843 Mr. Eldred started from Detroit with wheels and castings for a portable railway car. Arriving at the rock Mr. Eldred found it in possession of a party of Wiosconsin miners of whom he had to buy it for $1,365.

It took a week for the party of twenty-one persons to get the rock up the fifty-foot hill near the river; then they cut timbers and made a stout wooden railway track, placed the rock on the car and moved it with capstans and chains, as houses are moved. For four miles and a half, over hills 600 feet high, through valleys and deep ravines, through thick forests, where the path had to be cut, and tangled underbursh, the home of pestiferous mosquitoes, this railway was laid, and the copper boulder was transported; and when at last the rock was lowered to the main stream nature smiled on the labors of the workmen by sending a freshet to carry their heavily laden boat over the lower rapids and down to the lake.

While arranging transportation to Sault Ste. Marie Mr. Eldred was confronted by an order from the Secretary of War to Gen. Cunningham, directing him to seize the copper rock for transportation to Washington. "The persons claiming the rock have no right to it," says Secretary Porter, "but justice and equity would require that they be amply compensated for the trouble and expense of its removal from its position on the Ontonagon to the lake; and for this purpose Gen. C. will examine into their accounts and allow them the cost, compensating them fully and fairly therefor—the sum, however, not to exced $700. . . . If they set up a claim for the ownership of the article itself, that is not admitted or recognized, and their redress, if they have any, will be by an application to Congress."

The sum mentioned by the Secretary being manifestly too small to compensate Mr. Eldred "fully and fairly," it was however, exhibited for a small fee in New York, Detroit, Buffalo and other cities before being taken to Washington. Mr. Eldred appealed to Congress for redress, and in 1847 the Secretary of War was authorized to pay an adequate sum for it. The sum thus paid was $5,664.98.

FEMALE ACCOUNTANTS.

We do not ask what women do nowadays when working for their own livelihood. We ask what they don't do. Mr. Jerome only anticipated in a lighter vein the result of the census returns when he imagined himself having every complaint save that of housemaid's knee. The Registrar-General's more prosaic way of putting it was that charity was the only work of woman which man did not also do. Or rather it was that no man was to be found returned as a charwoman, a fact which is perfectly consistent with the work of charwomen being done under a different name by men. Women are playing tit-for-tat, and are bidding fair to make the interchange of employment complete. One by one the professions are yielding, but we learn from the thirty-sixth annual report of the Society for Promoting the Employment of Women that the Institute of Chartered Accountants is obdurate. When a woman has ranked higher than a first wrangler perhaps it is time for institutes of chartered accountants to tremble at the prospect of the young women trooping in. And then who is it that has asked the institute to open its doors. This very Society for Promoting the Employment of Women, who are training accountants in scores. Look at their list of engagements found for women last year.

For every woman they have made into a governess or mother's help they have made four clerks or bookkeepers, and to encourage these and others they tell us that "a few women who have very carefully studied accounts and have had good experience in business have established themselves as accountants and auditors." It is in this connection that, with a severe logic evidently unwelcome to the male accountants, the committee remarks that "women would have a better status as accountants if they would become members of the institute. They, therefore, appealed to the council to sanction the admission of women as articled clerks, that they might receive the same training and pass the same examinations as its members." The council, "after carefully considering this appeal, has cautiously decided that women could not be admitted under the present charter, and that it does not consider it desirable to apply for a supplemental charter in order to admit them." It is not yet stated that a separate institute for women accountants is being set up, but that no doubt will be the upshot of the disinclination to ask for that supplemental charter. Meanwhile sanitary inspectorships and county council lectureships are among the modern appointments now competed for by women, while in trades they are claiming an increased share in the occupation of the printers, process-workers and chromo-lithographers. They are also taking to the road as commercial travelers and giving other evidence that in the way they have begun they will travel far.—London News.

A gentleman in a fashionable restaurant was struck by the dexterity and ease with which the waiter extracted the corks from the bottles of wine, so the former remarked:

"You don't have much trouble getting the corks out of the bottles."

"Yes, I am pretty good at it. I wasn't a dentist ten years for nothing."

Mrs. Maginty—Begora, Moike, thim bears is foine animals. I whist I had the skin av one av thim.

Maginty—Arrah, phat would you be doin' wid a bear skin if yez had wan?

Mrs. Maginty—Sure O'id make me a buffalo robe wid it.

KINGS OF THE EAST.

At the Courts of Turkey, Greece and Egypt.

THE KEDIVE AND QUEEN OF GREECE.

Tello d' Apery's Accounts of His Audiences With Royalty—Personal Characteristics of the Sultan.

Tello d' Apery, a 17-year-old boy, in his travels around the world, had the distinction of an audience with several of the rulers of the Orient. It is only a few generations ago when even a foreign ambassador could not behold the glory of the reigning Sultan, and was simply permitted to remain in a room where the Sultan was to be concealed behind a curtain, so that the glimpses of the Sultan, as he passed in the pagean of the Turkish Sabbath, were a are privilege for the young foreigner. Ghazi Osman, the boys entertainer, is one of the foremost men in Turkey. He distinguished himself in the army, and especially at the battle of Plevna, and one of his sons is married to one of the Sultan's daughters. He took Master d' Apery to a private room in the palace where he could see the whole gorgeous pageant of Turkish regiments and the imperial escort. The boy describes the advent of the Sultan as follows:

"Then the Sultan came down the steps slowly, and looked gravely around, bowing slightly to right and left. He wore a black frock coat, with a high collar, in a military cut, and on his head was the red fez, just like those worn by all his subjects. He is not tall, nor is there anything about his appearance to distinguish him from thousands of other men in that country, except a peculiar waxen pallor. His eyes are sunken and his cheeks hollow, and there is an expression of deep melancholy on his features. He entered the carriage and took the back seat, and then Ghazi Osman Pasha got in and sat on the front seat. A bugle sounded, and the cavalcade started, and they rode to the Mosque of Hamidea, which is not much more than a quarter of a mile away.

"When the Sultan reached the steps and descended from the carriage, he turned and made a short salutation like a wave of his hand toward everybody in general, and disappeared from view in the palace. After these public appearances, he sometimes receives a person whom he may wish thus to honor, and whose desire to see him has been presented in a happy moment by Ghazi Osman Pasha, or some foreign Embassador. His Majesty graciously consented to allow his name to be presented among the list of patrons to the Sunny Hour. All conversation is carried on through the interpreter and high chamberlain, so that it is rather depressing to try to be brilliant under the circumstances. He appears to feel that interviews under such circumstances are bores, and a very few minutes suffice. But in that time every one may see that the Sultan, close to him, shows traces of care and ill-health. He looks still shorter than when out of doors. The Sultan is not a handsome man, but there is a certain gentle and grave dignity about him that impresses one favorably. He has proved a good ruler, and, knowing his country, its people, its resources and laws, has worked very many reforms, and has done so in so quiet a way as to offend no conservative persons. He has, with the aid of Ghazi Osman Pasha, reorganized and equipped the army, and has developed its resources."

On leaving Constantinople the youth went to Athens, where he was received by Queen Olga, to whom he was conducted by Count Massala, the Court Chamberlain. He describes his interview:

"Following Count Masala along several passages, we reached a large and very pleasant parlor, where Queen Olga was waiting, with two or three ladies. She received me very kindly and asked me to sit down. We talked for about an hour, chiefly about the condition of the poor Greeks in New York and their church here. Then she told me about the recent earthquakes, and gave orders that some photographs of the scenes of the catastrophe be sent me, and graciously accepted a little gold badge of membership in the Sunny Hour Club. She spoke very feelingly on the miseries of the street venders in New York, and ended by sending her blessing to them. Then she kissed and blessed me as I left, and gave me one of her autograph pictures. The Queen of Greece is a beautiful woman, although no longer very young. She had fine, thick hair, small hands and a graceful figure. She wore a light traveling dress with plaits down the waist and a few diamond rings. Her eyes are beautiful, with long, heavy lashes, and her smile is most charming. Her voice is very sweet and it is easy to understand why her people and the Russians call her "The Adored One." I met no other members of the royal family, as they were out, but I shall always cherish the memory of the lovely Queen of Greece among my most precious possessions."

On his second visit to Egypt, Dr. Comanas Pasha, the private physician of H. R. H. the Khedive, conducted young d'Apery into the presence of Abbas Pasha, the Khedive. He and his brother Mehemet Ali both speak English well and were educated in Vienna. Abbas Pasha is a very fine-looking young man, rather stout, but very intelligent. He has dark eyes and a splendid physique. His smile is very pleasant and he has a fine set of white teeth. He dresses in the Turkish uniform of dark blue, and wears many fine decorations when in full dress. He is married and has one child, a little girl. The Khedive said he hoped to make Egypt what she once was, the leading nation in the East. He wears the Turkish fez all the time. He is slow of speech, but every word means something.

Mehemet Ali is a slender, but most charming young Prince. He is full of vim and go and is a great contrast in manner to his brother.

Tello d' Apery next relates his audience with a Mohammedan woman:

"The next day her Highness, the Princess Nazli Hanum, sent for me to visit her at her harem. This Princess is the only Mohammedan woman who has the privilege of receiving gentlemen, and she has her right from the Sultan of Turkey from some reason or other. Dr. Comanas Pasha accompanied me to the palace, and I was received with a grace and cordiality as pleasant to a homesick boy as it was unexpected. Nazil Hanum is a beautiful woman, with eyes such as one does not see twice in a lifetime. She was surrounded with waiting maids and fairly covered with jewels. Coffee, sherbert, sweetmeats and cigarettes were served, and I was plied with questions about everything imaginable concerning Americans and American women and fashions, and I am afraid I blundered sadly in some respects when mentioning styles of dress. The Princess speaks English with a charming accent. Her dress was a mixture of Egyptian and foreign. There were divans, but, as in Turkey, there seems to be a leaning toward chairs. When I left the Princess it was with sincere regret, as she was so gentle and, if one may use the word of one no older than she, so motherly."

In Rome he met the King of Italy and saluted him in passing.

Finally, he saw Prince Guy de Lusignan in Paris.

"Out in the old part of Paris lives Royal Highness Prince Guy de Lusignan, whose family dates back to Hugues III., in A. D. 900. This Prince is hereditary Prince Royal of Jerusalem, Cyprus and Armenia, and the story of his family is most interesting, covering oriental history from 900 A. D. to the present day, and full of the stirring events of the crusades. Now, the present Prince Royal of that long line of remarkable heroes lives in Paris, with his books and his scientific studies. He has published perhaps fifty books, the first one when he was but 16 years old. He married the Countess Marie Godefroy le Goupil, and has two children, one now being the Marquise de Nauroy. Prince Guy de Lusignan has received the highest honors and decorations from every sovereign. The royal house of Cyprus, Jerusalem and Armenia founded three orders—one the Order of the Sword of Silence, and this was conferred on each of the 300 Barons who fought in Palestine; the second is the Order of St. Catherine of Sinal, and the third the Order of Melusine, the mother of the race. The Prince has seen fit to confer the Order of St. Catherine on me, and naturally I wanted to see and thank him. I was kindly taken to him by Count Godefroy, and was thoroughly charmed by the noble and gentle Prince. He is slender in appearance, with a fine head and studious expression. His hair is nearly white, but his eyes fairly blaze with life. Prince de Lusignan lives in a seclusion of his own making. He is fonder of his science and books than of grand display, and everything around him shows the scholar. He has many relics worth a careful study. When I came away, after a long and delightful afternoon, he embraced and kissed me on both cheeks."

REVOLUTIONARY ORDINANCE.

Arranged in a semi-circle around the flagstaff at the Watervliet Arsenal are seventy-six pieces of ordnance, captured at different times from the British during the Revolutionary War. Strange as it may seem no record has been kept by the Government. Many of these trophies are of peculiar construction and would compare very favorably with the field guns made in the arsenal gunshops at the present time. Through exposure to the elements many of the guns have become bright green in color, says the Troy Press.

Eight of them are known to have been captured at Saratoga in 1777. There is a 24-pounder howitzer, with these marks in the chase: "Surrendered by the convention of Saratoga, October 17, 1777. A. Schatch Fecti, 1748." This gun is embellished with two crowns and the monogram "G. R." There is a 12-pounder with marks on the chase similar to the gun described. On the breech are the words: "Homi soit quii mal y pense." "Dieu et mon droit." It has dragon handles, and is embellished with crown, rampant lion and arms of Great Britain.

The third canon is a 12-pounder, made in 1760. There is a 12-pounder with the inscription, "The Right Honorable Lord George Sackville, Leutenant-General, and the rest of the principal officers of her Majesty's ordnance. Surrendered by the convention of Saratoga, October 17, 1777." Its date of manufacture is 1753. Another 12-pounder was made in 1760. An 8-inch howitzer bears the date of 1758. An 8-inch mortar is among the trophies, it having been made in 1758. A 24-pounder Cochorn mortar is another of the collection.

Frank Carver and John Allison (white) and Eli Lucas (Choctaw Indian), all of Fort Smith, Ark., have been sentenced in the United States Court to be hanged Tuesday, October 1st. Carver killed Annie Maledon, his mistress, at Muskogee, I. T., March 28, 1895. Lucas was convicted of killing a half-witted negro near San Bois, I. T., September 30, 1894.

Florida, Georgia, Illinois, Iowa, Michigan and Wisconsin are nearly equal in area—between 55,000 and 60,000 square miles.

TAKING CHANCES.

Experiences Related by Leading Washington Correspondents.

A TIP WHICH FAILED TO WORK.

How an Editor Silenced Two Obstreperous Kickers—A Correspondent's Narrow Escape on a Good Story.

"There are times," said one of the oldest ccorrespondents of the Row, reported by the Washington corespondent of the Chicago Journal, "there are times when one's judgment is superior to official information. I recall one instance very distinctly. A copy of the dispatch which I sent that day, and which is in this book, reminds me of it. It was during Secretary Folger's administration in the Treasury Department. It was determined to call in certain bonds. The bonds subject to such a call were 5 per cents., and 4½ per cents. As the bonds which were called in would create a big demand or the notes left untouched, it was natural that the people of Wall street were desirous of getting early information as to which bonds would be called. I then had a Wall street connection, and was charged to keep a sharp lookout for the Secretary's decision and to wire it without delay. In Wall street a few moments often make the fortune of a man's life, and you may believe that I was on the alert. I determined at the same time to make a little spec, on my own account. As I could do this without in any way harming my connection, I felt perfectly justified in my action.

"I got one of my friends who also had a Wall street connection, to go to Sceretary Folger to ask him which bonds he intended to call. My friend was a favorite of the Secretary, and the latter, without a moment's hesitation, said that he should call the four and one-halfs. My friend came over to the telegraph office and reported what the Secretary had told him. It seemed strange to me that he should call in the four and one-halfs when he had the money to buy the fives, and a greater saving would be made by redeeming them. I mentioned this to my friend, who agreed with me, and I urged him to go over and repeat his question to the Secretary with a view to corroborating his first information. This my colleague did. The Secretary replied promptly:

"'Why I told you what I was going to call. Here, give me a piece of paper, and I will write it down for you.'

"And he wrote:: 'I shall call the four and one-halfs.'

"My colleague took the paper and brought it over to the office. We fired the information into Wall street, and at the same time drew a check against all our available cash in the bank, which amounted to $4,000, and invested it in fives. Scarcely had the information reached Wall street and our purchase made ere the market jumped one cent, which was a decided rise. And it began going still higher. We quit work for the day, highly pleased with what we had done. My colleague strolled down Pennsylvania avenue by way of working off his exuberance, and while in the midst of an inspection of the castles which he had built in the air, he reached the Peace Monument and heard some one behind him call his name. Turning, he saw a carriage rapidly approaching, out of which leaned the private secretary of Secretary Folger. My colleague stopped. When the carriage reached him, the private secretary informed him that Secretary Folger had made a mistake. It was not the four and one-halfs, but the fives which he intended to call.

"My friend did not stop to argue the question or to comment on the change in the Secretary's mind, but, shoving a bill into the driver's hand, he jumped into the carriage and bade him make the quickest time possible to the telegraph office. Arriving there he sent the correction to his Wall street connection, and at the same time instructed his broker to sell the fives purchased on his acount. It so happened, unfortunately for us, that the Press Association reporter had learned of the Secretary's intention to buy the fives, and sent the news to New York. It had reached Wall street while my colleague was driving to the telegraph office, and the market began to tumble. The castles which my friend and I had been building in the air tumbled at the same time, and so did the savings which we had invested in the bonds. Had we exercised our judgment, instead of relying on the Secretary, we would have made a snug little sum. As it was however, we learned the lesson at rather a high price. The Secretary was perfectly honest with us, however. It was merely a slip of the tonuge and the pen. He did not realize his mistake till he sat down to write out the formal call, and then it suddenly flashed upon him what he had told my colleauge, and he immediately dispatched his private secretary to make the correction."

"Apropos of corrections," observed one of the younger correspondents who recently came to the row, "I remember one which a couple of bruisers tried to have made, after the appearance of the report of a scene in a police court, in which they figured prominently. I referred to them as well known characters and this phrase seemed to stick in their craw. They came up to the office and met the managing editor, who was something of a bruiser himself.

"'Want to see the editor' they said.

"'Well you're looking at him,' the editor remarked.

"'Well, we want retraction.'

"'What for;' asked the editor.

"'This is what for,' the spokesman of the two replied. 'Here's a report you printed and you called us well known characters. We object to being called that.'

"'Lived here long?' queried the editor.

"'You bet we have,' the spokesman replied. 'Lived here all our lives.'

"'Got a good character'? the editor continued.

"'That's what,' the spokesman responded. 'We've got as good characters as they make 'em.'

"Got a lot of acquaintances here?

"'You bet we have,' the spokesman replied. 'We know most everybody in town.'

"'Then,' said the editor, 'what have you got to complain about? You say you have lived here long, are well known, and have got good characters, and that's how you are referred to in the report—well known characters.'

"The two bruisers looked at the editor for a moment. They were taken completely aback, and were much confused. Then they looked at each other and then down at the floor, growled out something unintelligible, and left."

"The mention of odd telegrams from the office," said one of the old-timers on the row, "reminds me of a lot I used to get when I represented a San Francisco paper. The managing editor of the sheet seemed to think that it was as easy for a newspaper man to walk into President Cleveland's private office at any time of the day or night as it was to get into a saloon. He used to wire me some of the strangest requests you could imagine. As I sent him a good, regular service and secured all the news, I felt safe enough to ignore such fool messages, and I did so, till one night when work happened to be slack. A telegram came about midnight, instructing me to go to Secretary Bayard, to interview him and get his opinion on some important question of state. I had just been reading Wharton on the subject, and so I sent a dispatch stating that Secretary Bayard was out of town, but that the distinguished authority on international law, Mr. Wharton, very kindly furnished me the information, and in reply to my question said ——. Then I copied all that Wharton had written on the subject and sent it to my paper. The next morning while at breakfast I took up the Post and the first thing my eye fell on was a paragraph telling that Mr. Wharton had died the night before. I gave vent to a sacrilegious exclamation, much to my wife's astonishment. She asked me what I meant, and I explained it to her, and ventured to predict that my connection with the paper would probably cease when my managing editor saw in the same paper which contained the interview the telegram telling of Wharton's death, which occurred several hours before I received my message instructing me to get the interview.

"When the paper came back from San Francisco my interview appeared in a conspicuous part of the paper, and at the end of it was the telegram announcing Wharton's death. Whether the managing editor concluded that I had interviewed the life out of Wharton, or whether he had failed to notice the dispatch, I never learned, for no word came from the office, and I continued to serve the paper for several years."

SERVITUDE OF THE CHAIR.

The victim goes by chance into a certain barber shop. The barber sees in him a stranger susceptible to the weakness which is so common among men who do not shave themselves. Therefore the wise barber shaves the stranger with the uttmost gentleness and care. He tenderly annoints the victim's face with many ointments until it looks like a lily of the valley and is as smooth to the barber's gentle hand as marble moistened by cool waters. The heart of the man gives answer to little courtesies and kindnesses even as sure as the waiter comes forward when one presses the button beside the table. Therefore he remembers the wise barber and comes again to his shop.

Perchance the next time two chairs are vacant, and each barber stands forward beside his chair as the stranger enters. As he advances the gentle barber tries to look unconcerned, but when his chair is selected he beams with pleasure. The customer feels that the gentle barber's happiness depends upon always shaving him. He returns again and again, and a bond of understanding and sympathy grows between them. Then it arises that the particular barber only shaves the now steady customer, who always waits for him if he is at work.

The victim has now become a victim indeed. When convenience causes him to go to some other shop he apologizes to his regular barber when he goes to him again, and explains his seeming infidelity as a lover explains the failure of a tryst to a sweetheart. Then possibly the victim removes to a remote part of the city, and the trip to the barber shop of his allegiance is inconvenient. But he continues to go. He spends hours in the roundabout journey every week. He spends hours waiting upon his special barber while other barbers stand idle in the shop.

The Mexican Government recently signed an agreement for the construction of harbor works at Vera Cruz, at a cost of $8,000,000, the contractor accepting payment in internal bonds at 25. The government proposes immediately to negotiate an external loan of $15,000,000, partly with the object of building a harbor at the Pacific terminus of the Tehuantepec Railway and partly for the payment of the interest on the foreign debt.

Jimson—"Doctor, I am getting too stout for comfort and I want your advice." Doctor—"Nothing reduces flesh like worry. Spend two hours a day thinking of the unpaid bill you owe me."—New York Weekly.

FRENCH TAXES.

Tourists are Taxed for Everything in France.

HER WAR DEBT IS THE LARGEST.

The Debt is Due the French People, and Represents the Apotheosis of a Popular Loan.

Whether the financiering of the French Government and the city of Paris be admirable or not, it works, it is practical. It has the virtue of taking the bull by the horns. The national government and the city divide the right of maintaining, for the glory of the patrie and the beauty of its capital, its one and only city. They do not seek to disguise the process, writes a Paris correspondent of the Washington Star.

The tourist, even in his first sight-seeing week, feels pressing on his shoulders the hand of the tax collector. It is not so much the customs examination at the frontier, although that is fairly searching. The feeling that the authorities are after your pocketbook comes rather through a series of petty annoyances and half pleasing, half displeasing curiosities when you are once inside the country. Your hotel bill comes to you receipted and stamped. You cash a check or draft with a banker. "Will you please write your name again, here, across the revenue stamp." Why are they so careful about the lumps of sugar in the restaurants and cafes? There is a special tax upon the sweet commodity. And why do they always give you sulphur matches? Because matches are dear, being manufactured only by the government.

Do you desire to play a game of cards? You may, for nothing, in the brasserie where you take your evening beer. The waiter brings the cards. "But they are dirty. Bring us a clean pack." Then you will have to buy them, and the cheapest kind costs 50 cents. There is a special tax on playing cards. It is not only a tax, ranging from 15 to 20 cents a pack, but the manufacture of all playing cards is under rigorous state supervision, as to quality, colors and designs, the latter with an idea as to possible political disturbances. Billiard tables are taxed, doors and windows are taxed, bicycles are taxed, and as for cigars and tobacco—but every tourist has his experience with that state manufacture.

Where the State leaves off then the city begins, and you are taxed from really morn till dewy eve. The city's chiefest hold upon the stranger is its "octroi," a set of high municipal customs duties on all food, drink and fuel. But the city shares with the State in most of the little perquisites already mentioned, in the profits of the exclusive government pawn shops, the exclusive funeral service, the tax on theater tickets, and the tax on dogs, even though it were the dog of a tourist, or, so to speak, a tourist dog. These are the taxes which the tourist feels. But the native, the citizen of Paris, could tell him, "There are others."

Taxes in France are called "contributions," and they are (1) direct and (2) indirect. The latter are by far the greater, reaching the average sum of 2,495,000,000 of francs yearly, as against the direct taxes of 553,000,000 of francs.

The public debt of France is by far the greatest in the world. Here is a nation with only 38,000,000 of inhabitants, with a debt of over 35,000,000,000 of francs. Russia has four times as many inhabitants and not half the debt. The United States of America has 67,000,000 of inhabitants and not 9,000,000,000 of francs debt. And yet the French people have just taken up a Russian loan that no one else would have, and may be soon lending millions to our own precious government. The secret is that while France, as a State, is more heavily indebted than any other in the world, her people, as a population, are the richest, the English only excepted. And the distribution of this wealth is infinitely more equal in France than in the British isles. The country long ago achieved for itself the enviable name of "pays de petits rentiers," the land of little capitalists. The French have a gigantic debt—but they owe it to themselves; it is not borrowed abroad; it is held at home. In France you see the apotheosis of the popular loan.

SUNDOWNERS OF AUSTRALIA.

Titled lords, baronets, parsons, lawyers, captains, architects, clerks—all these are to be met with on the roads. They can be divided into two broad classes, viz., those who are looking for work and those who are seeking to avoid it. The former consist of a fine set of men of all ages, ready and willing to undergo the hardships of a weary tramp of hundreds of miles, along which they push forward hopefully to find the work which is generally to be had by those who are willing to search for it.

Their "swag" is generally made up of a pair of blankets and a pair of trousers, a spare coat, two or three shirts and two pairs of socks, a brush and comb, towel, needle and thread, etc. For stores they carry bread or flour, sugar, tea, carbonate of soda for making damper, a billy, pannikin, and knife and fork. This is a fair average swag, though it will often be supplemented by sundry little additional luxuries, according to the individual idiosyncrasy of the owner.—Temple Bar.

INYO INDEPENDENT.

Irv. H. Mulholland,
ITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY, AUGUST 30..... 1895

"It is in spite of Cleveland and because of the bright prospect for the election of a Republican President next year that the wheels of business have begun to revolve," says a Republican contemporary. Let us gently jog the Republican memory. The business depression which is now subsiding began nearly a year before the end of President Harrison's term. The exhaustion of the surplus of more than a hundred million dollars left in the treasury by the first Cleveland administration was a leading factor in the money panic of 1892. In the early months of 1893 the gold reserve had been reduced to such an extent that Mr. Harrison's Secretary of the Treasury was forced to beg for gold in the mart of Wall street. He failed, and Harrison, as an au revoir prior to a fishing jaunt, advised the perplexed Foster to issue bonds, if necessary, to tide over until the ides of March, when the load of Republican mismanagement would be dumped upon the Democratic party. It required time, sagacity and prudent management for the present administration to overcome the results of incompetency in Republican rule, but the facts show a cheering resumption of business throughout the United States.

Any one who places poison in a melon for the purpose of poisoning a human being would, in the event of the victim's death, be guilty of murder in the first degree, and upon conviction would either be hanged or imprisoned for life. The fact that the melon was on the farmer's property and that the victim had no right to take it would cut no figure in the case. Murder by poisoning is regarded as one of the most heinous forms of mankilling and is especially mentioned in the State law, which provides that any one guilty of it shall either be imprised for life or hanged.

The Ohio Democratic Convention was a sad disappointment to Republican newspapers. The latter were very hopeful of a schism over the silver question, or some other mishap that might furnish a tune for the Republican harp. But the resolutions of the Convention were adopted in committee by an almost unanimous vote, 19 to 2, and the renomination of the popular ex-Governor was accompanied with red hot Democratic enthusiasm.

Many Republicans even laugh at David Lubin's scheme of a government bounty on agricultural products. But they have no room to laugh. Mr. Lubin is a protectionist to such a degree that he wants to see the farmer as well as the manufacturer protected. And if protection is right at all the farmer should receive just as much consideration as the wealthy manufacturer. Protect all or none is a fair policy.

What do the peace officers expect of a tramp anyhow? Eight of them were arrested in the suburbs of Fresno while taking a bath in a big irrigating ditch. The poor fellows were trying to clean up so as to be presentable in the fastidious raisin city, when suddenly they were nabbed by the fee-hungry constables and charged with breaking the law of Fresno. If it's against the law there to take a bath they must have a queer lot of law-abiding citizens.

When our exports diminished in 1893 the shrinkage was promptly attributed by the Republican press to the evil influence of "the Cleveland administration." Will the croakers now explain the figures furnished in the official statement of our exports for the last fiscal year, ending June 30th? The increase is $42,277,806. Is that also attributable to the Cleveland administration?

The British government has gone into the business of coining "silver dollars," for use in the orient. There is, of course, a handsome profit in the operation, but it seems strange that a power which discredits silver at home should engage in such a business.

WHEN TO HATCH CHICKS.

The Importance of Early Maturity Cannot Be Too Often Emphasized.

The importance of having chickens hatched in good time, whether the object be egg production or table chickens, is apparent, and yet by many poultry keepers no thought whatever is given to it. The breeder of exhibition fowls is wide awake on this point, occasionally too much so, and it will pay those who breed for economic purposes equally well to do so. If fowls are allowed to breed just when they like, the results can never be satisfactory. If we observe other branches of industrialism, market prices are carefully studied, and the attempt at least is made to avoid sending to market when prices are low. But in poultry it is much easier to gauge the ruling rates than in many other kinds of stock. Eggs are always dear in winter, and chickens command the highest prices in the spring months. Consequently the object should be to place supplies out during these two seasons and reserve the strength from the other periods of the year. But to do so is not possible unless thought and care are exercised, and it is essential to take the necessary steps months in advance.

For winter eggs there is nothing like commencing to hatch about February and having a succession of chickens until April. By so doing, at any rate with more rapid growing varieties of poultry, the earliest should commence laying in August, just when the older hens are going into the molt and eggs are falling off, while the succeeding pullets will take up the tale in proper order, and many of them will continue to lay throughout the greater portion of the winter. But in the case of table chickens an earlier start is desirable, and for those who desire to send a regular supply to market hatching operations should run through from October to March. In this way birds should be ready to kill from February to July, writes an authority on such matters to Country Gentleman. He also says:

Much, however, perhaps more than we think, depends upon the way in which the young birds are fed during their period of growth. It would be possible to hatch birds of the same breed together, and yet by different treatment in feeding one lot would commence to lay weeks before the other. A supply of good nitrogenous food, plenty of grit to digest it and regularity in feeding, with space to develop frame and stamina are all important in this connection.

Second Growth Sorghum.

In reply to the query, Is second growth sorghum poisonous? Farm, Field and Fireside has had numerous replies, from which it is made to appear that if hungry cattle are allowed to eat their fill of sorghum, at any stage of its growth, and especially when unaccustomed to it, the results are liable to prove fatal. This is not because the sorghum is poisonous, but because all kinds of cattle are excessively fond of it, and such being the case they will overeat at every opportunity. Their being engorged with such a mass of exceedingly succulent and easily fermented food results in fermentation instead of digestion and a severe case of "bloat," or "hoven," similar to "colic" in the human family, is the perfectly natural and legitimate consequence of such imprudence. As good authority as T. M. Rice of Oklahoma does not believe there is any more danger than in some other green feeds eaten in excess or when not accustomed to green food.

Mr. L. J. Harper of Nebraska says: First or second crop of sorghum will produce the same effect each time if eaten within ten days after the first good frost, providing it is green when frozen. Second crop is the only blamed, because first is always cut off before frost. These are facts you can rely on. It is the freezing of the green plant which does the mischief.

DELINQUENT SALE NOTICE

INYO MARBLE COMPANY OF CALIFORNIA.

Location of principal place of business: San Francisco, California. Location of works: Inyo, Inyo County, California.

NOTICE—There are delinquent upon the the following described stock, on account o assessment No. 27, levied on the 5th day o July, 1895, the several amounts set opposite the names of the respective shareholders, as follows:

NEW FEE BILL.

CHAPTER CCVII.

An Act to establish fees of county, township and othe. officers, and of jurors and witnesses in this State.

[Approved March 28, 1895.]

The People of the State of California represented in Senate and Assembly, do enact as follows:

SECTION 1. The following county, township, and other officers shall charge and collect the following fees.

COUNTY CLERK.

On the commencement of any action or proceeding in the Superior Court, except probate proceedings, or on appeal thereto, to be paid by the party commencing such action or proceeding, or taking such appeal	$5 00
On the filing of a petition for letters of administration, testamentary, or guardianship five dollars, to be paid by the petitioner; *provided*, that at the time of filing the inventory and appraisement in any such proceeding there shall be an additional deposit of one dollar for each additional thousand dollars of the appraised valuation, in excess of three thousand dollars.	
On filing the petition to contest any will or codicil	3 00
On the appearance of any defendant, or any number of defendants answering jointly, to be paid upon filing the first paper in the action by him or them	2 00
On placing any action, except a probate proceeding, or default case, on the calendar for trial or hearing, to be paid by the party at whose request such action or proceeding is so placed	2 00
For every additional defendant appearing separately	1 00

The foregoing fees shall be in full for all services rendered by such Clerk in he cause, to and including the making up of the judgment roll.

ALIAS SUMMONS.

Action brought in the Superior Court of the County of Inyo, State of California, and the complaint filed in said County of Inyo in the office of the Clerk of said Superior Court.

Adolph Gerckens Plaintiff, vs. Annie J. Gerckens Defendant.

The people of the State of California send greeting to Annie J. Gerckens, Defendant:

You are hereby required to appear in an action brought against you by the above named Plaintiff in the Superior Court of the County of Inyo State of California, and to answer the complaint filed therein, within ten days (exclusive of the day of service), after the service on you of this Summons—if served within this Inyo County, or, if served elsewhere, within thirty days.

The said action is brought to obtain judgment against you and a decree dissolving the the bonds of matrimony heretofore and now existing between the plaintiff and defendant as will more fully appear by reference to the complaint on file herein.

And you are hereby notified that if you fail to appear and answer the said complaint, as above required, the plaintiff will apply to the Court for the relief demanded therein.

Witness my hand and the Seal of said Superior Court of the County of Inyo, State of California, this 18th day of June, A. D. 1895.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY the 8th day of March 1892, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit Commencing at the South-east corner of the south-east quarter of North-east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 88-100; thence North-east following the meandersings of the bed of the Creek along its North branch to Edwards street, in the town of Independence thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hallhah, deceased, at the time of his death.

Lots Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate, lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dispriceda Lode."

That certain lot, piece or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the south-west quarter and the North-east quarter of Section No. twelve (12), and the South-west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South sixty-eight and eleven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence North-westerly along a small branch or swale to a point twenty-four (24) rods North of the general corner of the North East quarter and the South-east quarter, and the North-west quarter and the North-east quarter of the North-west quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven-twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres: Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney at Independence, Cal., or delivered to said Executor personally or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Gash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court Deed at the expense of purchaser.

WILLIAM L. HUNTER.
Executor of the Last Will and Testament John Allen Hannah deceased.

KENDALL'S SPAVIN CURE.

STAR, LANE CO., OREGON, Feb. 8th, 1892.

DR. B. J. KENDALL CO.,

Dear Sirs:—I have used your KENDALL'S SPAVIN CURE for the last twelve years never being without it but a few weeks to that time and I have made several wonderful cures with it. I cured a Curb of long standing. Then I had a four year old colt badly Sweenied; tried every thing without any benefit, so I tried your liniment, and in a few weeks he was well and his shoulder filled up all right, and the other, a four year old that had a Thoroughpin and Blood Spavin on the same joint, and to-day no one can tell which leg it was on. These statements can be proven, if necessary; the four year olds are now seven and can be seen any day at Cottage Grove, Or. S. Z. PAXTON.

Price $1.00 per bottle.

DIED.

TURNER—At Bishop, August 23, 1895, Francis Marion Turner, a native of South Carolina, aged about 60 years.

W. R. Johnson is spending his Summer vacation at Santa Catalina.

P. H. Mack Esq. arrived home from Los Angeles last Tuesday morning.

Max Christianson is again a free man. His term expired on Wednesday.

W. L. Zimmerman went to Bishop on Wednesday, returning yesterday.

Regular meeting of Inyo Lodge No. 121, F. & A. M., to-morrow evening.

D. C. Lane returned to Darwin last Tuesday from a visit to Los Angeles.

Louis Schalten and Louis Josephs were down from Big Pine on Wednesday.

A car-load of flour was received at Independence on Wednesday from Reno.

Elegant and stylish line of woolen dress patterns, no two alike, at Eibeshutz'. *

W. K. Miller of the Mojave and Keeler stage line was in town at the end of last week.

Henry Rhine and Ben Yandell made a short visit to Big Pine early in the week.

A. W. D. Carroll came up from Lone Pine last Saturday, returning Sunday morning.

District Attorney Forbes, accompanied by Mrs. Forbes and the boy, are visiting at Bishop.

The weather has been unusually cool this week and a frost is reported to have occurred at Reno.

W. F. Matlack and his daughter, Miss Edna Matlack, went to Long Valley at the end of last week.

Tom. Davis is in charge of Matlack's blacksmith shop during the latter's absence at Long Valley.

The Fall term of the Independence school will commence next Monday, Mrs. I. H. Mulholland, teacher.

Mr. Louis Josephs and his son Irving came down from Big Pine yesterday and are visiting with the family of L. Wood.

Gustave Sanger, George Hall and Mrs. A. P. Smith, all of Alvord, were in town last Monday on business in the local Land Office.

Lone Pine will celebrate the 16th of September. We have received no particulars as yet but hope to give them next week.

Mrs. E. M. Johnson arrived from Los Angeles on last Thursday's train and will remain here for some time visiting with friends.

J. R. Moffitt and Harold Eaton leave here for Los Angeles to-day. Harold has spent a pleasant vacation here and will return to school.

Mrs. R. C. Spear arrived home last week after an absence of over a year, most of which was spent with relatives in Ventura county.

George Thorpe expects to go to Mazourka in a few days and commence work on a placer claim which he owns in partnership with Tom Ferguson.

Hon. T. B. Rickey is expected down on to-day's train. In all probability he will make arrangements to winter a number of his stock cattle in Owens Valley.

E. Robinson and F. McIver went to Bishop on Tuesday to attend a meeting of the Board of Directors of the 18th District Agricultural Association, returning Wednesday.

Neil McLean came in from Cerro Gordo yesterday, where he has been hauling ore. He hauled forty tons to Keeler for Pat Clinton and seven tons for Jack Dunphy.

Charley Whittock came up from Little Lake yesterday and will spend a few days in town. Charley says that the cattle on the desert have done very well this season.

The residents of Taboose school district at an election held last Saturday decided to issue bonds to the amount of $1,000 for the purpose of building a new school house.

FAIR DIRECTORS' MEETING.

The meeting was called to order by President Robinson. Present—Robinson, McIver, Wells, Sherwin and Cooley.

On motion of McIver, seconded by Wells, N. J. Cooley was elected Secretary pro tem.

Moved by McIver, seconded by Wells, that we hold the Eighth Annual Fair of the 18th District at Bishop, commencing Tuesday, Oct. 8, and continuing four days. Carried.

Moved by McIver, that Cooley and Wells be appointed as a Committe to procure a hall for the Pavilion during the Fair. Carried.

On motion of McIver, Sherwin, Cooley and Wells were appointed as a Committee of Arrangements to procure attractions and exhibits for the Fair.

Board adjourned sine die.

The opening of the Fair will be Tuesday, the 8th of October. The races will commence on Wednesday, Oct. 9, and continue three days. The following is the race programme:

RACES.

OCTOBER 9, 10 and 11th.

FIRST DAY—WEDNESDAY.

Indian Pony Race—one mile—Purse $10 Entrance $1.

Trotting, 2-year-old, 2 in 3—Purse, $75.00

Running, ½-mile and repeat—Purse, $75

All entries 10 per cent of purse.

Two-year-old trotting race subject to change.

Horses shall be owned in the District six months prior to race or date of entry.

$100 is reserved for a special purse.

All entries must be made on or before Sept. 20. Horses to be named the day preceding the race.

For all information of races address James McBride, Secretary, Bishop.

Those desiring information regarding the agricultural and stock display will receive the necessary information on applying to N. J. Cooley, Bishop.—*Index.*

Gale—Conkey.

A. Y. Gale and Miss Blanche Conkey were united in marriage at the residence of the bride's parents yesterday afternoon, Justice of the Peace Linn officiating. The wedding was a quiet one, none but the immediate relatives of the contracting parties being present. Of the groom it is hardly necessary to speak, for there is probably no one in the country better known than "Deacon," and by his constant joviality he has drawn around him hundreds of stanch friends. When he returns from his honeymoon he will receive an ovation in the southern country, where he is employed as conductor on the C. & C., for he is extremely popular. Mrs. Gale, the bride, is one of Reno's very nicest young ladies, and shares the high esteem in which her husband is held. She is a bright, intelligent little lady and deserves the good fortune that is in store for her. The couple were the recipients of many costly presents. They departed last evening for a trip to San Francisco and San Jose, expecting to be absent about two weeks, and when they return will take up a residence in Hawthorne.—*Reno Gazette.*

Another Pioneer Gone.

Marion Francis Turner, of Big Pine, died at the Bishop Hotel at about 12 o'clock on Friday night last. Deceased was a pioneer of Owens Valley, coming here in the early sixties from South Carolina, where he was born on Sept. 10th, 1835. Alternately mining and ranching he at last with his family settled down to the latter at his home west of Big Pine. In April, '88, Mrs. Turner died, leaving four surviving children, three girls and a boy, to whom he now gave his entire care. For the past two years his health had been steadily declining and during the last year he was compelled to give up all participation in active affairs. During the few months preceding his death his sufferings made no difference in his courteous and gentle demeanor toward all. A quiet, kindly and unobtrusive man he made friends wherever he became known. Peace to his ashes.—*Index.*

Surprise Party at the Fort.

The friends of Mr. and Mrs. F. Schabbell surprised them with a party last Saturday evening. A hay wagon filled with friends, both young and old, and drawn by four horses, left town about 8 o'clock and reached the Schabbell residence just in time to prevent the family from going to bed. The party proved what it was intended to be, a genuine surprise. A large room was soon cleared and dancing begun, while music and games were carried on in the parlor. Those who enjoy the dance owe a vote of thanks to Mr. Leon Marks, who played for their benefit during the evening. At midnight a fine supper was served, after which a jolly time followed until nearly day break.

A. N. Bell, the veteran miller of the Oak Creek Flouring Mill, received a very painful injury last Monday. While at work with one of the rolls his left hand got caught in the swift revolving machinery and was badly lacerated. Dr. Woodin was sent for immediately, and he found it necessary to amputate a portion of the thumb and one of the fingers. The hand is very badly torn, the flesh being nearly all stripped away from the back. Dr. Woodin is in attendance and states that he hopes to save the hand, although amputation may become necessary.

A special rate has been made by the C. & C. of $20 to Reno and return on account of the State Fair, which begins next Monday and lasts two weeks. From Reno to Sacramento and return the rate has been fixed at $8.65, making the total fare from Independence to Sacramento and return $28.65. Tickets are now on sale and will be good until September 16th.

Pulley and Rector, the two foot-racers, and a third party named Brown arrived at Independence at the end of last week, having tramped through the mountains over the Kearsarge trail. Ed. Ober came down from Big Pine on Monday and met them here. It is likely that some kind of a race will be arranged for Fair week.

Mr. and Mrs. T. Webb and Miss Irma Webb arrived home from Long Valley last Saturday. Tom. will return to Long Valley in a few days to attend to the sale of his beef cattle now pasturing at Bridgeport. He says that buyers are making steady inquiry after beef and that prices will be much better than in former years.

COURT NOTES.

H. E. WILKINSON, Observer.

A new stock of Fall and Winter goods, including every line of men and women's wear, in endless variety, was received and opened at Eibeshutz' during the past week. Call and inspect them. *

G. W. Dixon, the Bishop merchant, was a passenger on Tuesday's train north. He was returning from Los Angeles, where he had been for the purpose of purchasing a stock of goods.

Sheriff Given started for San Francisco last Saturday morning, having in charge the man Conners who plead guilty to the crime of selling whisky to Indians and was sentenced to one year in Folsom.

The Board of Education completed its work Saturday. The following applicants received Primary certificates: Miss Clara Reynolds, Miss Katie Arcularious, Miss Clara Eldred, Miss Mildred Gregory and Prof. Dixon.

J. D. Lewis and Albert Lewis arrived home early in the week from a trip to San Francisco. They went through the mountains by way of the Kearsarge pass. The former went to Bishop yesterday morning.

George Mead came down from Bishop on Saturday last with a load of flour for E. H. Edwards of Lone Pine. He will be down with another load in a few days for local merchants and will go on to Mojave for a load of freight.

Dr. I. J. Woodin is in constant attendance upon Mr. and Mrs. Albers. He says that Mrs. Albers has very much improved, and Mr. Albers is also better. The Doctor says, however, that Mr. Albers' injured elbow is "sloughing" a great deal and may yet necessitate the amputation of the arm.

E. T. Loy, a mining expert from Denver, arrived at Keeler this morning on his way to Darwin to inspect mining properties there. He is interested in the purchase of the Custer mine, owned by J. S. Gorman. Mr. Gorman went to Keeler on Wednesday for the purpose of meeting Mr. Loy, but owing to the delay of the Mojave stage failed to see him.

Coolgardie.

Rich new finds are being constantly reported from Coolgardie gold fields. Coolgardie, Australia, is an accessible point, reached by steamer to Fremantle, thence by rail to Southern Cross and team to destination. The trip to Australia on the fine steamers of the Oceanic Steamship Company via Honolulu, Samoa, and New Zealand is pleasure sailing the day long. This line tickets passengers to Cape Town, South Africa. Map of Coolgardie district and Pacific ports reached by the Oceanic Steamship Company is mailed free to any address by the O. S. S. Co. 114 Montgomery St. San Francisco.

Estray Notice

There came to my place on July 22, 1895, a grey mare, weight about 1100 lbs. no visible brand, large scars on back, swelling in knee of left front leg, gentle animal and a persistent gate breaker. Owner will call and prove property and pay charges.

R. L. ROSSI,
At Lacey Ranch.

Camp Independence, July 26, 1895.

Handling Fodder.

It is told in Iowa Homestead how to handle corn fodder with a double harpoon fork. A correspondent says: I use a truck wagon with a large hayrack on it, and have several ropes with which to tie the fodder in bundles. I put from two to four shocks of corn in one bundle and draw this quite tight with the rope. The wagon will hold eight or ten such bundles. In putting it in the barn I use the harpoon the same as hay and can say that it is by far the easiest way to unload fodder, as it is not as hard work as hauling up hay and can be unloaded as fast as a man in the mow can untie the ropes.

Wheat For Stock Feeding.

The Cincinnati Price Current has made investigations as to the extent of wheat used in feeding stock. It is mainly in eight states, exclusively winter wheat, except Iowa, and the estimate is 40,000,000 bushels already fed, and a probable total for the year of 75,000,000 unless the price should advance. Iowa is bringing considerable quantities from other states for this purpose.

Windmill Power.

Dr. de Foulk has on his Pennsylvania farm a windmill which operates a pump forcing water to the hogpens, sheepfold, barnyard and the residence. It also grinds all his feed and cuts all his fodder. American Agriculturist tells that the whole apparatus, mills, etc., cost less than $600. He finds it a very profitable investment, with 200 or 300 hogs, as many sheep, with cattle and horses. Windmill power is being applied profitably for irrigation, and its use is destined to bring the great benefits of irrigation within reach of many who now consider irrigation impracticable.

MISCELLANEOUS.

NOTICE OF COMMISSIONER'S SALE ON FORECLOSURE OF MORTGAGE.

O. I. MAIRS, Plaintiff, vs. JOHN ALEXANDER, Assignee of John Barnes, an Insolvent Debtor, and as Assignee of M. V. Barnes, an Insolvent Debtor, Defendant.

Under and by virtue of an order of Sale and decree of foreclosure issued out of the Superior Court of the County of Inyo, State of California, on the 7th day of August, 1895, in the above-entitled action, wherein, O. I. Mairs, the above-named plaintiff, obtained a judgment and decree against John Alexander, as Assignee of John Barnes, an insolvent debtor, and as Assignee of M. V. Barnes, an insolvent debtor, defendant, on the 2nd day of August, 1895, which said decree was on the 5th day of August 1895, recorded in Judgment Book No. 1 of said Court, at page 506, I was appointed commissioner to sell and I am commanded to sell:

All those certain lots, pieces and parcels of land situate, lying and being in the town of Keeler, County of Inyo, State of California, and particularly described as follows, to wit: Lots numbers 1, 2, 17 and 18, n Block No. 4 in the said town of Keeler, as the same are commonly known and designated and as the same appear by the map of said town, made by James Oliver in the year 1883.

Notice is hereby given that on Saturday, the 31st day of August, 1895, at twelve o'clock, noon, of that day, in front of the Court House, in the town of Independence, in said Inyo County, I will, in obedience to said order of sale and decree of foreclosure, sell the above described property, or so much thereof as may be necessary to satisfy plaintiff's judgment, with interest thereon and costs, to the highest and best bidder for cash in gold coin of the United States.

Dated, Independence, Cal., August 9, 1895.

J. D. MAIRS,
Commissioner.

P. H. MACK, Attorney for Plaintiff.

NOTICE TO CREDITORS.

Estate of A. A. DIAZ, deceased.

NOTICE IS HEREBY GIVEN BY THE UNdersigned, Executrix of the estate of A. A. DIAZ, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice, to the said Executrix at the law office of W. A. Lamar, in the town of Independence, Inyo county, California, the same being the place for the transaction of the business of the said estate in the said Inyo County.

INHUMANITY.

Ships Bound for the "Islands of the Curst."

OFF THE COAST OF FRENCH GUIANA.

The Horrors of the Passage too Repulsive for Description—The Climate is Simply Murderous.

The isolated spot where Captain Dreyfus has to serve his sentence comprises three small islands off the coast of French Guiana, a few degrees north of the equator, and except a narrow sea frontage, are covered with tropical forests. The climate is simply murderous, certain death being the result of standing bareheaded in the sun even for an instant. From November to June is the wet season, during which the average rainfall is 180 inches; yet the temperature is never less than 85 degrees, and rises to 115 degrees during the four dry months. Convict ships bound for these "Islands of the Curst" generally sail either from the Ile de Re, in the Bay of Biscay, or the Ile d'Aix, in the Mediterranean. A month is occupied by the voyage, the horrors of which are a fit prelude to those yet to come. Dressed in their convict garb, the prisoners are confined in batches of fifty in great iron cages on the spar deck. Benches are placed round the sides of the cage and hammocks are slung at night. But day and night they are watched by guards standing beside loaded mitrailleuses, ready to fire at the first sign of mutiny. Sometimes, indeed, such outbreaks do occur, but they are invariably quelled with remorseless severity. The horrors of the passage are too repulsive for description, the scenes resembling rather those observable a century or two back than what one would associate with the present times.

On the arrival of the prisoners at the Iles de Salut they are taken to the "Camp," a clearing occupied by strongly-built iron-barred huts, furnished with double rows of hammocks. But at night the fetid atmosphere within, combined with the noisome vapors of the outer air and the ever-present swarms of stinging insects, render any but the sleep of exhaustion impossible. From the moment of his arrival the convict has no name. He is known only by the number of his hammock. The new arrivals are put to the most severe tasks—draining marshes and clearing ground—"to break their spirits." They are conducted to their work by armed guards, who are ordered to fire at the least attempt at flight. Hardly any try to escape, for they know that if they evade the bullets of the guards and their pursuit, it will be necessary to traverse the sea and the virgin forest. At every step will lie in wait for them death by hunger, by fatigue, by disease, or by the poisoned arrows of the natives, who receive a reward for every convict they bring back, dead or alive. Meanwhile, with bodies broken by their awful toil in a climate where a walk of a hundred yards is a formidable task, they labor in the blazing sun with spades and picks. About their heads hang clouds of stinging insects. Great red ants cover their bare legs, and sometimes poisonous serpents twist about their ankles and inflict mortal wounds. They stand in trenches up to their knees in water and mire, and the exhalations rising from the earth consume them with fever, or set their teeth chattering as with cold, while the sweat rolls from their foreheads. Occasionally, in their despair, some of the convicts revolt, in the hope, which is seldom disappointed, of finding in the bullets of their custodians a relief from this living torture. Others again go mad, or end their lives by deliberately exposing themselves to the sun, while very few ever succeed in escaping. Indeed, only once have any fugitives reached civilized countries again, and even then their period of freedom was comparatively brief.—Public Opinion.

KNOWLEDGE

Brings comfort and improvement and tends to personal enjoyment when rightly used. The many, who live better than others and enjoy life more, with less expenditure, by more promptly adapting the world's best products to the needs of physical being, will attest the value to health of the pure liquid laxative principles embraced in the remedy, Syrup of Figs.

Its excellence is due to its presenting in the form most acceptable and pleasant to the taste, the refreshing and truly beneficial properties of a perfect laxative; effectually cleansing the system, dispelling colds, headaches and fevers and permanently curing constipation. It has given satisfaction to millions and met with the approval of the medical profession, because it acts on the Kidneys, Liver and Bowels without weakening them and it is perfectly free from every objectionable substance.

Syrup of Figs is for sale by all druggists in 50c and $1 bottles, but it is manufactured by the California Fig Syrup Co. only, whose name is printed on every package, also the name, Syrup of Figs, and being well informed, you will not accept any substitute if offered.

A SCRAP OF RIBBON

By DAVID DWIGHT WELLS.

I determined on a bold plan and told him that I was a detective. It was a lie, and I thought he suspected it, for he at once demanded that I should show him my badge. Fortunately some people approached just then, and saying that I did not wish them to see it but would show it to him later, I gave him some money and bade him tell me what he knew quickly.

He said he had seen the girl I described arrive at the station in the afternoon, and that she had asked the way to the hotel. Soon after a young man, whom I had no doubt was Holden, had come from Boston and inquired for her. He knew nothing more except that he had seen her walking on a road that led out of town as he was going to his supper.

"Was she alone?" I asked.

"Yes. No one was with her that I could see."

"Where does the road lead to?"

"It leads just to the cemetery, and then"——

"That's sufficient; did you tell Miss ——, the lady that has just left, all this?"

"All, except about the young man. I forgot that till just now."

"Good. Say nothing about it to any one. Good night."

I left him and walked rapidly in the direction of the hotel that Miss Ormsby had gone to; then I changed my mind and decided to wait for her on the road to the cemetery.

I was not long in finding a place convenient for my purpose. A thick clump of trees growing near the roadside at once afforded me a secure retreat and a position from which I could watch all who passed by without being seen myself.

It was by this time nearly ten o'clock, and the road was deserted and lonely. It had been bright moonlight, but some thin gray clouds were drifting across the sky, and every now and then would obscure the face of the moon. Before me the broad, dusty road stretched away to where the white gravestones of the cemetery shone on the hill side. It was a warm, sultry night, and wearied by my exertions I found the cool shade of the trees very pleasant.

I mentally viewed the day's experience to see how I stood with regard to the mystery and what chances I had of solving it.

The clew I had just obtained threw a new light on the situation, but did not conclusively prove why Miss Ormsby had come to Malden.

I could only think of two reasons for this action on her part; the first to find out what had become of her missing partner for the ball, Frank Holden; the second to find out what had become of the shopgirl, Miss Mason. If the first cause was the true one she must have known of Holden's connection with the shopgirl—must have known or foreseen the result of her sending the ribbon; must have known that Miss Mason would go to Malden, and that Holden would follow her; but Holden had said that his fiance had gone there to kill herself. Did Miss Ormsby know that too? Then she had not inquired for him at the station, though that proved nothing, because she might have taken it for granted that where Miss Mason was he would be also.

If the second cause were true, she must still have known that Miss Mason would go to Malden on receipt of the ribbon, and again the ugly suspicion arose in my mind that she must also know what she went there for. But why did she follow her? Was it to save her? Hardly, for then she would have gone at once. Was it to see if she had killed herself? That was preposterous, for she could have read it in the next morning's papers with much more safety and much less trouble. Either reason left much to be proved, and I must await further developments. Just then in the distance I heard footfalls, and a minute later Miss Ormsby passed me, walking rapidly toward the graveyard.

I saw her enter it, and following as quickly as I dared, crept along on my hands and knees till I was in the shadow of the church near by, and then raising myself looked over into the cemetery. I started, for I found that I was within three feet of her, but fortunately the moon was clouded just then and she did not see me. She was carefully searching every nook and corner of a small lot and was evidently looking for something. Two of the graves lay close together and the little trough between them was in the shadow and looked black and forbidding. She approached this hollow several times, but seemed afraid of it, for she would draw back a step or two and stand listening. Finally she mustered up courage enough to put out her arm as though she were going to feel in the hollow. But though she came very near dipping her hand into the blackness she would hastily draw it back, only to bring it nearer the next time.

She feared to touch something, and yet so strongly was she attracted to the something that she thought was lying in the blackness that she finally nerved herself to thrust her hand down as far as it would go; but she touched only the grass.

Her face bore an expression of mingled relief and fear—relief because her hand had not touched something, fear for what had become of the thing that she sought. She now arose from the kneeling position she had assumed and returned as quickly as she had come to the hotel. I followed, thinking, for I now knew two more facts. I knew what she had come to find, and I knew by the look of fear upon her face that it was not her fault that the grewsome thing she looked for was missing, and that she greatly dreaded lest some one else had found it.

The hotel of the town was built around three sides of a hollow square, and while Miss Ormsby entered by the front door I came in the back way and passed through the courtyard.

The window of a private parlor in one of the wings was open, and as I went by I heard voices that sounded familiar and caused me to look up. Within was seated Frank Holden, and on his lap none other than Miss Mason; no, there I was wrong, for on her finger she wore a plain gold ring that had not been there in the morning. I went into the house with a light heart and a hope that somebody else would see that scene also before the night was over.

As far as I was concerned I did not see but that I might as well have stayed at home. For the drama in which I had unintentionally played a prominent part had turned out to be a comedy, and not a tragedy as I had feared. Still, I had been used most unfairly, and had been made a tool. I was grieved and thought I deserved some compensation. I determined, therefore, to clear up the mystery if possible before I left Malden; but this I knew would require strategy. So I sat down in the parlor and thought it over for a while, and then, going to the office, sent up my card to Miss Ormsby.

CHAPTER IV.

I now had her where I wanted her.

Following it closely I arrived at her door in time to hear her say that she could see no one, but before she could finish her excuses I stepped into her private parlor, saying that I was here on business and seeing by the register that she was here also and alone I had come to see if I could be of any service to her.

"None whatever; thanks," she replied very coldly, "and you will find that if you look again, Mr. Cummings, that my name is not on the register. Then she waited for me to leave the room.

I bit my lip with vexation that I should have made so stupid a blunder. I might have known that she would never have signed her own name to the register. I had no intention of being driven away, however, and so continued the conversation by saying I should like to report to her concerning the errand she had given me to do that afternoon.

"Is it necessary?" she inquired, in the same icy tone.

"Why, the fact is," I said, "that I am rather ashamed to confess that I forgot to deliver the ribbon"— I paused, for she looked as angry and disappointed as I have ever seen a human being appear; but with it all there was not a trace of pity for the girl or thankfulness at her escape, only rage at the failure of her own plans.

"Is that the way you generally execute your commissions?" she said at last, with a sneer.

"Excuse me," I continued, "you looked so angry that I did not finish my sentence. I was going to say that I forgot to deliver the ribbon for nearly an hour after you gave it to me."

"Well?" she said; but I could see she was intensely interested.

"I met a friend of mine down town and we got to talking, and so the time passed. It was Mr. Frank Holden. Do you know him?"

She answered "No," but I knew that she meant yes. "It was curious," I went on, "but he was taking some ribbon to Jordan & Marsh's also." I paused for a minute in astonishment, for this had been the wildest sort of a guess on my part, and yet I could see from her involuntary start that I had unwittingly hit upon the truth; then I proceeded. "Just before we arrived at the store, however, another friend stopped him to talk, and I hurried on to do your errand and left him." She looked immensely relieved.

My first bit of fiction had succeeded so well that I determined to try again, so I said as innocently as I could, "That was not all, Miss Ormsby, for the girl that I gave the ribbon to fainted." She made no direct reply to this, but muttered, "The little fool."

"What do you think of that?" I asked.

"I think," she said, "that your conduct is very ungentlemanly, and that you are saying these things to me for some purpose. What do you mean? Either tell me at once or be kind enough to leave the room."

"I mean, Miss Ormsby," I replied, "that I know why you sent the purple ribbon; that I have followed you everywhere that you have been tonight; that the body of Miss Mason has been found, and that I have seen it; finally, I mean that I have it in my power to have you arrested for murder."

For a minute or two she did not say a word, but stood looking at me and biting her lips; otherwise she was perfectly calm, and presently said in a hard dry voice, that told of suppressed feeling: "You make bold assertions, Mr. Cummings. Can you prove them?"

"Yes," I replied, producing an envelope I had prepared for this occasion, "here is a letter I found on her body, charging you with the deed, and with the proof I already have it would serve as conclusive evidence."

"Has any one else seen this letter?"

"No one but myself. I found it as I have just said."

She waited a minute, and then replied, "Why don't you summon help and hand me over to justice, my chivalrous gentleman; you see I am defenseless.

"By Jove," I cried, as I looked at her, "you are a brave woman if you are bad. I hate to give you up for punishment, much as you deserve it."

She fell into the trap just as I hoped she would, for she thought I was weakening, and almost before I knew it she was imploring me to have mercy upon her and save her.

I now had her where I wanted her, and after pretending to be obdurate for a while, I finally seemed to relent.

"Well," I said, "I will grant you what you wish on one condition; that you make a clean breast of the whole affair to me."

"Will you give me the letter and swear on your honor not to betray me!"

"Yes, but not till you have told me about it."

The reader already knows so much of her story that I will only give a brief summary of her confession.

She told me that she was engaged to Mr. Frank Holden, and had been for more than a year, but that the engagement had never been announced. About six months before she had learned that her fiance was paying marked attention to a shopgirl in Jordan & Marsh's, with whom he had become enamored.

He offered her honorable marriage, but the girl was too sensible not to foresee that complications would arise owing to their different stations in life and refused him. Holden, however, was persistent, and Miss Mason, who did not know that he was already engaged, submitted to his wishes to this extent. She told him he must leave her and see nothing of her for three months. If at the end of that time he still wished to marry her she would consent.

It was further agreed that he should inform her of his decision in the following manner, When the three months were past if he still loved her he should send her a bit of red ribbon; if not, a scrap of purple.

All this Miss Ormsby discovered, as well as the date on which he would send the token. She knew well enough that it would be red, and she knew also that as long as Miss Mason lived her own love was vain. She likewise learned that Miss Mason was of a highly nervous temperament and very much in love with Mr. Holden, so she felt quite sure that should he disappoint her she would do something desperate.

It now only remained to send a bit of purple on the day that Holden sent the red ribbon, and so arrange matters that the shop girl should have several hours at her disposal before her lover could discover the trick.

Miss Ormsby did not care to take the package herself for fear that she might be recognized, and meeting me used me as the reader knows.

My providential delay was all that saved the shop girl's life, for it gave Holden a chance to get to Malden before she could harm herself. She was an orphan and all her family were buried there, so Miss Ormsby reasoned rightly enough that thither she would go to die among them.

When she had finished her confession I handed her the letter—it contained only a blank piece of paper—and then turned to look out of the window. Right opposite me in the other wing was Holden's parlor, and I could see both occupants very plainly.

I then thought it queer that I heard no exclamation from Miss Ormsby, but my thoughts were rudely interrupted by a slight click. Turning quickly around, I was just in time to prevent my captive from escaping me for ever. I wrested a revolver from her grasp and said as I uncocked it, "You were going to kill yourself. Why?"

"Because the letter is blank, and you have extorted a confession from me by a trick. You mean to inform the police about me. I could not bear the scandal. Then he would tell anyway. He will never forgive me for killing her."

"You need not fear," I replied; "he will never tell, and you have not committed murder. See?" I pointed out to her the parlor and the two happy figures that occupied it, and putting the pistol in my pocket quietly left the room.—Harvard Advocate.

A Chinese Druggist.

A Chinese druggist will freely display the most nauseous and disgusting substances as medicine. Often he will keep a live deer there in a pen against the time when it will be pounded whole in a mortar, coram populo, to convince customers that his drugs are genuine. Medicines are gulped down by the quart, the prescriber holding that if one ingredient does not do its work another may. Their virtues nevertheless are many and mysterious.

A missionary doctor was well acquainted with a native practitioner, a man of considerable intelligence and repute. Him he brought to his home one day and showed, with natural pride, his three fair haired little girls. The native hastened to compliment his foreign friend, "Their complexions are indeed beautiful, but, if I may say so, their hair is perhaps hardly dark enough." He produced a bottle. "A dose of this taken internally three times a day would make a wonderful improvement."

He went on with more embarrassment, "There is another thing about them that I hardly like to mention." His friend reassured him. "Well, if you will allow me to say it, they are all girls. Now I have at home some pills that are perfectly infallible. Let them take these regularly for a month or so, and I promise they will develop into three as fine boys as father could wish for."—Temple Bar.

The capitol at Washington has cost more than $30,000,000. It covers 3½ acres, the dome is 307 feet high and 135 in diameter and is exceeded in size only by St. Peter's in Rome, St. Paul's in London, the Invalides in Paris and St. Isaac's in St. Petersburg.

HOITT'S SCHOOL.

Nowhere are boys better cared for and more thoroughly taught than at Hoitt's School, Burlingame, San Mateo county, Cal. The school is in charge of Ira G. Hoitt, Ph. D., and will reopen August 6th.—*S. F. Chronicle.*

After a young woman gets to be thirty she stops calling attention to her birthdays by giving parties.

After six years' suffering, I was cured by Piso's Cure.—MARY THOMPSON, 294 Ohio avenue, Allegheny, Pa., March 19, 1894.

Advice is like snow, the softer it falls, the longer it dwells upon, and the deeper it sinks into the mind.

A Good Appetite

Indicates a healthy condition of the system and the lack of it shows that the stomach and digestive organs are weak and debilitated. Hood's Sarsaparilla has wonderful power to tone and strengthen these organs and to create an appetite. By doing this it restores the body to health and prevents attacks of disease.

Hood's Sarsaparilla

Is the only true blood purifier prominently before the public eye today.

Hood's Pills the after dinner pill and family cathartic. 25c.

A SURE CURE FOR PILES

Itching Piles known by moisture like perspiration, cause intense itching when warm. This form and Blind, Bleeding or Protruding Piles yield at once to

DR. BO-SAN-KO'S PILE REMEDY,

which acts directly on parts affected, absorbs tumors, allays itching, effecting a permanent cure. Price 50c. Druggists or mail. Dr. Bosanko, Philada., Pa.

The mother of the modern girl says her daughter is like a piece of cheap calico. She won't wash.

THE KEYSTONE OF THE ARCH

In the edifice of health is vigor, which means not merely muscular energy, but an active discharge of the various functions of the body, such as digestion, secretion of the bile, the action of the bowels, the circulation of the blood. Nothing more actively and thoroughly contributes to the united performance of these functions than the renowned tonic and regulator, Hostetter's Stomach Bitters. The result of its use is a speedy gain in strength, together with the agreeable consciousness that the tenure of life is being strengthened—that one is laying up a store of vitality against the unavoidable draughts which old age makes upon the system. The fortifying influence of the Bitters constitute it a reliable safeguard against malaria, rheumatism and kidney trouble. Appetite and sleep improve through its use, and it protects the system from the effects of cold and damp.

It's the man without much mind who always "has a mind to do" something and never does it.

DEAFNESS CANNOT BE CURED

By local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure Deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube gets inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by catarrh, which is nothing but an inflamed condition of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars, free.

INDUSTRIAL JAPAN.

Every Kind of Manufacturing Pays Well.

EXCELLENT CHANCE FOR CAPITAL.

Because Labor and Fuel are So Cheap—The Japanese a Frugal and Industrious People.

Mr. Dun, the United States minister here, said yesterday that in his opinion the outlook for commercial and industrial enterprises was brighter in Japan than in any other part of the world—that there was no more profitable field for investment. Mr. Dun has lived in Japan almost continuously for twenty-three years and knows the country and the people. He came here in 1872 with Gen. Horace Capron, who had been commissioner of agriculture at Washington, for the purpose of organizing an agricultural department and establishing an experimental farm for the Japanese government. A number of other young men from the civil service at Washington came at the same time to assist in modernizing the executive branches of the government here. He has been a member of the United States legation for several years and was appointed minister by Mr. Cleveland at the beginning of this administration.

Mr. Dun says that almost every kind of manufacturing pays in Japan, and there is an opening for almost every sort of factory. Labor is so cheap and so skillful, fuel is so cheap, and there is a growing demand for all the myriad articles that enter into the wants of civilized men. Manufacturing has been conducted in the households of Japan until very recently. Every man did his work under his own roof, assisted by his wife and children, and the latter usually followed the trade of their parents. Factories were unknown, and they are very few in number even now, although they are increasing rapidly.

In Osaka, which is the Chicago of Japan, where there is more commercial activity and enterprise than in any other city of the empire, there was scarcely a manufacturing establishment ten years ago; but now you can count 500 smokestacks, and it is rapidly becoming one of the great manufacturing centers of the world. It has seven or eight large cotton mills that will compare well with any in the United States or Europe, and one of them is run by electricity. Their machinery is all modern and of the most improved patterns. It was made in England, but the Japanese machinists are so skillful that they are imitating both the spinning and the weaving apparatus with great success. It will not be long before mills may be entirely equipped with machinery of home manufacture.

The success of a manufacturing enterprise in Japan, Mr. Dun says, is entirely a matter of management. Investments are as safe here as anywhere else in the world, although there is comparatively little foreign capital represented. All the railroads, which now represent a total of about 3,000 miles and a capital of $75,000,000, were built with local money. Not a dollar was borrowed abroad, and there are very few shares or bonds of Japanese corporations held by foreign investors. At the same time the people are not rich. There are very few men of large fortunes. I was told by a Tokyo banker the other day that he knew of only two millionaires in Japan. One made his money in coal-mining and the other is the principal owner of the Nippon Yusen Kaisha, the great steamship company which has 100 vessels in its service and a monopoly of the coasting trade. But there are many men with small fortunes, and although wages are very low nobody is very poor. I have not heard of an almshouse in the entire country, and have never seen a beggar on the street. Occasionally some poor leper stretches out his hand as you enter one of the gilded temples, but there isn't a country in Europe or America so free as this from street begging.

The people as a rule are frugal, economical and manage to save a little even when they are working for 10 cents a day. They have few wants and are temperate. You never see a drunken man in the street. I have been in Japan nearly a month and have visited five of the principal cities. The only intoxicated people I have seen were a party of young fellows dressed in fantastic costumes who were sailing down the river in Osaka the other day. The city had been given over to great ceremonies and rejoicing over the return of the soldiers it sent to the war, and these young bloods—five or six of them—were continuing their celebration another day.

This sobriety is due to the use of tea instead of liquor as a beverage. The tea houses in Japan take the place of saloons and they are about as numerous in the large cities as barrooms are in Chicago. But a pot of tea that will entertain an entire family can be bought for 2 sen (1 cent in our money), which cheers and stimulates quite as much as malt or alcoholic liquors. The use of beer is, however, increasing so rapidly in Japan as to excite apprehension, and the government is making it the subject of an inquiry. There is a brewery or two in nearly every city of size and beer can be bought at almost every tea house.

While Mr. Dun does not advise any one to invest money in Japan or enter into mercantile or mechanical affairs here, he recommends those who are looking that way to make a careful personal investigation and consult with Americans of experience. No concessions are necessary, and foreigners are allowed to interest themselves in any enterprise except mining, although until the new treaty goes into effect in 1899 they must confine themselves to the treaty ports and the limits of consular jurisdiction.

The new treaty, which was negotiated by Secretary Gresham and Minister Kurino last winter at Washington, makes Japan as free for foreigners as the United States, with the exception that they cannot own real estate, and by a straight reading of the text it would seem that that is not prohibited. It provides that foreigners may trade by wholesale or retail, singly or with native partners, and it says that they "may own, hire and occupy houses, manufactories, warehouses, shops and premises, and lease land," conforming of course to the laws and police regulations that apply to them and the natives of the country alike.

If this does not mean that they may both own and lease real estate the English language has lost its significance, but Minister Dun says the treaty is intended to permit people to own buildings but not the land they stand upon.

The treaty also provides that foreigners shall enjoy all rights and privileges enjoyed by natives "in whatever relates to residence and travel, to the possession of goods and effects, to the succession to personal estate and the disposition of property"; that they shall not be required to pay any higher taxes, imposts or charges than natives; that they may freely enjoy their own religion, bury their dead according to their own rites, and that they shall be exempted from military service, forced loans and all other exactions. No higher duties are to be imposed upon the products of the United States than upon those of the most favored nation, and there must be perfect equality in the treatment of Americans and natives in the exportation of merchandise. The coasting trade, as is customary in all countries, is withheld for the benefit of the citizens of Japan, but American vessels laden with cargoes for more than one port are allowed to load and unload wherever they like. The same protection is afforded to natives and foreigners in patents and trademarks, which is a very good thing, because at present there is no patent treaty between the two countries and the Japs are stealing all of our inventions.

The foreign settlements which are now subject to the jurisdiction of the consuls of the different countries are to be incorporated into the municipalities which they adjoin, and the consuls will yield control to the local officials.

Until now Japan, like China, Turkey, Egypt and other countries which have not reached a high degree of civilization, has been subjected to what is called the doctrine of extra territoriality. That means that the citizens of the United States or England or any other civilized nation residing in those countries are subject to their own laws administered by their consuls and not to the local authorities or courts. If an American commits a crime in Japan today he is tried before the United States Consul-General, according to the laws of the United States, and not by the courts and laws of Japan. The same is true of citizens of European nations. If a Japanese citizen commits a crime against an American he is tried by the local authorities. The general rule in civil as well as criminal cases is that the defendant shall be tried under the laws of his own country, and the plaintiff brings his suit accordingly.

But Japan thinks she is sufficiently civilized to administer justice to foreigners and has long demanded release from the extra territoriality restriction. That release is given her in the treaties that were made with England and the United States last year and recently with Russia, but it does not go into effect for five years from date—that is, July 17, 1899. By that time it is believed that all doubt on the subject of Japanese justice will be removed. But this is a serious question for foreigners residing here, and for those who intend to enter business or invest money in Japan.

A majority of the American and British residents were opposed to the ratification of the treaties and they sent many remonstrances to their governments. They have not sufficient confidence in Japanese justice to submit their persons and properties to the protection of the laws of this country. They prefer to remain under the jurisdiction of their consuls, but you will find a great many of the opposite opinion, who believe that the Japanese laws are liberal and their judges are just. There is plenty of time for improvement and before the treaty goes into effect in 1899 Japan will have made great progress in this as well as other directions. While one may sympathize with the preference of the foreigners here to live under the laws of their own countries, it is, nevertheless, the impression of disinterested observers that life and property are quite as safe in Japan as in Spain, or Italy, or any of the Latin American republics. There have been a few cases of injustice which are cited whenever this question is discussed—cases in which foreigners have suffered injustice in the courts of Japan when they have been trying to defend their rights or collect dues from the government or Japanese citizens, but the wonder is that such instances are so few. I can cite ten times as many quite as serious in which the United States government has been the defendant, and which could never have occurred in Japan without an international eruption. No foreigner has ever been treated by the parliament or the people of Japan as badly as Ericsson was treated by the United States, and I might mention other similar historical examples.

There are about 3,000 foreigners in Japan, not including Chinese. The majority of them are Englishmen; Germans are next in number. The Americans constitute perhaps 15 per cent. of the whole. The native population by the census of 1892 was 41,089,940, and for the benefit of the 3,000 foreigners they have been kept in what is practically a commercial bondage since 1858, because in her treaties made at the opening of Japan to foreign settlement the great nations of the earth allowed her no more authority over her own tariff than over the stranger within her gates. She cannot impose a higher duty than 5 per cent. on any foreign merchandise, and must tax her farmers to pay the expenses of her government, including the best lighthouse system in the world.

This is the only country which does not tax foreign ships for lighthouse, harbor to tonnage duties, and every foreigner in Japan, no matter what amount of property he may own or what business he may be engaged in, is entirely exempt from all taxation. The government furnishes him police protection, and he has the benefit of a paid fire department, and in most of the cities water and sewerage systems, but he is not required to contribute anything to their support.

Japan has thought for many years that she has reached a stage of civilization that should justify her in assuming authority over all the inhabitants of this empire, and the treaties made last year agree that she may do so at the end of this century. Then any foreigner may enter into any lawful enterprise as freely as any citizen, but until that date it will be necessary for foreigners to confine their manufacturing and commercial establishments to the limits of the consular jurisdiction or place them under the nominal management of natives by a process which is familiar to people here.—William E. Curtis, in Chicago Record.

GERMANY'S BLUEJACKETS.

Before an assemblage of naval experts I saw the German bluejackets perform work that could not have been surpassed in any navy of the world. Their fleet landed about 5,000 men at a given moment. This is an operation always difficult and rarely done without unexpected hitches. But the German bluejackets poured from the warships with a smoothness and rapidity most astonishing, covered the space to the beach with startling rapidity, and started skirmishing up the steep hillsides with the energy and exactness of well-trained riflemen.

Yet I can recall a cartoon in Punch, which appeared while Prussia was engaged here in the Danish war of 1864. Two English bluejackets were pointing contemptuously to the figure of a German sailor—as he was then caricatured, and as we know him in the pages of Puck. One bluejacket says to the other: "We can't fight such a lubber as that; let's kick him!" At this distance of time I may misquote, but the words indicated the contempt of the average Englishman for what he looked upon as the German of that time. It was much the feeling that Chinamen had for Japanese up to within a few months.

Those great German naval maneuvers of five years ago, near the mouth of the new Baltic Canal, first opened the eyes of the world to the new spirit that was abroad in Germany, and that is as yet not fully appreciated. The drill on board a German man-of-war bears favorable comparison with that in any other navy.

But it is not in drill alone that the German bluejacket is good. He is, as a rule, of superior make-up to the bluejacket going into English or American service. I can illustrate this by the statement of a merchant of St. Vincent, in the British West Indies, whom I engaged in conversation while some German bluejackets were embarking at a neighboring pier.

"It's this way," he said. "I'm an Englishman, but give me ten Germans ashore rather than one Britisher. The Germans come ashore, walk about, drink beer, and behave themselves. My people get howling drunk, punch everybody's head, smash what they can, and nobody dares go about the streets until they are afloat again."—Harper's Weekly.

HENRY IRVING'S STORIES.

A number of years ago, when the players had gathered in a little knot after rehearsal jesting and laughing, Mr. Irving joined them and proceeded to narrate one of his stories. When he had finished there was an awful silence. Sir Henry (to be) tossed his head and left the theater in a huff.

"Great shades of all that is diplomatic," cried Mr. Terriss "why didn't you laugh? That was one of Mr. Irving's funny stories."

All agreed that they would never be caught napping again.

The next time Mr. Irving proceeded to tell how Lord Randolph Churchill, then a young man, had come behind the scenes in a great hurry, after the second act of Hamlet.

"I'm deucedly interested in this Hamlet, or whatever you call it," said Lord Randolph. "But I've got an engagement, and must hurry away. I'm deucedly anxious to know what becomes of the prince and what becomes of the flower girl."

Everybody roared.

Whereupon Mr. Irving left the theater in a huff again.

"Great shades of everything that is diplomatic," cried Terriss.

"What have we done, now?" gasped one of the members of the company.

"Why, that was one of Mr. Irving's sad, serious moral-example stories."

"But the incongruity of it—an Oxford man and a Lord. It's actually funny."

"It would never do to tell Mr. Irving so."

Mr. Terriss being familiar with all of Mr. Irving's stories, after that the rule was one wink for a sad story and two winks for a funny story.—New York Press.

THOSE WHO TRAVEL.

A Few Hundred Dollars Spent Never Regretted.

ADDED INTEREST TO ONE'S FUTURE.

Traveling Gives Zest to Life and Causes One to Better Understand Descriptive Fiction.

In these days of cheap and rapid traveling a girl's education should never be considered complete until she has taken a trip abroad. A few hundred dollars spent now will give a new zest to life and an added interest to all one's future. Books of travel and descriptive fiction will be read with more pleasure and understanding. The thought will come, "I have seen that place," or "I have stood beside the tomb of Abelard and Heloise, I walked in the gardens of the Luxembourg, I saw the spot where the little ward of Jean Valjean played, I looked at my self in the mirror that showed Marie Antoinette beheaded, I saw the Gobelin tapestry-workers weaving their beautiful designs, the Venetian glass-blowers blowing their fragile glass toys, I saw the pantheon where Victor Hugo's body lies."

And books of poetry will be read with a deeper feeling when one has stood by the graves of Keats and Shelly, visited the home of Shakespeare or walked in the fields where Robbie Burns plowed and sung.

How much more pleasure will a picture give if one can say: "I have been there; I have glided over the Bay of Naples and seen the smoke rising from that smoldering Vesuvius," or I "have seen the people dressed in just those quoint costumes.'

E'en though the trip be a hasty one, memories are brought away that are constantly bringing back in the future a picture, a thought, a story.

What is needed to give one this little present enjoyment that will cast such bits of brightness over one's future? A few hundred dollars, a good sized satchel containing a change or two of clothing, a traveling skirt of ankle length and a fair quantity of common sense. With this stock in trade an American girl can get a vast amount of pleasure out of three months' travel.

The experience and knowledge gained will certainly repay one for any little sacrifice entailed by the trip.

It is a mistake to think of taking much baggage, for it is expensive and awkward to handle when one reaches the other side. And one's friends should remember that each added package, however small, they wish to send a friend across the water will cause more or less inconvenience and annoyance to the person taking it. I remember a German gentleman who was exceedingly wroth at having to take a pound of candy to an American girl in Berlin. It was the white confection, covered with chocolate, and chocolate is a dutiable article, and he had to pay far more than the actual value of the candy before he could leave the custom house at Hamburg. He declared if he had to pay another cent on it before he got it to its destination he would throw it away.

"Yes, I will take a pair of rubbers for you," I heard a girl say, "I can squeeze them in somewhere and I know rubbers do come awfully high in Paris and Italy, I am only going to take a satchel, however, and when it comes to carrying a whole wardrobe of clothes and a library of books as Jennie asked me to do I must refuse."

One girl sent a 25-cent silver piece to a friend and requested her to buy her a little Parisian souvenir with it. After the friend had taken it to the bank, changed it into French money and paid the discount on it and the car fare both ways there were just 2 cents left with which to purchase the souvenir.

It is well to know, and to know well, a few current phrases of the language of the country in which one is traveling. Two American ladies were riding in a cab in Italy when they became frightened at the speed the horses were going. They expostulated with the driver, but he did not understand a word of what was being said, and, thinking they desired to go faster, lashed his horses to increase their speed. At last one of the ladies remembered the only Italian phrase she knew—a phrase that is familiar to every language and is always used in the original. "Dolce far niente," she called to the driver, and, although literally meaning "it is sweet to do nothing," yet the driver understood and went slow. For those who know nothing of the language it is best to hire an interpreter by the hour. An application to the resident consul or to the hotel proprietor will procure a French or German or Italian woman, who, for 25 or 30 cents an hour, or less if more hours than one are necessary, will accompany one and do all the necessary talking both ways.

And there are many of our own countrywomen, students of music or painting, who being anxious to earn a little toward paying their expenses, will gladly act as cicerones. And they probably give better satisfaction than the foreign women, for they know better what the Americans desire to see and buy.

One thing that should be attended to before leaving the American shore is a visit to the dentist. An aching tooth will destroy the entire pleasure of a journey, and it is neither safe nor convenient to trust to an unknown dentist. Prices for having the teeth "stopped," as the English call it, are about twice as high abroad as they are at home. So it is well to see that they are in good order before starting.

Those who anticipate seasickness and those who do not, for even the bravest are taken unawares sometimes, should make a little preparation before starting. The clothes should be so arranged that they could be got into as quickly and easily as possible. To get out of the state room and up into the fresh air on deck is the best thing to do, although those who suffer much are not able to do this. So it is necessary to have the clothes arranged so they can be put on quickly, as one cannot stand up long after getting out of the berth.

I know one wise woman who sewed her dress skirt and petticoat together, fastened false frizzes into her traveling cap, had woolen shoes made with rubber loops that would fasten easily, a dressing sack with only one button on it, and then carefully packed al these easily adjusted garments in the bottom of her steamer trunk. The first morning on shipboard she got at those specially prepared garments, but weakness overcame her and she was obliged to go back to her berth, where she remained until the ship touched at New York. Perhaps when she went on board, healthy and well, if she had unpacked that trunk and hung those garments on the convenient peg near her berth she might have spent every day on deck. But it is only perhaps; the vagaries of seasickness can never be foretold.

In traveling in Europe one should try to get into a compartment having as few people and as little baggage in it as possible, so that when night comes one can arrange one's self as comfortably as circumstances will permit. A countrywoman told me an incident which illustrates how a Frenchman procured a whole compartment for himself. The lady had been abroad for some time and was returning to America. She had reached Paris safely and taken the train for Calais. Besides herself in the compartment there were a Frenchman and a Frenchwoman. The two women were soon chatting aimably together. Their boxes and bags were piled up on the seats and the racks. It was a very hot day and the air was stifling. The Frenchman soon began to fidget about, and at last, bending his head over, he slowly poured a bottle of water over it and let it trickle down to the floor. He repeated this operation every time the car stopped at a way station long enough for him to refill the bottle. "Poor man," thought the American woman, "how he must suffer from the heat." At one of the stations a couple of English girls got into the compartment, and added their boxes and bags to those already there. The Frenchman fidgeted more than ever. Finally he began to divest himself of his wearing apparel. First his coat, then his shoes, his collar, and he was just unfastening his suspenders when the car stopped at a station and the English girls, with flaming cheeks, grasped their bags and rushed from the compartment.

"The English are so rude sometimes," murmured the American, whose sympathies were still with the man who was suffering so with the heat. The afternoon wore on toward evening, and each began to think how they could make themselves comfortable for the night when the Frenchman began to exhibit another peculiarity. Bowing effusively and shaking hands with an imaginary companion on the seat opposite him, he began to converse as though with a friend he had just met. The two women gazed at him blankly, and as the cars stopped they caught up their parcels and fled.

But the American woman was uneasy; her conscience troubled her. The next time a stop was made she got out of her compartment and went back to see if she could not do something for the sick man. She found him resting very comfortably — occupying both seats with the blankets and pillows. Mustering up her best French she kindly inquired how he felt, and asked if she had not better tell the guard to call the doctor. The Frenchman stared at her a moment in amazement, then burst into a hearty laugh. The American woman went back to her own crowded compartment, sadder and oh, so much wiser.—Lindsay Jarvis.

HARD LINES FOR MR. CONTRACTOR.

A few years ago a prominent oil producer of Pittsburg was putting down a well in a territory that had never been tested for oil. He was keeping the fact a profound secret, in order that, in case he got a good well, he might without difficulty secure all the leases he desired in the vicinity. He was on the ground himself, watching with great interest the indications. Everything pointed to success. Two days before the well was expected to "come in," he was called home. Anxious about the result, he arranged with his contractor to telegraph him as soon as the drill had reached the sand.

He knew, however, that secrets will sometimes leak out of a telegraph office, and so he told the driller, that the sentence, "Pine trees grow tall," would mean that he had struck oil. The driller promised to do as he was ordered. The mingled satisfaction and vexation of the producer may be imagined, when, two days later, he recieved the following telegram: "Pine trees grow tall. She's squirting clean over the derrick." His hope that he should have no competitors for leases was disappointed.—Argonaut.

Baggage is moved from one end to the other of the Victoria station at Manchester in basket trucks running along a light electric railroad suspended from the roof of the station. The trucks are lowered by chains to any platform desired.

Tagleigh (rapturously) — Did you ever see Brainwaves, the poet, in one of his rare moments?

Wagleigh—I guess so. I met him at dinner.—Life.

KILLARNEY.

A Visit to Its Wonderfully Beautiful Lakes.

THE SCENERY IS WILD AND RUGGED.

The Tourist is Common Property—the Inhabitants Expect Great Things from a Sight-Seer.

After kissing the Blarney stone and thoroughly enjoying the more agreeable features of Cork, we decided that Killarney and its wonderfully beautiful lakes should be our next and last place in southern Ireland. 'Tis beyond the powers of the human pen to do full justice to the scenery hereabouts; the lights, shadows and colorings of water, hill and dale are simply wonderful and partake too much of the heavenly for us poor mortals to attempt a fitting description. The air is so soft, balmy and soporific that one falls asleep several times during the day, sleeps through the night and fights against getting up in the morning to do a lot of riding and sight-seeing. However, the tourist is common property hereabouts, and the inhabitants expect that a peaceful man shall undertake a giddy round of excursions, beginning generally at unearthly hours in the morning and lasting all day. This pernicious custom tends to the enrichment of car drivers, boat proprietors, pony owners, guides, and has the further local advantage that you pay for your board by the day, and take your meals in the mountains and on the lakes, much to the joy of the hotel keepers.

To the novice the jaunting car, on which one starts out on his journey, seems a most unsafe and devil-may-care vehicle. You sit sidewise over one of the two wheels with nothing between you and the flying hedge. You expect every minute to be thrown on your face in the ditch, and it is a constant wonder to you that you still are in your place on the car. The driver goes with a reckless speed that is terrifying and you have nothing to hold on by. You can scarcely indeed hold your breath, for it is fairly taken away by the headlong pace at which you are going. After awhile you find you are still alive and can breathe more freely and you begin to realize that the car is merely having its fun with you and that besides being the easiest riding machine imaginable it is as safe as a church.

You first strike a pretty road with a deep, sunless plantation on one side and gentle hills on the other, while above the streets overlooking the lake can be seen the chimneys of the mansion of the earl of Kenmare, one of the two owners of the lakes of Killarney. It seems to be the habit of the nobility and gentry of Ireland to build a house several times more expensive than they can afford and larger than they need, and then slide gently into bankruptcy. While the remark is not to be considered as applying in this particular case, it is induced by the many occasions upon which one is informed that the owner of large property has been obliged to go elsewhere.

After quite a ride through lanes leading across rougher country than we found at the start we found the jolting increase to such an extent that we were forced to begin a bargain with a lot of pony boys who had been following us for a mile or two. The journey to Ross castle, which is usually the objective point, is by no means an unbroken one, as your car must from the nature of the road give way to a pony to take you over the pass, then to see the lake a boat is necessary and finally another car for the return trip. However, the expense, strange enough to say, is comparatively inconsiderable and everybody connected with it is so civil and attentive that no one has a right to grumble.

There were two or three horses more than our party required, and as the drivers each boasted of the fine qualities of his particular beast it was rather hard to make a selection.

Finally a race was agreed upon and we were to make our selection at its close. Away dashed the squadron of horsemen with their coat tails flying like banners behind them, yelling and whooping like mad. Round the turning mark they went in a body, and down the field they came toward us like a tornado, each man bending over the neck of his steed while he lashed wildly with his switch.

Our car horse frightened at the tumult became very restless and finally swerved around square across the narrow road, which he completely blocked up and headed off the racers on the way to the finishing goal. There was an exciting moment as the racers dashed to one side and all but three of them tumbled into the ditch that ran along parallel with the road. We hardly expected to see rider or horse come out unmaimed, but apparently no harm was done, and as the number of animals that went into the ditch just tallied with our party the matter was settled on that basis. We mounted and found that the animals were no worse than they looked, and, reenforcing our drivers and ourselves with "mountain dew" that the pretty black-eyed country girls sold to us as the beverage of the country, we started for Kate Kearney's cottage, which was the first point of interest.

Some one of our number had read of what the poet wrote of Kate Kearney and her cottage and he told us the story, so we were willing enough to stop there with him until he satisfied his curiosity, which he did by taking a long pull at a jug containing poteen and goat's milk that Kate's granddaughter brought out for us to drink to the memoy of her distinguished ancestress.

When we got to the Gap of Dunloe, our next halting place, there were five lakes, and in one was placed the last snake ever seen in Ireland. The guides tell you that St. Patrick said the snake would get out tomorrow but we all know now that tomorrow never comes. The poteen and such is, however, sufficiently bad to induce the belief that if a person were to partake too freely of it he would surely see this snake and a whole lot of others. The little river that flows into Serpent lake twists and turns in true serpentine fashion, and is said to represent the track the snake made when squirming to its lengthened stay in the lake region.

There is a celebrated echo in the pass and for some time we had been followed by men and boys with trumpets who offered to make the welkin ring for a consideration. A reputable firm of cannon-firers, who, with their ordnance, work in conjunction with the echo, the latter being a sleeping partner until waked up by the noise of the gun, sent advance agents to us respectfully soliciting our patronage. They were echo-makers to the nobility and gentry, so of course we paid the shot.

The pass itself is very grand and the surrounding scenery exceedingly beautiful. Purple mountain, so called strangely enough, because it is purple, keeps constant watch over the traveler through the gap. It is one of the most lovely mountains anywhere to be seen, the purple heather which gives it its color being of a pure, delicate hue most charming to look upon. Once over the pass descent is made by a long, looped road reminding one of Alpine scenes down into the Black valley, a gloomy gorge that fully justifies its name. At last we reach a gate where we pony up with the drivers, as the sign "He who enters here leaves all ponies behind" warns one that another stone of the journey has been completed.

It was the upper lake that we were about to see, and the Herbert estate was where we were admitted for a consideration. The money paid is said to go toward keeping the lakes in repair. The wear and tear of a lake caused by small boats going over it in this part of the world is said to be something that we Americans have no idea of. We concluded that the statement was correct as to its final clause.

The scenery is wild and rugged. In one spot a mountain called Eagle's Nest rises sheer from the water's edge 1,000 feet into the air, and it is sublime. It takes two looks at least to see the whole from base to summit. The stories that these boatmen can tell are wonderful, and they are chock full of legendary lore. One man pointed out the marks on the solid rock where somebody and his bride had jumped, and sure enough there were the gigantic foot-prints to prove it. Let us hope that the lady was not troubled with cold feet, for they were big enough to lower the temperature over all the south of Ireland although much smaller than the bridegroom's. We soon came to a bay with no visible outlet. The boatman, knowing we were Americans, asked us to guess the way out, and as we were none of us able to do so he was jubilant.

After shooting the rapids under the old wire bridge, which our boatmen said were swifter and more dangerous than any we had in Ameriky, we drew up at Dinish island, a scene of truly sylvan beauty, the like of which is not to be found in many a long day's ramble. Here is the "meetin of the waters" celebrated in song and story, while just round the corner are the Colleen Bawn rocks and caves made familiar to us by a famous actor. The middle lake has a quiet, soft beauty of its own that is peaceful and comforting after the more savage grandeur of the upper lake. Our course lies under the fine bridge of the perfect arch and into the great lake until finally we are landed at Ross castle.—Nazro, in Chicago Record.

THE GOBLER'S SENSE OF PITY.

A lady of Shreveport owns an old turkey gobbler which deserves to go on record as a feathered philanthropist, says the Philadelphia Times. Some time last fall a young hen inhabiting the same fowl yard as the old gobbler in question had the misfortune to be caught by a hawk, and left to the cold charity of the world a couple of chicks that had not shed their first down. For the first day of their grief the little fellows peeped around in despair, and almost died of starvation. None of the hens seemed inclined to throw the protecting wing over their helplessness, and it is probable that the next day would have ended their career had not the old gobbler come manfully to their rescue.

With a gentleness that would have done credit to a tenderer nature he considered their helpless condition, and began at once to provide for the wants of the little orphans. It was really beautiful to behold his kindly care of the children of his adoption. He learned to suit his pace to theirs, accommodating himself to their feeble ability in every particular. He taught them to scratch and pick as patiently as their own mother would have done, and actually harbored them at night till they were able to roost unsheltered. During the bitter cold winter, though they were by that time well-grown pullets he continued to care for them, sheltering them from the wind and guarding them from the wet, though he had to suffer himself in their stead.

The run of salmon has increased at Astoria, Or. The average catch runs up to twelve fish per boat. All the cannery plungers come in deep laden with fish. The chinooks now being caught average twenty-nine pounds, with color and quality of superior excellence.

INYO INDEPENDENT.

INDEPENDENCE, CAL.

FRIDAY, SEPTEMBER 6 1895

The Brazilian Senate has passed a bill granting amnesty to political offenders, which means that all the political offenders captured have been shot and those that have not will be as soon as they are coaxed home.

The Eastern papers that have been sending out black bordered notices of the death and interment of Senator Marr Quay were astounded at the marvelous evidences the gentleman gave yesterday of his resuscitation. The Republicans gave him the State Convention and all that therein was.

Some experiments made by Professor Bailey at Cornell are said to have disclosed the strange fact that under the influence of electric light certain plants grow so rapidly they cannot absorb water fast enough to keep up with the growth.

Some of our foreign born citizens are said to be making active efforts to secure a pardon from President Cleveland of Hans Hansen, who was convicted in San Francisco of murdering Mate Fitzgerald on the high seas When a hanging approaches, the fact that a human life has been taken appears to be forgotten.

Lieutenant Governor Millard telegraphs from Wisconsin, or Michigan, or whatever state he happens to be living in at present, that he is in fine health and is coming right on to California. That is real nice, but Californians are thankful to learn that Governor Budd is getting along all right and will continue to do business at the old stand as usual.

Editors Dunn and Lemon of the Carson Tribune have been punished for alleged contempt of court for their comments on the cases of the men suspected of robbing the United States mint at Carson. The attorney for the newspaper men contended that the Judge of the court had no jurisdiction, but this objection was brushed aside by a wave of the judicial hand, and the writers had to pay their fines and go to jail.

We learn from San Diego that at a recent prayer meeting in that city the minister invited the brethren "to pray for Mayor Carlson and the common council." Objection was made to this proposition by one brother. He was willing to pray for the Counsel, but he drew the line at the Mayor. He seemed to think it was useless to tackle so tough a job. But the prayers of the righteous availeth much. Sodom was destroyed because ten righteous mem could not be found in the town. If San Diego's salvation is in jeopardy it would be well to scurry around at once for righteous recruits.

Utah's new constitution, framed for the soon-to-be State, proposes to dispense with Grand Juries. It substitutes information for indictment. Although this is not a novelty it is decidedly exceptional, and the result will be interesting in a high degree because of a growing dissatisfaction with the Grand Jury system. It is claimed, and in some cases proven, that Grand Juries do many things that ought not to be done, and leave undone many things that ought to be done. In other words it is charged and shown that they often find indictments on totally insufficient grounds, and fail to indict in many cases where justice demands that presentments be made.

The surprising speed of 23.9 knots developed by the St. Louis during a recent trial places the American liner at the head of the list of ocean greyhounds. With a few more of her class afloat, foreign nations are throwing money away on their fleet cruisers built expressly for service as destroyers of an enemy's commerce. It is a subject for congratulation that an American shipyard has turned out such a triumph of marine architecture, as it sets aside the old belief that we would have to go abroad for our iron merchantmen if we wanted any. The St. Louis in her time has proved as great an eye-opener to John Bull as the Sovereign of the Seas and other famous American clippers did in the days of the old Atlantic packet ships.

NEW FEE BILL.

CHAPTER CCVII.

An Act to establish fees of county, township and othe. officers, and of jurors and witnesses in this State.

[Approved March 28, 1895.]

The People of the State of California. represented in Senate and Assembly, do enact as follows:

SECTION 1. The following county, township, and other officers shall charge and collect the following fees.

COUNTY CLERK.

On the commencement of any action or proceeding in the Superior Court, except probate proceedings, or on appeal thereto, to be paid by the party commencing such action or proceeding, or taking such appeal	$5 00
On the filing of a petition for letters of administration, testamentary, or guardianship five dollars, to be paid by the petitioner; *provided*, that at the time of filing the inventory and appraisment in any such proceeding there shall be an additional deposit of one dollar for each additional thousand dollars of the appraised valuation, in excess of three thousand dollars.	
On filing the petition to contest any will or codicil	3 00
On the appearance of any defendant, or any number of defendants answering jointly, to be paid upon filing the first paper in the action by him or them	2 00
On placing any action, except a probate proceeding, or default case, on the calendar for trial or hearing, to be paid by the party at whose request such action or proceeding is so placed	2 00
For every additional defendant appearing separately	1 00

The foregoing fees shall be in full for all services rendered by such Clerk in the cause, to and including the making up of the judgment roll.

On the filing of any notice of motion to move for a new trial of any civil action or proceeding, the party filing same must pay to the Clerk, in full for all services to be rendered in connection with said motion, except as hereinafter in this section provided	2 00
For issuing an execution or order of sale in any action	1 00
In all proceedings begun or acts performed prior to this Act becoming a law, such and charges as were provided by the law at the time such proceedings were begun or acts performed.	

The Clerk shall also charge and collect the following fees and compensation not above provided for:

For any copy of any record, proceeding or paper on file in the office of the Clerk relating to any civil action pending in said Court, when said copy is made by him, per folio	10
For each certificate of the Clerk, under seal of the Court	25
For filing each claim in probate or insolvency proceedings	15

No fees shall be allowed or charged by the Clerk for services rendered in any criminal case.

For services rendered by the Clerk, not in connection with civil actions or proceedings in Court, he shall charge and collect, for the benefit of the county, the following fees:	
For issuing marriage license, one half to be paid to the County Recorder	2 00
For filing and indexing articles of incorporation	1 00
For filing and indexing certificates of copartnership	1 00
For filing and indexing all papers to be kept by him, other than papers filed in actions or proceedings in court, and official bonds and certificates of appointment, each	25
For issuing any license required by law, other than marriage licenses	1 00
For examining and certifying to a copy of any paper, record, or proceeding recorded by another, and presented for his certificate, fifty cents, and one cent per folio for comparing the said copy with the original.	
For making satisfaction of or credit on judgment	25
For receiving and filing remittitur from Supreme Court	50
For administering each oath, without certificate, except in a pending action or proceeding	25
For taking any affidavit, except in criminal cases	25
For taking and approving each undertaking and the justification thereof, except in criminal cases	50
For searching records or files, for each year	50
For taking acknowledgement of any deed or other instrument, including the certificate	50
For filing notices of appeal and appeal bonds, each	25

SHERIFF.

For serving any process, writ, order, or paper, except as hereinafter provided, required by law to be served by the Sheriff	50
For serving a writ of attachment, execution, or order for the delivery of personal property	1 00
For taking any bond or undertaking	50
For serving an attachment or execution on any ship, boat, or vessel	3 00
For keeping and caring for property under attachment or execution, such sum as the court may fix, *provided*, that no greater sum than two dollars per day shall be allowed to a keeper when necessarily employed.	
For a copy of any writ, process, or paper actually made by him, when required or demanded according to law, per folio, ten cents; *provided*, that when correct copies are furnished to him for use, no charge shall be made for such copies.	
For advertising sale of property and posting notice, exclusive of cost of publication, or furnishing notice for publication, each	50
For publication of notice in newspaper, the reasonable cost of publication, subject to the approval of the Court.	
For serving writ of possession or restitution, putting a person in possession of the premises, and removing the occupant	1 50
For subpoenaing witness, including copy of subpoena, each	25
For summoning trial jury of twelve or less	2 00
For each additional juror	10
For traveling in the service of any paper required by law to be served, for each mile actually and necessarily traveled, one way only, fifteen cents, when such travel can be made by rail, in other cases, twenty-five cents. No constructive mileage to be allowed.	
For collecting money on execution, with or without levy, one per cent on the first thousand dollars or less, and one half of one per cent on all sums over one thousand dollars.	
For executing and delivering Sheriff's deed	1 50
For executing and delivering certificate of sale	50
For transporting prisoners to county jail, actual cost of such transportation.	
For executing and delivering any other instrument, per folio	10

RECORDER.

For recording every instrument, paper, or notice required by law to be recorded, per folio	10
For indexing every instrument, paper, or notice, for each name	10
For filing every instrument for record, and making necessaay entries thereon	20
For each certificate under seal	25
For every entry of discharge, credit, or release on the margin of record, and indexing same	25
For searching the records of his office, for each year	50
For abstract of title, for each conveyance or incumbrance	25
For recording each map or plat where same is copied in book of record, for each course	10
For recording each map or plat, where same is not copied in a book of record	50
For figures or letters on maps or plats, per folio, ten cents; *provided*, that the fees for recording any map shall not exceed fifty dollars.	
For taking acknowledgement of any instrument	50
For recording marriage license and certificate, to be paid by County Clerk	1 00
For recording transcript and all services in estray cases	1 00
For recording each mark or brand	50
For administering each oath or affirmation, and certifying the same	25
For filing, indexing and keeping each paper not required by law to be recorded	25

The Clerk, Sheriff, and Recorder shall account for all fees in this section provided for, and the Clerk, Sheriff and Recorder, unless otherwise provided by law, shall pay the same to the County Treasurer on the first Monday of the month following their collection, as provided in this Act.

County Officers must, and township officers may, demand the payment of all fees in civil cases, in advance.

SECTION 2. No fees or other compensation shall be paid for certificate of declaration to become a citizen of the United States, and for making a record thereof, or issuing a certificate of citizenship to become a citizen of the United States, or for making a record thereof; and no fees or other compensation shall be paid for filing the statement and affidavit of a committee or candidate voted for at any public election held within the State; and this section shall apply to all the counties in the State.

SECTION 3. All Acts or portions of Acts inconsistent herewith are hereby repealed.

SECTION 4. This Act shall take effect immediately.

NOTICE IS HEREBY GIVEN, to all persons having business with the offices of Clerk, Sheriff or Recorder fo the County of I no that the above provisions of the Fee Bill are mandat.rg, and will be strictly enforced.

ALIAS SUMMONS.

Action brought in the Superior Court of the County of Inyo, State of California, and the complaint filed in said County of Inyo in the office of the Clerk of said Superior Court.

Adolph Gerckens Plaintiff, vs. Annie J. Gerckens Defendant.

The people of the State of California send greeting to Annie J. Gerckens, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Superior Court of the County of Inyo State of California, and to answer the complaint filed therein, within ten days (exclusive of the day of service), after the service on you of this Summons—if served within this Inyo County, or, if served elsewhere, within thirty days.

The said action is brought to obtain judgment against you and a decree dissolving the bonds of matrimony heretofore and now existing between the plaintiff and defendant as will more fully appear by reference to the complaint on file herein,

And you are hereby notified that if you fail to appear and answer the said complaint, as above required, the plaintiff will apply to the Court for the relief demanded therein.

Witness my hand and the Seal of said Superior Court of the County of Inyo, State of California, this 18th day of June, A. D. 1895.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY the 8th day of March, 1892, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise, acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit Commencing at the South-east corner of the south-east quarter of North-east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 98-100; thence North-east following the meanderings of the bed of the Creek along its North branch to Edwards street, in the town of Independence, thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hallnah, deceased, at the time of his death.

Lots Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dispricada Lode."

That certain lot, piece or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the south-west quarter and the North-east quarter of Section No. twelve (12), and the South-west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardine Base and Meridian, running thence South sixty-eight and eleven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence North-westerly along a small branch or swale to a point twenty four (24) rods North of the general corner of the North East quarter and the South-east quarter, and the North-west quarter and the North-east quarter of the North-west quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven-twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres: Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney, at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court Deed at the expense of purchaser.

WILLIAM L. HUNTER.
Executor of the Last Will and Testament John Allen Hannah deceased.
Dated, Independence, Cal., February 11th 1892.

KENDALL'S SPAVIN CURE.

STAR, LANE CO., OREGON, Feb. 8th, 1892.
DR. B. J. KENDALL CO.,
Dear Sirs:—I have used your KENDALL'S SPAVIN CURE for the last twelve years never being without it but a few weeks in that time and I have made several wonderful cures with it. I cured a Curb of long standing. Then I had a four year old colt badly Swenceled; tried every thing without any benefit, so I tried your liniment, and in a few weeks he was well and his shoulder filled up all right, and the other, a four year old that had a Thoroughpin and Blood Spavin on the same joint, and to-day no one can tell which leg it was on. These statements can be proven, if necessary; the four year olds are now seven and can be seen any day at Cottage Grove, Or. S. Z. PAXTON.

—Price $1.00 per bottle.—

COURT NOTES.

Geo. M. Gill, Superior Judge.

WEDNESDAY, Sept. 4, 1895.

Estate of J. A. Walker deceased—Filed petition for letters testamentary.

Mrs. A. M. Lubkin was in town on Wednesday.

Mrs. B. Rhine is visiting with her par- at Warm Springs.

Sheriff Given got back last Monday evening from Folsom.

Three inches of snow fell at Bodie on the 27 of last month.

John McMurry was down from Big Pine early in the week.

J. A. McKenzie and T. C. Boland were up from Keeler last Saturday.

The California State fair began last Monday and will last two weeks.

A. C. Harvey and Miss Aggie Harvey were up from Lone Pine last Sunday.

D. Holland has bought the Reynolds band of cattle. There were over a hundred head.

Ben. H. Yandell and Marshall Naylor are making a run of ore from their mine at Fish Springs.

Hon. P. Reddy returned to San Francisco last Monday after a stay of about a month at Bridgeport.

George Mead arrived from Bishop last evening on his way to Mojave with a 12-horse team after a load of freight.

A. J. Davis has just finished a run of ore at the Alabamas. The result will not be known until he gets returns for the bullion.

Judge Arnot is expected to arrive here next Monday. There are several cases to come up in the Superior Court next week.

W. H. Graham has gone on a prospecting trip to the Colorado river. He states that his trip will in all probability last a year.

Mrs. Thomas Callow arrived home at Big Pine last Monday. She spent a month in San Francisco receiving medical treatment.

Mrs. Geo. Drake returned home to Bishop last Tuesday after a visit of two weeks with her brother, Judge Gill, at Independence.

The Independence school opened last Monday with 38 pupils enrolled. The list has been increased to over 40 and there are more to come.

The Schober team got in from Mojave last evening with a big load of freight for Bishop merchants. Most of the goods were purchased in Los Angeles.

Mr. and Mrs. Jack Willett and Miss Rosa Roeper arrived home last Monday from their camping trip to Long Valley. They had a very pleasant outing

The suit of J. S. Cain et als. vs. the Adelaida Gold Mining Co. has been decided in favor of the plaintiffs. Hon. P. Reddy was the attorney for Cain.

The Independence Water Company started in last week to lay their new water pipe through Edwards street. The old pipe will be utilized for cross-mains.

Master Harry Mack will celebrate his sixth birthday to-morrow with a party to which all the school children have been invited. It will be a great day for the little folks.

On Monday last H. E. Wilkinson received a telegram stating that T. H. Nicholas has been appointed to the Independence charge by the M. E. Conference recently held at Winnemucca. Mr. Albone has been stationed at Bodie.

Lone Pine will celebrate the 16th of September in the usual happy manner. The programme will begin at 11:50 p. m. of the 15th by a salute and display of fireworks. On the 16 there will be horse-races and games of various kinds. At 4:30 p. m. literary exercises will be held in the town hall. The entire affair will end with a grand ball in the evening to which all are cordially invited to attend. See advertisement.

Items From Darwin, Cerro Gordo and Outside Precincts.

Quite a number of the miners ot Cerro Gordo have been on the sick list lately. Jos Rogers and Geo. Holland are unable to work and will take a rest for a week or two at Keeler and Lone Pine.

M. Aldai of Lone Pine and John Oldenburg of Modock have gone to work for P. Clinton at the Newton Mine.

An axle broke on the hind end of Bolands ore wagon Monday afternoon while coming down the grade with a load of ore and smashed up things pretty badly. It was repaired Wednesday and the team started to make regular daily trips again Thursday.

Jeff Rigg teamster for Thos. Boland has moved into the house known as the B. F. Gray property and will reside there for the winter.

Mrs. C. Silva and daughter have gone to Darwin for awhile and has charge of the dining room for the hotel de Anthony. Times are booming in the hotel and mining business in and around Darwin. Anthony is feeding from 20 to 25 a day at present.

Fred Wallace was a passanger in on the last stage from Darwin to Keeler.

M. G. Reddy and R. F. Boland have leased a mine at Cerro Gordo and will start operations at once.

Bert Johnson is driving the northern end of Millers celebrated stage line and the regular driver, Will Miller has gone to Lone Pine for a rest.

Chinese at Keeler are running boarding house and charging Indians who work at the Soda works the sum of fifty cents a day for board and both Chinese and Indians seem to be doing well at it.

Pat Connell who drove stage for Chas. Anthony all summer has quit work and gone east with his cousin J. P. Tilden where they will do some work on a quartz ledge owned by them some where in the state of Connecticut.

Johnny Davies of Independence or rather of Georges Creek has gone to work for Gehrig at the Lockett mine.

It is rumored that the Marble Quarry will soon resume work at Inyo.

Sam Levy who has charge of the round house at Keeler has taken a months vacation, and left for Sacramento on Thursday morning. Mr. J. B. Church of Candelaria takes his place while he is away.

Mr. Meyers of Big Pine or Alvord is visiting friends at Keeler this week.

No items from Olancha this trip as the telephone line is down.

Yours hastily,
"INDEPENDENT,"

The Placer Mines.

The claims in Mazourka Canyon and vicinity at present are paying very fair wages, nothing very large having been found lately, the number of men working is somewhat smaller than at this time last year. The Vaughn Bros. are still working their old claims that paid so well last year; reports from there last week stated that they were taking out twelve dollars a day. The Showalter Bros., Laberge, Ramsey, and a few Mexicans are working in Mazourka Canyon. Chas. Houle and three men from San Bardino are working at the Golden Star claim, and all are making fair wages. Sam Grouber came down from his claim this week and will work out an assessment on the Silver Sprout claim across the valley in the Sierra Nevada's. Chas. Houle has about eighty sacks of ore out at one of the claims formerally worked by Phil. Cartier and is expecting to make a shipment when he takes out a car-load.

Assessor Chalfant was down from Bishop early in the week.

Julian Eibeshutz started for San Francisco, last Tuesday morning for a short vacation. He will take in the State Fair at Sacramento and will be home in about two weeks.

There was a total eclipse of the moon on Tuesday evening between 9 o'clock and mid night. Those who stayed up to watch it say that the spectacle was most beautiful all the colors of the rainbow being reflected.

Little girl learning to read: "A deer has--has--h-o-r-n-s". Teacher: "What does that spell?" Little girl: "I don't know." Teacher: "Well, what does a cow have?" Little girl (brightly) "A calf." Tableau. The foregoing occurred in a local school a few days ags.

Miners and prospectors should take notice that all assessment work is required to be done this year in order to hold claims. The special Act of Congress relating to fee filing of notices of intention to hold and work claims does not apply to this year.

Charles H. Northup, who for the past seven years has been general clerk and book-keeper for the San Bernardino Borax Mining company at its works situated at Borax Lake, Bernardino county, has recently resigned his position and removed with his family from the wilds of the desert region. The immediate cause of the change has been the closing of the borax works on account of the reduction of tariff and consequent importation of foreign borax in excess of the demands of the country.

Local orchardists state that there will be much damage to the apple crop this year by a species of worm which destroys the fruit. It is said that the worm is caused by an insect which deposits an egg in the blossom when forming. The pest is gaining ground very rapidly and unless vigorous action is soon taken bids fair to destroy the apple orchards. It is claimed that a system of spraying will effectually eradicate the pest and this should be made compulsory by ordinance of the Board of Supervisors as is done in other counties.

Another party of intending settlers arrived here on Wednesday from Covina, Los Angeles county. They had a large wagon drawn by six good animals, loaded with household goods and farming utensils. The party consisted of A. A. Neil, W. J. Blackburn, Frank Lovett, Ernest Owens and J. Lough. Mr. Neil was here a few months ago and was so well pleased with the country that he determined to settle here. They all are young men, industrious and undoubtedly will succeed in making themselves good homes.

Silver Star.

Our correspondent at Silver Star writes as follows: Johnny Harrington has taken out some very rich ore during the past week. Among the rich ore were three specimens weighing from seven to eight pounds which are estimated to be worth $100 per pound. They have shipped 12 tons of good ore to the Kinkead mill.

From Pedrazzi is taking out some rich ore on the Berna.

The shaft on the Lone Pine is down 42 feet. The ledge is 20 inches wide and is higher grade ore than any that has yet been taken out, nearly every piece showing gold.

The Douglas Company has commenced digging the ditch from the mill to the Rebel Gulch Spring. Pipe laying will soon begin. With this Spring added to the present supply of water the company will be enabled to run their mill at full time.

Kelly & Ruppert have moved their camp down to Gem City, so as to be nearer their mine.

A $5,000 bar of gold bullion was shipped below Saturday. It was the result of a 100-ton run of ore from the New Party, taken out by Owen Owens.

Tom Pritchard has struck a 12-inch ledge of about $40 ore on the Snowball, about 100 feet from the Bounce line. This discovery adds greatly to the value of the Snowball mine.—*Walker Lake Bulletin.*

Coolgardie.

Rich new finds are being constantly reported from Coolgardie gold fields. Coolgardie, Australia, is an accessible point, reached by steamer to Fremantle, thence by rail to Southern Cross and team to destination. The trip to Australia on the fine steamers of the Oceanic Steamship Company via Honolulu, Samoa, and New Zealand is pleasure sailing the day long. This line tickets passengers to Cape Town, South Africa. Map of Coolgardie district and Pacific ports reached by the Oceanic Steamship Company is mailed free to any address by the O. S. S. Co. 114 Montgomery St San Francisco.

MISCELLANEOUS.

NOTICE OF COMMISSIONER'S SALE ON FORECLOSURE OF MORTGAGE.

O. I. MAIRS, Plaintiff, vs. JOHN ALEXANDER, Assignee of John Barnes, an Insolvent Debtor, and as Assignee of M. V. Barnes, an Insolvent Debtor, Defendant.

Under and by virtue of an order of Sale and decree of foreclosure issued out of the Superior Court of the County of Inyo, State of California, on the 7th day of August, 1895, in the above-entitled action, wherein, O. I. Mairs, the above-named plaintiff, obtained a judgment and decree against John Alexander, as Assignee of John Barnes, an insolvent debtor, and as Assignee of M. V. Barnes, an insolvent debtor, defendant, on the 2nd day of August, 1895, which said decree was on the 5th day of August 1895, recorded in Judgment Book No. 1 of said Court, at page 506, I was appointed commissioner to sell and I am commanded to sell:

All those certain lots, pieces and parcels of land situate, lying and being in the town of Keeler, County of Inyo, State of California, and particularly described as follows, to wit: Lots numbers 1, 2, 17 and 18, n Block No. 4 in the said town of Keeler, as the same are commonly known and designated and as the same appear by the map of said town, made by James Oliver in the year 1883.

Notice is hereby given that on Saturday, the 31st day of August, 1895, at twelve o'clock, noon, of that day, in front of the Court House, in the town of Independence, in said Inyo County, I will, in obedience to said order of sale and decree of foreclosure, sell the above described property, or so much thereof as may be necessary to satisfy plaintiff's judgment, with interest thereon and costs, to the highest and best bidder for cash in gold coin of the United States.

Dated, Independence, Cal., August 9, 1895.

J. D. MAIRS,
Commissioner.

P. H. MACK, Attorney for Plaintiff.

ROYAL

BAKING POWDER

INSECT GUARDS.

Priceless Nuggets Surrounded by Swarms of Mosquitoes.

A PLAGUE DRIVES WORKERS AWAY.

Only the Leprosy-Ridden Natives are Able to Stand the Horrible Tortures.

Gold in plenty may be found in the sands of the Volador River—a stream of moderate volume that comes tumbling from the snow line of the Sierra de St. Martha in South America—but though the lowland region and the river bed where the precious metal abounds in fabulous quantities are easily accessible, the mosquitoes are so thick and terrible there that all attempts to rifle the sands of their gold have so far failed.

Elisee Reclus, the celebrated French geographer, was the first to explore the plain about the Volador's mouth. It seemed like an earthly paradise at first, and the stinging insects were no more numerous than one might have expected. But as the rainy season came on and the air grew hot and humid the mosquitoes appeared in incredible swarms. M. Reclus had thought of establishing an agricultural colony in the fertile lowlands, but found the plague of insects so unbearable that he was forced to beat a retreat and abandon his project.

He was the discoverer of this wonderful stream, whose waters sweep over sands that are literally golden. He told the news to the French Vice-Consul at Rio Hacha, and this official obtained the concession of this Eldorado. The dangers he was to encounter he knew perfectly well. He took with him when he set out an ingeniously constructed gauze tent of large dimensions. For two days he tried to live under its shelter and watch the operations of his workmen, who toiled in the stifling heat, clothed in thick garments, and protected by heavy boots, gloves and veils. At the end of the second day, however, both employer and employees with one accord gave up the struggle and retreated.

The next to try to wring fortune from these auriferous sands was an Italian, who obtained permission from the Vice-Consul referred to above. The Italian laughed at the idea of mosquitoes driving any one away from a place where gold could be picked up almost by the handful. He started out with a party of six who shared with him his belief, and so they took along no special protection against the insects. They endured for less than half an hour the awful torture and then fled. They found their way back to Rio Hacha with difficulty, for the eyes of five were so badly swollen that they were blind. The sixth's face was a sight to behold, and he had to pick out the pathway with the aid of one eye, which the mosquitoes had not entirely closed.

Yet there are human beings who can venture with impunity into this hell whose guardian demons are mosquitoes, and these are some of the savage natives of the mountains from whose rocky steeps the river comes tumbling down. These savages who are mosquito proof are rendered so by their bodies being covered with the scales of that awful disease leprosy. Strange to say, the mosquitoes will not touch them. But neither gold nor the gauds of civilization will tempt them to labor, and there is no human power, apparently, which will drag them on from their rude caves on the mountain side and make them labor for the white men.

It is an old and true saying that one might as well try to get along without furs in the Arctic regions as without mosquito nets in the tropics. Mosquito nets seem to have been of little avail, however, in the instances related. The insects are said to have been both unsually large and unusually venomous, and they came in such myriads that they had the appearance of a mist hanging over the waters of the river. The intense pain and action of the poison on the system speedily drive the strongest mad.

One of the favorite tortures among the natives of the region about the valley of the Volador is to strip their victim and bind him naked to a stake. In a moment his body will be literally covered with mosquitoes and in a half hour's time it will be enormously swelled. The torture is indescribable.

Nevada City is threatened with a plague of flies. Salem and vicinity have a cherry corner of their own this year. Royal Annes have retailed right along at 5 cents per pound. The cannery has paid 4 cents for more than 1,000 cases of them, and everybody who has had cherries to sell has had no trouble in finding a market.

Beulah Barton's Birthday.

By MARY KYLE DALLAS.

[Copyright, 1891, by American Press Association.]

CHAPTER I.

"And you don't know yet that the fifth of August is my Beulah's birthday."

"Seems to me, Mis' Barton, that your folks are going to hev a party," said Mr. Spicer, the grocer, as he extracted from the bunches of fine "eating raisins" that he was weighing one that tipped the scales, and held it suspended, hesitating between a wish to be just and a fear of being too generous. "Seems to me, Mis' Barton, your folks are going to hev a party."

Mrs. Barton, a thin lady, with a flat chest and sloping shoulders, who wore the "waterfall" of the period at the back of her head and was dressed in a way that spoke of easy circumstances, as indeed did the little basket phaeton that waited for her at the door, pursed up her lips.

"I've dealt with you ever since I was married and came to live on the Heights, Mr. Spicer," she said, "and you don't know yet that the fifth of August is my Beulah's birthday. I gave her a party when she was two years old, and I've given her one ever since, and as long as I live I shall give her one. I don't think there's anybody else in Mulberry that wouldn't remember that we always had a party at our house on the fifth of August."

"I did remember it, too, Mis' Barton," said the grocer, "but this here war is driving everything else out of our minds, I think. Well, since it's a birthday, in goes the bunch, overweight as it is. And how old is little Beulah getting to be, Mis' Barton?"

"She's seventeen," said Mrs. Barton.

"Well, well," said Mr. Spicer. "Why, I'd have said ten if I'd been asked. How time flies."

"Don't talk," said Mrs. Barton, "it spins. You can send two baskets of them Maryland peaches up, Mr. Spicer, they're beauties, and I guess I've got everything else. It's a young folks' party, you know, so I don't ask any married folks but Beulah's aunt and uncle; but I've sent an invitation to your Reuben. I guess he must have got it. If not he'll get it today. He might fetch his flute, I should think; anybody that can entertain had ought to."

"I'll make him, Mis' Barton," said Mr. Spicer. "He's bashful about taking it with him for fear folks will think he wants to be asked to play. I don't know but I like him to feel so. But if you really want he should I'll make him." After which he helped Mrs. Barton into the phaeton. And the facts that it was Beulah Barton's birthday; that she was seventeen; that Mrs. Barton was going to give a party; that she always did and always would give a party on her daughter's birthday; that she had bought some of those Maryland peaches, and that she was anxious his Reuben should bring his flute and that he was going to make him, furnished counter conversation for the rest of the day.

The squire sat on the sugar barrel and talked it over. The doctor dropping in added the information that Beulah Barton was as pretty a baby as he ever saw, and the real estate broker remarked that Jeremiah Barton had been one who knew how to buy and when to sell, and hadn't left his widow to go out washing for a living, as some men did who had passed for rich with everybody. And then they fell to talking of the war, the all absorbing subject of the day, of their own regiment, of the boys who had done gallant things and the boys who had fallen. Strong partisans, they, all on one side, and they agreed perfectly.

"Glad when it's over, though," said the squire, checking a sigh. "Mother, she gets up sometimes of moonlight nights and looks out of the south window. Seems as if Jim might be looking at the moon at that minute and sort of feel ma was looking too, she says. Jim was her baby, you know."

"Yes, I know," said the grocer. "I couldn't spare Reu, you see. I was oldish when he was born. Sarah Jane was my second wife. I tell the minister I'd ought to hev named him Benjamin."

Just then Reu came into the store. He had been to the postoffice and had some papers and letters in his hand. One of the envelopes was large, square and glossy, with a gilt edge. Such envelopes were used for elegant occasions in that day.

His color rose as he nodded to everybody and went hastily into the back room. His father knew that he had received his invitation.

That night, when it was too late for customers to come and the shutters were up and the door locked, Mr. Spicer sat at his desk and figured with a pencil on the cover of a passbook.

"She must be worth a couple of hundred thousand anyway," he said after awhile. "I don't believe in marrying for money, but Beulah's a nice girl, too, and I want he should marry and settle in Mulberry, not off in the city. I guess Mis' Barton won't object. Ef marryin' three times hadn't seemed too much like follerin' Bluebeard's example I'd have tried for the widder five years ago. She ain't handsome, Mis' Barton ain't, but she's as genteel lookin' a lady as I know." After a while he said:

"Well, it would be better this way;" and when, as was their custom, father and son sat in the little back room taking "a bite" of something before they went to bed, the old man said to the young one:

"Whatever you want you must go to town and get. I want you should be as well rigged as anybody, and fixy things become you."

"Dad, you are a brick!" cried the boy, with the most respectful intentions, whatever Lord Chesterfield might have thought of the style of his address could he have heard it; "and a fellow must talk to somebody. Do you know, I like her."

"Beulah?" queried Mr. Spicer.

"Yes," replied Reu. "She's so pretty, don't you think? If I tried for her would you mind? They're a little uppish, but"—

"We're as good as anybody, my son," said Spicer. "Nancy Peeler's folks were considerably plainer than ourn, though she did well for herself. Go ahead, I'm with you."

"Most fellows' fathers are against them when it comes to that sort of thing," said Reu.

"Well, I've only got you, my boy," said Spicer. "All that's mine is yours, and I want you should be happy. All that makes me sick is the idea of being parted from you. But if you like Beulah and she likes you that wouldn't happen."

At this juncture, if this father and son had been Frenchmen, they would have embraced. But they were Americans of the Americans, so old Spicer gave Reu a thump on the back and Reu squared off scientifically and tapped him lightly on the chest, and both laughed a little foolishly. And all the same the boy was the light of his father's eye and knew it.

Meanwhile all this had not been said without some little understanding between the young people. Beulah, amid all the excitement of preparation for her first grown up party and the coming home of a blue silk dress with seven flounces and a train, still thought more of Reuben than of anything else—what he would say, what he would think of her in her new dress. Above all, whether he would come early, before the others, so that they could have a little talk.

She hoped he would, she thought he would, and she was dressed very early and on the watch for him, and if he had come all would have been different, for he would have told her all that was in his heart and the answer would have been a cheering one. She was ready to listen to him, and for this reason the fact of his nonarrival piqued her; and when he proved to be not only not the first guest but not the twentieth, she was seriously offended and ready for reprisals. Yet it was not poor Reuben's fault by any means. The boy had been dressed very early, even to the flower in his buttonhole, and had been duly admired by his father, and was about to set forth in a gig driven by the hired man in order that he might arrive at his destination in his original spick and span condition, when little Tommy Briggs, the son of their next neighbor, who had been fishing in the Spicer well with a crooked pin and a spool of basting cotton, slipped from the brink and vanished headfirst beneath the water. Mrs. Briggs, who witnessed the catastrophe from her garret window, went into hysterics on the spot. The old black woman who supervised the Spicer kitchen fell down on her knees and began to pray in campmeeting fashion, with many cries and groans and shouts and writhings. Mr. Spicer began to look for his glasses in order to see what was the matter, and the neighbors universally shouted "help" and "murder." In a few moments there would certainly have been one little angel more had not Reuben, tearing off his coat and vest and throwing them on the grass, jumped to the well brink, caught the chain, gone down in the bucket and grabbed Master Tommy by his curls, which his mother had fortunately fostered.

To lift Master Tommy, gasping and shrieking, within reach of the brink, where somebody took charge of him, and to scramble up himself was not a very difficult matter. But what a plight he was in! Wet to the waist; his patent leather ties full of water; his cuffs soaked; his face dripping with perspiration; the hair, to which the hairdresser had given the most delicate touches, out of curl and rumpled; and to crown all, Mrs. Briggs, who had been making over a feather bed in the garret and had fallen into its depths in her excitement, insisted on embracing his knees while calling him the preserver of her darling child and praying heaven to bless him. Gladly would he have gone without thanks in order to avoid the large contribution of fluff and chicken feathers with which she endowed him, but rid of the grateful family, the neighbors who came to talk it over and the strangers who called to inquire what had happened, Reuben put into the back room for repairs and a serious consultation was held with Mr. Trabb, the tailor, who was good enough to step over.

"Well, sir," said Mr. Trabb, with a diplomatic air, "them pants will come out right. I don't say all that fluff don't complicate matters, but I can bring 'em round, only it will take time."

"How much, Trabb?" asked Mr. Spicer, who was managing the affair.

"'Bout an hour," said Trabb, and carried off the garments.

It was two hours and a half before he returned with them. Meanwhile it was discovered that old Mrs. Betty, the brewer's stout mother, had been sitting on the coat and vest, that the hat had been rubbed the wrong way and that the shoes would not dry. A toilet was made at last, but by no means the spruce affair of the early evening, and poor Reuben, who had calculated on having such a good opportunity for his wooing, and such a happy time with Beulah, arrived at the Bartons' at last to be received by Mrs. Barton with the information that every one had gone down to supper except little Miss Smith, who was just going down with her, but would naturally enjoy herself more with a gentleman.

Little Miss Smith was fifteen. Perhaps she enjoyed herself, but poor Reuben did not. Very near him sat Beulah, so entirely absorbed in the conversation of a tall gentleman with fine features and a large mustache and very expressive eyes, that she did not even look at him.

He discovered after a while that the gentleman was Mr. Du Bois, from Texas, who was visiting relatives in Mulberry, and that he had devoted himself to Beulah all the evening, and it occurred to him that he might have been a favored admirer for some time, as his friends were neighbors of the Bartons. At all events Beulah had no eyes for any one else. It never occurred to him that being piqued and offended by his late arrival she was revenging herself. He could not know that charming and chivalrous as Mr. Du Bois certainly was, so much more conscious than were any of the young men of Mulberry that America expected every man to do his duty at an evening party, her every thought was with him, recreant though he was. While Du Bois paid her compliments that were poems and lowered his voice and looked into her eyes, she kept asking herself how Reuben felt, and hoping that he was suffering pangs of jealousy.

After a while she intended to forgive him if he were sufficiently penitent, but not readily, not easily. Why should she, who could make such an impression on a splendid man like Du Bois?

Not until this wonderful Du Bois was gone did poor Reuben get an opportunity to approach Beulah.

"You have not even said 'How do you do?' to me, nor have I wished you many happy returns of the day," he said.

"Ah," she said coldly; "I did not know you were here."

"You were too well entertained to notice me, I suppose," he retorted.

"I was certainly very well entertained," she answered. "Ah, those southern gentlemen are so charming when you come to know them."

"And Mr. Du Bois is an intimate friend, I presume?" said Reuben.

"Recently," replied Beulah, purposely looking conscious.

Trifles light as air are to the jealous confirmation strong as proofs of holy writ.

Reuben said to himself: "She likes him. She will marry him. He has driven me out of her heart."

He looked gloomily down at the toes of the shoes which had taken the place of those in which he had descended into the well to rescue the lost fisherman. Had Beulah noticed that he came late he would have told her why. But now he thought why should he? She did not care.

Meanwhile she was longing for an explanation that should give her an excuse for forgiving him then and there. She asked herself why did he not speak or sit down beside her or do something? She was so vexed that he did not that she could scarcely keep from stamping her little foot, and an evil spirit prompted her to say:

"There is something in ancestry. Mr. Du Bois comes of a family, no member of which has ever worked at a trade or kept shop, or even followed a profession for pecuniary reasons. I think one could tell it by the way he carries himself, don't you?"

"I don't know; I'm the son of a shopkeeper, you remember," Reuben answered. "Not a judge of such matters. Good evening."

He was gone, and instead of sitting down to talk things over with her mother, as that lady expected she would, Beulah rushed to her own room, threw her new blue dress into a corner, and without even brushing her hair, hid herself beneath the coverings and cried herself to sleep, while Mrs. Barton, feeling that this was a very disappointing world, counted the spoons, put away the best damask, and lamented the spots on the dining room carpet, as she always did after those annual birthday parties, which she felt it her duty to give in Beulah's honor.

In his bed that night Reuben did not weep. Men do not habitually, but he felt as he had never felt before. The demon jealousy had entered into him. He was full of rage and hate, and these emotions were new to him. Suddenly he found himself sitting up, clinching his pillow with his left hand and dealing it heavy blows with his doubled right fist.

"I should like to kill him!" he said, thinking of Du Bois. "To kill him! To kill him!" He seized the bolster with both hands and smothered with it an imaginary Desdemona. Then he was very much ashamed of himself there in the dark, and thought how his dead mother would have grieved could she have known of his violent and absurd emotions.

That fair, delicate mother had been a Quakeress. Often she had taken him with her to meeting, and he had listened to the mild, sweet, drawling speech of the Friends whom the spirit moved to speak. It had had an influence upon him. Had he chosen a profession he would rather have been a surgeon to heal men than a soldier to kill them. But now all his nature was altered, and he felt there was no possibility of following the steps of his father and grandfather as dealers in groceries. Her speech concerning the superiority of those who had a distinguished ancestry who had never engaged in trade seemed to ring in his ears. "I'll be a soldier," he said. "I'll go to the war. No one can despise a soldier."

In imagination he saw himself slaying men like this Du Bois. He rode into the ranks of the enemy unscathed. "He bears a charmed life," he heard them say, but knew that he feared nothing, because the life in which Beulah had no share had no value for him. He threw himself back upon his pillow, rose in imagination from the ranks to a captaincy, was major, colonel, major general, fell asleep then and dreamed that in a wild, smoke veiled contest he stood face to face with Du Bois, the man whom Beulah loved. Then—he never could remember what followed, but he awoke determined to enlist.

The poor old father uttered a groan when he came home one day and told him that he had done so, but he felt a little thrill of pride notwithstanding. But what was done could not be undone.

"Ef I wasn't too old I'd go along with you," he said. "I'd like you and me to fight side by side. I wonder ef they'd take me?"

"No, no, dad," said Reuben. "I'll be back soon."

"I shall pray for you," said old Spicer, "but I dunno as I'm listened to." He was thinking of the prayers he had offered to heaven that his boy and he might never be parted. And it had all come to this. He knew why.

"Just a pretty little girl, and there's such lots of little girls," he thought; "and he's only got one old dad, living on borrowed time, too, and fonder of him than words can tell, and he ain't nothin' to him compared with one little girl." But he bade his son godspeed, and waved his large red handkerchief as the regiment marched away, and stepped to the music a little himself, and whistled his way home, but his hair got whiter after that, and it was at breakfast time next morning that black Sally noticed for the first time that he was beginning to stoop.

As for Beulah, she not been well since the night of the birthday party. Not well enough to see Mr. Du Bois when he called to say goodby, and had been so gallant to her mother that the old lady stood before the mantel mirror for ten minutes after he had gone, and said to herself that she must be wonderfully well preserved for her age.

No, Beulah had not been well, but on this day mother and daughter had gone out for a ride together and had driven down toward what was called the landing, when they were aware of a steamboat lying there, the stars and stripes flying and a regiment marching on board of her.

The long line of boys in blue stretched up the street; the band played "The Girl I Left Behind Me."

The pony attached to the basket phaeton thought it respectful to stand on his hind legs and widen his nostrils, and a man who was watching the procession took him by the bridle and held him, soothing him by certain pats and whispers.

"Another lot of men off, I see," said Mrs. Barton.

"Yes," said the man, "there is Freeman Pennypacker and Rodman Calkindahl and Phineas Spot, and the youngest of 'em is Reuben Spicer, Grocer Spicer's boy. I see him stop to shake hands with his father just now. It's rough on the old man—rough. Like enough he won't see Reu again in this world."

It was just then that Beulah leaned back on the cushions. A little later her mother discovered that she had fainted.

(TO BE CONTINUED.)

THE "TELEPHONE EAR."

It is somewhat strange that the new malady which has appeared in the American Telephone Exchanges is most prevalent in California, while being almost entirely unknown in the Eastern States. The fatigue of listening continually at the receiver produces a humming in the ears, headache, and, finally, abscess of the tympanum. The employe has to rest every three or four hours, and sometimes to cease work altogether for some days. It is not yet explained whether the affection is due to defective apparatus or to overwork. Further light on this subject is especially desirable, as it may give most valuable suggestions to aurists who are now treating certain ear affections by sound vibrations produced through the telephone.

The idea is favored by some leading practitioners that in many cases abnormal tissue can be stimulated to healthy activity by the concentration upon them of vibrations of exactly suitable pitch and strength. In many of the best equipped telephone exchanges a clever provision has been made for reducing the ear fatigue of the operator, by the use of a small electric lamp, which, working in the call wires, indicates "through," and so obviates the voice calls, which are sometimes so irritating to the subscriber, as well as wearing on the "central," by their inevitable repetition.—Philadelphia Record.

In the Sahara region all the creatures assume a sandy hue, which, of course, renders them inconspicuous in their native home, and among the fishes, especially in those groups of flat forms which lie among the sand, the skin is all speckled in character with the surface on which they rest.

We have not been without Piso's Cure for Consumption for 20 years.—LIZZIE FERREL, Camp St., Harrisburg, Pa., May 4, 1894.

If you keep your husband constantly in hot water, madam, you alone are to blame if he gets soaked.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.....

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

Try Germea for Breakfast.

Summer Weakness

Is caused by thin, weak, impure blood. To have pure blood which will properly sustain your health and give nerve strength, take

Hood's Sarsaparilla

DIRECTIONS for using CREAM BALM.—Apply a particle of the Balm well up into the nostrils. After a moment draw strong breath through the nose. Use three times a day, after meals preferred, and before retiring.

CATARRH

ELY'S CREAM BALM Opens and cleanses the Nasal Passages, Allays Pain and Inflammation, Heals the Sores, Protects the Membrane from Colds, Restores the Senses of Taste and Smell. The Balm is quickly absorbed and gives relief at once.

A particle is applied into each nostril and is agreeable. Price 50 cents at druggists or by mail. ELY BROTHERS, 56 Warren Street, New York.

The tramp has reached the hay day of his prosperity when he is allowed to sleep in the barn.

SMALL BEGINNINGS

Make great endings sometimes. Ailments that we are apt to consider trivial often grow, through neglect, into atrocious maladies, dangerous in themselves and produc ive of others. It is the disregard of the earlier indications of ill health which leads to the establishment of all sorts of maladies on a chronic basis. Moreover, there are certain disorders incident to the season, such as malaria and rheumatism, against which it is always desirable to fortify the system after exposure to the conditions which produce them. Cold, damp and miasmi are surely counteracted by Hostetter's Stomach Bitters. After you have incurred risk from these influences, a wineglassful or two of Hostetter's Stomach Bitters directly afterward should be swallowed. For malaria, dyspepsia, liver complaint, kidney and bladder trouble, nervousness and debility, it is the most deservedly popular of remedies and preventives. A wineglassful before meals promotes appetite.

A man is satisfied to make a reputation for himself, but woman, bless her, wants to make one for everybody in the neighborhood.

There is more catarrh in this section of the country than all other diseases put together, and until the last few years was supposed to be incurable. For a great many years doctors pronounced it a local disease, and prescribed local remedies, and, by constantly failing to cure with local treatment, pronounced it incurable. Science has proven catarrh to be a constitutional disease and therefore requires constitutional treatment. Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, Ohio, is the only constitutional cure on the market. It is taken internally in doses from 10 drops to a teaspoonful. It acts directly on the blood and mucous surfaces of the system. They offer one hundred dollars for any case it fails to cure. Send for circulars and testimonials. Address F. J. CHENEY & CO., Toledo, O.

Sold by Druggists, 75c.

The man who says he will welcome death as a release from a life made up of sorrow, generally sends for four doctors when he has the colic.

GREAT BOOK FREE.

When Dr. R. V. Pierce, of Buffalo, N. Y., published the first edition of his work, The People's Common Sense Medical Adviser, he announced that after 680,000 copies had been sold at the regular price, $1.50 per copy, the profit on which would repay him for the great amount of labor and money expended in producing it, he would distribute the next half million *free*. As this number of copies has already been sold, he is now distributing, *absolutely free*, 500,000 copies of this most complete, interesting and valuable common sense medical work ever published—the recipient only being required to mail to him, at the above address, this little COUPON with twenty-one (21) cents in one-cent stamps to pay for postage and packing *only*, and the book will be sent by mail. It is a veritable medical library, complete in one volume. It contains over 1000 pages and more than 300 illustrations. The *Free Edition* is precisely the same as those sold at $1.50 except only that the books are bound in strong manilla paper covers instead of cloth. Send NOW before all are given away. They are going off rapidly.

COUPON No. 114

MRS. WINSLOW'S SOOTHING SYRUP - FOR CHILDREN TEETHING - For sale by all Druggists, 25 cents a bottle.

DR. GUNN'S IMPROVED LIVER PILLS A MILD PHYSIC.

ONE PILL FOR A DOSE.

A movement of the bowels each day is necessary for health. These pills supply what the system lacks to make it regular. They cure Headache, brighten the Eyes, and clear the Complexion better than cosmetics. They neither gripe nor sicken. To convince you, we will mail sample free, or a full box for 25c. Sold everywhere. BOSANKO MED. CO., Philadelphia, Pa.

MEN!

Any Man Who Suffers

Or is just beginning to suffer from the weakening effects of emissions or over indulgence can be permanently cured by taking VITAL RESTORATIVE. Call or write for Sample Bottle. The worst cases cured. Address DR. COOPER, 523 Kearny Street, San Francisco. [All private diseases cured.]

ELECTRICAL WORLD.

Steam vs. Electricity in Future Railroad Traffic.

ASBESTOS IN ELECTRICAL WORK.

Melting Metals in the Electric Furnace—The Readiness of Manufacturers to Utilize Electric Power.

The burning question of the day in electrical and railroad circles is the relative part which steam and electricity are to play in the railroad traffic of the future. Out of the engrossing and exhaustive discussion of this subject which has lately been in progress, the public are at length beginning to form a definite idea of the outlook. The problem for which a solution has been desired is "Steam or Electricity?" The solution reached is "Steam and Electricity." As Frank J. Sprague puts it, the question narrows itself down to the number of train units operated between terminal points. Make that number sufficiently large, and the electric motor is the best means of propulsion, whether for high or low speed. Decrease this number and you must rely on steam. In other words, electricity will but partially take the place of the steam locomotive for railway service and then only when the number of units operated between terminal points is so large that the resulting economy will pay a reasonable interest on the combined cost of a central-station system of conductors and the motor equipment, and the traffic existing is commensurate with the needs of such a system. Mr. Sprague urges the putting aside of "some of the visionary prophecies concerning electric railways. The future of the electric railway is not in the wholesale destruction of existing great systems. It is in the development of a field of its own, with recognized limitations, but of vast possibilities. It will replace the locomotive on many suburban and branch lines; it will operate almost all street railway systems and elevated and underground roads; it will prove a valuable auxiliary to trunk systems; but it has not sounded the death-knell of the locomotive any more than the dynamo has sounded that of the stationary steam engine. Each has its own legitimate field in the traction work of the future.

The fact that asbestos plays a remarkably useful part in electrical work is not generally recognized. For purposes of insulation this unique material meets the most exacting requirements and its use by electricians is daily increasing. Its latest application is in the "electrotherm," the new device which has already begun to take the place of hot-water bottles in hospitals and invalid chambers. The electrotherm is a "flexible sheet or pad composed of asbestos in which electric wires are embeded. When these wires are connected to any source of electric current a constant and uniform degree of heat is generated. For this connection the socket of an electric lamp is ordinarily found most convenient, but where the lighting current is not available batteries can be used. The pad is found a great convenience in the relief of chilliness, cold feet, etc., as well as in cramps and other local pains, as in general hospital practice. By its use the risk and discomfort of frequent changes of temperature incident to the renewal of ordinary hot applications are entirely obviated. It can be moistened without injury, and it can be made to give the effect of a poultice or moist heat by being applied over one or more thicknesses of wet flannel. It can be used by any one with perfect safety, and its simplicity and convenience wherever the application of artificial heat is desired render it especially valuable for medical use. The regulation of the temperature is effected by a conveniently placed switch. Pads can thus be maintained at approximately 130 degrees, 170 degrees and 200 degrees Fahrenheit, when covered with ordinary bedclothing, but these temperatures can be modified by the interposition of a blanket or raised by additional coverings. This new adaptation of the principle of electric-heating is made in various forms, from the simple pad, which lends itelf to all ordinary uses, and the wicker-covered mat, or foot-warmer, to a cape-like covering, which will completely enwrap the neck and the upper part of the body.

One of the most beautiful porcesses in modern metallurgy is the melting of certain metals in the electric furnace, and it is now possible to project upon a screen every phase of such an operation. Some idea of the wonderful play of colored light, which thus becomes so tonned down as to be tolerable to the naked eye, may be formed by a description lately given by Prof. Roberts-Austen of the projection of an electric furnace during the melting of metallic chromium. As the current is turned on the interior of the furnace appears as a dark crater, the dull red poles revealing the metallic luster and gray shadows of the metal beneath them. Soon these poles are tipped with dazzling white, and in the course of a few minutes the temperature has risen to about 2,500 degrees C. A lambent halo of green blue now encircles each pole, the central band of the arc changing rapidly from peach blossom to lavender and purple. As it becomes necessary to lengthen the arc, and the poles are drawn further and further asunder, the irregular masses of chromium fuse in silver droplets in the midst of light changing from intense blue to green of lustrous emerald. Then the last fragments of chromium dissolve into a shining sheet, which reflects the glowing poles in green and gold shot with orange hues. Prof. Roberts Austen adds: "Still a few minutes later, as the chromium burns, a shower of brilliant sparks of metal are projected from the furnace amid the clouds of russet or brown vapors which wreathe the little crater, while if the current is broken and the light dies out you wish that Turner had painted the limpid tints and that Ruskin might describe their loveliness. The effect when either tungsten or silver replaces chromium is much the same, but in the latter case the glowing lake is more brilliant in its turbulent boiling and blue vapors rise to be condensed in iridescent beads of distilled silver which stud the crater wall.'

An act has been approved by the governor of New York requiring employes of telephone companies, on and after Sept. 1 next, to be as secretive regarding the nature of their business as are the men and women who handle telegraphic messasges. The act makes it punishable by a maximum fine of $1,000 or imprisonment for not more than six months, for any person to wrongfully obtain or attempt to obtain any knowledge of a telegraphic or telephonic message by connivance with a clerk, operator, messenger or other employe, of a telegraph or telephone company. The same punishment may fall on the operator or other employe of the telegraph or telephone company who wilfully divulges to any one but the person for whom it was intended the contents or nature of any message or dispatch intrusted to him for transmission or delivery. The same penalties attach to refusal or neglect of an employe to duly transmit or deliver such message, or the aiding or abetting of any unlawful business or traffic.

An incident is reported from Niagara Falls which illustrates the readiness of manufacturers to utilize electric power. It has been generally expected that Buffalo would be a large user of the electric power generated by the Cataract company at Niagara Falls. Considerable delay has taken place in the negotiations between the city and the company for the power, and in the meantime another customer has arisen. According to a Buffalo paper, "While Buffalo is dickering for Niagara Falls power and talking about impossible restrictions Depew has made a bid for it, and literally goes half-way to get it. In all probability Depew will get the power before Buffalo does." As a matter of fact, Depew, a growing town, eight miles from Buffalo, actually stepped in and pre-empted a large amount of the power for which Buffalo was somewhat too complacently bargaining. The town has large locomotive shops, coupler works, etc., and in the acquisition of the new power it has made a big bid for prosperity.

The speed of electricity under the most favorable conditions is now estimated to be 180,000 miles a second. What this enormous speed implies is somewhat dimly suggested by an illustration recently used by the eminent scientist, Sir Robert Ball. Suppose that a row of telegraph posts 25,000 miles long were erected around the earth at the equator. Suppose that wire were stretched upon these posts for this circuit of 25,000 miles, and that then another complete circuit was taken with the same wire around the same posts, and then another, and yet another. In fact, let the wire be wound no fewer than seven times completely about this great globe. We should then find that an electric signal sent into the wire at one end would accomplish the seven circuits in one second of time.

The theory of disintegrating effect of the electric current upon brain and nerve tissues in persons electrocuted has been controverted by Dr. A. M. Bleile. Dr. Bleile holds that death in electric shocks is entirely owing to the contraction of the arteries produced by the current through its influence on the nervous system. The effect of this constriction is that the heart fails in its attempt to overcome the mechanical impediment arising from the greatly retarded flow of blood. In the course of investigations on this subject it has been found that where drugs have been given to counteract the constrictive effect of the current much larger doses of electricity than the ordinary can be borne. This fact cannot but have a bearing upon the much disputed question of resuscitation after electrocution. Notwithstanding the apparently conclusive testimony which has been given on this subject, it is still believed by some medical experts that given a criminal who had an exceptional capacity for resisting the electric shock—and this capacity varies in every one—and his power of resistance be still further increased by a timely dose of the drugs mentioned, the effect of the electrocuting current would be so far modified as to make it possible to resuscitate the body after the execution, even though signs of apparent death were exhibited. —Chicago Record.

"Mr. Uplate," said the landlady, severely, "it is now after 10 o'clock. I really cannot keep the breakfast table waiting for you so long every morning."

"Madame," replied the lazy boarder, with dignity. "If you think I am going to endanger my health by arising before the day is far enough advanced so I can tell whether I will need to put on my winter flannels or my gauze underwear, you are entirely mistaken."—Buffalo Express.

There are eight cats on the staff of the Midland Railway. The expenses connected with them are regularly shown in the accounts of the company. These lucky felines have under their charge, according to the season of the year, from one to three or four hundred thousand empty corn sacks. The holes in the sacks, which are eaten by the rats, are darned by twleve women, who are kept constantly employed.

Why is a tear like a potato?—Because it springs from the eye.

SNAKE LIFE.

Yarns About Snakes Gathered From Many Points.

THERE ARE SNAKES IN IRELAND.

Not Many, Says Dr. Steineger, but they are There—Fierce Serpents of the Indian Ocean.

One of the most interesting things in nature is the study of snakes and their habits. All the world delights in a snake story, especially if it has a flavor of innocent exaggeration. True snake stories are rare, but one has come to the Sunday World from Berlin, and several other equally good ones from the far-away island of Java, and other places, which make excellent reading for dog-day weather.

A Berlin correspondent of the World was the other day watching the actions of a king snake in a meadow at the Havel Lake, Potsdam.

"This snake," he writes, "which was nearly five feet long and whose body was covered with brownish red spots, was hanging from the limb of a tree. He remained motionless for at least ten minutes, when three sparrows settled on the ground beneath him, picking food out of the sand and twittering joyously. They did not see the snake that hung over them like the sword of Damocles. As they hopped around I observed the snake's eyes shooting vicious glances. Suddenly Mr. Snake let himself down about a foot and instantly the sparrow that was in the center of the plumed terzett vanished between his teeth.

"The act was accomplished with such suddenness, so noislessly and stealthily, that the two other birds did not become aware of their comrade's fate, but continued picking the ground in search of worms as if nothing had happened.

"Also in the neighborhood of Berlin I have observed the antics of a snake known in zoology as Elaphis quater raditus. I saw this serpent catch and kill three birds in less than five minutes. The first victim he caught between his teeth; he bit him through the body and then laid him carefully on the ground, drawing his body over him and holding the fluttering bird down with his tail. He kept his eyes open all the time and pretty soon caught another bird in a home-made loop made of his own body.

"That accomplished, Mr. Snake wound his tail around bird No. 1 and began moving ahead cautiously. After a while a third bird was caught, and then Mr. Snake settled down for luncheon. He ate the last-caught bird first, then examined the second victim to see if any life was left in him, and finally despatched No. 1.

There are in the world five great collections of snakes. One of them is in Washington and belongs to Uncle Sam. The others are in London, Paris, Berlin and Vienna, all owned by the Governments. Not one, however, has a snake as long as those found in Java. For years there have been traditions of snakes—pythons, presumably—in Java 100 feet long and as big around as a hogshead. Native hunters say they see them from time to time.

Fifty years ago a Scotchman named Tait started with a party of natives to hunt these big snakes. Not one of the party came back. A captain in the English Army, named Coles, landed in Java, accompanied by Sikh soldiers. He was joined by Lieut. Ayres, of the British Navy. It was announced that they were going after the big snakes. Capt. Coles was a remarkable shot. Their course was up the Dowan, a stream running clear for fifty miles and then spreading over a swamp for 100 miles, almost to the south coast, and alive with man-eating crocodiles. They had several donkeys. One night, while encamped on the river bank, one of these animals squealed frantically. The Englishmen saw a huge gray mass sliding over the sand and gave the alarm. Two crocodiles had come ashore and seized the donkey. Both were shot. They were thirty feet long, with enormous jaws. The next morning the hunters killed thirteen, one being thirty-six feet long.

In a few days they reached the heart of the swamp. Snakes thirty-five feet long were shot, but the 100-feet snakes kept out of sight. The brush is thick, and wild hogs and deer make paths from one watercourse to another. Along these paths the snakes watch for victims. A native hunter reported a big snake near by. Two hundred yards away the Englishmen found it swinging between trees. Its back was broken by a shot and it was taken in and skinned. It was forty-one feet long. Near the head of the river the vegetation was so dense that further progress was impossible. So a camp was made on the bank. The next day the guides brought in the head and a few feet of the trunk of a serpent that had evidently been eaten by crocodiles. The head was nearly three feet long and "indicated an enormous length of body. Shortly after this a Sikh soldier pointed to something glistening in the water half a mile away. Through a glass it was seen to be a snake swimming. A raft was at once manned by the two Englishmen and their gun-bearers. Seen above the water the reptile's head was as long as a barrel and shone like bright copper. It made for shallow water and displayed a body three feet in diameter. Four shots were fired. Three went through the body. The snake arised its head and kissed angrily and beat the water into foam with its tail. Suddenly it turned, and the next moment a tremedous blow smashed the raft. All but one Skih made for shore. The Skih tried to secure his rifle. The snake's tail descended, struck him, broke his back and crushed all of his ribs. Another shot back of the head from Lieut. Ayres killed the snake.

It took six hours to remove the body to dry land. Its length was ninety-four feet. The skin was treated with palm ashes by the natives, an excellent preservative. There is no record of such a snake ever being killed before. Fever attacked the hunters, and they killed no more big snakes. It took them three weeks to get home. They were out three months. Their experiences are of great value from a scientific point, and the story of their trip is being prepared for the information of those in charge of the five great snake collections.

The collection in Washington is in an out-of-the-way corner of the National Museum. It is under the care of Dr. Leonard Stejneger, who is well known as an expert in reptlies.

"The Java snakes?" said the doctor with a smile in response to a query. "Oh, yes; they are enormously large, traditionally speaking. Few people admire snakes, I suppose. But it is a matter of taste. There was Prof. Baird, formerly secretary of the Smithsonian Institution. He swallowed the poison glands of a rattlesnake one day, just to make sure that the venom was harmless. The experiment was a risky one. I would have advised him against it. At all events, it is well that he did not try the poison glands of a cobra. You see, the poisons are different. Each of them contains two distinct active principles, one of which produces local symptoms in case of a bite, while the other has a tendency to paralyze the nervous centers of the victim. The latter preponderates in the cobra venom. A wound made by the tooth of that species of serpent is a mere puncture, and causes little swelling. The person bitten is killed by paralysis of the nerve centers. The dangers of the rattlesnake bite, on the other hand, is from mortification of the injured part, which may proceed so far that the flesh actually putrefies. Cobra poison in its natural state is one of those fluids which passes through membranes. If swallowed it would be apt to go through the walls of the alimentary tract and get into the circulation that way.

"We have some specimens of the python here. They attain a length of thirty feet and a diameter of a foot. The Java pythons must be giants.

I have often been asked whether, if I met a python my scientific knowledge would give me a better chance than laymen would have in an encounter with it. Perhaps it might. But, notwithstanding my enthusiasm as a collector, I would certainly run away if I could. If the serpent seized me the only thing to do would be to grasp the creature by the throat and try to strangle it.

"Snakes have their usefulness in the world. They are the scavengers of swamps and morases where other animals of size are unable to penetrate or to exist. It is in the tropics, of course, that serpents chiefly abound. All snakes are of tropical origin, but some species have spread into cooler latitudes. In very cold countries there are no snakes. Contrary to the popular belief, there are some snakes in Ireland, but they are very rare. The smallest serpents in the world are the 'worm snakes' of the tropics. They are about as big as fair-sized earth-worms. Some snakes lay eggs, while others bring forth their young alive. In the latter category are vipers, rattlesnakes and nearly all water snakes. Pythons incubate their eggs after laying them.

"Among the most venemous serpents in the world are the marine snakes of the Indian Ocean. They are the dread of fishermen, and it sometimes happens that vessels are obliged to thread their cables through barrels to prevent the reptiles from swarming on board. Great numbers of them may often be seen floating on the surface of the water as if asleep. They are exceedingly fierce and will commonly attack human beings without provocation."

PEAS FROM SEED 3,000 YEARS OLD.

Gardeners will be interested to learn that J. Davis of Wood Close, Bromley Common, Kent, has growing at the present time peas which are the product of sound peas found in Upper Egypt in a mummy case about three years ago. The sarcophagus which contained the mummy and case in which the parent of these peas were found was discovered in a cave tomb situated in the Valley of the King's at Assaseef, which is about an hour's ride west from the Nile at Thebes. The discovery was made by a party of five gentlemen, consisting of two Americans, two Cambridge students and the cousin of the lady from whom the specimen peas now growing at Bromley were obtained.

The inscription went to show that the person entombed was Memptah, a younger son of User-Khepaar-Ra (Seti II), son of Rameses II. founder of the eighteenth dynasty. Prince Memptah existed about 1270 B. C. The valley in which this tomb was discovered is the old burying place of the Theban Kings of the sevententh and eighteenth dynasties, and most of the tombs are remarkable, not so much for their size as for their exquisite beauty. All of these two races of kings were buried in this valley, but only about one-half the number buried (about forty in all) have yet been discoveed. The peas are much smaller than those of the present day, a fact which is possibly evidence of the improvement which has taken place in the cultivation in the modest interval of 3,000 years.—London Letter.

"Oh, he is a born debater. There is nothing he likes better than an argument. He won't even eat anything that agrees with him."

IN FAIR ITALY.

Poverty and the Lottery Go Hand in Hand.

DRAWINGS ARE HELD ONCE A WEEK.

The Lottery a Curse to Italy—It Holds Out False Hopes to the Poor, Poverty-Stricken People.

Roman poverty and the lottery go hand in hand.

Here in Italy where the currency is depreciated, where all classes are tax-ridden and the government must count upon five years of strict economy in order to get out of a deep financial hole, where a large part of the population eats a mixture of corn meal and water in order to live until the next drawing, the lottery is a very popular institution.

It is a swindling sort of lottery, too, even though it has the indorsement of the authorities and is a source of revenue to the State. The man who wins anything at it becomes at once a public character and lives in comparative luxury for a time. He may play all his life and win once—perhaps not so often. But when he does win he gets $20 for an expenditure of 10 cents, provided he is reckless enough to play such a large amount.

The Italian "lotto" is practically the same as the American game of "policy," which has been played under ground in Chicago for many years and is chiefly patronized by some colored people. Its advantages are that small amounts may be played and those who do not win often come dangerously near it.

The drawings in Italy are held once a week or oftener and each city has a lottery of its own, although tickets are sometimes sold for drawings in other places and the numbers which "come out" in all the principal cities are kept posted, so that superstitious players may know what kind of numbers are winning.

The humble Italian in selecting his numbers is governed by signs and omens. He places large dependence in dreams and knows the full significance of a funeral procession, a black cat or meeting a former friend.

The humble Italian is not alone in this.

All classes play the lottery and nearly all have fanciful methods of selecting the numbers that are sure to be lucky.

To say that the Italian lottery is like American "policy" may not be a clear explanation to some persons. There are ninety numbers in all, and the players can select any one, two, three, four or five of them. There are never more than five winning numbers. Usually the player selects three numbers. If two of these numbers win he gets about 80 to 1 on the amount invested. If by any miracle he gets three numbers he may realize more than 1,000 to 1. If but one number of the three comes out he wins nothing. In order to win on one number he must play it alone, taking a very slim chance of winning a small amount.

The tickets vary in price from 12 centimes (2 2-5 cents) upward, the maximum bet being 1,000 francs. On any traveled street of Milan, Florence, Rome, Naples, Genoa or Turin may be found one of the "banks." Usually it is a small, stuffy room, with a railing, a desk, and a few posted numbers. The attendant fills out the ticket, which is torn from a book. Each ticket is numbered, and a corresponding stub is left in the book. The tickets costing 16 centimes are in greatest demand. Change is returned in 1-centime pieces, which are about the size of bird seed. It would require fifty of them to pay for a glass of soda water in America. At the present rate of exchange 550 of them would buy an American dollar, yet they are very useful in a city like Naples, where discarded cigar buts are offered for sale in damp and mangled rows.

If any player is in doubt as to the selection of numbers, he can always find in one corner of the bank a small wheel numbered from 1 to 90. When the needle is whirled it is supposed to point the way to fortune.

On Saturday, the day of the drawing, no tickets are sold for less than 60 centimes (12 cents each. In the last hours previous to the drawing the heavy speculators come in and buy the flimsy strips of white and yellow paper. The drawing takes place at about 5 o'clock in front of the Central bank, or in the most public place that can be provided, and by 6 o'clock the lucky numbers are pasted in front of evey bank and are being read by mothaten, fowsy men and women who ejaculate, argue, wave their arms and tell how much they would have won if they had played 35 instead of 36, or 7 instead of 9. Every drawing appears to be fraught with the narrowest escapes.

In Florence the drawings are made on an elevated platform in the square of Victor Emmanuel. All the numbers are placed in a sort of woven-wire ball mounted between two posts and turned by a crank. The ball is revolved until the numbers are thoroughly mixed together and then the winning ones are withdrawn by a blindfolded boy, who hands them to an official, who, holding each in full view of the spectators, passes them to a second official, who shows them to several suspicious and watchful persons, after which they are displayed on the board. Official duplicates are then printed and scattered throughout the city.

Any one who has "caught" the combination may go to the bank where he bought his ticket and get his money. It requires a knowledge of higher mathematics to figure how slight are the chances of getting three of the five numbers. The reader may remember that in one of the Harrigan plays a colored gentleman falls into a fit when he discovered that 4-11-44 has won.

In some parts of Naples the people require daily drawings. They seem to believe that when they can buy a ticket every day they have more chances of becoming wealthy. In Naples, also, there is more playing for the first number to be drawn, also for one of the first two or one of the first three. The game has its complications, not easily understood by the stranger, and it also has its slang vocabulary, with words corresponding to the "gigs," "saddles" and "splits" of the American policy-player. At each bank the money comes in bits and driblets, but the total for the year must be something very large. In Rome alone the lottery yields an annual revenue to the government of 100,000 francs. It is a government institution. Pictures of the queen appear on the large posters which announces special drawings. Patriotic citizens may be comforted by the knowledge that even if they never win the government will be ahead and no one can dispute the goverment needs the money.

"The lottery is a curse to Italy," said an American who has resided in Rome, for years. "It holds out false hopes to the poor people and takes the money from those who need it most. Regarded as a tax it is unjust, because it does not affect all classes alike. I know of some well-to-do Italians who play it regularly for the diversion it affords. They set aside small amounts each week, and are not disturbed at the losses. The servants, laborers, street peddlers, working girls of all classes, and even children often play all the money they have in the world. Every servant I have employed has played the lottery, and only one of them ever won anything."

There is no organized effort to suppress the lottery. The Italians take it as a matter of course and use the old argument that no one is compelled to play unless he chooses to do so. Besides, the government derives a revenue and if the lottery were suppressed the tax would be laid on somewhere else.

Italy needs a society for the suppression of the lottery and—particularly in Naples—a society for the prevention of cruelty to animals. The draft horses are bony and colar-worn, and most of them, through long ill treatment, have come to a state of extreme dejection. The horses pulling tram-cars and cabs are lashed continually. In Paris the newspapers advise people to give no tips to the cab drivers who abuse their horses. Such a plan, if adopted in Naples, would deprive the "cabbies" of all their drink money. —Chicago Record.

GUNS AND BICYCLE TIRES MADE OF PAPER.

The wonders in the use of paper and wood pulp seem not likely to cease soon. The latest application of paper is for the manufacture of large guns. Guns have been made from leather pulp, and these are bound with hoops of metal. The leather pulp is, of course, hardened. There is also a core of metal set inside of the gun. The lightness of the leather cannon is an essential feature. The principal aim, however, is to secure a material which has some elasticity, so that the force of a heavy discharge will be broken gradually. This seems to be obtained in cannon made from a pulpy substance. Paper pulp answers the purpose, as numerous trials and experiments have proved; it possesses more elasticity than metal, and when hardened, is nearly as tough, hence this material is useful in the manufacture of articles requiring hard, efficient and elastic, properties. The body of the gun is made of paper pulp. The core is of metal, and made very much like the cores of ordinary cannon. The exterior of the cannon is wound with wire. About five layers of copper, brass or steel wire are firmly wound on, thus binding the cannon. Outside of the covering of wire are various bands of brass. These bands are set with uprights, through which rods extend parallel with the gun. There are lock nuts on each side of the uprights, and these hold the rods in place.

The Western Stationer states that a new bicycle tire is being tried, built on the compartment plan. The arrangement is such that a series of chambers are produced in the tire, each independent of the other, so that in case the tire is punctured with a tack or a sharp piece of glass, only part of the tire will collapse and the rider of the wheel can continue on his journey. If a pneumatic tire is punctured now, the entire tire will collapse wholly, and the machine is useless until repaired. The new tires are made of pulp produced from paper stock, and are of sufficient durability to permit usage on carriage wheels as well as bicycles. It is claimed that the ties manufactued on the compartment plan are as easy riding as the most elastic pneumatics.

The preliminary surveys have been made for the great canal it is proposed to run through the entire length of Yuma county, Arizona. The canal will be sixty feet wide in the bottom, with a slope of one to one, and will carry water seven feet deep—a volume of 50,000 miners' inches, or 1,000 cubic feet of water per second. It is estimated that this amount of water will irrigate 80,000 acres, or 125 square miles. The canal, from the head to the Sonora line, will be about fifty-four miles in length, and its total close to $1,500,000.

A.—"She is the occasion of lots of talk wherever she goes." B.—"Indeed!" A.—"Yes; she always plays the piano, you know."

SHOP FISHING.

But the Fish Lines Were Too Weak.

WAS OUTWITTED BY AN AMERICAN.

A Japanese Merchant Who Sold Privileges to Fish in His Pool With a Rod That Broke Too Easily.

Some years ago while a party of us were driving through "Japanese town," Yokohama, in search of curios or novel experiences we were attracted by a large fishing pool in the center of a shop. We hurriedly descended from our conveyance and entered. The proprietor, smiling and bowing low, with old-time politeness, offered us fishing rods and explained to us that each fish caught should belong to the fortunate fisherman, says a writer in the Washington Times. He asked so small a price for his rods and the fish seemed so ready to bite that we marveled at this most charitable plan for our amusement. We had scarcely dropped our lines in the clear water before we each had hooked a good-sized fish, but alas our cries of pleasure and exultation came too soon, for in trying to land the prize the line broke and the smiling proprietor stepped forward with an extra supply of rods, relieving us of those for which we had already paid. We soon discovered that there was not a fish in the pool light enough to be lifted on so slender a string. We loudly demanded fair play and a chance to show our skill. The proprietor seemed very much astonished at the great demand for extra rods, assuring us each time that the one given us was much stronger than the previous one, while we tried to have faith in his assurances, and used rod after rod, always hoping to be able to land just one. It was all in vain, and after many useless efforts we left the shop, feeling that our diversion had been far from a charitable affair on the part of the innocent-looking proprietor. During the evening the more I thought of the afternoon's sport, the more my annoyance increased at having been so coolly swindled, so I concocted a little scheme by which to avenge the entire party.

I went the following morning and purchased a small ball of stout twine as nearly the color of the fragile thread we had been using as possible. Without informing the other members of the party of my intention, I asked them to accompany me that afternoon to the fishing pool and follow my directions without question. A faint smile showed itself and rapidly disappeared from the face of our "belto" (coachman) as he received the order to drive to the fishing pool. The proprietor greeted us most cordially and whispered to one or two of his Japanese friends his pleasure at seeing us again. He then gave to one or two small boys an enormous quantity with which we were to be supplied and retired with his friends to the back part of the shop, where they smoked their pipes and lazily watched us, smiling with satisfaction at the thought of the large sum of money which the foreigners would leave behind them. When they became engrossed in conversation I turned my back to the Japanese and quickly replaced my thread with the stout cord, then begged the others of the party to stand about me in such a way as to shield me from view. As the first fish was landed the small assistants uttered an exclamation of surprise, which at once attracted the attention of the proprietor. Before he could reach us fish number two was triumphantly raised from the pool. He (the proprietor) then shuffled toward us in a hasty and excited manner, but my friends had their instructions to stand about me in such a way as to shield me from being reached, and to talk to the proprietor and his assistants and misunderstand his efforts to get near enough to examine my fishing rod, while I fished as though our lives depended upon emptying the pool at a rapid rate.

The Japanese became finally so excited and noisy that I cut the cord and pocketed it; so, although they had their suspicions, and very well-founded ones, they had no proof and sadly counted the fish they had lost. They were preparing to send them to the carriage, when I asked them if they would take them in exchange for the money of which they had swindled us the previous day. While they were haggling and arguing we presented them with the trophies, and their faces resumed the pleased expression of satisfied children. We left our trap before their door and wandered on foot farther down the street, peering into the shops with the hope of discovering some other novelty. On our return we saw our smiling proprietor passing a few live fish to our belto, who was tucking them away in the folds of his kimono. I called to the man, thinking he had misunderstood me, and assured him that we did not wish the fish we had caught and had returned them to him. He politely informed me that he had perfectly understood, but was presenting our belto with his fee for having honored him by bringing to his humble abode such distinguished strangers.

We shortened our drive and returned at once to the bungalow, as we imagined the belto must be slightly uncomfortable with the fish wriggling in his kimono.

Lord Roseberry is the third person who ever was permitted to be both a Knight of the Garter and a Knight of the Thistle. The present Duke of Argyll is another, and the first was the Lord Aberdeen who was Prime Minister.

INYO INDEPENDENT.

Irv. H. Mulholland,
ITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY, SEPTEMBER 13 1895

The latest wrinkle in Eastern racing is to pump ozonized oxygen into the lungs of a racehorse to improve his wind, and the sports of the old school are protesting against it on the ground that wind is one of the things that a horse is bred for and trained for, and that it ought not to be supplied by artificial means.

Even in Ohio the Democrats have opinions of their own. In Hardin county in that State, at a county convention, the Democrats by a two-thirds vote declared for bimetallism and repudiated the State platform. The triumph of Senator Brice may not be so complete as it seemed at first.

The promotion of Li Hung Chang from the office of Viceroy of Pechili to the greater office of Imperial Chancellor is considered a proof that the Chinese Government intends to enter seriously upon the work reforming the empire on modern ideas, and Chang will at last have an opportunity to show the world he is really the great man General Grant thought him.

Boss Quay has again shown that he absolutely controls the Republican party of Pennsylvania. He is the man who raised the great corruption fund in 1888, which was used to buy Indiana and New York for Harrison, and pious John Wanamaker's entrance to Harrison's Cabinet was a part of that Pharisaical deal. Quay's success shows that neither the friends of good government in Pennsylvania nor the friends of free silver anywhere have anything to rejoice at unless it shall cause such a revulsion of feeling as to throw the State again to the Democrats, as sometimes has been done.

What kind of civilization is it where every jockey has a valet and one-half the editors in the country have to black their own boots? asks the San Francisco Call, to which the Fresno Republican replies that it is the same kind of a civilization that gives us a page in a newspaper about Pugilist Corbett's new blow and a quarter of a column in the same paper about a national convention of Christian Endeavorers. The same civilization that makes conceivable the putting of a Durrant tragedy on the stage, and leaves able lecturers with a dozen hearers. Yes, it is the same civilization.

The coming contest in Ohio is to be an interesting one. Ohio is naturally a Republican State. The Democrats have carried it only four times in eighteen years, and the last time was in 1889 when Governor Campbell won with a majority of 10,872. In 1892 Harrison got the State by a narrow majority of 1,072. Although McKinley had a majority of 80,000 in 1893 and last year the Republican majority was much larger, because not less than 125,000 Democrats stayed ayay from the polls, there is a chance for winning this year. The Democrats have put up a popular man against a wealthy man—a man against a barrel of money. Should Governor Campbell win he would be a formidable candidate in the Democratic convention for the Presidential nomination.

David Lubin of Sacramento is devoting his time and fortune to a losing cause. He recognizes that that in the scheme of protective tariffs the farmer has always got the worst of it, being taxed on all he buys under that system and being compelled to sell his products in the free, open markets of the world. Mr. Lubin now wants to tax the whole people to get money to pay farmers bounties on their products. It is simply an extension of the principles that a people can be made rich and prosperous by being taxed. The true system is to tax people no more than is necessary for the support of their governmental institutions, schools etc., and let them work out their own prosperity—which they will do easily enough when they are not taxed to make other people inordinately and offensively rich. The idea that everybody is to be taxed to make everybody else prosperous is like a man's trying to lift himself over a fence by his boot straps.

NEW FEE BILL.

CHAPTER CCVII.

An Act to establish fees of county, township and othe officers, and of jurors and witnesses in this State.

[Approved March 28, 1895.]

The People of the State of California represented in Senate and Assembly, do enact as follows:

SECTION 1. The following county, township, and other officers shall charge and collect the following fees.

COUNTY CLERK.

On the commencement of any action or proceeding in the Superior Court, except probate proceedings, or on appeal thereto, to be paid by the party commencing such action or proceeding, or taking such appeal $5 00

On the filing of a petition for letters of administration, testamentary, or guardianship five dollars, to be paid by the petitioner; *provided*, that at the time of filing the inventory and appraisment in any such proceeding there shall be an additional deposit of one dollar for each additional thousand dollars of the appraised valuation, in excess of three thousand dollars.

On filing the petition to contest any will or codicil 3 00

On the appearance of any defendant, or any number of defendants appearing jointly, to be paid upon filing the first paper in the action by him or them 2 00

On placing any action, except a probate proceeding, or default case, on the calendar for trial or hearing, to be paid by the party at whose request such action or proceeding is so placed 2 00

For every additional defendant appearing separately 1 00

The foregoing fees shall be in full for all services rendered by such Clerk in the cause, to and including the making up of the judgment roll.

On the filing of any notice of motion to move for a new trial of any civil action or proceeding, the party filing same must pay to the Clerk, in full for all services to be rendered in connection with said motion, except as hereinafter in this section provided 2 00

For issuing an execution or order of sale in any action 1 00

In all proceedings begun or acts performed prior to this Act becoming a law, such and charges as were provided by the law at the time such proceedings were begun or acts performed.

The Clerk shall also charge and collect the following fees and compensation not above provided for:

For any copy of any record, proceeding or paper on file in the office of the Clerk relating to any civil action pending in said Court, when said copy is made by him, per folio 10

For each certificate of the Clerk, under seal of the Court 25

For filing each claim in probate or insolvency proceedings 15

No fees shall be allowed or charged by the Clerk for services rendered in any criminal case.

For services rendered by the Clerk, not in connection with civil actions or proceedings in Court, he shall charge and collect, for the benefit of the county, the following fees:

For issuing marriage license, one half to be paid to the County Recorder 2 00

For filing and indexing articles of incorporation 1 00

For filing and indexing certificates of copartnership 1 00

For filing and indexing all papers to be kept by him, other than papers filed in actions or proceedings in court, and official bonds and certificates of appointment, each 25

For issuing any license required by law, other than marriage licenses 1 00

For examining and certifying to a copy of any paper, record, or proceeding prepared by another, and presented for his certificate, fifty cents, and one cent per folio for comparing the said copy with the original.

For making satisfaction of or credit on judgment 25

For receiving and filing remittitur from Supreme Court 50

For administering each oath, without certificate, except in a pending action or proceeding 10

For taking and approving each undertaking and the justification thereof, except in criminal cases 25

For searching records or files, for each year 50

For taking acknowledgement of any deed or other instrument, including the certificate 50

For filing notices of appeal and appeal bonds, each 25

SHERIFF.

For serving any process, writ, order, or paper, except as hereinafter provided, required by law to be served by the Sheriff 50

For serving a writ of attachment, execution, or order for the delivery of personal property 1 00

For taking any bond or undertaking 50

For serving an attachment or execution on any ship, boat, or vessel 3 00

For keeping and caring for property under attachment or execution, such sum as the court may fix, *provided*, that no greater sum than two dollars per day shall be allowed to a keeper when necessarily employed.

For a copy of any writ, process, or paper actually made by him, when required or demanded according to law, per folio, ten cents; *provided*, that when correct copies are furnished to him for use, no charge shall be made for such copies.

For advertising sale of property and posting notice, exclusive of cost of publication, or furnishing notice for publication, each 50

For publication of notice in newspaper, the reasonable cost of publication, subject to the approval of the court.

For serving writ of possession or restitution, putting a person in possession of the premises, and removing the occupant 1 50

For subpoenaing witness, including copy of subpoena, each 25

For summoning trial jury of twelve or less 2 00

For each additional juror 10

For traveling in the service of any paper required by law to be served, for each mile actually and necessarily traveled, one way only, fifteen cents, when such travel can be made by rail, in other cases, twenty-five cents. No constructive mileage to be allowed.

For collecting money on execution, with or without levy, one per cent on the first thousand dollars or less, and one half of one per cent on all sums over one thousand dollars.

For executing and delivering Sheriff's deed 1 50

For executing and delivering certificate of sale 50

For transporting prisoners to county jail, actual cost of such transportation.

For executing and delivering any other instrument, per folio 10

RECORDER.

For recording every instrument, paper, or notice required by law to be recorded, per folio 10

For indexing every instrument, paper, or notice, for each name 10

For filing every instrument for record, and making necessaay entries thereon 20

For each certificate under seal 25

For every entry of discharge, credit, or release on the margin of record, and indexing same 25

For searching the records of his office, for each year 50

For abstract of title, for each conveyance or incumbrance 25

For recording each map or plat where same is copied in book of record, for each course 10

For recording each map or plat, where same is not copied in a book of record 50

For figures or letters on maps or plats, per folio, ten cents; *provided*, that the fees for recording any map shall not exceed fifty dollars.

For taking acknowledgement of any instrument 50

For recording marriage license and certificate, to be paid by County Clerk 1 00

For recording transcript and all services in estray cases 1 00

For recording each mark or brand 50

For administering each oath or affirmation, and certifying the same 25

For filing, indexing and keeping each paper not required by law to be recorded 25

The Clerk, Sheriff, and Recorder shall account for all fees in this section provided for, and the Clerk, Sheriff and Recorder, unless otherwise provided by law, shall pay the same to the County Treasurer on the first Monday of the month following their collection, as provided in this Act.

County Officers must, and township officers may, demand the payment of all fees in civil cases, in advance.

SECTION 2. No fees or other compensation shall be paid for certificate of declaration to become a citizen of the United States, and for making a record thereof, or issuing a certificate of citizenship to become a citizen of the United States, or for making a record thereof; and no fees or other compensation shall be paid for filing the statement and affidavit of a committee or candidate voted for at any public election held within the State; and this section shall apply to all the counties in the State.

SECTION 3. All Acts or portions of Acts inconsistent herewith are hereby repealed.

SECTION 4. This Act shall take effect immediately.

NOTICE IS HEREBY GIVEN, to all persons having business with the offices of Clerk, Sheriff or Recorder fo the County of Inyo that the above provisions of the Fee Bill ave mandatory, and will be strictly enforced.

A. M. GIVEN, Sheriff.
D. J. HESSION, Clerk and Recorder.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY the 8th day of March, 1892, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise, acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South-east quarter and the South half of the South-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit: Commencing at the South-east corner of the south east quarter of North east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 98-100; thence North-east following the meanderings of the bed of the Creek along its North branch to Edwards street, in the town of Independence, thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hallahah, deceased, at the time of his death.

Lots Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dispricada Lode."

That certain lot, piece or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the north west quarter and the North-east quarter of Section No. twelve (12), and the South-west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardine Base and Meridian, running thence South sixty-eight and eleven-twentieth (68 11-20) rods; twence West twenty-three (23) rods; thence North-westerl along a small branch or swale to a point twenty four (24) rods North of the general corner of the North East quarter and the South east quarter, and the North-west quarter and the North east quarter of the North-west quarter of Section No. twelve (12), in Township No. three (3) North, Range No. twenty-one (21) West; running thence North forty four and eleven twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres; Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court. Deed at the expense of purchaser.

WILLIAM L. HUNTER.
Executor of the Last Will and Testament John Allen Hannah deceased.

KENDALL'S SPAVIN CURE.

STAR, LANE CO., OREGON, Feb. 8th, 1892.
DR. B. J. KENDALL CO.,
Dear Sirs:—I have used your KENDALL'S SPAVIN CURE for the last twelve years never being without it but a few weeks in that time and I have made several wonderful cures with it. I cured a **Curb** of long standing. Then I had a four year old colt badly **sweenied**; tried everything without any benefit, so I tried your liniment, and in a few weeks he was well and his shoulder filled up all right, and the other, a four year old that had a **Thoroughpin and Blood Spavin** on the same joint, and to-day no one can tell which leg it was on. These statements can be proven, if necessary; the four year olds are now seven and can be seen any day at Cottage Grove, Or. S. Z. PATTON.

—Price $1.00 per bottle.—

Following are the latest prices quoted in the San Francisco metal market:

Refined silver, per oz	$ .66¾
Antimony	8
Borax, refined in car lots	5½
Pig lead	3.30

Religious Services.

Rev. T. H. Nicholas will conduct services at the M. E. Church next Sunday evening at 7:30 o'clock.

DIED.

WIMBERLY—At Independence, Cal., September 7, 1895, Louis W. Wimbely, aged 61 years.

J. D. Lewis Esq. came down from Bishop early in the week.

J. R. Moffett arrived home last Tuesday morning from a trip to Los Angeles.

Henry Fehrman has so far recovered from his recent illnes as to be on the street again.

Mrs. A. W. Eibeshutz arrived home last Monday fiom a month's visit to San Francisco.

W. T. Grant is spending a few days in town. He has just come from a camping trip to Kern River.

Admission Day was observed by floating "Old Glory" from all the public buildings in town.

Neil McLean started for Cerro Gordo on Saturday with his big team to haul ore for Pat Clinton.

P. W. Bennett Esq has returned from his trip to Casa Diablo. His health has very much improved.

The Board of Supervisors will meet next Monday to fix the rate of the tax levy for the present fiscal year.

Johnnie Kispert was up from Keeler the first part of the week buying mules for the big team of Wm. Arcularius.

Part of the Holiness Band returned from Bishop last Tuesday and are holding meetings every night in Mair's Hall.

L. DeCloss, Wm. LeGros and John Kogge came down from Bishop on Wednesday on business in the local Land Office.

Herb. Wells is still working on the race track. Though badly out of order he will soon have it in speed-making condition for the fair —*Index.*

Work is progressing steadily on the Independence Water Co's. new pipe line through Edwards Street, more than half of the line being completed.

S. G. Sneden Esq. came down from Bishop last Monday and will probably be detained in town a week or more, on business in the Superior Court.

Ben T. Williams and Geo. H. Lewis commenced work on the May-Day mine last Monday, owned by Lewis & Gorman and situated on Poverty Hill, at Fish Springs.

Hon. N. D. Arnot arrived at Independence last Tuesday. He will in all probability be detained here for some time as there are a number of cases in the Superior Court that demand his attention.

Chris. Carrasco was up from Lone Pine yesterday. He says the boys are making arrangements to have an old fashioned good time next Monday, the 16th. Quite a number of Independence people will attend.

School began in the Liberty district last Tuesday with Miss Gregory of Mono in charge. There are over twenty pupils and the school is running nicely. A. E. Janvier will open the Georges Creek Creek school next Monday.

R. S. Miner Esq., the well known Mono county attorney, arrived at Independence on Wednesday. He is here on business connected with the Sheep license cases, having been retained by the Board of Supervisors to look after the County's interests.

Joe. Buckwalter came in from Beveridge last Tuesday, where he is where he is now working for Pat. Keys. He says Keys now has three men at work, Carroll, Wilder, and himself, and has about fifteen tons of ore on the dump, and will make a run sometime in November.

Mr. Frazer, superintendent of the Inyo marble quarry, accompanied by his wife, went south on Monday's train. Mr. Derby, Superintendent of the mill at Marmol, was at Inyo last week and it is stated that the company has some large orders to fill and that operations will be resumed on a considerable scale. Several quarrymen went to Inyo on last Monday's train to begin work.

From The Timber Line.

The clouds which have been hanging over the valley the past few days, have deposited very little rain in the mountains or any part of the valley, so far a little has fallen on the mountains and on Wednesday night a slight sprinkling of snow fell on the summit of the Sierras, just enough to be seen.

The pass over the summit may remain open for a month yet, and possibly longer. Up at the top of the timber line, what vegetation is there is only in its primary state, the bushes bearing berries being only in bloom, one mile further down the berries are ripe and still further down a mile the berries have ripened and disappeared. Game in the timber on this side have disappeared, a few groundhogs or mountain squirrels are seen when passing the timber line, but fishing in the lakes is still very fair, the nights being quite cool but not to cold to spoil the sport at this late date. Around the edges of the lakes and on the bleached rocks near the summit are the marks of camp-fires, tin cans and the like, rements of the numbers of pleasure parties who have visited those grounds the past summer. When coming out towardse the valley and looking back into the dark canyon covered with clouds, the thought strikes the tourist as that being a grand place to see winter in all its glory.

Cerro Gordo Notes.

F. Wallace, J. Dunphy and S. Reynolds came up from Keeler Sunday last. S. Reynolds is now working for P. Clinton. Thos. Boland made a flying trip to this town to-day. Boland's team is now working ten animals, the team being loaded both ways, hauling merchandise up and ore down. Frank Elder and wife are now living in town. Frank is working for Thos. Boland.

The Bonanza Mining Co. have struck a two-inch vein of ore, and are now working full force.

Richard Kennedy arrived in town today after a weeks visit to Lone Pine.

Cerro Gordo will send a delegation to Lone Pine on the 16th. Lone Piners look out for fun.

There are now about thirty men in camp with an outlook for a larger force.

JIGGER.

Broken Leg.

Sunday last, about 4 p. m., while John Clarke, his son, J. B., and W. Dunn were unloading and piling lumber in the latters yard, a sudden gust of wind caused a four feet pile to sway in a threatening manner. The son who was on the wagon seeing the timbers about to fall, shouted a warning but to late. Dunn got out of the way and Clarke was caught by the falling mass. The others soon had him from under and at his home, where it was found his ankle was dislocated, his left leg from knee downward was badly bruised and the small bone broken above the ankle. At last accounts, the doctor was at one end dressing the maimed limb and John at the other hurling choice scriptural dislocations at the unfortunate medico.—*Index.*

Weather Summary. Week Ending September 12 .895.

Highest barometer, 29.932, date Sept. 6.
Lowest barometer, 29,628, date Sept. 8.

No. of partly cloudy days, 1
No. of cloudy days, 4
No. of rain days (.01 or more precip) 0.

H. E. WILKINSON,
Observer.

The first race for the America cup was sailed last Saturday and resulted in a splendid victory for the Defender. The second race was sailed Tuesday and the Valkyrie III came in first by 45 seconds, but as she had fouled the Defender and carried away part of her rigging the race was given to the latter The rival yachts started for the third race yesterday but after sailing a short distance the Valkyrie turned back, the cause not being stated. It looks as though the American boat, manned by Yankee fisher lads, would put another reef in the British jack.

Louis W. Wimberly died at the residence of his son-in-law, Niel McLean, at Independence, on the 7th inst, and was buried in the Masonic cemetery last Sunday. The deceased had lived at Keeler for a number of years and had many warm friends in the southern end of the valley. He had been ailing for a long time and his death was not unexpected.

A letter received from Los Angeles yesterday states that Chas. Anthony sold his mine in the Panamint range last Monday to Los Angeles parties and that part of the purchase price has been paid. There is a large body of free-milling gold ore and experts claim that it will develop into a valuable property.

Ben H. Yandell has had two attacks of hemorrhage of the lungs, the last one occuring last Monday. He is at the residence of his sister, Mrs. P. W. Forbes and is being attended by Dr. I. J Woodin. While his condition is not dangerous he will need be very careful for some time.

J. H. Stoutenborough Jr. came down from Bishop on Wednesday driving a handsome pair of black mares owned by his father. On Thursday morning one of them was found dead in the barn and an examination showed that death was caused by the rupture of a blood vessel.

J. W. Murphy and H. D. Gill left town last Monday morning for Coso where they will obtain a load of mud from the mineral springs that have been found so beneficial in cases of rheumatism, and Judge Gill will give the remedy a thorough trial.

Coolgardie.

Rich new finds are being constantly reported from Coolgardie gold fields. Coolgardie, Australia, is an accessible point, reached by steamer to Fremantle, thence by rail to Southern Cross and team to destination. The trip to Australia on the fine steamers of the Oceanic Steamship Company via Honolulu, Samoa, and New Zealand is pleasure sailing the day long. This line tickets passengers to Cape Town, South Africa. Map of Coolgardie district and Pacific ports reached by the Oceanic Steamship Company is mailed free to any address by the O. S. S. Co. 114 Montgomery St San Francisco.

COURT NOTES.

HON. N. D. ARNOT, presiding.

WEDNESDAY, Sept. 11, 1895.

An order was made for sixty trial jurors to be drawn to appear in the Superior Court on September 17. An order was also made that 25 names be drawn to serve as Grand Jurors, to appear in the Superior Court on September 24, 1895.

THURSDAY, Sept. 12, 1985.

J. H. Stoutenborough vs. William McDonald—Case continued until September 14 and an order made for a venire of 15 jurors.

I. J. Woodin vs. Charles Anthony—After Argument, demurrer stands submitted.

People vs. Wah Lee—Information presented and filed and time for arrangement fixed for September 16.

Jacob Koch vs. W. G. Bennet et als.—Issued order for publication of summons.

Estate of August Matschke, deceased—Matter continued until September 16.

Estate of W. G. Watson, deceased—On petition an order was made setting aside all of the real estate to the widow.

Estate of Eleanor Flenniken, deceased—Issued order for publication to show cause why real estate should not be sold.

The Birthday Party.

On Saturday last Mr. and Mrs. P. H. Mack gave their son Harry a birthday party, to which all the pupils of the school and also some others were invited. We went at 1:30 o'clock. We all gathered in the Masonic Hall where were Mrs. Webb to play the organ, Mr. Roeper to play the cornet, and Mr. Mulholland to play the violin for the children and some of the ladies to dance, while the other ladies and children looked on. We also had a Chinaman to pin the cue on and the one who came the closest to the place where it belonged got a prize. Mr. Mack brought up a large bucket of lemonade with ice in it and that was enjoyed by everyone I guess. The prizes for pining the cue on the Chinaman were won by Louella Robinson and Ivan Bunney, Louella got a silk handkerchief and Ivan got a silk necktie, the presents were both very pretty. After this we all got our partners and went down to Mr. Mack's where we saw a very large table on a nice spot of grass in the shade. The table looked very nice indeed. We all gathered around the table where we had ice-cream, water-melon, candies, cakes, fruits of all kinds, and different things. The birthday cake was very pretty, it had Harry's name written on it with carraway seeds. After we all got through eating we went back into the hall and danced until about six o'clock and then we all went home. I guess all who attended the party had a nice time and were tired when the party was over. I know I was.

VIVA L. GILL.

A BIRTHDAY PARTY.

I went to a peraty the other day. I had a good time. I had candy and nuts but they was some hogs to the supper. we played games. we danced and they played. and then we played some games. we played the Chinaman. and then we went to the supper and eat supper and then we went up to the Masonic hall and then it putnear six o clock.

HOWARD MAIRS.

ALIAS SUMMONS

IN THE SUPERIOR COURT OF THE COUNTY OF KERN, STATE OF CALIFORNIA.

S. Bachman, Plaintiff vs. Domingo Etcharren John Iribarne, Frank Cattiery S Heineman and L. Bachman, copartners doing business under the firm name and style of S. Heineman & Co. John Doe and Richard Roe, Defendants.

THE PEOPLE OF THE STATE OF CALIFORNIA, send greeting to Domingo Etcharren, John Iribarne, Frank Carthery, S. Heineman and L. Bachman, copartners doing business under the firm name and style of S. Heineman & Co. John Doe and Richard Roe, Defendants.

You are hereby required to appear in an action brought against you by the above named plaintiff in the Superior Court of the County of Kern, State of California, and to answer the complaint filed therein within ten days (exclusive of the day of service) after the service on you of this summons, if served within this County, or if served elsewhere within thirty days.

Said action is brought to obtain a judgment of this Court for the foreclosure of a certain chattel mortgage described in said complaint, duly acknowledged, verified, executed and delivered by said defendant, Domingo Etcharren, to John Iribarne, on the 17th day of May, 1894, to secure the payment of a certain promissory note, or instrument in writing dated May 17th, 1894 for the sum of Four Thousand Dollars, U. S. Gold Coin, payable twenty four months after date with interest thereon from date at the rate of one per cent per month, payable monthly, and if not so paid the whole, sum of both principal and interest thereof to become immediately due and collectable, at the option of the holder of said note, or instrument in writing, which said note or instrument in writing, after the making, execution and delivery thereof, was duly endorsed and delivered by said John Iribarne to the firm of S. Heineman & Co. and on said last mentioned day, said John Iribarne duly assigned said chattel mortgage to said firm of S. Heineman & Co. and afterwards, to wit: on the 28th day of September, 1894, said firm of S. Heinman & Co. for value received, sold, assigned and delivered said promissory note or instrument in writing and said chattel mortgage to the plaintiff. Said mortgage conveyed the following described personal property which said property was at the date of the execution of said chattel mortgage in the County of Inyo, but is now and for more than one month last past has been in the County of Kern and is described as follows: Thirty eight hundred head of sheep marked "D" and having an underbit and overbit on each ear, together with the wool thereon and the increase thereof; also four horses two mules, two wagons and one sets of harness and camping outfit; that the personal property conveyed by said mortgage be sold and the proceeds applied to the payment of said sum of Four Thousand Dollars, U. S. gold coin principal with interest thereon at the rate of one per cent per month from the 17th day of May, 1894 and costs of suit, and in case said proceeds are not sufficient to pay the same then to obtain a judgment and execution against said defendants Domingo Etcharren and John Irisarne, for the balance remaining due, and a so that said defendants and each of them, and all persons claiming by, through or under them, or either of them, may be barred and foreclosed of all right, title, lien, equity of redemption and interest in or to said mortgaged personal property, and every part thereof, and for such other and further relief as may be just, all of which will more fully appear by said complaint on file herein, to which you are referred for further particulars.

You are hereby notified that if you fail to appear and answer said complaint, said plaintiff will apply to the Court for the relief demanded in said complaint.

Witness my hand and the seal of said Superior Court of the County of Kern, State of California, this 13th day of June 1895.

[SEAL.] F. W. CRAIG, Clerk.

T. M. MCNAMARA, Attorney for Plaintiff.

Royal Baking Powder

ABSOLUTELY PURE

Beulah Barton's Birthday.

By MARY KYLE DALLAS.

CHAPTER II.

And taking a flask from his pocket put it to his lips.

Often after that Beulah as well as the squire's wife used to rise from her bed of moonlight nights and look toward the south. How many women did that in those days, I wonder, mothers and sisters and wives and sweethearts, all told—northern women and southern women whose hearts ached alike?

She used to put her palms together and lay her cheek upon them, after a pretty unconscious fashion that she had, and think that if ever Reuben came back she would try to make up with him. But she had very little hope that he would return. "I am punished for behaving as I did to the man I loved," she often said in confidence to Diana, "and I shall be punished more and more." And the pale huntress seemed to give her a cold smile of assent.

We do such odd, mad things when we are young and in love, especially if we are unhappy. I am sure that Mrs. Barton would have sent for the doctor to prescribe for poor Beulah if she had heard her talking to the moon in little, low murmurs, interspersed with soft sobs, but no one heard her and the habit grew.

"You are up there, so high above the world," she would say; "you can see Reuben. Ah, if you could tell me what you see!" And one night the silent moon could indeed have told her a thrilling tale, painted a strange picture.

Far to the southward her silver light flooded a battlefield red with blood. All day they had been fighting, the blue and the gray. No matter what they call the battle in history or how it ended we have only followed Reuben there for his love's sake. The fighting had been furious, gallant, on both sides; they were all Americans—the dark eyed, black haired, dashing soldiers of the south; the cool, strong, light haired, gray eyed northern men.

The fighting, orderly at first, had become a wild turmoil. The men were fighting hand to hand; officers whose horses had been killed under them were on foot, sword in hand, covered with blood, dust and gunpowder; hideous sights were to be seen everywhere; wounded men, bleeding at every vein; crippled horses struggling to rise; mounted men vainly striving to prevent their horses from trampling on fallen comrades; dead men fallen forward in their saddles, borne into the thickest of the fray, their hands frozen to their sword hilts.

The setting sun was merely a red rim beyond the blackest westward woods when Reuben almost stumbled over an officer in Confederate uniform lying on his back upon the ground. The next moment a mounted cavalryman dashed past and stooping low in his saddle struck at the poor wretch with his sword. Reuben parried the blow with his gun. The rider was gone, glad perhaps that he had not carried out his purpose, which was only a furious impulse of the moment, not the coldblooded and cruel thing it seems as it is written. But Reuben, who had a tender heart, could not leave his enemy there to be trampled upon, and began to drag him toward the nearest clump of trees, half way across the space that lay between. He heard the "ping" of a bullet, felt a pang in his left arm and did the rest of his work with his right.

As the two men fell together under the old pine the sun vanished, twilight fell. A retreat had begun. In ten minutes the great plain was deserted by all but the dead and dying. Even the wounded who were able to move had gotten away somehow. Reuben was not suffering much. His arm was benumbed; with his other he managed to place the Confederate officer in a sitting position, his back against the tree, and taking a flask from his pocket put it to his lips. A faint voice lifted itself.

"Sir, you are very kind, but you may need that yourself," he said. "You also are wounded."

"Plenty for both," said Reuben. A little later, revived by the draught, the Confederate officer was binding Reuben's arm, shattered above the elbow.

"I am conscious, sir," he said, "that it was in aiding me you received this wound. You are a magnanimous enemy."

As he spoke a peculiar expression, the promise of a smile that was not fulfilled, passed over his mouth.

Reuben had seen it before; it awakened a memory, as a glance, a sound, a perfume often will. He was once more in Mrs. Barton's large dining room. He saw before him the table with its dishes of salad, its gold and silver cake, its maccaroon pyramids, its shapes of cream and jelly. He saw the Mulberry belles in their evening dresses, the Mulberry beaux chattering, smiling, looking pleased with themselves, striving to please the ladies.

Beulah, in her blue dress with tea roses at her belt, so absorbed in the conversation of young Du Bois that she had no eyes for him, and everything else vanished, as everything does if one fixes one's eyes long enough upon some single star in the clear night sky. "Beulah, Beulah," he whispered. Then out of the mists came the smile that was so peculiar.

"Is your name Du Bois?" he asked.

"Yes," replied the other. "I have met you at the north; they entertained me most hospitably; I met charming people. I am glad to"— He paused, his voice failed him, but he struggled to complete the sentence, "to meet you again." The knight of courtesy was faithful to the last.

Reuben sat silent. The moon was slowly rising, a great, silver disk in the sky. Afar in Reuben's native home Beulah saw her rise.

The white light flooded the great, stubbly field with all its ghastly relics of the battle, and the handsome face of Du Bois looked white as Parian marble. He spoke again, and his voice had altered strangely. His hands moved stiffly as he drew a ring from his finger.

"I—I shall not see my wife again," he said. "Poor darling, she'll break her heart. We love each other. Let—let me put this on your finger. Some day give her this and tell her I thought of her and the babies last of all. Tell her how good you were to me. Galveston, Texas, is our home."

Reuben could not see him for the tears that dimmed his eyes, but their hands met in a long, lingering clasp. And still the moon shone down upon them, riding her course, and Beulah watched it.

"Tell him I loved him all the while," she whispered. And he at the moment was saying to himself:

"Jealous fool that I was. He was a married man, who loved his wife, and Beulah must have known it. The poor fellow was gallant to all women. Well, I shall never see her again, or poor old dad either."

CHAPTER III.

And there in that back room the talk was long and sweet.

One day, as Mrs. Barton sat upon her porch crocheting together the strips of an afghan, Mr. Spicer opened the gate and came in. He had never done more than nod in passing. But now he strode up to the porch. His face was red and his eyes blazed.

"Where's your girl?" he asked roughly.

"Sally?" queried Mrs. Barton. "In the kitchen, I guess. Has she been doing anything out of the way?"

"I don't mean Sally, I mean your daughter," said old Spicer. He swayed a little as he stood there, and Mrs. Barton wondered if he could have been drinking.

"Well, I ain't used to hear Beulah asked for just exactly in that way, you know, Mr. Spicer," she said.

For answer, Spicer held toward her a letter and a newspaper that he clutched in his hand.

"Read them," he said.

"News from the seat of war," cried Mrs. Barton. "Oh, Mr. Spicer, is it bad news?"

"My Reuben is dead, and your girl murdered him," cried the old man shrilly. At this moment both saw Beulah standing in the doorway. She was trembling from head to foot.

"What does he mean, mother? What does he mean?" she cried.

"I guess he is out of his mind, child," said Mrs. Barton. "He's got bad news. Sit down, Mr. Spicer, and let me get you a good cold drink. We've got to bear afflictions when they come."

"I'm not crazy, Mrs. Barton," said old Spicer. "I know what I'm saying, and your girl knows what I mean. You did it at your birthday party. I don't know what you did, but he went to it happy and hopeful, meaning to ask you to hev him, I guess. My Reuben wasn't a boy to do that without encouragement, and when he came back I didn't know him. No, I didn't know him; he was so altered, broke down, wretched, desperate. You drove him away. You thought yourself above him, I suppose. You're not! You're not! My Reu was any girl's equal." And then that absurd speech of hers about people who had never been shopkeepers rushed into Beulah's mind, and, to her mother's shocked astonishment, she sprang forward and threw her arms around old Spicer's neck.

"Say anything to me! I deserve it!" she sobbed. "But I never meant to drive him away. I've cried over it many a long night. I didn't know he felt so. I was angry because he did not come early. I thought he didn't care, and I loved him. I loved him as well as you did— Oh, Reuben, Reuben, Reuben!"

The old man sat down upon one of the red chairs with which the porch was furnished, and Beulah knelt down beside him, and they wept together like two children for their lost dear one.

That year, for the first time, Mrs. Barton did not give her girl a birthday party. Beulah was very ill on that anniversary, and though she did not die, she settled down into an invalid—one of those interesting persons who exist in every village, to whom people take jelly and flowers and religious books, and of whose case the doctors find it impossible to give a diagnosis.

(TO BE CONTINUED.)

KNOWLEDGE

Brings comfort and improvement and tends to personal enjoyment when rightly used. The many, who live better than others and enjoy life more, with less expenditure, by more promptly adapting the world's best products to the needs of physical being, will attest the value to health of the pure liquid laxative principles embraced in the remedy, Syrup of Figs.

Its excellence is due to its presenting in the form most acceptable and pleasant to the taste, the refreshing and truly beneficial properties of a perfect laxative; effectually cleansing the system, dispelling colds, headaches and fevers and permanently curing constipation. It has given satisfaction to millions and met with the approval of the medical profession, because it acts on the Kidneys, Liver and Bowels without weakening them and it is perfectly free from every objectionable substance.

Syrup of Figs is for sale by all druggists in 50c and $1 bottles, but it is manufactured by the California Fig Syrup Co. only, whose name is printed on every package, also the name, Syrup of Figs, and being well informed, you will not accept any substitute if offered.

A LIVING CARD TABLE.

How a Scared Fugitive Slave Was Saved From Recapture.

Colonel Charles S. Parrish, formerly of Wabash, Ind., who, during the war period, became well known all over Indiana, is now living in Perry, O. T., and in a letter to a Wabash resident relates an interesting story of a queer incident in which he figured. In November, 1861, Colonel Parrish, with the Eighth Indiana regiment, was stationed at Georgetown, Mo.

While at Georgetown two mounted men rode into camp and asked if a certain young negro was about headquarters. They gave a minute description of the colored man, and Colonel Parrish recognized in him the cook of Captain Kenney.

While the visitors were talking to the other officers about the young fellow, who had run away, Colonel Parrish walked away unnoticed to Captain Kenney's tent and found the young negro, who was frightened out of his senses at the prospect of being returned to slavery. Even then his pursuers were moving through the camp after him, and if he was to be saved something must be done at once. Colonel Parrish told him to lie down in the tent, and threw a buffalo robe over him, and then, calling to Captain Kenney, he drew a deck of cards and began a game of euchre, with the colored boy as a table.

The card players were engaged in an animated dispute over a point in the game when the owner of the boy came up and made a hasty search of the tent, but did not disturb the robe, beneath which the scared darky lay. When they had passed on, the game ended, and the boy was uncovered and went about his work.

Colonel Parrish had forgotten all about the incident until last week, when a fine looking negro appeared at his office in Perry and asked if he was Colonel Parrish of the Eighth Indiana. Being answered in the affirmative, he said he was the boy the colonel had "played keards" on at Georgetown, more than 33 years before, and the greeting of Colonel Parrish was very cordial. The young man said that after his escape he joined a negro regiment, was wounded and left for dead on the field at Petersburg, Va., but recovered and a few years ago went west and was then the owner of a valuable piece of property in the Cherokee strip.—St. Louis Globe-Democrat.

The World's Oldest Man.

The oldest man in the world, it is said, is a citizen of Bogota, in the republic of San Salvador. He declares that he is 186 years old, but from the tales his neighbors and relatives tell he is much older than he claims to be.

He is a half breed Indian and Spaniard, and his name is Michael Solis. He lives with an old planter named Luis Hernandez, who is himself 89 years of age. Hernandez says that as long ago as he can remember old Michael was known as a man far past the century mark. It has also been ascertained direct from the records that "one Michael Solis, a man now 125 years of age," contributed ten days' work toward building the Franciscan convent which was erected at San Sebastian in 1812. If it is really true that the old patriarch was 125 years old in 1812, he has now passed the second century mile post and is fast winding out the first decade of the third.

Doctors who have lately made a study of the case of this double centenarian say that there is not an ounce of meat on his bones and that the skin, which resembles parchment, is drawn so tightly over his frame that it cannot be pinched up between thumb and finger. He is unable to walk, but has good hearing and sound eye sight and a large crop of perfectly snow white hair and beard.—St. Louis Republic.

Hit and Miss In Chicago's New Directory.

Many curious things come up in connection with the publishing of a directory. Mr. Donnelly was busily engaged in his private office, when the usual quiet of that room was disturbed by the angry voice of a man in the outer office. He wanted to see the manager and violently made his way inside. He was manager of a big manufacturing firm in Fifth avenue and was angry all the way through because the compositor had set up "mangr," the abbreviation for manager, as "nurse." It was too late to correct the error, and there is one manager who, for a whole year, will be presented to the public as a nurse. As the visitor flung himself out of the office he ejaculated:

"I suppose people will be sending their babies to me to nurse, now. I'll kill the first one that does."

Many brokers had no end of fun with one of their number whose vocation in life is given as that of "porter." A Chicago literary man of some celebrity was written down as a "writer" by the canvasser, but the directory said he was a "waiter."—Chicago Times-Herald.

Women's Keener Color Perception.

Statistics have been accumulated which reveal that in respect to color blindness there is a remarkable difference between the two sexes. About 3½ per cent of men are color blind to a marked extent, while not more than four-tenths of 1 per cent of women are thus afflicted. This difference in color perception will strike most husbands who have been sent by their wives upon shopping embassies to match ribbons as understated if anything.

Our Parlor Soldiery.

She—Is Mr. Dudely much of a military man?

He (of "Ours")—Well, I should say he was. He can put on a fresh uniform every morning, with two changes during the day.—Detroit Free Press.

A Broken Egg.

"He was always a bad egg, yet society received him as long as he was rich."

"Yes, he was in good odor until he was broken."—Detroit Tribune.

A BUILDER TALKS.

A GREAT SUFFERER FOR YEARS. CURED IN TWO WEEKS.

A. N. Tompkins of Oregon City Relates a Wonderful Story.

From the Enterprise, Oregon City, Oregon.

A representative of the *Oregon City Enterprise* visited Mr. A. N. Tompkins, the well-known carpenter and builder of Oregon City, and finding him hard at work, asked if he was the man who had been ill of rheumatism. Receiving an affirmative answer, the reporter asked if he would have any objections to making a statement of his case, how he was cured, etc., for the benefit of the public.

"No objections at all," said Mr. Tompkins. "I have suffered with lumbago for years, having bad spells off and on. Sometimes it would lay me up entirely. Whenever I did any heavy lifting, or got wet or caught cold, I would have a bad spell. Sometimes I would be so bad that I could not straighten up. I was always looking for something on which I could count for certain relief, if not absolute cure. I tried many physicians. One nearly succeeded in making a morphine fiend of me by injecting morphine into my body to relieve the pain he could not cure and was not honest enough to admit. All these medicines and doctors did me no good, some even as in this case, doing me harm.

"While working on the Barclay building some months ago I had an attack. I immediately went to Charman & Co.'s drug store and told Mr. Charman to give me a box of the Pink Pills. Having bought them I commenced taking them at once, and after the first day I experienced relief, and in two weeks I was entirely well. I had in that time used part of the second box. Being at the home of my daughter-in-law, Mrs. Lena Tompkins, and hearing her complain of rheumatism, I gave her the balance.

"Now, I have worked right along, and in spite of the present wet weather and the fact that I have a heavy cold just now, I have no indication of the presence of my old disease, and any one of the three things (heavy work, wet weather, and a cold) which I now have combined, would have given me a bad spell heretofore. I consider Dr. Williams' Pink Pill a great remedy, and I believe they have absolutely cured me. At least, if they have not, it is only a question of continuing the remedy long enough, and if I ever have a return of the pain I shall fly to Pink Pills."

Dr. Williams' Pink Pills contain, in a condensed form, all the elements necessary to give new life and richness to the blood and restore shattered nerves. They are an unfailing specific for such diseases as locomotor ataxia, partial paralysis, St. Vitus dance, sciatica, neuralgia, rheumatism, nervous headache, the after effects of la grippe, palpitation of the heart, pale and sallow complexions, all forms of weakness either in male or female, and all diseases resulting from vitiated humors in the blood. Pink Pills are sold by all dealers, or will be sent postpaid on receipt of price (50 cents a box, or six boxes for $2.50), by addressing Dr. Williams' Medicine Co., Schenectady, N. Y.

EXTINCTION OF THE BISON.

In a wild state, the American bison, or buffalo, is practically, though not quite wholly, extinct. At the present moment there are about two hundred wild buffaloes alive and on foot in the United States. To obtain these high figures we include the one hundred and fifty individuals that the white head-hunters and red meat-hunters have thus far left alive in the Yellowstone Park, where the buffaloes are fondly supposed to be protected from slaughter. Besides these, there are only two other bunches; one of about twenty head in Lost Park, Colorado, protected by state laws; and another, containing between thirty and forty head, in Val Verde county, Texas, between Devil's River and the Rio Grande.

Four years ago there were over three hundred head in the Yellowstone Park, thriving and increasing quite satisfactorily. Through them we fondly hoped the species would even yet be saved from absolute extinction. But, alas! we were reckoninng without the poachers. Congress provides pay for just one solitary scout to guard in winter 3,575 square miles of rugged mountain country against the horde of lawless white men and Indians who surround the park on all sides, eager to kill the last buffalo! The poachers have been hard at work, and as a result our park herd has recently decreased more than one-half in number. It is a brutal, burning shame that formerly, through lack of congressional law adequately to punish such poachers as the wretch who was actually caught red-handed in January, 1894, while skinning seven dead buffaloes! and now, through lack of a paltry $1,800 a year to pay four more scouts, the park buffaloes are all doomed to certain and speedy destruction.

Besides the places mentioned, there is only one other spot in all North America that contains wild buffaloes.

The Canadian authorities estimate the total number in that region at three hundred.—W. T. Hornaday in June St. Nicholas.

A special to the Times from Westmoreland, the county seat of Pottawattamie county, Kan., says that four masked men took Rev. T. S. Rooks, the Baptist minister at that place, from his home to a place five miles in the country and tared and feathered him. They kicked and beat him in a brutal manner, and he is lying at a farmer's house outside the town in a critical condition. Mrs. Rooks went along with her husband, and says she knows the whitecappers. She will swear out warrants for them. Excitement over the affair runs high at Westmoreland and in the surrounding country. Rooks is accused of trying to assault a young woman.

Since the Zulu war of 1880 British Standards have not been taken into the field.—London News.

Impure Blood

Manifests itself in hives, pimples, boils and other eruptions which disfigure the face and cause pain and annoyance. By purifying the blood Hood's Sarsaparilla completely cures these troubles and clears the skin. Hood's Sarsaparilla overcomes that tired, drowsy feeling so general at this season and gives strength and vigor.

Hood's Sarsaparilla

Is the only true blood purifier prominently in the public eye today. $1; six for $5.

Hood's Pills cure habitual constipation. Price, 25 cents.

When a man returns from his first trip abroad and doesn't try to tell everybody all about it, he is either a very considerate person or a mute.

HIS LATEST DISCOVERY.

Dr. Ricord's Compound Pennyroyal Pills for female irregularities—safe, sure and reliable; express, $2.50. Also, Ricord's rubber goods for hygienic and private use. Maison et Cie, Paris, France. Agents—Root's, 6th and Howard, S. F., Cal.

The manual of arms debars one from social intercourse at a very early age. "At-ten-shun company.

SMALL BEGINNINGS

Make great endings sometimes. Ailments that we are apt to consider trivial often grow, through neglect, into atrocious maladies, dangerous in themselves and productive of others. It is the disregard of the earlier indications of ill health which leads to the establishment of all sorts of maladies on a chronic basis. Moreover, there are certain disorders incident to the season, such as malaria and rheumatism, against which it is always desirable to fortify the system after exposure to the conditions which produce them. Cold, damp and miasmi are surely counteracted by Hostetter's Stomach Bitters. After you have incurred risk from these influences, a wineglassful or two of Hostetter's Stomach Bitters directly afterward should be swallowed. For malaria, dyspepsia, liver complaint, kidney and bladder trouble, nervousness and debility, it is the most deservedly popular of remedies and preventives. A wineglassful before meals promotes appetite.

Some of the loudest advocates of protection for home industry are never engaged in any industry at home.

There is more catarrh in this section of the country than all other diseases put together, and until the last few years was supposed to be incurable. For a great many years doctors pronounced it a local disease, and prescribed local remedies, and, by constantly failing to cure with local treatment, pronounced it incurable. Science has proven catarrh to be a constitutional disease and therefore requires constitutional treatment. Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, Ohio, is the only constitutional cure on the market. It is taken internally in doses from 10 drops to a teaspoonful. It acts directly on the blood and mucous surfaces of the system. They offer one hundred dollars for any case it fails to cure. Send for circulars and testimonials. Address

Last Words of Men on the Scaffold.

WITH A NOOSE AROUND THEIR NECK

With but Few Exceptions They Tell the Truth at the Final Moment—the Innocent Hanged.

Buchanan's asservation a few moments before his execution that he was innocent of the crime for which he was about to die suggested the other evening a discussion of the value of statements made by men about to be put to death. One of those who took part in it said:

"I have seen thirty-six men hanged by due process of law, and do not now recall a single instance in which the cultprit at that solemn moment, with his toes already on the brink of eternity's abyss, falsely affirmed his innocence. Some confessed their guilt openly; others only to their spiritual advisers; not a few kept sullen silence, and there were those who, though admitting their crimes, protested against their execution as an injustice, because they deemed themselves justified in what they had done. In fact, the only one who, the moment before death stoutly averred his innocence really was guiltless of the crime for which he was hanged.

"There is in every man sufficient apprehension of the dread possibilities of the unknown into which he is about to be plunged to suppress even the most confirmed habit of lying. And there is no incentive to indulge in it. The man about to hang may all his life long have considered a lie as Queen Elizabeth defined it, 'an intellectual method of evading a difficulty,' but the difficulty in which he finds himself is, as he knows too painfully well, not to be escaped from by any such method.

"It may be said that he is liable to lie in order that the shame of his untimely end may rest less heavily upon loved ones. In rare instances that is possibly true, but hardly in the case of a fellow like Buchanan. If there ever is a moment in life when one of his character is compelled to feel that he 'flocks all alone by himself' it is when the noose is about his neck. The poisoner is always the meanest sort of assassin, most cowardly when brought face to face with fate, least likely to take thought for the feelings of others. He will lie stoutly so long as any hope remains that a lie will help him, but when his feet enter the shadow of inevitable death, he cringes and confesses, or else abject terror so overwhelms him that his mind seems paralyzed to all consciousness other than contemplation of the horror before him, and he dies without either confession or denial.

"A wife poisoner named Stevens, who was hanged in the Tombs many years ago, was an illustration of that despicable class. As was proved beyond doubt on his trial, he had, while tenderly nursing his invalid wife, patiently and slowly stolen her life away by means of minute doses of poison, continuously administered in her medicine and food. He was a pious man and prayed for her recovery. Between prayers he gave her some more arsenic, until she died. When the time came for him to die he fairly collapsed in cowardly fear, and became almost a jibbering idiot. Liquor was administered to brace him up so that he might walk from his cell to the gallows, but even then he had to be supported on both sides, practically carried and held up while the noose was put about his neck. A more contemptible wretch never contaminated the old Tombs gallows.

In splendid contrast to him was a poor negro I saw, to my sincere sorrow, hanged on that same gallows. His name was Hawkins, and a finer specimen of the clear-blooded African I have never beheld. He was tall, had a fine figure and a very intelligent, kindly face. The story of his crime, as the law termed the deed for which he suffered, was very simple and one that won the sympathies of all right-minded men who heard it. He had been employed as cook on a coaster, bound from New York to New Orleans. The master of the vessel was a malignant brute, who was cruel to all his men, but most merciless to the poor negro, whom he esteemed most defenseless of all. It amused him to deal a savage blow or a violent kick to the black cook, to hurl a belaying pin or other missile at his head, and see him jump in fear or wince with pain. All that the unfortunate man endured without even thought of retaliation.

"But one day the fiendish skipper devised a more exquisite torture for his victim. He swore that when they reached New Orleans he would sell him into slavery. That was before the war, and Hawkins knew that if the wretch were so minded he could execute his threat, and that no protestations of being a free man would avail against the false claim of ownership. And he did not doubt that for the price he would bring the captain would be capable of any crime, even a far greater one than selling a free man into lifelong slavery, which the brute would deem a joke. The threat, under such circumstances, might well have made the man desperate, but there were further considerations to madden him. In New York, awaiting his return, were a wife and little child, whom he loved dearly, and he was to see them no more. When he thought of them he became frenzied, and, seizing a hatchet, he chopped the captain's head to pieces.

"They brought him back to New York, tried him, and condemned him to death. But he had the happiness of seeing his loved ones again, and was sustained by the consciousness of having done a good deed. The preachers and some amateur soul-savers swarmed about him, urging him to repent of his sin and be one of the redeemed, but he calmly put them all aside, thanking them courteously for their well meant attentions, but firmly refused to be bothered by them.

" 'I don't repent of what I have done,' he said, 'and the great Judge, who knows all the facts, will not expect me to. I did what was right, what I would under the same circumstances do again, and would have been no man had I not done it.'

"His keepers were kind to him, letting him see his wife and child as much as possible, and when he learned that some provision had been made for their future he seemed content and even happy. When the hour of his execution arrived he walked to the gallows with as firm a tread and calm demeanor as ever in his life he had stepped on the street. The noose was upon his neck, the black cap on his brow, and he stood under the gallows beam with no more bravado than fear in his manner when the United States Marshall asked him if he had anything to say before the sentence of the law was executed upon him.

" 'With your kind permission I would like to say a few words,' he replied, bowing politely.

"He spoke at least 20 minutes, uttering no complaint against the cruel injustice of his fate, but making an eloquent plea for reformation of the law and custom by which the masters of vessels, irrespective of their character, had despotic power at sea over the men under their command. He passed lightly over his own case, as too familiar to his hearers already to be worth mentioning, but cited many others illustrative of the gross abuse of power by brutal captains, and the most he said of himslef was an expression of hope that his death might perhaps be of some service in awakening the humane feeling of the community to a realization of the evil conditions existent in our merchant marine. His little speech was delivered calmly, though earnestly, with not one tremor in his voice or quiver of the pinioned hands behind him. When it was done he bowed again to the Marshal and said, with a smile:

" 'I am at your service, sir.'

"The black cap was drawn over his eyes, the signal given, and he dangled in the air a corpse. The law was satisfied, but there were tears of sympathy for that brave man in the eyes of many men who witnessed his death.

"I mentioned the hanging of one innocent man as having been witnessed by me. He was a poor, shiftless ne'er-do-well named Lee, who was hanged at Waukegan, Ill., in 1865, for the supposed murder of an old widow named Ruth Briden, for whom he worked on her farm. That he was lazy, worthless, abjectly poor and liable to get drunk when kind fortune gave him a chance was all true, but no act of violence was ever known to have been perpetrated by him, and though much effort was expended upon trying to make him out a petty thief, even that was not proved. He hadn't energy enough to kill anybody, even if he could get as much as $10—which would have been a fortune to him—by it. And he hadn't any temper. There was absolutely no object for him to kill the old woman, no discoverable good excuse for supposing he might have done it.

Beyond the fact that he was near enough, somewhere about the farm at the time when she was supposed to have been killed, and could have killed her if so minded, the circumstantial evidence on his trial—and there was no other—amounted to that, and nothing more. But the sense of the community was that somebody ought to be hanged for the murder, and he could be spared better than anyone else at hand. I studied the evidence in the case very closely and could not see any other basis for the verdict of guilty recorded against him. And I said as much to the Deputy Sheriff the night before the execution, at the same time pointing out a man who would have derived benefit from the old woman's death, a man of means, who was particularly zealous in pressing for the poor vagabond's conviction. " 'Of course,' I said, 'it's no concern of mine, but that is the man who killed Ruth Briden, and Lee did not." The deputy was much amused and laughed heartily at me. The next morning they led the prisoner upstairs from his cell to the courtroom, where, in the wide doorway, dangled the noose that was to take his life. Bright sunshine flooded the little hall where truth had been twisted to a lie, and Justice had thrown away her scales. Through the open window floated the songs of birds and the laughter of children from the trees and grass of the Court House square. The poor wretch standing in the door with the fatal cord about his neck looked his last upon the light, listened to the sweet sounds and sighed. Then there was moisture dimming his eyes, but no apparent fear, as he looked toward heaven and said simply, in a clear, steady voice:

" 'Call God to witness my innocence of the crime for which I am about to die.'

"The Sheriff gave the signal, and in a few minutes the vagabond's heart had ceased to beat. Six months later, in Chicago, I met the Deputy Sheriff to whom I had avowed my belief in the man's innocence. He was a big, hearty, manly looking fellow, with a frank, open countenance. Taking my hand he said, abruptly, as if I must, of course, be thinking of what was uppermost in his mind and understand intuitively what he referred to:

" 'What you said raised doubts in my mind, and the more I thought of it the more it troubled me, and at last I set to work to find out the truth. I've spent more than $1,100 out of my own pocket on it in detectives and travel and so on. And I'm convinced you were right. Though I can't prove it on him, I know who killed Ruth Briden and why he did it. As for poor Lee—well, God help us; we hanged an innocent man that day.' "

AN AGE OF UNIFORMS.

An aged New Yorker, whose memory runs back to the first quarter of the century, spoke to a reporter of a change which has occurred in his lifetime. "When I was a boy in New York," he said, "we used to guy a man who wore a uniform, excepting when there was a regimental parade or when it was the Fourth of July; but the boys can't do that now. When I left the house today a uniformed letter carrier was at the door with my mail. Half way up the block I met a uniformed policeman going his rounds. A uniformed messenger boy was running on the other side of the street. I took an elevated car, the guard upon which was in uniform. I saw lots of coach drivers on Madison avenue in livery, which is a private uniform. A gang of uniformed street sweepers were plying their brooms. A uniformed member of the National Guard marched past me. Lots of bicyclers, men and women, have taken to the wearing of a kind of uniform, rather queer looking, too, sometimes. The Federal Supreme Court is not the only court in which the Judges now wear a judicial garb, which is a uniform. I went to a college commencement and saw all the students uniformed in mortarboard hats and togas. You can see clergymen clad in a part of their clerical uniform, such as the all-round collar and buttoned-up vest. The waiters and hall men at high toned hotels are uniformed, and so are the women behind the counters in some stores. The fashionable evening dress is a uniform, and the stiffest of any.

"At first I did not like to see the adoption of the European custom in the place of the plain, old-fashioned American ways, but there does not seem to be any use in kicking. There was a kick against the police uniform now worn when it as introduced, and there was a kick against the uniforming of the letter carriers, and there has been a kick at every extension of the custom of wearing uniforms. The street cleaners did not like Colonel Waring's idea of putting them in uniform a while ago. But not a kick against uniformity, in any case, has ever had any effect.

"I am getting to wish now that everybody was uniformed, and that every business had its own particular uniform. I would have the Wall-street uniform, the poet's uniform, and distinctive uniforms for hotel keepers, editors, grocers, professional dudes, custom tailors, lawyers, typographers, gas company men, club members, doctors, brick layers and pullers-in. It would be very convenient. We would know something about a man at sight. The Wall-street broker might wear a plug hat, with a green coat; the hotel keeper a suit of sky blue, the doctor a dress of crape, the grocer a white apron, washed every day, and the East side barber should be allowed to carry a trumpet. There must be 30,000 or 40,000 uniformed people in the city, and the rest of us might as well be put in uniform. As it now is, you know a policeman when you see him and a letter carrier and a street sweeper, and a train guard, and a liveried coachman, and a messenger boy, and why should you not also know a politician in white or a retail druggist in the colors of all the bottles in his window?"—New York Sun.

MILK BILL WITH NO COW ON IT.

"My wife," said the midle-aged man, "attends to all household affairs. She buys all the food supplies and I simply eat what is provided and am grateful. I put up the money and she pays; and I rarely see the bills. But I did happen to see a milk bill the other day and I was amazed to see that there was no cow on it!

"When I was a boy every milk bill had a cow on it. Milk bills in those days were made out on printed blanks about the size of a bank check or a draft, and there was always a cow, usually a cow of pensve demeanor, in one corner. In rummaging over old papers, I have come across hundreds of milk bills, and every one of them had a cow on it. I should scarcely have imagined that a milk bill would be valid without one.

"But this bill is just a straight-ahead ordinary bill, with no cow, for so many quarts of milk, like a bill of any other merchandise; and, though there is no cow on the bill, they tell me we never had better milk. So I suppose the doing away with the cow is simply a doing away with so much surplusage, and that the modern milk bill only marks the bringing of the milk supply into line with modern business methods. But I miss the cow. Alas! poor cow."—New York Sun.

HOW IT WORKED.

Brown (expert shorthand reporter)—I say, James, the boy from the newspaper office has called for the report of that lecture. Is it finished?

James (a novice)—All but a short sentence in the middle of it, and I can't for the life of me make out from my notes what it is.

Brown—Oh, just put in great applause and let it go.

James acts on the suggestion, and the lecture is sent for publication with the doctored part reading:

"Friends, I will detain you but a few moments longer." (Great applause.)

Advices to the Surgeon-General of the Marine Hospital report thirteen deaths from yellow fever at Vera Cruz, Mexico, for the week ended July 25th.

NICARAGUA.

Some Valuable Concessions in Lands and Mines.

THE DRAWBACK TO THAT COUNTRY.

Devastation Wrought by Reckless Bands of Rubber Tree Cutters—Cultivation of the Chocolate Tree.

It was in 1502 that Columbus visited the east coast of Nicaragua and found a land whose fertile soil, salubrious climate and broad navigable rivers at once marked it as an acquisition of great importance and prospective wealth. Yet for more than three centuries its primitiveness was undisturbed by the torpid Spaniard, and time might record another lethargic centennial were it not for the activity of the American, who has here put in motion the wheel of progress and whose vigor will absorb this whole Latin-American country unless diminished through neglect and abandonment by the present government.

Just now, when our foreign policy in relation to the Nicaraguan question is so vigorously condemned or commended, as the case may be, it is interesting to know that on the east slope of the Nicaraguan foothills and about seventy-five miles inland there is a town founded, peopled and controlled by Americans. Rama is located at the confluence of the Rama and Sequia rivers, where begins the Escondido river. It contains about 1,000 inhabitants, has large wholesale stores, a theater, churches, saloons on every corner and in between, an ice factory, and just now is putting in a very good electric-light plant. This is the center of a rubber and banana trade to New Orleans, Mobile and New York, which is becoming of great commercial importance. Its advantage, enjoyed nowhere else in the trade, of loading the large ocean boats at the very plantations, enables the grower to sell all his fruit promptly and for cash.

The River Escondido, which reaches the Atlantic at Bluefields, is broad and deep. Along its banks on either side for forty miles and for an equal distance on the tributary rivers there is an unbroken chain of banana plantations. It was Humboldt who said on his return to Europe that one acre of well-cared for bananas in Central America would produce more nutriment than twenty acres of the average crop in Germany. Bananas when once planted will produce two crops annually for eight years. The land can be cleaned and planted with 200 plants to the acre the first year for $15 an acre in American money. It requires not more than $5 an acre each year thereafter for cleaning. The yield is 200 bunches an acre the first year and 400 bunches each succeeding year. These at the present market price in American money of 40 cents a bunch, net, gives a net profit the first year of $65 an acre, and for each of the remaining seven years a net profit of $155 an acre.

Rubber is indigenous, and, though once plentiful, the devastation wrought by reckless bands of cutters, who simply hacked the native trees to death, has rendered its cultivation both necessary and profitable. As the trees require about eight years to mature, most people plant them among the bananas, so that when one crop gives out the other will begin to yield a very large revenue for an almost unlimited period. It is conservatively estimated that 300 trees to the acre will yield annually $1 net for every tree.

The cacao or chocolate tree, too, is extensively planted among the bananas, as it is tender and requires a shade, which is here abundantly supplied. A great French manufacturer has a large plantation in the interior and grows his finest quality of chocolate from this soil. Cacao is a sure crop, and after five years will produce about $200 an acre net.

The Librarian and other grades of coffee are being cultivated after the same fashion. After four or five years this yield is $250 an acre net.

For six months, from January to July, there is paid each month to the banana growers, in American money, $150,000. During the rest of the year, when American fruits are on the market, the trade diminishes slightly, but the production is as great as ever. At present there are twelve large boats in the trade, so that communication with the United States is good.

American colonies down this way are not composed wholly by angelic characters. On the afternoon of my arrival and while taking dinner at the chief hostelry of the city I noticed a game going on at the other end of the room among a crowd of husky fellows, whose national pride was attested by frequent and copious draughts of American whisky. A fight began between a bravo, know as "Motana," and one "Kansas Bill," whose good eye and lightness of touch was attested by his playful habit of shooting cigarettes and cigars out of the mouths of unsuspecting natives. The two went into the street to settle their misunderstanding. There Bill threw away his revolver and invited his friend to shoot, which the accommodating "Montana" proceeded to do, but missed, and the ball went through a neighboring store. The street crowd attempted to disarm the man, and after a chase in the street the national army was called out and "Montana" was gathered in. After a few minutes' trial he was banished from the country and Bill was ordered to keep the peace for a year.

Rich gold discoveries are being made in the northern part of the Mosquito district, on the broad, navigable rivers, where the country is accessible and the mines easily worked. Already a large number of hardy miners from the western states have been attracted to this new El Dorado. The gold is principally shipped to the mint at New Orleans. Silver money to the value of 20 cents only is coined in Nicaragua, but there are about eighteen kinds of money called dollars in circulation here, representing all the countries of South and Central America, and each worth half a dollar in America money.

"Money is much more plentiful among the masses than in the United States, and one of these dollars will purchase as much labor as it ever would. It is only in the purchase of foreign articles of consumption that the difference in value is felt, and also in the government having to pay interest on the public debt on a gold basis.

England holds the bonds, and the country's situation is not very unlike that of the United State in this respect.

Americans are being extended valuable concessions in lands and mines in Nicaragua. Two notable concessions have recently been granted—one to John Lasche, representing a large colony from Sioux Falls. These colonists have about 50,000 acres on the Great river. The other concession is that of Henry G. Higley, the present surveyor-general of the state of Zelayo, but an American citizen from Cedar Rapids, Iowa, who represents the Nicaragua-American Land company in a grant of 50,000 acres on the Rama river. These colonies will be settled by Americans, who will grow bananas and other fruits.

The great drawback to this country is its method of taxtion. According to location the government will sell land or lease it for ninety-nine years and will exact from it no taxes, raising its revenue from export and import duties. For instance, every bunch of bananas leaving the country is taxed 3 cents. As American goods are consumed almost exclusively—nothing is made here—the import duties are very high. The Nicaraguans have not yet learned that the burdensome taxation of industry will stunt growth and generate the seed of insurrection. But they are promising improvement and Gen. Duarte, the new governor, is bending his energies toward correcting abuses and inducing Americans to come and develop the country.

Climatic conditions are very surprising. So far this summer I have not experienced severe heat for a single hour. There is little sickness here except that caused by gastronomic abuses. However, reports come from the interior that yellow fever is raging in Salvador and parts of Nicaragua. These reports, however, are denied. Sunstrokes are unknown.

MATRIMONY IN THIS DESK.

There is in the mail division of the Treasury Department a very popular desk, to which is attached the peculiar merit that the occupant is by that occupancy placed on the sure road to matrimony. Within the past ten years the desk has been occupied by seven lady clerks following each other in quick succession as embryo brides, and the records during that time indicate that they have come from all parts of the country only to finally meet their destiny while occupying the fatal desk.

Miss Birdie Walker of Tennessee started the pace by marrying a resident of the Distrct after a few months' service. She was succeeded by her sister, who speedily followed her example, and left the enviable position open to a newcomer. She arrived on schedule time from Virginia in the person of Miss Easby-Smith, who shed the glory of a famous Virginia name over the talismanic desk for a short time, and then was led to the alter by a journalist of Washington. Next came from Delaware a relative of Senator Gray—Miss Sue Gray—who was followed in an incredibly short time by a delegate from Massachusetts—Miss Mercine Dickey. This happy illustration of rotation in office, as exemplified by the feminine contingent of wage-earners, is the only one on record where nobody "kicks," for each woman thinks she is advancing her interests, either by filling the position or leaving it, as the case may be.—Washington Post.

BREEZY BITS.

If you want to learn just where a man stands follow him into a crowded street car.

Some women look at a secret much as a man looks at whisky—as too good to keep.

A man is the happiest when he can forget all the mean things he knows about himself.

From present indications the summer girl will look very much like a slice out of a rainbow.

There are several ways to pay bills, but the majority of the big ones are paid with reluctance.

In ancient Rome two augurs could not meet each other without laughing. But two bores could.

To go to the door with him and keep him talking a little longer is no way to speed a parting guest.

She—Let us sit under the grand old oak and chat. He—Beautiful tree. And did you plant it yourself?

In some parts of the country the English language must be very sick—at least our mother tongue is badly quoted.

The contented man can get more comfort out of a corn cob than the dyspeptic can from the finest imported cigar.

The man who is able to travel extensively can generally learn enough in a year to make a bore of himself all the rest of his life.

Advices from Foo Chow are that a telegram received there on the 3d inst. says that a fearful massacre of Christians has occurred at Ku Cheng. Five foreign ladies are among the murdered.

THE BALLOON'S USES.

It Behooves Uncle Sam to Hump Himself.

THEY HAVE SOLVED THE PROBLEM.

Devastation Possible by the Dropping of Bombs from Heights of Safety—May Stop Wars.

Uncle Sam will soon be forced to consider seriously the establishment of a balloon corps as an adjunct of the army. This country is sadly behind in the developent of aeronautics, while England, Germany and especially France have been giving much attention to the subject though their experiments have been veiled as far as possible. Within a year the French have produced a balloon that can be steered and manoeuvered in the teeth of a wind blowing twenty miles an hour.

In truth, the most important problem in aerostation has been solved, and the dirigible balloon is now an accomplished fact. Cigar-shaped airships have recently been run by propellers in France on calm days at fourteen miles an hour, and there is no doubt that double this speed will be attained. The Germans are said to have produced a balloon that can be steered and which carries great weights; but little is known about it. The supposition that atmospheric air is too tenuous a medium for propeller fans to act upon is exploded, while it is certain that a rudder will operate to direct the aerial machine if the latter can be driven fast enough to give it steerage way.

The notion that an airship sustained by gas is not to be relied on is another fallacy. Experts in Europe now understand how to make balloons tight, so that leakage is reduced to almost nothing. When one has a gas-bag of gold-beater's skin that will stay afloat thirty days he has something with which to begin business.

If half a dozen aerial batteries of four balloons each were stationed along the Atlantic coast no hostile fleet could come near our seaboard cities. The vessels could be sunk by dropping nitro-glycerine cartridges upon them. Dr. Myers, the aeronautic engineer, speaks of experiments in killing ducks in water by dropping shot from an elevation of 1,500 feet. Falling so far, the velocity of the leaden pellet was as great as if fired from a gun.

Air currents at a high elevation always move from west to east. Having wiped out the ship, it would be necessary for the flying battery to return in the face of the wind, but this could be accomplished very easily by using the propellers. Uncle Sam has been thinking of putting more than $20,000,000 into coast and harbor defenses for the Atlantic shore line. To keep these in order would require an expenditure of millions of dollars annually, without considering that the entire system would have to be remodeled every few years. Aerial batteries as here described would cost comparatively little at the beginning, and could probably be maintained for $1000 each per annum. Of course a long course of experiments would be required. Meanwhile if England should come down upon our cities with a flock of balloons from Montreal we would be obliged to sue for peace on any terms.

Against balloons no armed force on land or water could have any means of defense or retaliation. The warriors in an airship would be absolutely safe at an elevation of a little more than a mile. Owing to the force of gravity no shot that can be fired from any gun will do damage beyond 6,000 feet above the surface of the earth. If a balloon were within, say, 1,500 feet of the ground and passing away, the line of sight would be changed so slowly that sharpshooters could easily pepper it with accuracy; but even so the balloon would not suffer importantly. Though pierced by a score or even 100 bullet holes, its buoyancy would not be seriously affected. A rifle bullet puncturing a great gas bag would make a small hole only, which would be partly closed again by the broken edges of the fabric. Some gas would escape, but not enough to be of any consequence. But there would be no reason for passing over a hostile army or fleet at so low an elevation, inasmuch as bombs could be dropped as accurately from a point high enough to be out of reach. Besides, the instant that a bomb would be thrown the balloon would rise rapidly. At night or in a fog it would be entirely safe from observation. Or it would be easy enough for the airship to come down into the lower part of a cloud, whence the crew could see the enemy below while invisible.

These are the most important conclusions obtained from experiments recently made by foreign powers. During the siege of Paris balloons were sent up in great numbers from the city passing over the besieging armies. The aeronauts took homing pigeons which carried back news. These balloons were constantly fired at, and Krupp, the gunmaker, at the request of Von Moltke, designed a "balloon musket." This sort of rifle practice proved wholly ineffective, and only those balloons were captured which were low down through expended gas.

If those in a war balloon were operating at night and desired to get a clear view of a camp or of forts of the enemy, they would only have to drop one of the new illuminating bombs, which will explode on reaching the earth and light up the surroundings with 100,000 candle power. Then perhaps they might let fall pots which would set free volumes of poisonous and asphyxiating gases. The French melinite bombs on bursting liberate most deadly fumes. Experiments have shown that one of them will kill, by suffocation, sheep and dogs with a radius of many yards. It has been suggested that shells might be filled with stuperfying but harmless drugs, which on exploding would put a whole regiment or ship's crew to sleep. After being captured the foe could be resuscitated.

The idea on which the famous Mr. Maxim has been working is a cylinder of aluminum containing a three-fourths vacuum, its collapse being prevented by a strong rib inside. The machine is to be propelled and steered by electric gear while sustained and balanced by the wings of a great aeroplane. The inventor expects to be able to fill his aerial car with explosives and hover over a city, which must pay ransom or be destroyed.

Prof. H. A. Hazen, of Washington, an accepted authority on aeronautics, asserts that the aeroplane idea is impracticable. His opinion is that man must imitate the bird if he is ever to fly at all. Wonderfully clever mechanical birds, which will actually fly quite a distance, have been made in France but they are only toys.

The United States Signal Office has already constructed balloons for reconnoitering. These are intended for ascents of 1,000 feet or so, being anchored to the ground by a wire rope through which copper wire runs affording telephonic communication. A full description of the enemy's formation, movements and fortifications can be readily obtained. The apparatus is carried in three wagons, one conveying the balloon packed in a basket and the others containing cylinders filled with compressed hydrogen gas. When it is desired to make an ascent the balloon can be made ready within fifteen minutes. Maps can be sent down by the rope.

Should balloons come into use in warfare they might be forbidden by international law. There would be a howl if a nation should send airships to destroy a city by bombs. On the other hand such contrivances if once perfected, may do away with wars.

It has been seriously suggested that with the help of trained birds like the condor of South America, which can carry off a sheep or calf, man might be enabled to fly: but this plan is dangerous and as yet has not been tried.—N. Y. World.

WHAT COMES BEFORE EARTHQUAKES.

It is stated that for some days prior to the terrific earthquakes in Asia which recently swallowed up a town with 2,000 inhabitants, besides destroying many lives and much property throughout the whole region, the seismographic instruments of Paris and Berlin displayed great agitation. This of course, could properly be called a prediction of the earth tempest, as the barometer furnishes predictions of atmospheric tempests. But at the present, at all events, the predictions are by no means of equal value practically. The barometer has done good service to humanity. When a sea captain observes that his glass is falling he knows he is entering a storm circle and makes all snug for bad weather. Unquestionably an incalculable number of lives and a vast amount of property have been saved by means of barometrical forewarnings. But as yet we know so little of the cause, character or directions of terrestrial disturbances that we cannot depend upon the seismograph to guard us against the fearful dangers of the earthquake. Those living near or within sight of a volcano find suggestions in its varying moods, but no more than suggestions, for sometimes the sudden cessation of the smoke or a vast outrush of vapor is followed by no observable tremor of the surrounding country, while at other times either phenomenon may foretell a convulsion.

The agitation of the Parisian seismograph may have predicted an earthquake in Paris itself, or some other portion of France, or in Span, or Italy, or indeed, as is amply proved, in any part of the globe; but who is to translate its unknown language and learn from it where or when the peril is to culminate? The fact that the observer on duty at the time saw and recorded from his instrument that seismic disturbance as occurring or about to occur in some quarter of the sphere is without doubt scientifically interesting. But we shall await with the utmost interest the development of what is so far no more than a newspaper hint that one of our American investigators has, or at least believes he has, discovered the means of locating the center of the coming disturbance, its direction of movement and approximate force.—Demorest's Magazine.

Some amusing cases are to be found in the list of persons who had their names changed by law in this State during 1894. A man named Baxter up in Ulster county changed his to Smith; a whole family named Shober became Aspinwalls, and scores of persons who had Russian-Hebrew names got rid of them. Many persons changed their first names only. Two odd cases were those of women. In one Mary O'Donnell became Marie Donnelle, and in another a Miss Appleby preferred to become Miss Button.

With one bold stride Laguna promises to come to the fore. Her enterprising people are going to build a suspension bridge from the mainland to a large rock about 300 feet from shore. This will not only give the place prominence as the possessor of one of the few suspension bridges on the Coast, but it will furnish the town with an improved shipping service with very little cost.

The salesman (holding up a vellum-bound brochure—The price of the book is $10. Mrs. Nurich—Nonsense! You can't impose upon me in that way. Why, a minute ago you offered me a book of twice the size for $1.50.—Chicago Record.

PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY, SEPTEMB R 20 1895

After all that has been published in the eastern papers about the advance in wages and returned prosperity, there are a few blind editors still asking for more conclusive evidence in this respect. They ask for the names of the firms and a few other little things. The New York World has printed column after column of not only the names, but the addresses of such firms. The New York Herald recently got out an edition which our Republican name waners must have neglected to look over. The New York Times has presented list after list of firms who have advanced wages and recently paid its contemporary, the Herald, the following compliment, which, by the way, is not complimentary to the aforesaid Republican editors. The Republican calamity howlers demand the names of factories which have raised employees' wages. The Democratic press has given them from day to day as news of the increased wages have been published. Now comes the New York Herald with a resume that fills half a page of fine type. In the list are the names of over 650 mills and factories which Democratic prosperity has enabled to raise wages or restore the cuts which followed the McKinley tariff. There are 650 names representing increased incomes to over half a million workingmen. This is only a partial list but it is big enough to choke the cry of Republican calamity howlers. It is only the beginning too. Compare the present with the time that the McKinley law went into operation. All over the land iron and woolen mills began to close down or cut wages. December 6, 1893, the Bethlehem iron works turned off 1000 men. In January, 1801, the Carnegie mills at Homestead began to make reductions till in July, 1892, 3800 men were driven to strike. During the exhistance of the McKinley law only one large factory, the Fall River Cotton mills, advanced wages, and in that case the raise was less than 10 per cent.—Los Angeles Herald.

Now that the fall rush for seats—presidential seats—has begun, there is one man who might as well be counted out of "the rush" right now. He is Benjamin Harrison. There was a time when Quay claimed that he had made Harrison President, and again there came a time when Quay himself needed a little political influence, but Harrison coldly turned him down. However, Quay survived the shock and is again captain of the Republican watch in Pennsylvania, all of which Mr. Harrison no doubt regrets at this time, as he has reason to fear the knife Mr. Quey is said to carry in his sleeve.

In a country where you can raise two or three crops of grain and vegetables in a season by careful attention, where you can work your land nearly every month in the year and are not obliged to use your savings to meet the expenses of three or four winter months, when you are forced to be idle, and where you can raise not only southern products, but most of those in the North as well—in such a country as this farming will insure prosperity to any young man if properly carried on.—Orange News.

The Illinois law requiring the National flag to be raised during school hours over every public and parochial school in the State has strangely enough met with a good deal of opposition, and an effort is being made to have it declared unconstitutional,

Business measured by bank clearings in nearly one-fifth larger in volumne than it was one year ago. Times continue to improve all over the country and the expansion of business will become more pronounced now that the vacation season is over.

Down in Alabama the coal and iron workers have had their wages advanced 21 per cent since June 1st. These are some of the men whom the Wilson bill was expected to "ruin."

She iff's Sale.

ORDER OF SALE AND DECREE OF FORECLOSURE AND SALE.

Friederike Rhine, Plaintiff, vs. Eliza M. Hannagan, John H. Parish, W. C. Doane and Thomas Crelin, Defendants.

Under and by virtue of an order of sale and decree of foreclosure and sale, issued out of the Superior Court of the County of Inyo, the State of California, on the 18th day of September A. D. 1895, in the above entitled action, wherein Friederike Rhine, the above named plaintiff, obtained a judgment and decree of foreclosure and sale against Eliza M. Hannagan, John H. Parish, W. C. Doane and Thomas Crellin, defendants, on the 17th day of September A. D. 1895, for the sum of Two hundred and forty-six 30-100 ($246.30) dollars in United States Gold Coin, besides interest, costs and counsel fees amounting to the further sum of $100.30, which said decree was on the 18th day of September, A. D. 1895, recorded in judgment book 1 of said Court, at page 518, I am commanded to sell all those certain lots, pieces or parcels of land situated, lying and being in the County of Inyo, State of California and bounded and described as follows: The East half of the Northeast quarter of Section Thirty-one and the West half of the North-west quarter of Section Thirty two, in Township Fourteen, South of Range Thirty-six East, Mount Diablo Meridian, containing 160 acres; together with all and singular the tenements, hereditaments and appurtenances thereunto belonging, or in anywise appertaining. Public notice is hereby given that on Tuesday, the 15th day of October, A. D. 1895, at 12 o'clock M. of that day, in front of the Court House door of the County of Inyo I will, in obedience to said order of sale and decree of foreclosure and sale, sell the above described property, or so much thereof as may be necessary to satisfy said judgment, with interest and costs, etc., to the highest and best bidder for gold coin of the United States.

Dated the 18th day of September, 1895.

A. M. GIVEN,
Sheriff.

P. H. MACK, Attorney for Plaintiff.

ALIAS SUMMONS

IN THE SUPERIOR COURT OF THE COUNTY OF KERN, STATE OF CALIFORNIA.

S. Bachman, Plaintiff vs. Domingo Etcharren, John Iribarne, Frank Cattery, S. Heineman and L. Bachman, copartners doing business under the firm name and style of S. Heineman & Co. John Doe and Richard Roe, Defendants.

THE PEOPLE OF THE STATE OF CALIFORNIA, send greeting to Domingo Etcharren, John Iribarne, Frank Cattery, S. Heineman and L. Bachman, copartners doing business under the firm name and style of S. Heineman & Co. John Doe and Richard Roe, Defendants.

You are hereby required to appear in an action brought against you by the above named plaintiff in the Superior Court of the County of Kern, State of California, and to answer the complaint filed therein within ten days (exclusive of the day of service) after the service on you of this summons, if served within this County, or if served elsewhere within thirty days.

Said action is brought to obtain a judgment of this Court for the foreclosure of a certain chattel mortgage described in said complaint, duly acknowledged, verified, executed and delivered by said defendant Domingo Etcharren to John Iribarne, on the 17th day of May, 1894, to secure the payment of a certain promissory note or instrument in writing dated May 17th, 1894 for the sum of Four Thousand Dollars U. S. Gold Coin, payable twenty four months after date with interest thereon from date at the rate of one per cent per cent per month, payable monthly, and if not so paid the whole sum of both principal and interest thereof to become immediately due and collectable, at the option of the holder of said note, or instrument in writing, which said note or instrument in writing, after the making, execution and delivery thereof, was duly endorsed and delivered by said John Iribarne to the firm of S. Heineman & Co. and on said last mentioned day, said John Iribarne duly assigned said chattel mortgage to said firm of S. Heineman & Co. and afterwards, to wit: on the 9th day of September, 1894, said firm of S. Heineman & Co. for value received, sold, assigned and delivered said promissory note or instrument in writing and said chattel mortgage to the plaintiff. Said mortgage conveyed the following described personal property which said property was at the date of the execution of said chattel mortgage in the County of Inyo, but is now and for more than one month last past has been in the County of Kern and is described as follows: Twenty eight hundred head of sheep marked "D" and having an underbit and overbit on each ear, together with the wool thereon and the increase thereof; also four horses two mules, two wagons and four sets of harness and camping outfit; that the personal property conveyed by said mortgage be sold and the proceeds applied to the payment of said sum of Four Thousand Dollars U. S. gold coin principal with interest thereon at the rate of one per cent per month from the 17th day of May, 1894 and costs of suit, and in case said proceeds are not sufficient to pay the same then to obtain a judgment and execution against said defendants Domingo Etcherren and John Iribarne, for the balance remaining due, and also that said defendants and each of them, and all persons claiming by, through or under them, or either of them, may be barred and foreclosed of all right, title, lien, equity of redemption and interest in or to said mortgaged personal property, and every part thereof, and for such other and further relief as may be just, all of which will more fully appear by said complaint on file herein, to which you are referred for a more particular description.

You are hereby notified that if you fail to appear and answer said complaint, said plaintiff will apply to the Court for the relief demanded in said complaint.

Witness my hand and the seal of said Superior Court of the County of Kern, State of California, this 13th day of June 1895.

[SEAL.] F. W. CRAIG, Clerk.

T. M. McNOWN, Attorney for Plaintiff.

Pianos.

Excellent pianos may be bought in Europe at perhaps two-thirds the cost of a like instrument here, and even individuals can import pianos to advantage in spite of the tariff. But a fact that works pretty effectually to protect the home manufacturer is that either the American climate or the usual steam heat tends to destroy the imported piano, so that even the temptation of saving from $200 to $500 on the first cost does not induce many persons to take the risk of an instrument that cannot stand the climate.—Philadelphia Ledger.

England's Tobacco Law.

An antiquarian says that tobacco cannot be used in England save by a violation of law. In 1660 a law was made prohibiting the growth or importation of tobacco beyond a few hundred pounds of leaves every year, "to be used in medicine." It is said that this statute has never been repealed.

The Polite British Waiter.

The extreme politeness of the average English waiter is a continual source of merriment.

He thanks you when he brings your soup, again when he brings your napkin, when he takes away your plate, when he happens to find you looking at him—in fact, he says, "Thank you," at every turn, and says it in such a jerky, mechanical fashion that you cannot repress a smile. His example is followed by the bus conductor, who thanks you for your fare and thanks you again when he hands you your ticket, and by the theater usher when he seats you, and by every servant you meet, in the most inappropriate manner. They overdo the "thank you" business, and always employ the same jerky manner and mechanical tone.—Chicago Record.

Budding Creatures.

Sea anemones and some other marine creatures of low degree increase their species by budding. A small knot or wart appears on the body of the animal, and by and by develops into a perfect, though minute animal of the same species, separates from its parent and sets up in business for itself.

A Tragic Complication.

"So you refuse me!" said Charley Callow bitterly.

"Of course," said the charming widow.

"Won't you even be a sister to me?"

"No. I'm engaged to marry your father. I'll be a mother to you."—Washington Star.

A pair of spectacles cost in the sixteenth century at least $5.50. It was fashionable to wear them, and the larger they were the better they were supposed to support the dignity of the wearer.

The swordfish does not use its terrible weapon as a dagger, but as a flail.

PARADISE.

Oh, not afar in distant skies
The shining hills of heaven rise.
In loving hearts lies paradise,
And loving words are keys that ope
The portals to that land of hope.

Oh, planning hearts that droop and sigh,
To watch the bitter days go by,
Heaven itself is close and nigh.
Ever about us angels go,
Threading these toilsome ways below.
We do not see them—do not know.

But hearts that throb with loving thought,
And lips that whisper, heaven taught,
The loving words the Master brought—
These are the angels we would know,
And these the shining feet that go
Making a paradise below.

Oh, not afar in distant skies,
But close at hand, the blessing lies—
In loving hearts lies paradise.
Look up, sad soul! the world is fair,
And heaven and love are everywhere!

—Dorothy Deane in Minneapolis Housekeeper.

An Apt Reply.

Napoleon's apt replies often excited good humor in a crowd. A large and brawny fishwoman once was haranguing the mob and telling them not to disperse. She finished by exclaiming: "Never mind those coxcombs with epaulets on their shoulders. They care not if we poor people all starve if they can but feed well and grow fat."

Napoleon, who was as thin as a shadow, turned to her and said, "Look at me, my good woman, and tell me which of us two is the fatter."

The fish fag was completely disconcerted, and the mob dispersed.—Exchange.

An Original.

Little Marjorie—There are lots of little Marjories nowadays, but none other at all like this one. She is original in her prayers, as in everything else. The other night she finished off her petition thus:

"And, O Lord, make all the wicked people good and wash all the niggers white!"—New York Tribune.

The unrolling of an Egyptian mummy supposed to be that of a princess, disclosed a curious cheat. The priests who did the embalming probably spoiled or mislaid the body intrusted to them and for it substituted that of an ordinary negro man.

A gentleman of the court of Pepin had a wonderful pair of breeches that cost $700. They were embroidered with gold, and all the figures were traced with chains of small pearls.

Darwin found grains of maize in the earth on the seashore of Peru 85 feet below the level of the sea.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY the 8th day of March 1896, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah, deceased, has, by operation of law or otherwise acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the Southeast quarter and the South half of the Southwest quarter of Section No. 10, and the Northeast quarter of Section No. 15, all in Township No. 16 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest in and to that certain lode, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows to wit: Commencing at the Southeast corner of the southeast quarter of Northeast quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M. and running thence West eleven chains and 18-100; thence Northeast following the meandering of the bed of Bishop Creek along its North branch to Edwards street, in the town of Independence; thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the county Recorder of said Inyo county, having been the residence of said John A. Hallhah, deceased, at the time of his death.

Lot Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate, lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Empricada Lode."

That certain lot, piece or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the section west quarter and the North east quarter of Section No. twelve (12) and the South west quarter and the South-east quarter of Section No. one (1) in Township No. three (3) North of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South sixty eight and eleven-twentieth (68 11-20) rods; thence West twenty three (23) rods; thence Northwesterly along a small branch or swale to a point twenty four (24) rods North of the general corner of the North East quarter and the South east quarter, and the Northwest quarter and the North east quarter of the Northwest quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven-twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres; Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney at Independence, Cal., or delivered to said Executor personally or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court. Deed at the expense of purchaser.

WILLIAM L. HUNTER,
Executor of the Last Will and Testament of John Allen Hannah deceased.

Dated, Independence, Cal., February 11th 1895.

The Most Successful Remedy ever discovered is certainly its effects and does not blister. Read proof below.

KENDALL'S SPAVIN CURE.

STAE, LANE CO., OREGON, Feb. 8th, 1892.

DR. B. J. KENDALL CO.,

Dear Sirs—I have used your KENDALL'S SPAVIN CURE for the last twelve years never being without it but a few weeks in that time and I have made several wonderful cures with it. I cured a Curb of long standing. Then I had a four year old colt badly Sweenied; tried every thing without any benefit, so I tried your liniment, and in a few weeks he was well and his shoulder filled up all right, and the other, a four year old that had a Thoroughpin and Blood Spavin on the same joint, and to-day no one can tell which leg it was on. These statements can be proven, if necessary; the four year olds are now seven and can be seen any day at Cottage Grove, Or. S. Z. TAYLOR.

—Price $1.00 per bottle.—

DIED.

JOHNSON—At Citrus, September 19, 1895 Charles Johnson, a native of Denmark, aged 41 years.

The Board of Supervisors will meet again next Monday.

Supervisor Fitzgerald came up from Lone Pine yesterday.

There was quite a cold snap on Wednesday night but no frost is reported.

James McCormick came in last Monday with $50 from his placer mine.

J. J. Gunn arrived home yesterday morning from a month's visit in Southern California.

James Wright came in from Mazourka last Sunday and brought in two and a half ounces of gold as the result of a two week's run.

Rudolph Schober passed through town yesterday morning with a 14-animal team en route for Mojave.

Robert Love and his sister, Miss Jane Love, came down from Bishop on Wednesday, returning next day.

W. K. Miller was in town a day or two this week. He brought a party looking for an opportunity to secure homes.

Julius Schroeder and John Basto were in from the Alabama Hills last week and report very little being done there at present.

Al Stock came over to town on Tuesday and remained here till Thursday. While here he made final proof on his tract of desert land near Bishop.

Town has been quite lively for the past week owing to the number of jurors and witnesses here in the various trials now pending in the Superior Court.

The Board of Supervisors met on Monday and fixed the tax rate for the ensuing fiscal year at $2.50 on each $100 of valuation. The rate of school tax in this district has been fixed at $.40.

L. F. J. Wrinkle spent several days in town early in the week. Mr. Wrinkle has disposed of his interest in the soda works at Keeler but will remain charge of the concern until the first of the year. A large number of vats will be constructed at once and the works considerably extended.

There must have been a very heavy rainfall in the Sierras north of here. On Friday and Saturday of last week Big Pine creek had risen so high as to become impassable and other streams up the valley were considerably swollen. The river at Independence bridge rose nearly three feet in twenty-four hours.

Weather Summary. Week Ending September 19 1895

Highest barometer, 29.870, date Sept. 15.

H. E. WILKINSON, Observer.

Coolgardie.

Rich new finds are being constantly reported from Coolgardie gold fields. Coolgardie, Australia, is an accessible point, reached by steamer to Fremantle, thence by rail to Southern Cross and team to destination. The trip to Australia on the fine steamers of the Oceanic Steamship Company via Honolulu, Samoa, and New Zealand is pleasure sailing the day long. This line tickets passengers to Cape Town, South Africa. Map of Coolgardie district and Pacific ports reached by the Oceanic Steamship Company is mailed free to any address by the O. S. S. Co. 114 Montgomery St San Francisco.

SELF DESTRUCTION

On Moday Dr. I. J. Woodin received a telegram from Big Pine requiring his attendance at Tibbetts station and stating that Charles Johnson, section boss at Citrus, had been found in a dying condition and suspecting foul play. The doctor started at once accompanied by Sheriff Given. Arriving at the scene of the tragedy Johnson was found lying on the floor of the cabin in an unconscious condition, with three wounds on his head each one of which penetrated to the brain. A bath tub was in the room partly filled with water and in this was found a portion of the skull, a large quantity of blood and a very sharp handaxe. Johnson was put aboard the southbound train and brought to Citrus and the Sheriff arrested two Chinamen, a part of Johnson's section crew, and brought them to town, on suspicion of having committed the crime. Dr. Woodin, who is also Coroner, took possession of all of Johnson's effects to be found and brought them to Independence. Among other things was a box addressed to J. F Beale, station agent at Citrus, and two letters addresred to the same party. The letters were opened in the District Aattorney's office and are here given.

TIBBETTS STATION,
September 14, 1895.

This eare me last will. I behust to M J. F. Beale, Citrus, My Mare and bugy. House and lot in Dayton, Lyon Co. Nev. Also everyting what ellers be in my bellonging.

If you do not wis to have ennyting to do wid it Turn me over to the Lodges As i cannot tink of enny ting more i will close With best of Wishes to you and Farmely

Your Friend Charle
and God By to all.

These of course show that a most deliberate suicide was committed and every detail arrainged. It appears from the surroundings that he intended to stun himself with the axe, fall into the tub and drown. His head did not reach the water, however, and after lying over the tub for a time he struggled over onto the floor where he was found. A section of bone about an inch wide was cut out of his head and through this aperture a considerable quantity of brain matter oozed out. That he did not die almost instantly is one of the many mysteries of surgical experience. The suicide possessed a wonderful vitality and despite the fact that his brains were mixed up like a pudding, the convultions being broken, lived until yesterday forenoon at 10 o'clock.

The deceased was an Odd Fellow, in good standing, and his remains were brought to town yesterday and interred this morning under the auspecies of that order. It appears that he was disappointed in a love affair a few years ago and from constant brooding upon the matter grew morbid. His only known relative is a brother whow he has not seen for many years.

INYO INDEPENDENT:—

The following committe are announced to assist the County Sup't in arrangeing for the coming Teachers Institute.

COMMITTEE ON ARRAGEMENTS.

F. E. Densmore; Mrs. L. H. Mulholland; A. E. Janvier: Mrs. L. B. Rhine; Miss M. M. Gregory.

COMMITTEE ON MUSIC.

Fred Scott; Miss Mabel Chalfant; J. H. Shannon; Miss Mabel F. Doss: Miss Eva McGee.

COMMITTEE ON EXHIBIT.

H. C. Hampton; Miss L. E. Shirly; W. G. Dixon: H. H. Howell; Miss Mattie Adams.

The residents of Independence are earnestly requested to unite in giving the visiting teachers and their friends a hearty welcome.

The success of the Institute will largely depend upon the co-operation given to the above committee by the general public.

S. W. AUSTIN.

Mr. and Mrs. Rickey arrived here from Carson on last Friday's train, remaining in town until Tuesday. Mr. Rickey spent considerable time in the local Land Office looking after the status of his extensive Antelope Valley property.

Everybody who attended the celebration of the 16th of September at Lone Pine confesses to have enjoyed themselves hugely. The Lone Pine people on every occasion of this kind invariably "lay themselves out" to secure for the visitor a thoroughly good time and this was no exception to the rule. There were games of various kinds during the day, including an exciting horserace, with exercises appropriate to the occasion, followed by a grand ball at night, which, while the hall was crouded, was most enjoyable.

SUPERVISORS PROCEEDINGS.

MONDAY, Sept. 16, 1895.
1:30 o'clock p. m.

Board of Supervisors of the County of Inyo, State of California, met at above stated time pursuant to law for the purpose of levying taxes for the fiscal year 1895-6.

Present: Supervisors A. C. Freeman, Frank Shaw, J. R. Eldred, J. J. Stewart and Frank Fitzgerald, Chairman.

County Auditors exhibits showing County financial transactions for preceeding fiscal year were presented and filed.

Official notice from the State Board of Equalization, with information as to levy of State taxes and of assessment of the Carson & Colorado Railroad Company were submitted and filed.

Upon motion of Supervisor Stewart, seconded by Freeman it was unanimously ordered, That State and County taxes for the fiscal year beginning July 1, 1895 and ending June 30, 1896, be and the same are hereby fixed at the rate of Two 50-100 ($2.50) Dollars upon each One Hundred ($100) Dollars of taxable poperty within Inyo County, that the same be levied and collected pursuant to law and apportioned to the various funds as follows, to wit;

To the State fund	$ .685
General Expense fund	.51
Hospital fund	.04
Bridge	.015
Road	.13
Bond	.22
School	.50
Salary	.00
Total	$2.50

Ordered: That a special tax be levied and collected upon all property assessed in Bishop School District for current fiscal year at the rate of Forty-five (45) cents upon each $100 of valuation, the amount to be placed to the credit of said School District Bond Fund.

Ordered: That a special tax be levied and collected upon all property assessed in Big Pine School District for current fiscal year at the rate of Forty-five (45) cents upon each $100 of valuation, the amount to be placed to the credit of said School District Bond Fund.

Ordered: That a special tax be levied and collected upon all property assessed in Fish Spring School District for current fiscal year at the rate of Fifty (50) cents upon each $100 of valuation, the amount be placed to the credit of said School District Bond Fund.

Ordered: That a special tax be levied and collected upon all property assessed in Independence School District for current fiscal year at the rate of Forty (40) cents upon each $100 of valuation, the amount to be placed to the credit of said School District Bond Fund.

Ordered: That a special tax be levied and collected upon all property assessed in Union School District for current fiscal year at the rate of Thirty-two (32) cents upon each $100 of valuation, the amount to be placed to the credit of said School District Bond Fund.

Ordered: That a special tax be levied and collected upon all property assessed in Lone Pine School District for current fiscal year at the rate of Fifty (50) cents upon each $100 of valuation, the amount to be placed to the credit of said School District Bond Fund.

Claims of Supervisors for mileage and per diem were examined and approved by the District Attorney and warrents ordered drawn upon the Salary Fund as follows:

Frank Shaw	$20.40
A. C. Freeman	18.00
J. R. Eldred	14.40
J. J. Stewart	10.80
Frank Fitzgerald	26.40

Board adjourned to meet Monday, September 23, 1895, at 7 o'clock p. m.

FRANK FITZGERALD, Chairman.
Attest: D. J. HESSION, Clerk.

COURT NOTES.

HON. N. D. ARNOT, presiding.

MONDAY, Sept. 16, 1895.

J. H. Stoutenborough Jr. vs. Wm McDonald and Jacob Shoemaker—The following jury were selected and sworn to try the case: John Keegan; Thos Kehoe; Jerry Mairs; David Stubblefield; John McSweeny; John A. Lank; August Stecker; and Henry Fehrman. Quite a number of witnesses were sworn and examined. After a short consultation the jury found in favor of the plaintiff as follows;

Balance due plaintiff for labor and services performed $166.61
Assigned claim of Henry Bell 90.00

TUESDAY, Sept 17, 1895.

Friederike Rhine vs. Eliza Hannagan—Decree of foreclosure and order of sale.

People vs John Schofield—P. W. Forbes Esq. District Attorrey, for the People and P. H. Mack Esq. for the Defendant, on a charge of selling whiskey to an Indian. The following jury was selected and sworn to try the case: Thomas Kehoe; A. A. Cashbaugh; Geo. Thorpe; Harold Preston; Frank Lawrence; R. P. Hession; W. H. Uhlmeyer; Harmon Hankhammer; Edward Schober; John C. Anton; J. R. Moffett and W. L. Zimmerman. George L. Drake, who made the arrest, and Dick Free (Indian) were examined for the prosecution. The defedant testified in his own behalf. Ed. M. Clarke was called and examined for the prosecution. The case was given to the jury at 3 o'clock p. m., and at 7:35 they brought in a verdict of "Not Guilty" and the defendant was discharged.

WEDNESDAY, Sept. 18, 1895

The case of the people vs. Frank Howe was called, charged with burglary, B. H. Yandell and W. A. Lamar Esq's appearing for the defendant and District Attorney Forbes for the people. The following jurors were selected and sworn to try the case: John S. Gorman; Robert E. Gosney; George Thorpe; Harold Preston, W. H. Uhlmeyer; John C. Anton; W. G. Morton; Alexander Porteous; J. A. Partridge; D. Stubblefield; H. D. Gill; Julius Roeper.

THURSDAY, Sept. 19, 1895.

The case of Ma. Que (Chinaman,) charged with selling whiskey to an Indian, was called and postponed until Friday the 20th

The case of the People vs. Howe was then called and by five o'clock the evidence was all in and the case was given to the jury The jury on the first ballot stood nine for burglary in the first degree and three for the second degree, a conclusion was reached at 7:20 o'clock, the defendant being found guilty of burglary in the first degree The Judge setting Tuesday, the 24th as time to pronounce sentance.

ABSOLUTELY PURE

FLORIDA'S PEST.

Sore Spots, Scratches and Ulsers Attract Them.

MUCH WORSE THAN THE MOSQUITO.

A Disease-Breeding Gnat Which Makes Life a Torture—Convey Disease from Man to Man.

Florida has an insect more terrible than the dreaded "tsetse" fly of Africa. The latter does not attack man; furthermore, it is rather rare. The winged terror of the flowery peninsula, on the other hand, occurs in countless swarms and is very dangerous to human beings. Though it does not bite, it is a carrier of disease.

The pest is known in Florida as the "gnat," and it is only present in summer. Then it is seen in myriads, and around the head of every person who ventures into the open air, in some parts of the country, will be observed a cloud of the insects. Though they do not bite they are very annoying, because they sing almost as loud as mosquitoes. Then, again, they settle in clouds all over your person to suck up the prespiration, and the distress caused by their crawling over the face, neck and hands is very great. There are so many of them that to slap at them is almost a useless performance.

The bother of this might be endured, with a little patience, if the flies had not the habit of settling in the corners of the eyes, being attracted by the moisture there. This causes an unbearable annoyance and irritation, which, of course, is increased by the constant effort to wipe the flies away. Unfortunately that is not the worst of it. The flies carry contagious diseases of the eye from one human being to another, and thus epidemics are frequently propagated of a serious disease of the eyelid, which is known in Florida as "sore eye." This complaint has been known to start with a single individual and run through an entire school or community. So bad is it that sufferers seldom recover from it entirely, being troubled with weak eyes ever afterward.

These "gnats" do much other mischief. Sore spots, scratches, ulcers and other wounds have a great attraction for them; they not only thickly crowd on such places about the head and hands, but they crawl beneath the clothing to get at a sore spot. If only your own person were concerned, it would not matter much; but look at the dog lying on the ground only a few steps from you. From flea bites or other cause he has suppurating sores on the back or belly, which, of course, are thickly covered with the flies. Unable to stand the irritation longer, the animal suddenly rises and shakes off the insects. You can plainly see that many of the flies come toward you and settle on your person, some of them sure to get into the corners of your eyes. Perhaps a man approaches you on a road. He is evidently suffering from "sore eyes," a common disease among poor people in the South. Necessarily, he is enveloped in a cloud of "gnats,' and as you pass him some hundreds of them turn to follow you.

It has been proved that infectious diseases are disseminated by mosquitoes and houseflies, but as carriers of pathogenic germs the Florida "gnats" are unapproached by any other insects. Not only do they convey disease from man to man, but they are always likely to carry it from domestic animals to human beings. Perhaps the only thing to be said in favor of the flies is that they do not bite at night. They are troublesome from early morning until near sunset, being most aggressive during the hot and sultry hours of the afternoon. They prefer open and sunny places. They enter houses, but evidently do not feel at ease in the rooms for they do not attack people, but congregate on the panes of the windows, if these happen to be closed. They are greatly abundant only where the soil is sandy.

These flies resemble in general appearance the comon housefly, but are much smaller. One of their peculiarities is the hardness of their bodies, and a slap with the hand that would suffice to "lay out" any mosquito or housefly does not hurt them in the least. Mr. Schwar of the Bureau of Entomology, to whom the writer is indebted for his information, recently encountered considerable numbers of these flies at Selma, Ala., and Columbus, Tex. The Texas species does not seem to be so much addicted to seeking the eyes; it prefers to make its way into the ear thereby causing great annoyance. The Florida "gnat" occurs in small numbers in parts of Virginia and in the District of Columbia.

ODDITIES OF FACT AND FICTION.

Philadelphia has been entertained of late by two workmen on the City Hall tower who eat their lunch while sitting on the brim of the bronze William Penn's hat, over 500 feet above the pavement. They sit there with their legs hanging over and appear to be without fear, although their perch is the highest in the world of its kind.

A short time ago a fire broke out in a butter factory near Madison, Wis,. After all the water on hand was used 2300 gallons of milk were used in its stead, and the fire was put out. This is not unlike the case in San Francisco where 15,000 gallons of wine were used in an endeavor to quench a fire in a vineyard storehouse.

New Woman—Well, I married the only man who never told me he loved me! Old Woman—Why did you do that? New Woman—Because I thought he ought to be converted.—Ex.

Beulah Barton's Birthday.

By MARY KYLE DALLAS.

It was a great trial for Mrs. Barton, who was a spirited person, and who finally became not so sorry for her daughter as angry with her.

"Of course Reuben Spicer was a very nice young man," she said to herself, "and I dunno as I should have objected; but widders marry again in a couple of years sometimes, and I feel as if Beulah needn't carry on so so long."

And when August came and Maryland peaches were ripe and stood in big basketfuls at Mr. Spicer's door, Mrs. Barton, thinner and sharper of feature than of yore, but still as neatly cuffed and collared and coiffured as ever, stood beside the couch on which Beulah lay propped up by pillows, and said slowly and decisively:

"The last birthday party you had, Beulah Barton, was in sixty-one. Two years I've skipped it. This year I'm goin' to give you one."

"Mother!" cried Beulah.

"I be," said Mrs. Barton, who, whenever she wished to be impressive, returned to Yankee dialect.

"Mother!" repeated Beulah, "when you know I'm dying of a broken heart."

"I didn't know no sech thing, Beulah Barton," said her mother; "anyhow you air actin' rebellious, and blessin's never follow that sort of thing. The Lord's will has got to be done. August the fifth sees you havin' a birthday party, and you're goin' to set up to it cf I hev to carry you down stairs pig-a-back. Hear?"

"Yes, ma'am," said Beulah, closing her eyes.

"Very well, you kin look over them samples and see what I shill get for you a dress," said Mrs. Barton, laying a great envelope on the afghan that covered Beulah as she reposed on the couch, "and choose a proper nice patron, do."

"Mother, you're talking dreadfully Yankee," said the girl. "I wish you wouldn't."

But Mrs. Barton had left her alone, and after awhile she opened the envelope and found within a bunch of silk samples and a little fashion magazine, and shortly grew interested, and finally, when her tea was ready, pronounced with a sigh in favor of heliotrope color and white lace flounces.

Old Mr. Spicer was taking his dinner in the little back room while his boy watched the shop.

Meal times were sad affairs in these days. Ghosts were with him then. He used to fancy that he heard Reuben run lightly down stairs and up to the very door of the room, and lift his head half expecting to see him enter and to discover that he had been dreaming a bad dream.

Today this had happened half a dozen times, when the lad put his head in at the door of the room.

"What is it, John?" asked the old man.

"Well, Mr. Spicer, them there Maryland peaches is goin' faster'n you'd like, that's all."

"I suppose you're afraid to chase the boys away? You ain't got no more spunk than a hen," said old Spicer.

He arose, stalked through the back room and out upon the porch in haste, but there stood still. It was not a boy who was stealing peaches out of his baskets, but a soldier. Thin as a skeleton, his shoes like those of a tramp, everything he wore falling from him in rags, and the left sleeve of his wretched jacket pinned empty to his breast, he sat there eating peaches as coolly as if they belonged to him.

"Making free, you see," he said. "I couldn't help it if I was to be shot for it. You'd have to live on moldy crusts as I have, to know how these peaches taste to me."

"Help yourself," said old Spicer tremulously. "I'm glad to see any of the boys in blue for the sake of one I had that marched away and won't never march back again."

"You can't be sure of that," said the soldier, without looking up.

"Ah, he was killed," said Spicer. "Killed."

"They reported me killed," said the soldier, taking another peach, "and all the while I was in a southern prison. I reckon I'd have died there, too, if it hadn't been that I remembered an old father I had that was fonder of me than I deserved, and would be glad to see what was left of me. There's a good deal in will power. I said I'd live, and I did."

"My God!" cried old Spicer. "I guess I'm goin' crazy at last! Let me look at you! Let me look at you!"

"Dad," cried the soldier.

"Reuben!" screamed the old man. "Heaven is too good to me, I've got you again." The next moment he had Reuben in his arms. In the old familiar back room they had a long, long talk. Meanwhile customers rapped upon the counter in vain, and wondered what had become of Mr. Spicer.

"Don't let me spoil the business, dad," said Reuben at last, and the old man, wiping his eyes, left him and went into the store. Before the counter sat the tall, angular form of Mrs. Barton; at the door stood the basket phaeton, the black pony tied to the hitching post.

"I've waited quite a spell, Mr. Spicer," said the matron, "but I've got my list made out. Three pounds of almonds and four of eating raisins, fourteen pounds of sugar. Guess I'll take three baskets of your Maryland peaches."

How history was repeating itself. Mr. Spicer first felt that just this had happened before, then remembered when it was.

"You must be going to give a party," he gasped.

"My Beulah's birthday is the fifth, you know," said Mrs. Barton. "She's rebelled too long. I'm going to do my duty anyhow. I've made her get up and have a ride. It's her first since you know when. She's out there. I guess she won't catch cold, all wrapped up in my broche shawl."

"Your Beulah out there?" said the old man. "She's better then? She mustn't die. She must live, Mis' Barton; your girl must live."

"I mean she shill," said Mrs. Barton; "I mean she shill. But she don't take any interest. She jest wants to die, I believe, to go where she kin make up with your Reuben. But, Lord willin', she shan't."

"She can make up with my Reuben without dyin', Mis' Barton," said old Spicer. "My Reuben has come back."

"Obadiah Spicer! Don't tell me!" cried Mrs. Barton. "Come back! Your Reuben come back after all!"

Her voice, shrill and sharp by nature, rose higher than usual and carried further. Beulah, sitting wrapped in her shawl, heard every word and forgot that she was not able to walk. A moment more and she stood by her mother's side and caught her by the arm.

"Mother!" she cried. "Mother! is it true?"

"Yes," said Mrs. Barton. "You can jest go in and talk with him while I read off my list to Mr. Spicer. I shill want to hev this birthday party of yours a real proper good one, seein' Reuben's come hum."

For once Beulah did not find fault with her mother's Yankeeism. "They'll have a lot to say to each other," the latter added, "and I guess you and me kin afford time to sit down a spell and think over our blessings."

And there in that back room the talk was long and sweet; such talk as we might all have "if only the dead could know just when to come back and be forgiven."

Yet there were tears shed too. Some for the knight of courtesy, who had unwittingly caused so much sorrow—poor, bright eyed, gentle voiced Du Bois, who lay sleeping under southern sod. And Beulah's birthday party? That was, I assure the reader, what her mother had declared it should be, "a proper good one."

THE END.

Tastes In Jokes.

As George Eliot has justly remarked, "A difference of taste in jokes is a great strain upon the affections." This is particularly true of children's jokes. Children and grown persons rarely have the same standards of humor. A small boy at a long suffering boarding house not long since playfully filled the sugar bowls with salt, a "joke" that was none the less effective because of its lack of novelty. Another small boy at another boarding place found much pleasure in kicking such of his fellow boarders as he chanced to meet in the elevator. Of course everybody rebelled about it and threatened to inflict all sorts of punishment upon the little humorist.

But somehow none of the punishments was ever inflicted, and the kicking continued. The small boy distributed his favors impartially—the shins of both young and old, of men and of women, were alike bruised by his energetic boot soles. His parents never seemed to take the slightest interest in the complaints and anathemas concerning their offspring that poured in upon them. Some of the men declared that some day they meant to kick back, but when it came to the point they never did. At length one of the women tried to "reason" with the little boy.

"Willie," she said, "why did you kick Mrs. Blank in the elevator yesterday? It was very naughty of you, Willie, dear. Don't you know that you hurt her very much?"

Little Willie seemed moved. "I tell you what," he said, with a touch of real compassion, "I won't kick 'em so hard after this."—New York Sun.

Stevenson's Oddity of Dress.

Stevenson was not without a good deal of innocent oddity in his dress. When I try to conjure up his figure, I can see only a slight, lean lad, in a suit of blue sea cloth, a black shirt and a wisp of yellow carpet that did duty for a necktie. This was long his attire, persevered in to the anguish of his more conventional acquaintances. I have a ludicrous memory of going, in 1878, to buy him a new hat, in company with Mr. Lang, the thing then upon his head having lost the very semblance of a human article of dress. Aided by a very civil shopman, we suggested several hats and caps, and Louis at first seemed interested, but having at last hit upon one which appeared to us pleasing and decorous we turned for a moment to inquire the price. We turned back, and found Louis had fled, the idea of parting with the shapeless object having proved too painful to be entertained.

By the way, Mr. Lang will pardon me if I tell, with an added detail, a story of his. It was immediately after the adventure with the hat that, not having quite enough money to take him from London to Edinburgh, third class, he proposed to the railway clerk to throw in a copy of Mr. Swinburne's "Queen Mother and Rosamond." The offer was refused with scorn, although the book was of the first edition and even then worth more than the cost of a whole ticket.—"Personal Memories of Stevenson," by Edmund Gosse, in Century.

A Confirmed Wanderer.

Here is the pathetic figure of a delightfully simple old man whom we discovered in diligent perusal of his Bible, and who invariably camped by himself and did not encourage intruders on his privacy. When we broke through his reserve, he gave us the following strange history of his manner of working. "I only work at two places all the year," he said. "One is at a station up here, where I do the wool picking; that is always a two months' job. Then I go back to Richmond river in New South Wales for the cane cutting; that is a four months' job. The remaining six months I spend in traveling to and fro, as these two stations are 800 miles apart, and it takes me three months to do the journey. I have been doing this for 20 years and shall continue to do it as long as I live." He flatly refused an offer of a lift, for to alter his habits would make him miserable. "I always turn up to the day, for, see, here is my plan drawn out." And he showed us a rough chart of each day's route marked out like a ship's course. "I shall go on like this till I can do so no longer. They will wait a week for me up at the station, and if I don't turn up then the boys will come out and put up a cross for me, for they'll know I have gone home for good and all. Goodby."

We waived him an adieu, and we often wonder now if "the boys" have had to turn out yet.—Temple Bar.

A Newspaper Pensioner.

The Constitution has placed upon its pension list the name of a veteran who has well earned immunity from collectors. Mr. C. S. Youmans of Blackshear, in 1868, wrote to Colonel Carey W. Styles, then editor of The Constitution, subscribing to the paper. Ever since he has kept his name straight upon the books, having paid in all over $260 in subscription. But now he has grown old and writes:

"I love your paper as I do my life. It seems to me that I could not live without it. I am an old veteran Confederate, 69 years of age. My wife has been the mother of 24 children, of whom 21 are still living, eight of whom are young and still depending upon us for bread. Could you not afford to make me a pensioner on your list, as I am entitled to one from the state? I loved Henry W. Grady as I did one of my own children. I have his photograph hung up in my parlor, and go to look at it as often as I do those of my children."—Atlanta Constitution.

When Lee Surrendered

By SALLIE PATE STEEN.

[Copyright, 1891, by American Press Association.]

CHAPTER I.

She turned away, her eyes instinctively seeking the window opposite.

He was just vanishing over the brow of the hill when they came clattering along the dusty road. Heavens! Would the broomstraw hide his tall young form from their searching eyes? With her arms about her mother's waist Glen strained her own sight to watch him, while a sob rose in her throat. Maum Betsey, with her fat arms akimbo, stood at the corner of the house, alternately watching the disappearance of her oldest nursling and the rapid approach of a squad of cavalrymen as they drew nearer and nearer in a cloud of dust.

"My Gawd! Miss Ma'y, it is de Yanks, sho' 'nuff," she gasped, with her eyes starting from her head. "I clar to grashus, dey's a stoppin', and dar's dat boy Nelse hangin' on to de front gate an' talkin' to 'em, like as ef his black hide 'ud tu'n a bullet. Wisht dey would pepper him onct, ennyhow. I'll give him Yankee Doodle when I gits holt o' him again, see ef I don't."

A new fear pierced the mother's heart. Were the soldiers about to enter this defenseless home? But no; after a brief consultation with Nelse the party wheeled across the road and entered a grove of live oaks just opposite the mansion.

Nelse hung on to the gate with outstretched neck and starting eyes until the last blue coat was out of sight, and then dropping off, sped like a bullet up the avenue and around the house into Maum Betsey's wrathful presence.

"Lawdy!" he panted, nimbly dodging a cuff which she directed at his ear. "Is you seen dem Yanks, mammy?"

But before Maum Betsey's ire could burst forth, Glen left her mother's side and turned her stern young face inquiringly upon the boy.

"What did you tell those men, Nelse?" she asked.

"Lawdy! I ain't done tell 'em nuffin, Miss Glen. Hope I may die, ef I did. Dey up an' axed me who lived here, an' I tole 'em jes you an' ole Miss, an' Missy—an' me an' mammy—since all dem yuther niggers done runned off."

"And what did they say then?"

Nelse writhed under her steady eye.

"Den dey tuk an' axed me war dere no gen'l'men 'bout de place, an' I tole 'em ole marster he done tuk an' died fo' de wah—an'—an' dat was all."

"And you said nothing about your young master?"

"Lawdy, Miss Glen, I hope I may die ef I did," his black body twisting in emphatic denial. "You jes go an' ax 'em, ef you don't b'lieve me, you jes go an' ax 'em."

But Maum Betsey was no longer to be kept out of the conversation. "You look heah, nigger." She had managed in the heat of the discussion to grasp the wary Nelse by the shoulder and was pushing him before her to the kitchen doorway, near which they were standing. "You jes lemme ketch you hangin' on to dat front gate agin, projeckin wid Yanks, will you? An' if ever I heah a word out o' your black mouf 'bout Mars Frank gittin' away I'll skin you like a eel, boy. You heah me, don't you?"

As the pair disappeared Mrs. Helen lifted her anxious eyes to her daughter's face. "Glen, do you think he told them?" she whispered.

"I am afraid he did, dear, but mother, don't give up so. They must have learned it sooner or later. They have made no move as yet to search for him, and he is out of their reach now, or soon will be. He knows every foot of these woods and hills, and there are plenty of doors open to him. He will not lack for food and shelter. Besides, we can still communicate with him, and they will surely not be stationed long in this out of the way place. What a mercy he escaped them."

"But, oh, my child! think of the fearful outrages these straggling bands of soldiers have committed through the country. Oh, if I had but been wise enough to have sent you away, and kept only Missy with me!"

"Now, mother, listen. I am not afraid of a whole regiment of Yankees, and what in the world would you have done without me? You must come right in now and have a cup of tea and lie down, and if Missy's nap is out I'll bring her down to keep you company while I watch the movements of the blue coated gentry over in the grove a little and keep my eye on Nelse, for he'll slip through Maum Betsey's fingers like an eel, sure enough."

But when her mother had been comfortably established on the sitting room sofa with Missy, warm and rosy from her afternoon nap, chattering happily beside her, Glen's lighthearted show of fearlessness forsook her. Her anxiety took the form of restless wanderings over the house, whose every window commanding a view of the grove opposite, drew her in turn like a magnet.

It was a fine old house of red brick, standing well back from the high road, surrounded by clustering trees and approached by an avenue of magnificent cedars; but the grounds were no longer trim and well kept, and the numerous outbuildings were dilapidated and vacant. An air of neglect and loneliness, enhanced by its remote situation from any town or village, hung about the place, and its interior corresponded but too well with this external desolation.

There had evidently been but few modern additions to the household belongings in late years. The furniture was still handsome, but old and massive, and the brilliant hues of the Turkey carpets and the rich curtains had faded to sober and neutral tints. The bare floors in some of the rooms were actually more cheerful, for they were waxed and rubbed until they shone like mirrors, and when the fires were lighted in the open fireplaces the flames glistened upon shining oak and danced on the polished surface of old mahogany and multiplied themselves in the big brass andirons, that shone in rivalry of the brass candlesticks upon the high, old fashioned mantels.

As Glen wandered restlessly from room to room, her home seemed to wear a new and unfamiliar aspect to her startled eyes. Suppose it should be invaded? It had always been so sure and peaceful a haven. Remote and secluded, only the rumors of war had disturbed its inmates, and the one member of the immediate family who had ever been called upon to yield to its demands had thus far been singularly preserved from danger. But its grim shadow had taken all the color out of the girl's life. All her opportunities had been sacrificed to it. Every promise of her opening girlhood had been blighted by it.

"You were to have gone to school in Philadelphia, dear," her mother would say sometimes, passing her hand over Glen's fine head caressingly, "and then abroad, if it had not been for the war; your father and I had planned it all." Or, "There is no hope of your coming out, or of our entertaining for you, as we would once have done. It would all have been so different if it had not been for the war."

Of course these were but minor considerations, and the girl unselfishly felt them to be such. Were there not always graver consequences to be lamented? Had not this insatiable war snatched from them their all, whitened her mother's hair with untimely snow, and torn son and brother from their arms? And just before her, as she reached the hall, was a sadder evidence than these of its terrors.

The hall was a fine old entrance to a fine old house. Its oaken floor and rich wainscot gleamed in the evening light, and a curiously carved settle ran around three of its sides.

A few high backed chairs and one or two old tables with quaint spindle legs constituted its meager furniture, but its noble proportions and rich carvings redeemed it from bareness, and it was sweet with the pine cones and wild flowers of which Glen had yesterday rifled the woods. A bowl filled with early violets and pale primroses was placed directly beneath a portrait draped with the sad Confederate flag, and looking up at the boyish face above her with all the fiery tragedy of a hopeless self devotion written upon it, Glen read once more through a mist of tears the inscription beneath:

"Captain Helen, a brave soldier and a gallant commander, fell in leading a charge at the battle of Antietam, Sept. 17, 1862."

As she turned away, her eyes instinctively seeking the window opposite, which commanded a view of her foes, she started with surprise and terror. A man in the uniform of a Union cavalry officer was making his way up the long avenue to the house.

(TO BE CONTINUED.)

"Are you fond of etching?" asked the young man who had taken the hostess' pretty niece from the country down to supper. "As a general thing, yes," she answerd, looking up into his eyes with an engaging frankness that threatened havoc to his heart; "but," she added, hastily, as he started to say something pretty, "not any tonight, thank you—it is rather late. A very little sherbet is all I care for."—Spare Moments.

The old politician, after a long and stormy career, had retired from the field and settled down to making an honest living. A few months after his retiracy a friend met him. "Well," he said, "you are out of poltics, I understand" "Yes," was the reply, with a long-drawn sigh of relief, "out of politics, out of money and out of the penitentiary, thank the lord."

Elderly Gentleman (to a little boy who is buying candy)—My young friend, don't you think that instead of spending all the pennies you get it would be better to put some of them away for a rainy day? Little Boy—O, no! What's the good of money on a rainy day? Ma never lets me stir out of the house.—Pearson's.

SMALL BEGINNINGS

Make great endings sometimes. Ailments that we are apt to consider trivial often grow, through neglect, into atrocious maladies, dangerous in themselves and productive of others. It is the disregard of the earlier indications of ill health which leads to the establishment of all sorts of maladies on a chronic basis. Moreover, there are certain disorders incident to the season, such as malaria and rheumatism, against which it it always desirable to fortify the system after exposure to the conditions which produce them. Cold, damp and mia-mi are surely counteracted by Hostetter's Stomach Bitters. After you have incurred risk from these influences, a wineglassful or two of Hostetter's Stomach Bitters directly afterward should be swallowed. For malaria, dyspepsia, liver complaint, kidney and bladder trouble, nervousness and debility, it is the most deservedly popular of remedies and preventives. A wineglassful before meals promotes appetite.

Hard work is a cure for almost every human ill, except the evil of having to work hard.

Piso's Cure for Consumption has no equal as a Cough medicine.—F. M. Abbott, 383 Seneca St., Buffalo, N. Y., May 9, 1894.

The funny man who has exhausted his stock of jokes may be said to be out of humor.

Du-Prae's Female Regulating Pills, safe and efficient emmenagogue; $1 per box. Richards & Co., druggists, 406 Clay St., San Francisco, sole agents. Mailed on receipt of price.

Dr. Ludlum Hill, 1443 Market street, near 11th, S. F.; no charge for extracting when plates are made; old plates made over like new; teeth from $8 per set; extracting 50c; gas given.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted. Sold by druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

Try Germes for Breakfast.

25 CTS. PISO'S CURE FOR CURES WHERE ALL ELSE FAILS. Best Cough Syrup. Tastes Good. Use in time. Sold by druggists. CONSUMPTION 25 CTS.

HIS LATEST DISCOVERY.

Dr. Ricord's Compound Pennyroyal Pills for female irregularities—safe, sure and reliable; express, $2.50. Also, Ricord's rubber goods for hygienic and private use. Maison et Cie, Paris, France. Agents—Root's, 6th and Howard, S. F., Cal.

A woman will rail against horse races, and yet keep her own tongue running all day long.

There is more catarrh in this section of the country than all other diseases put together, and until the last few years was supposed to be incurable. For a great many years doctors pronounced it a local disease, and prescribed local remedies, and, by constantly failing to cure with local treatment, pronounced it incurable. Science has proven catarrh to be a constitutional disease, and therefore requires constitutional treatment. Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, O., is the only constitutional cure on the market. It is taken internally in doses from 10 drops to a teaspoonful. It acts directly on the blood and mucous surfaces of the system. They offer one hundred dollars for any case it fails to cure. Send for circulars and testimonials. Address F. J. CHENEY & CO., Toledo, O. Sold by Druggists, 75c.

The lawn mower is a good deal like the keeper of a bucket-shop—it shaves the green.

DO YOU EXPECT To Become a Mother? If so, then permit us to say that Doctor Pierce's Favorite Prescription is indeed a true "Mother's Friend," FOR IT MAKES Childbirth Easy by preparing the system for parturition, thus assisting Nature and shortening "Labor." The painful ordeal of childbirth is robbed of its terrors, and the dangers thereof greatly lessened, to both mother and child. The period of confinement is also shortened, the mother strengthened and an abundant secretion of nourishment for the child promoted.

Send twenty-one (21) cents for The People's Medical Adviser, 1000 pages, over 300 illustrations, giving all particulars. Several chapters of this great family doctor book are devoted to the consideration of diseases peculiar to women with suggestions as to successful home treatment of same. Address, World's Dispensary Medical Association, Buffalo, N. Y.

BEFORE I could get relief from a most horrible blood disease I had spent hundreds of dollars trying various remedies and physicians, none of which did me any good. My finger nails came off and my hair came out, leaving me perfectly bald. I then went to

HOT SPRINGS

Hoping to be cured by this celebrated treatment, but very soon became disgusted and decided to try S.S.S. The effect was truly wonderful. I commenced to recover at once, and after I had taken twelve bottles I was entirely cured—cured by S.S.S. when the world-renowned Hot Springs had failed. Wm. S. Loomis, Shreveport, La. **S.S.S.**

Possibilities of Tobacco Culture in California.

THE FINE GROWTH MADE IN TEHAMA

Irrigated Lands of the San Joaquin May Be Devoted to the Raising of the Sugar Beet.

The farmers of Lompoc, Santa Barbara county, will have the largest bean crop known in that section for years. This crop will be harvested from mustard land, which is considered the best soil for beans.

George Fry, the bee-keeper, has received eight pure-blooded Italian queens, says the Bakersfield Californian. They came, each one, in a little cage, and all the cages crated. Food for the bees was put in the cages before they started, and they arrived in prime order. They are rather expensive luxuries, costing very nearly $2 apiece to lay down here.

It is reported that the wooly aphis is again making its appearance in the northern part of Santa Barbara county. It is now an almost undisputed fact that this pest infests the roots of the apple tree, as the aphides are to be seen making their appearance through the ground. Scientists are now trying to find a means of confining these creatures, believing that if this can be accomplished the pest can be exterminated.

There probably is no better land in the world for sugar beet growing than the irrigated lands of this part of the San Joaquin Valley, says the Fresno Expositor. The establishment of a beet-sugar factory in Fresno, or anywhere near Fresno, would introduce a system of diversified farming that would bring wealth to our people. The refuse from these factories when fed to stock is a great flesh-producer, and besides getting $4 a ton for beets the farmer can get half the weight of his beets back again for hauling to feed to cattle or hogs.

Farming is a business wherein, owing to the diversified details and often large areas under cultivation, it is very difficult for the master hand to keep his eye upon so many simultaneous operations, therefore it is especially important that, after taking great care in the selections of his hands, he should endeavor to gain their respect by kind treatment, at the same time placing trust in them. If he finds his confidence has been misplaced the only alternative is to cashier them at the first convenient opportunity.—Country Gentleman.

The Fresno Republican publishes an article in which it is shown that several of the orchards of that county have this year paid their owners from $150 to $250 per acre. Such cases can likely be found in Kings County, but if orchards gave a return of only one-half that sum they would pay better than if the soil were used for some other purpose. The day for making large profits in any branch of business has gone by in California, and henceforth the husbandman will have to care for what grows and become economical in his habits.—Hanford Democrat.

It is gratifying to note the more enthusiastic sentiment that now prevails in the East in favor of California products. The New York Fruit Trade Journal of recent date had this to say: "Trade in general has come to the conclusion that California oranges are of better flavor and give better satisfaction than foreign oranges, and the Californians appear to have entirely taken their place in this market. We find it impossible to sell foreign oranges against them. In reference to the varieties, will say that the California navels surpass any oranges in the world that have ever been put on the Philadelphia market.

The hop worm, which has been such a pest to California, has made its advent in the Puyallup Valley, and is quite prevalent in William Voses yard, says the Puyallup (Wash.) Citizen. The worm is the same shade of green as the hop leaf, has a black head and is three-quarters of an inch in length. The hop aphis emulsion does not seem to destroy it. The leaf upon which it feeds curls over and enfolds the worm within it, and affords it an asylum to build a web and propagate eggs. Andrew Nix, who has investigated its habits very carefully, fears that it may become a very dangerous pest in a few more seasons.

King County, modestly remarks the Seattle (Wash.) Post-Intelligencer, has never been boastful of its agricultural resources, although it has some excellent farms and abundance of rich and productive soil withins its boands that is capable of growing anything in the vegetable or cereal line produced in the temperate zone. Mention is sometimes made of the largest hop field in the United States possessed by King county, but there is a modest meadow of nearly 2,000 acres, neighbor to the big hop field, that is worthy of passing mention. The grass on this meadow this year averaged five feet in height, and the average yield of the whole field will be four tons to the acre of clean, well-cured hay.

A letter from Ione, Morrow county, says that the other day a cloud of grasshoppers swept down on the ranch of A. H. Smith, says the Pendleton East Oregonian. The hoppers began on the garden stuff, and after cleaning that out, attacked the fruit which was hanging on the trees. After almost wholly destroying the fruit, they appeared to be eating the leaves and twigs of the trees themselves, and Mr. Smith was fearful that they would die. These hoppers seem to have no special likes and dislikes. They eat what is set before them, if it be green and alive, and for this reason there is danger not only to vegetation, but to many people living in various parts of the country.

Elton Fulmer, professor of chemistry of the State Agricultural College of Washington, who has recently been investigating the beet-sugar industry of California, declares that the whole product of the island of Formosa would not supply one-half of his State with sugar, and that the sugar-cane growers in the South, through their journals, admit that they cannot compete with beet sugar and that they are afraid of it. The German sugar-beet producers were so frightened last year that they sent a representative to this country to look into affairs here, and in his report he stated that we were outdoing them, and that while their labor was slightly cheaper the Americans were doing 50 per cent. more work to the man, and that in their country land was worth from $200 to $600 an acre, while in this country it could be had easily at from $25 to $40, and that altogether America has decidedly the best of them in production and cheapness. The quality, too, is better than theirs and the beets of this country better and larger.

J. W. Woodrum of Hooker has shown us a sample of bright tobacco leaves which he gathered from some stalks he has growing on his place, says the Red Bluff News. The plants were set out a year ago last spring and lived through the winter. This year the stems grew up from the old stalks and are now from three feet to three and a-half feet in height. Last year the tobacco was gathered and some of it went as much as five and a-half pounds to the plant. The tobacco is raised on the Hooker rolling hills without irrigation, and both Mr. Woodrum and Postmaster William Wade, who are from the tobacco regions of Kentucky and Virginia, are satisfied that a very good quality of the weed can be raised in that section of the country. The sample that Mr. Wodrum had with him was the natural leaf and had not been cured and prepared in any way.

Why cannot those persons who profess to instruct farmers use plain words? asks the New York Times. Here is a case in point. One, asking the cause of the white specks in butter, is informed by a professor not that it is due to the excessive sourness of the cream and the separation of the curd flakes, and these flakes become mixed with the butter, and not in these plain words, but the inquiring butter-maker is informed "that it is due to homogeneousness in the cream, which is partly decomposed. This would not be so bad if it were correct, which it is not; for this word does not apply to the character of one substance, but to the similarity of character or composition of two or more. A single sample of cream cannot be homogeneous at all, and does not possess the quality of homogeneousness. But two samples may, by being alike in composition. There is much cause for complaint on this account in the bulletins of some of the experiment stations, in which, to be useful to the general public, scientific names should either be explained, or not used at all, and the information given in such terms as will be readily understood by those persons who are to be instructed by it.

The lament over horses being so cheap and common as to be sold for food rests upon a flimsy foundation, asserts the Rural World. The horses undergoing capture for canning factories are the feral ponies, the ill shapen and idiotic animals which roam the plains of Oregon, and they are just as far removed from the highest type of the domesticated horse as the wild crabapple is from the golden pippin. They cannot be employed in the domestic arts, and the complete obliteration of them is what the scientific breeder would like to see. Putting value upon weeds in a garden is equivalent to attaching value to them. The intelligent will not waste any tears over the decadence of this form of equine life.

Brains and capital will still be used to advance the standard of the pleasure horse. Breeding is a fascinating pursuit, engaging to the utmost the intellectual forces, and its greatest triumphs will command the sharpest competition. After the panic of 1873 the doom of the light harness horse was pronunced by the pessimist. Well-bred animals were very cheap, but the greatest era of development that we have known quickly followed, and at its climax a two-year-old sold for $125,000. History repeats itself. A wave of exaltation exceeds a wave of depression. The breeder of the future record-breaker will find a purchaser at his own price.

AN ALUMINUM EAR.

We have had people with glass eyes, porcelain teeth and artificial whiskers, and now comes along a man with an aluminum ear. He is 63 years of age and was admitted into the Queen's Hospital, at Birmingham, England, with an epithelioma of the left auricle.

The greater part of the diseased ear was cut off by the attending surgeon and a plaster-of-paris cast was taken of the left side of his head. Then an artificial ear was made in vulcanite and aluminum, tinted and enameled to harmonize with the complexion.

The man now can hear as well as ever, but he takes care to sleep on his right side at night so as not to break off his new ear.—Aluminum World.

"Can you give me any good reason for liking these impressionist pictures?" She—"Yes, indeed; they can be hung either side up with equally good effect."

To brag little, to show well, to crow gently if in luck, to pay up, to own up, and to shut up, if beaten, are the virtues of a sporting man.—O. W. Holmes.

CHILD OF THE GODS.

Only Man on Earth Who Claims Divine Parentage.

THE CLAIM OF JAPANESE MIKADO.

Traces His Ancestry to the Heavenly Deities, Who Made Japan from Islands Floating in Space.

The emperor of Japan is supposed to be descended from the gods. I believe he is the only man on earth who claims divine parentage. In geology Japan is the youngest of lands, and of recent volcanic origin. The authentic history of the country begins with the eighth century. The people had almanacs and means of measuring time as far back as the sixth century. The traditions are pretty well defined from about the beginning of the Christian era. The oldest documents in the archives of the government were written in 712, and the antiquity of the Imperial family is unparalleled among nations. The line runs back, unbroken, as far as that of the popes of Rome with absolute certainty, and Mutsu Hito not only claims to be the 121st emperor of the same family but to have received his crown by unbroken succession from Jimmu Tenno, who ascended the throne in the year 660 B. C.

The official history of the empire of Japan says that "from the time that Amaterasu-Omikami made Ninigin-o-Mikoto descend from the heavens and subject to his administrative sway Okuninusi-no-Mikoto and other offspring of the deities, descendants of divine beings have sat upon the throne generation after generation. Each sovereign, faithful to the spirit of his divine ancestors and to the administrative policy bequeathed by their divine descendants, transmitted the reins of power to his successor, thus preserving the continuity of the imperial dynasty and achieving the aim of good government. Descended in a direct line from the heavenly deities the emperor has stood unshaken in his high place through all generations, his prestige and dignity immutable from time immemorial, and independent of all the vicissitudes of the world about him.

The period before the reign of the Emperor Jimmu, seven centuries before Christ, when the Japanese assume that their actual history begins, is called Jindai—the age of the deities. Two gods of minor rank were commanded by the supreme sovereign of heaven to form a country out of certain islands that were floating in space, and in obedience to such instructions Japan became a nation. The divine pair then became husband and wife and gave birth to the ancestors of Mutsu Hito.

Out in the Shiba park, near Tokyo, there is a shrine dedicated to the memory of these divinities, and we visited it the other day. It is said to have been erected in the year 1005, and it is one of the most beautiful examples of ancient Japanese architecture. Within the shrine is kept a mirror, a crystal and a sword—the emblems of imperial power—which were handed down from the divine authors of the nation to Jimmu, and by him transmitted to the present occupant of the throne. The emperor goes to this shrine to worship between Sept. 16 and 21, which is the period assigned to the creation of Japan.

The mirror is the emblem of conscience, and when the emperor looks in it he sees a custodian of imperial power, and is reminded of his responsibilities and the ancestral commandments to love the poeple as himself. When he looks upon the crystal he sees an emblem of purity, and the sword represents the power and independence of Japan, which has never been subdued. A member of the imperial family is always appointed as the custodian of these relics, and arranges the programme for the September ceremonies.

While the present emperor is not unmindful of his divine origin, he has shown himself to be more of a human personality than any of his predecessors. Until the reformation in 1868 he and those who had previously occupied the throne were practically the prisoners of the tycoon, or shogun, as he is more often called—the generalissimo of the army—and were seldom allowed to leave the shelter of the yellow walls that surround the grounds of the imperial palace at Kyoto. He knew nothing of his subjects and was unknown to them. He was too sacred for the eyes of ordinary mortals to look upon, and even now when his name is mentioned, all of the old-fashioned Japanese make a low bow. After death the emperors became deities and were enshrined with the other gods.

Since 1868, however, the emperor has gradually taken the reins of power more and more into his own hands until he is now quite as much the ruler of this country as King Humbert is of Italy or Francis Joseph of Austria. He does not show as much nervous activity as Emperor William, but he has more to do with the administration of affairs than Queen Victoria or the regent of Spain. He presides quite often at the meetings of the cabinet and usually attends the sessions of the privy council, which is a consulting and advisory body, composed of princes of the imperial family, prominent members of parliament and men who have retired from the ministry with distinction. While he is sensible enough to keep his hands off the executive branches of the government, and permits his ministers to look after details, he requires them to consult him concerning all matters of public policy and to report promptly all events of importance. For example, every important order that was issued from the navy or war departments during the last year was submitted to him before it was promulgated, and a copy of every report from the seat of war in China and Korea has been furnished him as soon as received.

He takes a great interest in industrial and commercial affairs, and has often added from his privy purse to the subsidies voted by parliament for the encouragement of new enterprises. He examines closely into the revenues and expenditures of the government, and only a few days ago, I understand, he had a long and serious conference with Count Ito, the prime minister, concerning the proposition to increase the revenues by additional taxation. Count Inouye, who has recently returned from Korea, spent two hours with him yesterday, according to the native newspapers, answering questions and making his report.

The emperor was only 16 years of age when in February, 1868, he received the envoys of foreign nations at the palace at Kyoto with uncovered face. Before that time no foreigner had ever looked upon the mikado and the eyes of his own subjects had seldom seen his divine person. He concealed himself even from the nobles of the court and at his reception the throne was protected by curtains.

The ancient throne of Japan is now on exhibition in the Imperial museum in this city—the one that was used until about twenty years ago. It consists of a platform eighteen inches high and about twelve feet square. The floor is covered with the thick matting that you find in every house, and was spread with rugs of exquisite embroidery; while in the center was a silken cushion, upon which his imperial majesty squatted like a tailor or a Turk. Handsomely carved and lacquered posts supported a square canopy made of white silk, delicately embroidered with the mikado's crest. This canopy concealed him from all eyes except those of his personal attendants, through whom he communicated with the public and who draped him in his imperial robes. Some of those robes are now exhibited in the same room with the throne, along with a lot of swords and saddles and other military equipments that were worn by the shoguns, and cases of earthen images of men and horses that were used for interment in the graves of illustrious personages after the custom of burying the chief retainers alive with their lords was abandoned.

Here also can be seen the ancient imperial carriage, which was drawn by a bullock, the palanquins in which the mikado and the shogun and the members of the imperial family used to ride about, and a model of the state barge, which was known as the "ship of heaven and earth," and was propelled by sixty-four oars, like the galleys which Anthony and Cleopatra used to ride around in.

"In an adjoining room are several cases containing relics of Chrisitanity that were left in Japan when the Franciscan and Jesuit missionaries were driven out of the country nearly 300 years ago. St. Francis Xavier spent most of his life here, and might have evangelized Japan, for noblemen, Buddhist priests, men of learning and military commanders embraced the faith with the same alacrity as the poor and ignorant, and by the year 1582 the number of Japanese professing the Christian faith was estimated at 1,000,000 souls. And so favorable were both the princes and the people that they sent an embassy to the pope to beseech his favor and acknowledge his supremacy. But in 1596 an edict was issued by a shogun, who thought the people ought to worship him instead of God, expelling every missionary and commanding every convert to renounce the faith.

Many of the presents that were brought from the vatican are preserved and exhibited in the museum, with holy pictures, rosaries, crucifixes and other emblems of religion that were concealed by the faithful during the persecution; and there are several curious flumisitia or "trampling boards"—oblong blocks of metal with figures of Christ and the crucifixion, the descent from the cross, the Madonna and child, and other representations of the most sacred character, upon which persons suspected of the crime of Christianity were obliged to trample in order to testify to their abjuration of the "depraved faith."

But the emperor wears no embroidered robes today, and his throne is simply a gilded chair, from which he can see the members of his court, and no screen of silk conceals him from them. While he is not as accessible as some of the European sovereigns, and never appears in public except upon the most solemn functions of state, he has become a familiar figure to the upper classes and the members of the diplomatic corps who are invited to the palace several times a year and are asked to accompany him at military reviews, the inauguration of public enterprises and on other occasions when his majesty participates.

The palace grounds include twenty-six acres, to which strangers are never admitted except upon the invitation of the sovereign or by a permit from the minister of the household, which is exceedingly difficult to obtain. There are riding courts, rifle ranges, gymnasiums, groves, gardens, fish ponds and other facilities for exercise and amusement, but his majesty seldom utilizes them, for he is not fond of sport, and is afflicted with rheumatism to an extent that often seriously interferes with his movements. He has several palaces in different parts of the country which he never visits, and magnificent game preserves where he never shoots. There is an imperial yacht in the navy also, but he never goes to sea.

He is of a serious temperament, lacks social qualities and is so occupied with ceremonies and receptions that he has very little time to himself. From all I can hear he works as hard as President Cleveland and has an equally solemn sense of his responsibilities. Some years ago he attempted to learn English and German, but gave them up as a bad job. On public occasions he wears a heavily frogged and gilded uniform as generalisimo of the army, with a sword of modern pattern in a golden scabbard and a hilt loaded with diamonds and other jewels. But in the privacy of the palace he is said to wear the kimono of his race, which he finds much more comfortable, and sits upon the floor like any ordinary Japanese.—William E. Curtis, in Chicago Record.

HE HAD ENOUGH FOR EVERYBODY.

"I see, remarked the wide-awake farmer, "that wheat has gone up to 70c in Chicago, and there's a report that it will keep going till it gets to a dollar. Now I'd like to contract to sell you my crop for 70c. Seventy cents will do me. I'd rather have a sure thing while it's goin' than to take my chances of doin' better by waitin'."

"But," replied the commission merchant "I can't agree to contract for your wheat at 70c."

"Why not? It's goin' up to a dollar, an' you'll make 30c a bushel. Ain't that enough?"

"Oh, yes; but you see, that 70c is only a speculative price. It ain't what they pay for real wheat."

"Don't pay that for real wheat? What in thunder do they pay it for, then?"

"Why, for options."

"Well, what in blazes are options?"

"Why, they're promises to get wheat and sell it for such and such a price."

"Well, then, they got to get the wheat, ain't they?"

"No; they sell the promises again, according as the market rises or falls."

"An' don't they buy and sell any real wheat at all?"

"Not much."

"Just buy and sell wind at 70c a bushel?"

"That's about it."

"Thunder an' Mars, wish I'd knowed that last fall! I wouldn't a sowed any wheat. I'd tied my grain bags to the back o' my fannin' wheel an' kept the boy turning it all winter, till I'd filled all the bags I could get hold of. But it ain't too late, yet. By gosh, if it's wind they want 'stead of wheat, I can supply the market for the hull country off my farm."—Buffalo Express.

KEEP YOUR HAND STILL.

Thought provokes action. Think of doing something, and, unconsciously, perhaps, you begin to do it. We might almost say that thought is action. A good proof of this is found in the movements of the hand.

In the University of Wisconsin Professor Jastrow has an instrument called the automatograph, which shows very clearly and precisely the automatic movements of the hand.

It consists merely of a piece of glass resting on three movable metal feet, or in other words it is a small carriage which will shift its position at the slightest movement.

At the end is a needle, fixed vertically and in contact with a roll of paper covered with a layer of lamp-black. If the apparatus moves the movement is traced on the paper by the needle.

It should be mentioned that both paper and needle are hidden by a screen.

Professor Jastrow tells you to rest your hand upon the glass and keep it perfectly still. This appears quite easy, but when you think that your hand is quite motionless you find, to your surprise, that the needle is tracing the lines on the paper.

The fact is, you cannot keep your hand still; unconsciously and invisibly it moves with your thoughts. Look at that pair of scales; watch how the rod goes this way and that way as the scales move. Now look at the black paper; you will find that your hand has been moving exactly in agreement with the movement of the rod.

A KING'S SHIN BONE.

During Dr. J. J. McGovern's recent stay abroad he ran across many interesting things and had many funny experiences.

Down in Egypt, while doing the pyramids, he had as a guide an accommodating Bedouin sheik named Abdullah, who, by virtue of being the seventh son of the cousin of some notable, was able to give the doctor extra-privileges. He let the doctor climb the pyramids alone, and finally led him into a recently opened cave or tomb dating from the time of the Rameses.

A number of bones were visible, and Dr. McGovern asked if he might take one as a souvenir.

Abdullah immediately had a righteous spasm and grew pale with holy horror as he rehearsed the penalties for such a sacrilege. On the production of a good-sized coin, however, he thought he would like to see how the scenery looked from another elevation and left the doctor alone.

"I crawled on my hands and knees," Dr. McGovern said, "and finally, after rummaging around, emerged from the tomb with the shin bone of an ancient Egyptian king. I had lots of fun over that shin bone."—Chicago News.

Police Inspector—It was very plucky of you, ma'am, to have set upon the burglar and so ably captured him, but need you have injured him to the extent of necessitating his removal to the hospital? Lady—How did I know it was a burglar? I'd been waiting up for three hours for my husband! I thought it was him.

UNCLE SAM'S MULES.

An Invaluable Beast in America's History.

HE CAN PULL AS MUCH AS A HORSE.

Frequently Without a Bite of Hay or Grain for Four or Five Days at a Stretch.

Unless you have seen actual war you can hardly imagine what an immense number of wagons an army requires. There are so many things that must be taken along. Amunition, food, clothing, medicines and surgical appliances, tents, forage for the animals and materials for the repair of the wagons themselves form the bulk of the baggage, but there is a deal of miscellaneous stuff besides. Indeed, the supplies required are so great that a large force cannot operate more than 100 miles from its base without clinging to a railroad or navigable stream.

If we take an army corps at its average strength, say 25,000 men, it would need a train of from 600 to 1,000 six-mule teams. This immense train would stretch for ten mlies behind the troops. It would cost about $1,000 per team, or from $600,000 to $1,000,000.

An army contains from two to eight corps, each requiring the transport facilities above stated. Just before the battles of the Wilderness the Army of the Potomac had 125,000 men. The train consisted of 4,300 six-mule wagons and 835 ambulances. In addition to this each man carried on his person fifty rounds of ammunition and three days' cooked rations, while three days' beef ration were driven on the hoof.

When the terrible battles took place this great number of ambulances was only sufficient for use on the field. The wounded had to be transported to the rear in wagons that were going back for supplies. As those wagons were wholly without springs you may imagine that the poor soldiers endured great suffering.

The 15th, one of the four corps that marched with Sherman to the sea, numbered 20,000 men at the start. It had 856 six-mule teams and 150 ambulances; 225 wagons were loaded with ammunition, 300 with rations and the remainder with miscellaneous supplies. Eight wagons had nothing but shoes and socks. Each wagon at the start carried five days' forage for its own team, but after the campaign was well under way this item ceased to be carried. Sherman's famous "bummers" found plenty among the farmers.

When an army moves it would be impossible for the troops and their supply wagons to march on one road. If they did the column might be a hundred miles long. Instead it is customary for the different corps, each with its own train, to march on separate and parallel roads.

Before the war the regular troops out West performed some wonderful marches, relying wholly upon supplies carried in wagons. Railroads did not exist in that part of the country—in fact, it was a wilderness.

In 1857 the Sixth Infantry marched from Fort Leavenworth, Kan., to Benicia, Cal., a distance of 2,100 miles. The journey took six months. The immense wagon train of 149 six-mule teams was under charge of Captain Hancock who afterward became famous. Hancock did not lose a wagon or even a wheel on the entire trip, and in his conduct on this occasion gave evidence of the great ability which he afterward exhibited as a general officer during the war.

As a draft animal for our baggage wagons the mule has been used for a long period. He can pull as much as a horse and can better stand the poor food and rough service which are necessary accompaniments of a campaign. We tried horses in 1861, but on account of the immense numbers of them which died from exposure and hard work the experiment was quickly given up.

Mules are abundant in this country, and of the very best quality. St. Louis is probably the best mule market in the world.

Some one has called the mule the best soldier we had in the war. It is certain that the services he rendered are beyond calculation. Some teams were conspicuous, as witness the history of this one. It was fitted out in Berryville, Md., in April, 1861. A year later it was transferred to Washington and in May was sent to Fort Monroe to join McClellan's army. It followed the latter up the peninsular, was at the siege of Yorktown, the battle of Williamsburg and in the swamps of Chickahominy. Participating in the Seven Days' battles, it finally brought up at Harrison's Landing, whence it went back to Washington. It then hauled ammunition for the second battle of Bull Run, followed the army to Antietam, and from there to Fredericksburg. When General Hooker took command of the army it went with him through the Chancellorville fights. In 1864 we find him at City Point with Grant. It served with him until the war closed, and a year later was in Washington as ready for duty as ever.

The team was frequently without a bite of hay or grain for four or five days at a stretch, and nothing to eat but what they could pick up by the wayside. There were times also when they went without water for twenty-four hours. Those mules should have been tenderly cared for during the rest of their lives and never worked except for exercise.

Teams of six mules each are the standard for army use. The driver rides the near wheel mule, and uses instead of reins a leather strap attached to the bit of the near leader. He manipulates the brake with another strap. The wagon is large and very strongly built, each piece having its dimensions and material determined from experience. Wagon covers are white canvas, and have printed on each side in large letters the contents of the wagon and the name of the regiment, etc., to which it belongs.

The British use all sorts of animals and conveyances for their baggage. This results from the widely scattered countries in which they serve.

In the Ashantee war they used coolies, for no animal could live upon the Gold Coast. Men, women and children were employed. They carried the loads upon their heads, the common load being 50 pounds for a man, 40 for a woman and less for a child. Each battalion of 650 men had as many carriers.

In India and South Africa the British use oxen. They are somewhat slow, but require but little care and thrive upon poor food. They will stand fire better than any other animal.

The camel is another animal used for carrying baggage, but only under the pack-saddle. The pack camel will make from two to three miles an hour for any length of time, will carry a load of 400 pounds and go without water four or five days. For the reason that he is so well adapted for use in the desert the British employed many camels in the recent Soudan campaign.

The camel has some disadvantages from a military standpoint, however. He is very delicate in constitution and is subject to diseases but little understood. He must also have proper food and plenty of it. Lord Wolseley states that the daily ration for a good-sized camel is 20 pounds of dry or green fodder, together with 8 pounds of barley flour. The latter is made up into a paste ball and rammed down the camel's throat.

The British consider the elephant the king of beasts of burden, although, of course, he can only be used in warm coutries. The elephant becomes fit for work at 20 years of age, and lasts until he is 80. He can pack 1,200 pounds upon his back and haul a much larger load. He will not stand fire, however, and that is a very serious drawback. The usual ration for an elephant is a large, thick cake, consisting of 25 pounds of wheat flour mixed with 1 pound of molasses. In addition he is given 400 pounds of green food, such as sugar-cane. He will drink thirty gallons of water per day.—Philadelphia Times.

THE COMING CORN CROP.

Exports of corn for the fiscal year ending June 30th aggregated 25,507,753 bushels, which was the smallest total of any year since 1887-88. The largest annual export of corn from this country was in the year following the big production in 1889, when 101,973,717 bushels were sent abroad. Even in that year the shipments were a trifle short of 5 per cent. of the yield, and in no other year on record has the exportation of corn equaled that percentage of the production. But corn is the food basis of a very important class of exports in the form of meat products and lard, and the effect of a large or small yield upon the foreign trade of the country is not to be measured by the exports of the cereal alone. The big corn crop now in prospect could supply material for record breaking exports, both of grain and provisions; but in addition to its effect upon international exchanges it would be of vast benefit in cheapening the cost of many food products which have been inflated in price by the recent shortage in the production of corn.

An increase of 1,000,000,000 bushels in the yield of corn would probably cause a marked reduction in the price. But if the latter should fall to the lowest average in recent years, which was 28.3 cents on the farms in December, 1889, the crop of 2,200,000,000 bushels now foreshadowed would be worth nearly $100,000,000 more to producers than the yield of last season, even at the highest prices at which it has been marketed. The country is to be congratulated on the present favorable promise of this important crop; and its progress through the critical stages of its growth that are yet to come will be carefully watched, not only by the speculators in grain, but by the entire business community, whose interests may be vitally affected by the issue of the corn harvest.—Philadelphia Record.

ELI PERKINS' LECTURE EXPERIENCES.

"One day," said Eli Perkins, in narrating his lecture experiences, "a young gentleman came to me on the Boston and Maine train, and smiling and bowing politely, asked me if I was the gentleman who delivered the lecture before the Portsmouth Y.M.C.A. the night before.

"'I am,' I said, with some pride.

"'Well, I want to thank you for it. I don't know when I ever enjoyed myself more than when you were talking.'

"'You are very complimentary,' I said, almost blushing, 'very complimentary. I am glad my humble effort was worthy of your praise,' and I took the young man warmly by the hand.

"'Yes,' continued the young man, 'it gave me immense pleasure. You see, I am engaged to a Portsmouth girl, and her three sisters all went, and I had my girl in the parlor all to myself. Oh, it was a happy night!—the night you lectured in Portsmouth. When are you going to lecture there again?'"

Advices from Tarsus, Asia, Minor, say a mob attacked the American school in that place and maltreated several students and threatened the missionaries.

INYO INDEPENDENT.

Irv. H. Mulholland,
ITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY, SEPTEMBER 27.....1895

It is cheering to learn that the New York Republicans have resolved upon going into battle this fall shouting for "reform;" but when the dispatch goes on to say that "Thomas Platt dominates the situation" our enthusiam becomes "sicklied o'er with the pale cast of thought."

The latest sensation in Chicago has been caused by a judge named Payne, who, in charging the Grand Jury, said: "The man who is guilty shall be punished whether he is too poor to hire a lawyer or rich enough to buy the bar." The Judge is believed to have aimed his lick at the big meat-packers who are charged with tapping the water mains with secret pipes.

One of the side topics that engages discussion in the East just now is a proposed constitutional amendment providing for a Presidential term of eight years, ineligibility of re-election, and the making of ex-Presidents United States Senators for life. The discussion is of course a sort of debating society politics which the big West is to busy to take part in just now.

Before another international yacht race is run for the America's cup perhaps it would be well to call out the navies of England and the United States and order them to clear the sea for ten miles on each side of the limits of the racing area, with orders to sink any vessel that transgressed the ten-mile limit. It might be necessary to sink four or five excursion steamers, with all on board, but then the momentous question could in that way be settled satisfactorily to all concerned and the country could be at peace, but in no other way does it seem possible to meet the lordly requirements of the Earl of Dunraven.

After the McKinley act went into effect there was no increase in the wages of workingmen in a single factory in the United States. On the contrary wages steadily declined, reaching their lowest point while that law was still in operation. Since the Wilson act has been in force, now a little more than a year, wages in protected manufactories are up to their highest point under the protective tariff, and the tendency is still upward. The iron workers in the South have had their pay increased twenty percent in the last four months.

Another decisive victory for the rebels is reported from Cuba. In this case it appears that the royal forces engaged the rebels in a hot battle, large bodies of men being involved on either side. But the rebels had a force of 1,200 men in ambush along a hill ridge. To the foot of this hill the fight finally proceeded, when the ambushed force suddenly poured out of hiding and hemmed the Spaniards between two armies, the result being the discomfiture of the Spaniards and their rout. If this be true, Spain needs to send better Generals to Cuba. Really, the Cubans have made such headway that the matter of recognizing them as belligerents is now only a question of a short time. It must come.

Thoughtful observers agree with the opinion of Justice Brewer of the Supreme Court of the United States, who declares that "in criminal cases there should be no appeal." The demand for a new trial should be decided by the trial Judge who has heard the testimony. As Justice Brewer truly remarks: "You can trust a jury to do justice to the accused with more safety than you can an appellate court to secure protection to the public by the speedy punishment of a criminal. An appellate court decides on minor technical points and its only ground for reversing a verdict is the contention that too much truth has been put before the jury. Its work, at all times, where it does not confine itself to approving what has been done, is to whittle away the privilege of the jury to hear the evidence in the case. It would sweep away the most serious abuses of the criminal law if the right of appeal to the Supreme Court were abolished. Between the jury, the trial Judge with the power to grant a new trial and the Governor's of computation and pardon, there is little danger of injustice being done the accused. And the law would then be a protection to the innocent.

Starting In With Sheep.

First—Study your farm conditions and learn exactly what sheep will thrive best upon it. Second—If you are not able to purchase even a small flock of pure bred or high grade sheep then put all you can advantageously in a pure bred ram, and after that do the best you can in buying ewes. Start right, even if upon a small scale. The sheep will rapidly increase. Third—In purchasing a ram get one fully developed, strong in bone, straight shaped and thoroughly typical of his breed and sex. I have always had an intuitive liking for the lamb that will leave a group of his fellows in the field and boldly front you. Fourth—Do not purchase sheep that you have to trust in for proper development. It is only the experienced breeder who can forecast development. Fifth—Never take an ill doing sheep, even if it is cheap, with the expectation that it will become right. Sixth—In selecting sheep if possible handle them so that you may know how much of their form is due to themselves and how much to the shears. Seventh—Select as critically as you can to a chosen type. Uniformity is a cheap feature for you to buy, and yet a valuable one in a flock. Eighth—There is no sheep that embodies perfection in sheep qualities. Judging between different sheep is a checking of weakness and a balancing of qualities. Be inclined toward the sheep that appears to be better every time it catches your eye. Ninth—The purchaser will find it to his interests to select from the field sheep, and thereby shun those that have been fitted for show. Tenth—The best time to buy is usually in the fall. Provision may be made with the seller to have the ewes served by a ram of different breeding from the one you buy, and thereby you add another season's use to the ram of your flock.—St. Louis Post-Dispatch.

More Sorghum Testimony.

A Minnesota farmer tells in Farm and Fireside that it is the freezing of the green plant which makes second growth sorghum poisonous to stock. Freezing, together with warm sun after the frost, causes the juice to ferment. This taken into the stomach while in a state of fermentation causes such a rapid accumulation of carbonic acid gas that the stomach is distended and inflamed, causing great pain. Finally all of the intestines are involved, with extreme suffering, and death ensues.

ALIAS SUMMONS

IN THE SUPERIOR COURT OF THE COUNTY OF KERN, STATE OF CALIFORNIA.

S. Bachman, Plaintiff, vs. Domingo Etcharren, John Iribarne, Frank Cathery, S. Heineman and L. Bachman, copartners doing business under the firm name and style of S. Heineman & Co. John Doe and Richard Roe, Defendants.

THE PEOPLE OF THE STATE OF CALIFORNIA, send greeting to Domingo Etcharren, John Iribarne, Frank Carthery, S. Heineman and L. Bachman, copartners doing business under the firm name and style of S. Heineman & Co. John Doe and Richard Roe, Defendants.

You are hereby required to appear in an action brought against you by the above named plaintiff in the Superior Court of the County of Kern, State of California, and to answer the complaint filed therein within ten days (exclusive of the day of service) after the service on you of this summons, if served within this County, or if served elsewhere within thirty days.

Said action is brought to obtain a judgment of this Court for the foreclosure of a certain chattel mortgage described in said complaint, duly acknowledged, verified, executed and delivered by said defendant, Domingo Etcharren to John Iribarne, on the 17th day of May, 1894, to secure the payment of a certain promissory note, or instrument in writing dated May 17th, 1894 for the sum of Four Thousand Dollars, U. S. Gold Coin, payable twenty four months after date with interest thereon from date at the rate of one per cent per cent per month, payable monthly, and if not so paid the whole sum of both principal and interest thereof to become immediately due and collectable, at the option of the holder of said note, or instrument in writing, which said note or instrument in writing, after the making, execution and delivery thereof, was duly endorsed and delivered by said John Iribarne to the firm of S. Heineman & Co. and on said last mentioned day, said John Iribarne duly assigned said chattel mortgage to said firm of S. Heineman & Co. and afterwards, to wit: on the 28th day of September, 1894, said firm of S. Heinman & Co. for value received, sold, assigned and delivered said promissory note or instrument in writing and said chattel mortgage to the plaintiff. Said mortgage conveyed the following described personal property which said property was at the date of the execution of said chattel mortgage in the County of Inyo, but is now and for more than one month last past has been in the County of Kern and is described as follows: Thirty eight hundred head of sheep marked "D" and having an underbit and overbit on each ear, together with the wool thereon and the increase thereof; also four horses two mules, two wagons and two sets of harness and camping outfit; that the persona property conveyed by said mortgage be sold and the proceeds applied to the payment of said sum of Four Thousand Dollars, U. S. gold coin principal with interest thereon at the rate of one per cent per month from the 17th day of May, 1894 and costs of suit, and in case said proceeds are not sufficient to pay the same then to obtain a judgment and execution against said defendants Domingo Etcharren and John Iribarne, for the balance remaining due, and also that said defendants and each of them, and all persons claiming by, through or under them, or either of them, may be barred and foreclosed of all right title, lien, equity of redemption and interest in or to said mortgaged personal property, and every part thereof, and for such other and further relief as may be just, all of which will more fully appear by said complaint on file herein, to which you are referred for further particulars.

You are hereby notified that if you fail to appear and answer said complaint, said plaintiff will apply to the Court for the relief demanded in said complaint.

Witness my hand and the seal of said Superior Court of the County of Kern, State of California, this 13th day of June 1895.

[SEAL] F. W. CRAIG, Clerk.

T. M. McNAMARA, Attorney for Plaintiff.

NOTICE TO CREDITORS.

Estate of IDA ADELIA WALKER, deceased.

NOTICE IS HEREBY GIVEN BY THE UNDERSIGNED, Administrator of the estate of IDA ADELIA WALKER deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice to the said Administrator at the town of Big Pine in Inyo County, California, the same being the place for the transaction of the business of the said estate in the said County of Inyo.

R. W. THOMAS,
Administrator of the estate of Ida Adelia Walker deceased.

Dated at Independence, Inyo Co., Cal., September 21, 1895.

ORDER OF SALE AND DECREE OF FORECLOSURE AND SALE.

Friederike Rhine, Plaintiff, vs. Eliza M. Hannagan, John H. Parish, W. C. Doane and Thomas Crellin, Defendants.

Under and by virtue of an order of sale and decree of foreclosure and sale, issued out of the Superior Court of the County of Inyo, of the State of California, on the 18th day of September A. D. 1895, in the above entitled action, wherein Friederike Rhine, the above named plaintiff, obtained a judgment and decree of foreclosure and sale against Eliza M. Hannagan, John H. Parish, W. C. Doane and Thomas Crellin, defendants, on the 17th day of September A. D. 1895 for the sum of Two hundred and forty six 30-100 ($246.30) dollars in United States Gold Coin, besides interest, costs and counsel fees amounting to the further sum of $105.30, which said decree was on the 18th day of September, A. D. 1895, recorded in judgment book 1 of said Court, at page 518, I am commanded to sell all those certain lots, pieces or parcels of land situated, lying and being in the County of Inyo, State of California and bounded and described as follows: The East half of the North-east quarter of Section Thirty-one and the West half of the North-west quarter of Section Thirty two, in Township Fourteen, South of Range Thirty-six East Mount Diablo Meridian, containing 160 acres; together with all and singular the tenements, hereditaments and appurtenances thereunto belonging, or in anywise appertaining. Public notice is hereby given that on Tuesday, the 15th day of October, A. D. 1895, at 12 o'clock M. of that day, in front of the Court House door of the County of Inyo I will in obedience to said order of said decree of foreclosure and sale sell the above described property or so much thereof as may be necessary to satisfy said judgment, with interest and costs, etc., to the highest and best bidder for gold coin of the United States.

Dated the 18th day of September, 1895.

A. M. GIVEN,
Sheriff.

P. H. MACK, Attorney for Plaintiff.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY the 8th day of March 1892, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit: Commencing at the South-east corner of the south-east quarter of North-east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 98-100; thence North-east following the meanderings of the bed of the Creek along its North branch to Edwards street, in the town of Independence, thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hallahah, deceased, at the time of his death.

Lots Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dispricada Lode."

That certain lot, piece or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the north-west quarter and the North-east quarter of Section No. twelve (12), and the South-west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardine Base and Meridian, running thence South sixty-eight and eleven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence North-westerly along a small branch or swale to a point twenty four (24) rods North of the general corner of the North East quarter and the South east quarter, and the North-west quarter and the North east quarter of the North-west quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres: Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Gash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court Deed at the expense of purchaser.

WILLIAM L. HUNTER.
Executor of the Last Will and Testament John Allen Hannah deceased.

KENDALL'S SPAVIN CURE.

STAR, LANE CO., OREGON, Feb. 8th, 1892.
DR. B. J. KENDALL CO.,
Dear Sirs:—I have used your KENDALL'S SPAVIN CURE for the last twelve years never being without it but a few weeks in that time and I have made several wonderful cures with it. I cured a Lump of long standing. Then I had a four year old colt badly Sweenied; tried every thing without any benefit, so I tried your liniment, and in a few weeks he was well and his shoulder filled up all right, and the other, a four year old that had a Thoroughpin and Blood Spavin on the same joint, and to-day no one can tell which leg it was on. These statements can be proven, if necessary; the four year olds are now seven and can be seen any day at Cottage Grove, Or. S. Z. PAXTON.

—Price $1.00 per bottle.—

METAL MARKET.

Following are the latest prices quoted in the San Francisco metal market:

Refined silver, per oz	$ 66¾
Antimony	8
Borax, refined, in car lots	5¼
Pig lead	3.30

Religious Services.

Order of services until further notice will be as follows:

Independence—Every Sunday evening at 7:30 o'clock.

Lone Pine—Every Sunday morning at 11 o'clock, except the second Sunday in the month, and the Thursday evening before the second Sunday of each month at 7:30 o'clock.

Fort School House—The second Sunday in the month at 11 o'clock a. m.

Georges Creek—The first and third Sunday of each month at 2:30 o'clock p m

All are cordially invited to be present at these services.

Thos. H. NICHOLAS,
Pastor.

BORN.

ALBRIGHT—At Bishop, Sept. 20, 1895, to Mr. and Mrs. Geo. L. Albright a son.

C. B. Rawson was down from Bishop last Monday.

Regular meeting Inyo Lodge No. 221 F. & A. M to-morrow evening.

Jack Black and Chas. Walter came down from Bishop yesterday, returning to-day.

The Milton school opened last Monday in charge of Mr. F. Moore, a graduate of the University of Wisconsin.

Julian Eibeshutz arrived home last Friday from a two weeks pleasantly spent vacation at San Francisco.

Jack Dunphy has very much improved in health since leaving here and will doubtless be all right again soon.

Mrs. Maggie P. Goodale was down from Fish Springs a couple of days this week on business in the Probate Court.

Judge Arnot will return to his home at Alpine county to morrow. He expects to be here again about the 15th of October.

Joseph Shelly and Mrs. William McLaren were down from Bishop early in the week on business in the U. S. Land Office.

The Board of Supervisors met last Monday evening to fix the valuation of the C. & C. R. R, for assessment purposes.

Neil McLean got back from Cerro Gordo last Sunday, where he had been hauling ore for Pat Clinton. About twenty-seven tons were shipped.

Mrs. F. W. Bedford and children went north on yesterday's train to Bishop where she will visit with her parents, Mr. and Mrs. Wm. McDonald.

J. C. Miller was down from Fish Springs last Monday. He has leased his ranch and will re-open the J. J. Gunn saloon on Edwards street about the first of next week.

Tom Webb came down from Long Valley on Tuesday and will return to day for the purpose of bringing down the cattle for the winter. The cattlemen of this vicinity sold four hundred and fifty-six steers to Sinnamon of Bridgeport.

The Independence String Band will give a grand ball on the last evening of the Teacher's Institute to be held at Independence some time during November next. Full particulars will be given as soon as arrangements are completed.

George Lewis and Ben T. Williams are at work on the mine owned by Lewis & Gorman at Poverty Hill and have taken out about six tons of good ore. They are now sinking a new shaft which when completed will greatly facilitate operations.

Chas. Anthony spent several days in town early in the week. He got back last week from a stay of over a week at Los Angeles. He has sold his mine in the Panamint range to Los Angeles parties who are now on the way with a five stamp mill to be erected at the mine.

The Carson & Colorado has made a special rate from Independence to Bishop and return of $2.00, good from October 8th to 10th and limited to October 14th. This is a reduction of one-half of the regular rate and is made on account of the District Fair. The railroad people have always given every assistance in their power to the local fairs, both in the way of hauling exhibits free of charge and in low rates of fare.

COURT NOTES.

HON. N. D. ARNOT, presiding.

FRIDAY, Sep. 20, 1895.

Lacey vs. Rossi—Case continued until Saturday, Sep. 21st.

People vs. Ma Que—Defendant found guilty of selling intoxicating liquor to Indian.

People vs. Howe—Testimony taken at trial ordered transcribed by official reporter.

SATURDAY, Sep. 21. 1895.

Friderike Rhine vs. Ah Joe et al—Case stands submitted.

Lacey vs. Rossi et al—Judgment ordered for plaintiff.

P. Beyeya and Frand Hayata, Insolvent debtors—Ordered that Bertrand Rhine, assignee of Insolvent debtors immediately file with Clerk proper vouchers in subject of financial account as such assignee filed with Clerk March 25, 1894.

Woodin vs Anthony—Demurrer to amended complaint overruled and defendant allowed ten days in which to answer

Estate of Frederick Reynolds, deceased—Fee of attorney fixed at $100.

Estate of Jonathan Brown, deceased—Estate assigned to Mrs. Allie R. Brown.

Estate of F. M. Turner, deceased—Miss Josie Turner appointed administratrix.

Estate of Ida Adelia Walker, deceased—R. W. Thomas appointed administrator. William McDonald, Jacob A. Shoemaker and S. H. Spratt appointed appraisers.

Estate of Ida Adelia Walker, deceased—Order of publication of notice to creditors.

Estate of Frederick Reynolds, deceased—Order approving sale of personal property.

Estate of James Daley, deceased—Order to sell real estate issued.

TUESDAY, Sept. 24, 1895.

People vs. Howe—Time for pronouncing sentance continued until Friday, 20th

WEDNESDAY, Sept. 25, 1895

Victor Trepier vs. Jaques Jalberque et al—Demurrer sustained, plaintiff given ten days to answer.

County of Inyo vs. Pedro Erro—Demurrer overruled and defendants given ten days to answer.

County of Inyo vs. Jaun Inda—Demurrer overruled and defendants given ten days to answer

Friederike Rhine vs. Ah Joe et al—Plaintiff allowed judgement against Ah Joe, Bok Sam, Charley Ling and Ah Man in the sum of $887.30.

Friederike Rhine vs. Leauteaud and Meyer—Plaintiff given permission to proceed against Leauteaud as member of the firm of Leauteaud & Meyer.

THURSDAY, Sept. 26, 1895.

In the matter of John Barnes, M. V. Barnes and H. J. Robinson, insolvents, final accounts were heard and the various assignees discharged.

The following dates of trials were fixed: Sherman vs. Wrinkle, Wise vs. Collins and Bell vs. Spratt, October 15th; Carroll vs. Clinton, October 17th; Woodin vs. Tourniel, October 18th; County of Erro, October 21; County of Inyo vs. Inda, October 22d.

Mairs vs. Maylor—Plaintiff declines to amend amended complaint.

Estate of James Daley, deceased—Issued order of sale of real estate.

FRIDAY, Sept. 27, 1895.

People vs. Frank Howe—Counsel for defense submitted a motion for a new trial, which was denied by the Court and the defendant sentenced to two and a half years at Folsom.

People vs. Ma Que—Defendant sentenced to fifteen months at Folsom.

In the Howe case the defendant asked as a special favor of the Court that the place of his incarceraton be changed to San Quentin, which was taken under advisement.

GRAND JURY'S REPORT.

To HON. N. D. ARNOT,

Acting Judge of the Superior Court of the County of Inyo.

We the Grand Jury impanelled by you on the 24th day of September, 1895, respectfully submit the following report.

We have examined the public buildings and jail, and find all in good condition, with the exception of the window in the County Treasurer's Vault, which is very insecure. We recomend that bars be placed across the same.

We have examined the books and records of the several County Officers and find them to be kept in a neat and proper manner; they having been expeted this year did not deem it necessary to make a rigid examination.

We have visited the County Hospital and find four patients there, it is kept in a neat and orderly manner; have conversed with the patients and find them well satisfied with their treatment.

Upon information and investigation we find that the Board of Supervisors are pensioning men and women in the several parts of the County, thereby exceeding their authority and violating the law; We therefore recomend that they do not grant any pension to any indigent person that can be removed to the County Hospital, andthat all pensions be discontinued.

We recomend that the Supervisors, for their own protection, require the District Attorney to render all legal opinions in writing and file the same with the papers pertaining to the subject matter all of which is

Respectfully submitted.
NORRIS J. COOLEY,
Foreman.

Ordered that the report be read to the members of the Board of Supervisors at their next regular meeting.

Jury discharged and the Court took a recess.

Wm. Morahan came down from Big Pine on Monday and left for Modock on Wednesday, where he will do some work on a mine owned by himself and J. J. Gunn.

Coroners Inquisition.

He'd at Independence, Cal. September 20 1895 over the remains of one Charles Johnson, Dr. I. J. Woodin, Coroner, presiding. The following were sworn as jurors: James Moffett; Wells Barnes; L. Wood; D. Stubblefield; J. D. Mairs; J. J. Gunn; E. Robinson; J. C Roper. Wells Barnes selected as Foreman.

Body viewed by the jury, cause of death indicated by Dr. J. D Blair and Dr. I J. Woodin

A. M. Given, Sheriff of Inyo County, sworn.

Q.—"What did you notice at the place where the body before you was found?"

A.—"We did not notice anything at that time that would indicate suicide. We went through the house with Mr. Calvert, and seen Johnson on a bed where he had been placed by Mr. Calvert; in the kitchen found a tub about half filled with water in which was considerable blood; there was also a quilt and bench on floor. Mr. Calvert showed us where he had found the wounded man. The doctor examined the wounds and a general search of the premises was made, which resulted in the engineer, I think it was, finding the hatchet and knife in the tub."

Articles, hatchet and tableknife exhibited and identified by witness.

An examination of the wounded man disclosed two or three gashes in his head.

J. H. McBride sworn:

Q—"Do you recognize this hatchet as one belonging to Mr. Johnson?"

A.—"I could not say positively, it shows no marks of being railroad property."

A. M. Given called:

Q.—"What effects were found that would indicate suicide?"

A.—"There were three letters found which were in the possession of Dr. Woodin, which were not opened until Monday night in the District Attorneys office. They were addressed to Mr. J. F. Beale. One of these letters detailed his indebtedness to various persons, and the fact that he intended killing himself. Another was to Mr. Beale bidding him and family good bye and telling him to take everything, the third was his will in which he bequeathed everything to Mr. Beale."

Mr. Givens recognizes the letters.

There was also a check for pay and $3.10 in coin.

Mr. Given reads letters at request of juror.

J. H. McBride recalled, and recognizes letters as being in handwriting of deceased.

Henry Rhine sworn:

Q—"Are you acquainted with the handwriting of Mr. Johnson?"

A.—"Yes sir. I have a letter here from him which can be compared with those found.

Hands letter to the jury for comparison, identifies writing and signature as that of Charles Johnson.

Q. "What amount of money did Mr. Johnson owe N Rhine?"

A.—"$19 10 He had a pass book which was generally checked up whenever he came to town, and in the meantime bills were sent for goods sent him."

Dr. J. D. Blair called to stand.

Q.—"Do you consider the wounds on body of deceased necessary fatal?"

A.—"I do."

Q.—"Could they have been self-inflicted?"

A.—"Yes, there is a possibility of their having been self inflicted, but I cannot see how it was done.

Q.—"(by Coroner) Don't you think he could have come too after the first blow and inflicted another one?"

A—"Possibly. I am positive he was capable of knowing something for it is evident he used his fingers in the wounds to disturb his brain. His right side became paralyzed."

Max. Christiansen sworn and takes the stand.

Q—"At what time was you at Tibbetts station?"

A.—"About midnight Saturday, the 14th"

Q.—"How long did you remain there?"

A—"Till about eight o'clock the next morning."

Q.—"Did you notice anything unusual there the next morning?"

A.—"No sir"

Q—"Did you see any persons around there?"

A.—"Mr. Calvert, Mr. Calloway and a Chinaman;"

Q.—"Did you hear any unusual noise while there?"

A.—"Yes sir, I heard a noise in the night."

Q.—"About what hour of the night?"

A—"I should judge about midnight. I had been asleep and awoke and thought something was wrong with the animals, and learned it was a racket in the house."

Q.—"Was Mr. Calvert about there on Sunday morning?"

A.—"Yes sir. He asked me if I wanted to go with him up the track and I declined, saying I was going to Lone Pine."

Q.—(by Juror Moffett) "Did yourself and Barrigan leave Tibbetts at the same time."

A.—"Yes sir"

Q—"Did I not meet you alone on the road near Black Rock Sunday morning?"

A.—"Yes sir, Barrigan and I had seperated."

Q.—(by Juror Robinson) "You say you seen Mr. Calvert going up the track Sunday morning?"

A.—"Yes sir. He was going north."

Statement by Coroner: Mr. Johnson was found by Mr. Calvert about 11:45 a. m. Monday. He asked the chinese section where the boss was and their reply was "gone to Big Pine, no come back", Mr. Calvert then went over to the house and trying the doors found them all locked, and upon peering through the kitchen window he seen Johnson laying on the floor in the condition first seen by the Coroner and Sheriff. Mr. Calvert broke into the house by forcing a door and removed Johnson to a bed and raised the alarm.

Evidence closes.

The jury brought in a verdict of suicide.

Weather Summary. Week Ending September 26 1895.

Highest barometer, 26.248, date Sept. 22.
Lowest barometer, 29.551, date Sept. 20.

Observer.

Coolgardie.

Rich new finds are being constantly reported from Coolgardie gold fields. Coolgardie, Australia, is an accessible point, reached by steamer to Fremantle, thence by rail to Southern Cross and team to destination. The trip to Australia on the fine steamers of the Oceanic Steamship Company via Honolulu, Samoa, and New Zealand is pleasure sailing the day long. This line tickets passengers to Cape Town, South Africa. Map of Coolgardie district and Pacific ports reached by the Oceanic Steamship Company is mailed free to any address by the O. S. S. Co. 114 Montgomery St San Francisco.

E. Robinson got down from Long Valley at the end of last week with his cattle. Like all the animals that were summered in the mountains his stock are in fine condition.

SUPERVISORS PROCEEDINGS.

MONDAY, September 23, 1895.
7 o'clock p. m.

Board of Supervisors of the County of Inyo, State of California, met at above stated time pursuant to law.

Present: Supervisors A. C. Freeman' J. R. Eldred, and J. J. Stewart, absent, Frank Shaw and Chairman Frank Fitzgerald.

On motion of J. J, Stewart, seconded by J. R. Eldred, A. C. Freeman was chosen Chairman and ordered as follows, to wit:

Ordered: That pursuant to assessment made by the State Board of Equalization on the fifth day of August, 1895, Assessment of the Carson and Colorado Railroad Company be entered upon County Roll in accordance therewith, as follows:

For the length of 74.25 miles of main track and for franchise, road bed and right of way at a valuation of $2137 14-100 per mile making in the aggregate $158,638

That the number of miles of said railway and the pro rata valuation thereof being in the several school districts are as follows:

Station	school dist.	6¾	miles	$14425 72
Bishop	" "	2	"	4274 30
Warm Spr.	" "	4	"	8548 60
Valley	" "	6	"	12822 88
Big Pine	" "	7	"	14960 02
Fish Sp'ngs	" "	7½	"	16728 60
Taboose	" "	7	"	14960 02
Liberty	" "	6	"	12822 88
Milton	" "	1½	"	3205 72
In'pend'ce	" "	4½	"	9617 06
Union	" "	7	"	14960 32
Lone Pine	" "	15	"	32057 18

Claim of Supervisors for mileage and per diem were examined, approved by the District Attorney and warrents ordered drawn on the Salary Fund as follows:

A. C. Freeman	18 00
J. R. Eldred	14 40
J. J. Stewart	10 80

Whereupon Board adjourned.

A. C. FREEMAN,
Attest: D. J. HESSION, Chairman.
Clerk.

When Lee Surrendered

By SALLIE PATE STEEN.

CHAPTER II.

"This is the ballroom," she said, suddenly stopping.

Before she had time to collect herself she heard the jingle of spurs outside, and a peremptory hand knocked at the door. It was barred and bolted. Before Glen had crossed the floor to open it she was herself again. As she stood with one hand still upon the bolt confronting her visitor the instinct of hospitality, as old as her race itself, forced a sentence from her unwilling lips. "Will you come in," she asked coldly but not ungraciously. An instinct as strong, the instinct of homage to her sex and her beauty, stirred in the man before her. With bared head and a profound bow, he accepted her invitation. His face was very young, Glen thought quickly—as young as the pictured face just opposite. Her eyes had noted the captain's epaulettes upon his shoulders, and his courteous manner reassured her.

"May I speak to the lady of the house?" he asked; "or, perhaps"——

Glen motioned him to a chair. "If you will be seated, I will call my mother," she said, and left the room.

Now, if you had told Captain Campbell ten minutes before that this would be his method of approaching a southern household he would have laughed you to scorn. He had already planned this "move." He had meant simply to state to the owner or owners of the mansion that he required certain accommodations for his men in general and for a wounded comrade among them in particular. This was to be done in that curt, businesslike manner which befitted a Union officer upholding his government when addressing a rebel. And behold, a pair of beautiful eyes, which had looked up fearlessly into his own, had suddenly changed his tactics. The charms of the room into which he had entered completed the transformation he was undergoing.

There was little in it to attract a marauding soldier—there was much that appealed to the refinement of a man who in camp and bivouac had longed for all the sweet amenities of home, and been none the less brave for the longing. He reveled in the scent of the pine logs flickering softly on the hall hearth and mingling their perfume with that of the violets and primroses upon the quaint old tables. He even longed to touch a bit of feminine lacework which was reflected in the polished surface of one of them, upon which it lay. When he rose at the entrance of the lady of the house he bent before her with even greater reverence than that with which her daughter had inspired him. Surely she resembled his own mother, perhaps not in feature, but in that exquisite likeness of expression which all tender mothers bear to each other.

"Madam," he said, "I have no apology to offer for my intrusion but the fortunes of war. Your woods afford but a sorry asylum at this wet season, and a wounded fellow officer under my charge is afraid of suffering from the effects of exposure. I must ask shelter for him and for my men."

He was not wholly unprepared for the gentle courtesy of her reply.

"There are a number of vacant rooms in the house," she said. "They are at your disposal. Perhaps you had better look at them to ascertain if they are sufficient for your force. If not, I may be able to make other arrangements as my family is small. I will send some one to show you over the house."

It was well that he could not hear the troubled discussion which followed between mother and daughter in the next room.

"I am most unwilling, Glen"——

"But, mother, I am not at all afraid, and there is no one else; your going is out of the question. Maum Betsey would never mount the stairs with her 'jints,' and Nelse would betray us on the first landing. Set your mind at rest. Missy shall go with me."

And so it came to pass that Captain Campbell presently found himself following a slender figure, which held a lighted candle high in one hand, up a winding stairway and along a wide hall, with Missy toiling patiently in the rear. It was a strangely silent procession. His guide flitting on, with such quick, light footsteps before him, said nothing but a few words of explanation as they entered one misty, closed uproom after the other; but he was sufficiently occupied in noting the poise of her head, the turn of her rounded wrist, the scant, soft folds of the gown that clung to her young shape. It was of some faint gray stuff—a moth-eaten heirloom of her mother's, if he had but known it—and her only adornment was a cluster of carnations which Missy had fastened at her sister's throat a half hour ago. He thought he had never seen colors so artistically blended.

"This is the ballroom," she said, suddenly stopping before a double door and throwing it open for him to enter. It was with a pang that she did so. Of all the rooms in the house it was in this that she had dreamed the sweetest day dreams. It had been used as a school room of late years, and an old blackboard and some forlorn desks in one corner still bore witness to this profanation, but a raised platform at one end for an orchestra attested its true character, and the floor was as smooth as polished ivory. There was a tradition in the family that Washington had once danced a minuet upon its honored boards, and that here Lafayette had bent the knee in stately courtesy to some fair ancestress of the Helens, but in all Glen's young girlhood it had never echoed to the footsteps of any dancers save those with whom her fancy had peopled it.

"What a fine old room!" said Campbell admiringly. He impulsively put out one foot to try the polished surface, and at the same time Missy, with her short skirts daintily lifted in her chubby hands and her charming head held smilingly to one side, advanced toward him with pretty mincing steps. He looked up, hoping to see her sister's severe young mouth relax, but there was a sudden whiz, the candle was dashed from her hand, and they were in utter darkness. Glen uttered a faint cry, there was a scream from Missy, and for one brief moment the captain felt that these two young creatures shrank toward him for protection, but Glen soon recovered herself.

"It was only a bat," she said calmly, and sure enough, when the candle was found and relit, the ugly creature, scared from some dusty hiding place, was seen circling and swooping over their heads. But they had had enough of exploring. As they retraced their steps the captain insisted upon holding the candle and leading the way, and Missy clung confidingly to his hand, in spite of her sister's whispered remonstrances. When they reached the head of the stairs the small witch put up her arms with a plea to be "carried" which could not be resisted, and before Glen could interpose the captain had shifted his candle to the left hand and swung her up to his shoulder with his strong right arm, to her great glee and delight. All the way down the long staircase Glen bit her lip at the sight of the small, dark head resting so contentedly against the blond one, and when Missy's evening ablutions were performed some hours afterward, her left cheek and her pink right palm were scrubbed so vigorously as to cause complaint. When she came to say her prayers at her sister's knee, Glen stumbled at the sublime plea for forgiveness—"as we forgive those who trespass against us"—and hurried on, with a lump in her throat, to an additional petition.

"And now, Missy, don't forget—God bless mother and Frank and Glen and Maum Betsy."

"And the Yankee man," Missy added gravely, with such exquisite innocence in her serious eyes that the girl could but bow her head at the soft amen.

When the captain and his men moved into their new quarters Missy went over body and soul to the enemy. Aside from the flattering devotion of which she gradually became the object, there were other considerations which appealed to her as strongly. The captain had learned to coax her affections by catering to her taste for dainties—sweet crackers, preserved ginger and other luxuries not unknown to an officer's table—and the pretty gourmand was feasted and petted to her heart's content. But if her humble slave and admirer imagined for an instant that her naive friendliness might act as an opening to some intercourse with the rest of her family he was destined to disappointment.

What a fine network of dignified, yet exquisite, reserve these southern women could weave around them! Day after day Captain Campbell found himself smiling at it, wondering at it, chafing at it. His enforced term of idleness in a lonely country house was a sufficient explanation to himself of any interest he might take in his surroundings. Such an experience of boredom was enough to warrant the degree of pleasure he began to feel in the rare appearance of a girlish form, or the sound of a fresh young voice, which was not often audible. Sometimes he enjoyed the privilege of seeing the grinning Nelse lead a fine old hunter around to one of the side doors of the mansion, and then he would watch breathlessly the breezy grace with which the Virginia girl swung to her saddle. He learned in time that these afternoon rides were not pleasure excursions. They were errands to the postoffice, about five miles distant, upon which Nelse was never trusted, and the captain soon succeeded in approximating so exactly the period required for their performance that the twilight was almost sure to find him at his window in time to watch the return—the thoroughbred skimming over the ground like a bird, while Glen's lithe body swayed easily to his magnificent stride.

But never once did Captain Alan Campbell gain an opportunity of speaking to her after their first meeting. Her mother he saw almost daily, for her woman's heart was not proof against the fact that a sufferer was lying under her roof, and the wounded young sergeant, who was wasting away with fever, had reason to bless her tender ministrations. For awhile the captain found himself hoping that another gentle presence might brighten the sick room, but Mrs. Helen always came alone, and only once did the captain meet his younger hostess face to face. It was one evening when Missy, entirely forgotten by her elders, had made one of her surreptitious visits to the soldiers' quarters, and there, overcome with drowsiness and an excess of sweetmeats, had fallen asleep in Captain Campbell's arms. He could not bear to waken her, and so, with her unconscious little head resting against his breast, he strode down the long hall and ventured to knock at the door of the family sitting room.

It was opened by Mrs. Helen, who thanked him, with some gentle confusion at her apparent oversight of the child. He was not invited to enter, but over the lady's head he caught a glimpse of Glen, and was not slow to interpret her quick indignant glance at her little sister in such a resting place. He had seen that impatient brightness in her eyes before, and he went back to spend a restless night in the old ballroom, which some whim had led him to choose as his own and his wounded comrade's sleeping apartment. He was beginning to curse himself for the fancy. A veritable spirit of unrest paraded the ghostly old room. When the lights were extinguished, and the sick man lay quietly sleeping beside him, a mocking bird, in the syringa hedge just below the open windows, filled the night with melody, and in the pauses of his song the plaintive cry of the whip-poor-will echoed across the wide lawn.

The air was filled with the sweet night scents of languishing spring flowers, and the captain, tossing on his couch, peopled the room with half waking fancies. Once more the floor rang to the tread of dancing feet, and as the music throbbed his own arms encircled a slender shape; or, in that alcoved window filled with shadows, while the moon hung low in a tender sky, his clinging lips found hers. In his dreams he shook with the sweet agony of the caress—and the next morning he laughed mockingly at its recollection as he made his toilet.

"Surely this languid air and this idle life have fired my blood," he said, stretching himself. "I no longer wonder at southern sentiment. I need a ten mile march through Virginia pipe clay, under a pouring sky, to shape me up again. If my orders don't come this week I shall be a proper subject for irons and a court martial."

And at the same early hour Glen was in the hall beneath him, engaged in her morning tasks of sweeping and dusting, with Missy, elevated on one of the tables, gravely watching her.

"Missy," said Glen, suddenly throwing down her brush and putting her arms about the child, "do you know what mother says? that you must never, never go into the soldiers' rooms again. Do you understand me? Do you know that they are bad, wicked men, Missy; that they have taken everything away from us, and that they are keeping Brother Frank away from home, and poor mother breaking her heart about him? And Missy," Glen's face darkened as she lifted the child in her strong young arms and held her up to the draped portrait above them, "don't you know that they killed Uncle Matt, our dear father's youngest brother?" Glen waited to watch the effect of this last statement, but it was certainly not what she expected. Missy had evidently heard the story before, and in her eyes it had lost some of its tragic features. There was actually a judicial severity in her face as Glen put her down.

"No, they didn't, Glen; indeed they didn't," she declared.

"What do you mean, Missy?"

"Because I asked him," the child said triumphantly. "I brought him in here one day when you were away, and I said, 'Did you—kill—my poor, dear uncle?'" Her exact imitation of her sister's tones gave the girl a sobbing, hysterical desire to laugh.

"And what did he say?"

"He said"—missy's eyes grew solemn as she raised her right hand and repeated in a whisper—"'God knows I did not, my dear little one!'"

And Glen, suddenly bending down, kissed the innocent face that had grown so awed at the recollection of that oath.

CHAPTER III.

"Oh, Frank, you must hurry."

But other things even more important than the fact of Missy's defection weighed upon the girl's mind. A crisis had suddenly arrived in the family affairs. The instructions which terminated her brother's short furlough and the orders for which he had waited had at last arrived, and Glen was feverishly anxious to convey them safely to his hands. On the evening of the arrival of the Union troops at the homestead he had barely escaped being made a prisoner by receiving information of their coming, and since then he had steadfastly refused to leave the vicinity without orders, hoping to be able to carry some information concerning the enemy to headquarters.

(TO BE CONTINUED.)

KNOWLEDGE

Brings comfort and improvement and tends to personal enjoyment when rightly used. The many, who live better than others and enjoy life more, with less expenditure, by more promptly adapting the world's best products to the needs of physical being, will attest the value to health of the pure liquid laxative principles embraced in the remedy, Syrup of Figs.

Its excellence is due to its presenting in the form most acceptable and pleasant to the taste, the refreshing and truly beneficial properties of a perfect laxative; effectually cleansing the system, dispelling colds, headaches and fevers and permanently curing constipation. It has given satisfaction to millions and met with the approval of the medical profession, because it acts on the Kidneys, Liver and Bowels without weakening them and it is perfectly free from every objectionable substance.

Syrup of Figs is for sale by all druggists in 50c and $1 bottles, but it is manufactured by the California Fig Syrup Co. only, whose name is printed on every package, also the name, Syrup of Figs, and being well informed, you will not accept any substitute if offered.

SPRY AT SIXTY.

THE REMARKABLE VITALITY OF AN AGED CALIFORNIAN.

Stands Today Unscathed by Disease. How He Conquered Rheumatism. His Story will Interest and Benefit all Old Folks.

From the Examiner, San Francisco, Cal.

There is at least one happy man in San Francisco today—one man who can enjoy, despite the fact of his being sixty years of age and of corpulent build, the full and free use of all the powers of mind and body.

James Keenan is a prominent liquor dealer at 256 Brannan street, and it is he who is now lauding those who have restored him from a bed of pain to his former youthful activity. Mr. Keenan had, to within a year ago, been blessed with the enjoyment of almost perfect health.

It was a year ago that Mr. Keenan first suffered the hand of disease to take hold upon him. At that time he was stricken down by an aggravated attack of rheumatism, which robbed him of the use of his lower limbs and of both his hands. For fully six weeks he lay on his couch, a helpless victim of the dread disease, and all the time he suffered intense pain in the affected portions of his body. He could not move himself upon his bed, and all that he ate had to be fed to him by those in attendance. He had about despaired of ever gaining release from the clutches of the frightful disease, when one morning his attention was drawn to an advertisement in a morning paper, of a remedy for rheumatism. The story of what succeeded this casual glance at a medicine advertisement can best be told in the words of Mr. Keenan himself, who, when asked for an explanation of his seemingly miraculous cure, gave the following account:

"It seemed to me that after all the weeks of terrible suffering that I had endured there could not possibly be a relief. I had no faith in patent medicines, and when I saw in a paper the advertisement of Williams' Pink Pills I was induced to try them only in sheer desperation. I did not feel any relief until I began taking the second box of the pills, but then the pain began gradually to leave me, my appetite became better, and I could sleep soundly throughout the night without experiencing any of the jerking pains that had before kept me awake. I continued to take the pills and it was only a short time until the rheumatism had entirely left my hands, and I had so far recovered the use of my legs as to be able to walk about the house without assistance. In about two weeks more I was entirely free from the disease, but I took two more boxes of the pills as a precaution against a return of the rheumatism. From the time that the last trace of the disease left me I have not felt the least sign of its return, and I can truthfully say that I now enjoy as free use of my limbs as ever I did before the rheumatism attacked me.

"I have taken the pains to recommend Williams' Pink Pills to a number of my friends who are suffering from rheumatism. I think I know of no other remedy that will afford such quick and permanent relief from rheumatism as do Williams' Pink Pills, and I only hope that many others may be brought to see and feel the high curative powers that the pills possess."

Dr. Williams' Pink Pills contain, in a condensed form, all the elements necessary to give new life and richness to the blood and restore shattered nerves. They are also a specific for troubles peculiar to females, such as suppressions, irregularities and all forms of weakness. They build up the blood and restore the glow of health to pale and sallow cheeks. In men they effect a radical cure in all cases arising from mental worry, overwork or excesses of whatever nature. Pink Pills are sold in boxes (never in loose bulk) at 50 cents a box or six boxes for $2.50, and may be had of all druggists, or direct by mail from Dr. Williams' Medicine Company, Schenectady, N. Y.

DOES A GOOD BUSINESS.

A quaint and decidedly original healer who does business on one of the Puget Sound islands advertises in placards and posters as follows:

"Legs and arms sawed off while you waite without pane."

"Childbirth and tumors a specialty."

"No odds asked in measles, hoopincoff, mumps or diarrear."

"Bald heads, bunions, corns, warts, cancer and ingrowing two nales treated scientifically."

"Coleck, cramps, costiveness and worms nailed on site."

"Wring worms, shingles and cross eye cured in 1 treatment or no pay."

"P. S.—Terms: Cash invariably in advance. No cure, no pay."

"N. B.—Take notice. No coroner never yet sot on the remains of my customers, an eny one having me doant haf to be laying up money to buy a grav stoan. Cum 1, cum awl."

The writer adds that this man does a good business, although you would not expect it, and his patients say that he cures disease thoroughly and quickly.—Exchange.

In a recent examination some boys were asked to define certain words, and to give a sentence illustrating the meaning. Here are a few: Frantic means wild; I picked some frantic flowers. Athletic, strong; the vinegar was too athletic to use. Tandem, one behind another; the boys sit tandem at school. And then some single words are funnily explained. Dust is mud with the wet squeezed out; fins are fishes' wings; stars are the moon's eggs; circumference is distance around the middle of the outside.

Mrs. Hicks—"I have been shopping all day and came home completely worn out." Hicks—"You do look just a bit shop-worn."

In Our Great Grandfather's Time,

big bulky pills were in general use. Like the "blunderbuss" of that decade they were big and clumsy, but ineffective. In this century of enlightenment, we have Dr. Pierce's Pleasant Pellets, which cure all liver, stomach and bowel derangements in the most effective way.

If people would pay more attention to properly regulating the action of their bowels, by the use of these little "Pellets" they would have less frequent occasion to call for their doctor's services to subdue attacks of dangerous diseases. The "Pellets" cure sick and bilious headache, constipation, indigestion, bilious attacks and kindred derangements of liver, stomach and bowels.

A GOOD THING.

He was a new member on the staff and dropped exhausted beside an old reporter in the local room when he reported off.

"I'm so lame and tired from chasing on a story that I can hardly move," he sighed.

"Is that so?" remarked the old-timer, sympathetically. "Do you know I suffered the same way when I went into the business, but I cured it."

"How? What did you do for it?" asked the new man, eagerly.

"I took some medicine, and you want to try it. You can get it for $1 a bottle, or six for $5."

"What is it? I want some."

"It's 'get on to yourself,' you sucker."

The next night the new man wrote the synopsis of a sermon he had never heard with one hand while he played pedro with the other, and a cure was effected.—San Francisco Post.

"All the good Indians, they say, are dead Indians."

"So are all the good white people. Go and read the epitaphs on the tombstones, will you?"—Chicago Tribune.

Easy—"Do you think woman will ever successfully fill the pulpit?" "I see no reason why she should not. It ought to be easy with the sleeves she wears."

HIS LATEST DISCOVERY.

Prof. Reinold, one of the greatest authorities on soap bubbles, says that the best liquid to employ is a mixture of soap solution and glycerine.

There is more catarrh in this section of the country than all other diseases put together, and until the last few years was supposed to be incurable. For a great many years doctors pronounced it a local disease, and prescribed local remedies, and, by constantly failing to cure with local treatment, pronounced it incurable. Science has proven catarrh to be a constitutional disease, and therefore requires constitutional treatment. Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, O., is the only constitutional cure on the market. It is taken internally in doses from 10 drops to a teaspoonful. It acts directly on the blood and mucous surfaces of the system. They offer one hundred dollars for any case it fails to cure. Send for circulars and testimonials. Address F. J. CHENEY & CO., Toledo, O.

Sold by Druggists, 75c.

The trial of a husband for beating his wife, at Gray's Summit, developed the fact that he had knocked her down with a loaf of her own bread.

SMALL BEGINNINGS

Make great endings sometimes. Ailments that we are apt to consider trivial often grow, through neglect, into atrocious maladies, dangerous in themselves and productive of others. It is the disregard of the earlier indications of ill health which leads to the establishment of all sorts of maladies on a chronic basis. Moreover, there are certain disorders incident to the season, such as malaria and rheumatism, against which it it always desirable to fortify the system after exposure to the conditions which produce them. Cold, damp and miasmi are surely counteracted by Hostetter's Stomach Bitters. After you have incurred risk from these influences, a wineglassful or two of Hostetter's Stomach Bitters directly afterward should be swallowed. For malaria, dyspepsia, liver complaint, kidney and bladder trouble, nervousness and debility, it is the most deservedly popular of remedies and preventives. A wineglassful before meals promotes appetite.

Doctors have declared that the heart of Zimmerman, the famous bicycle rider, is fully two inches longer than the average size of hearts.

AN OPEN ROBBERY BY JAPANESE.

They Not Only Make Duplicate Articles, but Use the Trade-marks of the Original.

A visit to the exposition at Kyoto or an examination of its catalogue is sufficient to convince any one that efforts to build up an export trade in general merchandise from the United States to this country would be wasted. It represents an epitome of the progress of the people for the last twenty-five years, and demonstrates the facility and the accuracy of the Japanese in imitating the arts and industries of other nations. It contains in its department of manufactures a sample of almost everything that enters into the wants of civilized men, and most of the articles are exact reproductions of inventions that are still protected by patents in Europe and the United States.

One of the weak spots in the national morals of Japan is the refusal of the government to make patent and trade-mark treaties, for there is no protection whatever against piracy in Japan. Still, when you reproach him with this, the Japanese gives you a knock-down argument in defense of his country. As Mr. Matzudiara, the chief examiner in the Japanese patent office, who was commissioner to the World's Fair, remarked the other day: "The United States and the European powers have refused to recognize Japan as a civilized nation. They have refused to submit their subjects to the protection of our courts, and have forbidden us to make our own tariff. They insist that their subjects in Japan shall be tried before their own consuls, under the laws of their own country, because our laws are not good enough for them, and they will not allow us to impose a duty of more than 5 per cent. upon imported merchandise. Then they blame us for not being willing to make a treaty to protect their patents. Under the new treaties that take effect in 1899 Japan will become a member of the international patent and trade-mark union, and will give the inventions of foreigners the same protection that its own receive. If that is not satisfactory our government would be willing to have them go into effect tomorrow instead of four years hence."

While Mr. Matzudiara presents the selfishness of other nations in a forcible and truthful manner, it does not justify the wholesale robbery that Japanese manufacturers have committed upon American and European inventors. Two wrongs do not make a right in this or any other case, and it is not a fair example of ordinary Japanese equity. Every novelty and invention for which they have any use will be reproduced here within three months after it appears in the United States or London, and will be sold for about one-half what it costs there. Every Japanese who goes abroad is always on the lookout for some useful and profitable process or article which his people at home may use. The Japanese merchants at New York, Chicago and other cities in the United States as well as in Europe are continually sending samples of popular designs and useful utensils to their friends at home, even toys and games and puzzles. The famous thirteen puzzle was sold by peddlers on the streets of Tokyo within three months after it appeared in the United States, having been sent over by a Jpaanese merchant in New York. They have an advantage here in not being compelled to pay royalty as well as in the low price of their labor, so that when they acquire the inventions of foreigners they can reproduce and sell the goods much cheaper than they cost at home. The Japanese are splendid chemists also, and they are able to analyze patent medicines, chemicals and patents of that sort and manufacture them to suit the demands of their own market.

They have no respect for trade-marks, but imitate them on their own goods, even to the name of the manufacturers. It is bad enough to have them steal our patents, but when they put on labels like the genuine to deceive the public it is carrying a wicked practice a little too far and is adding insult to injury.

For example, you will find perfecting presses in nearly all the printing offices of Japan bearing the name of R. H. Hoe & Co., New York—the inscription being cast in raised letters upon the iron. Every one of these machines was manufactured in Japan without the permission or the knowledge of the Hoe Company. Some years ago the American Trading company imported half a dozen Hoe presses for a dealer in printing materials in Tokyo and delivered them to the buyer at a cost of $250 each. A few months later Mr. Morse, the president of the American Trading Company, called on the local dealer to pay his respects and found thirty or forty similar presses in his wareroom, all bearing the name of R. H. Hoe & Co., of New York.

"Ah!" remarked Mr. Morse, "you are importing presses on your own account?"

"No," was the reply, "we are making them ourselves."

"But you have no right to put that name on any machine you make," exclaimed Mr. Morse, with indignation.

"They cast them at the foundry in that way," was the answer; "but I do not see who is going to prevent us. There is no foreign patent law in Japan."

"But there is a moral law which every honest business man should recognize and obey, and, while no one can prevent you from robbing the Hoe company, you ought to be satisfied with stealing their machine only and not their reputation."

The Japanese machines were sold at $175 at a large profit, or $75 less than they cost in the United States.

The same is true of type-casting machines and other printers' supplies, and another notable example of Japanese thievery is offered by the local reproduction of Fairbanks' scales. There used to be large shipments from the United States, but now they are imitated exactly, trade-mark, name, decorations and everything, and are sold at about one-half the price they bring in the United States. There is a large display in the exposition at Kyoto and you can find them in almost every shop throughout the whole empire where goods are weighed. Indeed, the factory where they are made is commonly known as the "Fairbanks scale factory" although the Fairbanks have not the slightest interest in the concern beyond the damage it does to their trade.

Mason & Hamlin organs that sell for $40 in the United States are manufactured in Osaka and sold for $17 to people who suppose they are imported from the United States. Singer sewing machines and other machines patented under the laws of the United States are reproduced here exactly, except that the table is made very low to suit the habit the Japanese have of sitting on the floor. They make their own telephones and electric-light apparatus on American patents without asking leave of paying royalty. The telephone they have here is an improvement on that we are accustomed to in that it has two receivers, which are placed at both ears instead of one. You can also obtain the best English and American bicycles made in Japan for about half what the genuine articles cost.

I went into a hardware store the other day to buy a padlock and was shown a variety which looked very familiar. The shopkeeper brought out a box which he said contained genuine American locks, but it was difficult to distinguish them from the Japanese imitations. We finally selected one of the Japanese manufacture which bore the words in English stamped in the brass: "Automatic lock. Patent applied for," while the key bore the name of "Miller Lock Company, Philadelphia, U. S. A."

Some time ago a manufacturer of lamp burners in New England sent over a few beautifully finished samples which he desired Mr. Morse of the American Trading Company to introduce here. They were instantly popular and a large demand was created, which, however, suddenly ceased. The manufacturer inquired the reason and was informed that the Japanese were making them on their own account. He replied that it wasn't possible for them to produce as good a burner as he made and asked to see some of their samples. Mr. Morse went to the factory, got a full set and packed them himself so that there could be no mistake. They were exactly like the originals, even to a little trade-mark and instructions to the user stamped in the brass. When the New England manufacturer received them he insisted that they were his own and were part of the last invoice he had sent from his factory to Japan. I believe Mr. Morse has not yet been able to convince him that they are forgeries, but the same burners are now selling in every city of Japan for about one-third the price they bring in the United States.

You can buy Pear's soap, Beecham's pills and Worcestershire sauce of Japanese make that are put up exactly like the original—it is very difficult to tell the difference—and many patent medicines, tooth powders, cosmetics and other preparations for the toilet. Bass' ale, Porter's stout and Milwaukee export beer, made in Japan and bottled and labeled exactly like the original, are exhibited among the products of the empire at the Kyoto exposition. The Eagle brand of condensed milk is also to be found there, and what is more interesting to some of my Chicago readers, various samples of Armour's canned meats. There is no attempt on the part of the exhibitor to deceive the public. He is proud of his success as a forger, and when you tell him that Armour's beef is made only in Chicago he assures you that his is exactly like the original, but is made in Japan.

I might give a list of other articles that would fill three columns of this paper. In fact, nearly one-fifth of the catalogue of the exposition is a record of patent robbery, and includes every possible variety of articles, except, perhaps, agricultural implements. Nor do our mechanical tools seem to be suited to the Japanese taste. They prefer their own. They imitate our patent safety razors, but they insist upon their own old-fashioned saws.

Foreign inventors and manufacturers have tried repeatedly to test the question in the courts, but have been unable to obtain relief. They have also endeavored to secure protection by assigning their patent rights to Japanese citizens, but the patent office will not issue a certificate for anything that is not invented by a native. Trade-marks can be protected by having them secured in the name of a Japanese "sole agent," but they must be modified in some manner so as to be different from the original. The same can be done with copyrights, but no method has yet been contrived to protect patents.

The Japanese have an excellent patent system and patent office of their own, organized upon the plan of that in Washington, and their laws and decisions have followed our own very closely. But when you come to complain that your property rights have been invaded and that your inventions have been stolen, they reply that they are only imitating the English plan, which has always been to take all you can get and give as little as possible. Foreigners, they add, are not willing to accept our judicial jurisdiction; therefore, why should we insist upon protecting their patents? This practice does not injure us any more than it does England, Germany and France. Perhaps we suffer less than they do. But the British are to blame for the situation, because they have always resisted the recognition of Japan as a civilized nation.

The only foreign patent or copyright that was ever protected in Japan was the English-Japanese dictionary, which represents twenty-five years' labor on the part of Dr. James C. Hepburn, the pioneer medical missonary of the Presbyterian board, who came here in 1859, and was only recently relieved from his labors. Having passed fourscore years, he is enjoying a well-earned rest at Orange, N. J. It was Dr. Hepburn who translated the bible into Japanese, and no man has done more to introduce and promote Christianity and civilization in this country. Soon after his dictionary was published a pirated edition appeared, but the government, out of respect to him and in recognition of his usefulness, by an arbitrary decree forbade its sale within the limits of the empire, and a large number of copies in a Tokyo printing establishment were confiscated.—William E. Curtis, in Chicago Record.

SPICE BOX.

"Our engagement is quite a secret, you know," she said, sweetly. "So everybody tells me," he replied, with a smile.

Effie—"Please, Uncle Arthur, do come and play chess with me." Uncle Arthur—"Oh, Effie! Don't you remember? It's Sunday." "Well, we can let the bishop win."

Tommy—"Pop, what's the difference between a bon mot and a joke?" Tommy's Pop—"A bon mot is something you tell a friend, and a joke is something a friend tells you."

He had stolen a kiss, and she scolded him very properly. "You'll forgive me, won't you?" he asked. "Will you promise never to do it again?" "No." "Then I forgive you."

Mrs. Hubbs—"Why did the Temperance Club put Miss Winko out of office?" Mrs. Dubbs—"Oh, somebody heard a man say, she had an intoxicating smile."—Louisville Courier-Journal.

He—"Well, I must be off. Going to the station to meet my wife's eldest sister." She—"But she can find her way to your house." He—"She can. But if I meet her in public I shan't have to kiss her!"

"If every atom of the human body is renewed every seven years, I cannot be the same woman that you married," said a wife to her husband. "I have been suspecting that for some time," he replied, with a chuckle.

An Englishman recently had his life saved by a $500 wad of greenbacks, which warded off a bullet aimed at him. With such simple means of precaution as this at our very elbow, everybody should be prepared for an emergency.

"I would not be so downhearted," said the sympathetic lady. "You do not know what good fortune the world may have in store for you." "What is the use," moaned Mr. Dismal Dawson, "of the world havin' anythin' in store for me, when it is a dead sure thing I can't git no credit at the store."

"Why?" asked the philosopher—"why is it that a man—the noblest created object—why is it that a man should have such doubts of his ability to win a woman's affection, when he considers the success in that line of a pop-eyed, pudding-shaped, pretzel-tailed pug dog?" But the assembled listeners answered him not.

Prisoner—Why, Jedge, you don't mean to fine me $10 jest fur talkin' on the street corner? Judge—That's it. You are charged with being noisy and boisterous. Prisoner—Ten dollars, and jest for talkin'. Well, jedge, I'll work it out, but you have destroyed a patriot. You have druv the iron heel of cruel reality into a soul that was hitherto jest wrapped up in idolatrous worship of the Goddess of Liberty. Freedom of speech is the bulwark of our country, and when speech gets to costin' ten dollars a crack, Jedge, I pass out. I'm an anarchist from now on.

GREASED THE WRONG END.

An old gentleman, before getting into an express at Eucton, tipped his guard and said:

"I wish you would make sure of catching the 11:45 at Crewe."

The guard goes to the engine driver, who has been a witness to the tipping business, and says:

"Here, Billy; this gentleman wants to catch the 11:45 at Crewe."

They arrive at Crewe just in time to see the 11:45 leaving the station.

Old gentleman, in a rage, to the driver:

"Weren't you told to catch the 11:45?"

Impassive driver, with a solemn wink: "Yes, sir; but you greased the wrong end of the train."

Our old friend will tip the driver next time he wants to travel unusually fast.—London Answers.

"I don't like hash," remarked the musical boarder at breakfast. "It is not rythmical." "Maybe not," replied the landlady, as her eyes emitted a baleful fire, "but you will always find one word to rhyme with it, and that word is cash."

"Do you know I can tell a man's character pretty accurately by the way he smokes his cigar?" "But suppose he happens to be a cigarette smoker?" "Oh, then, he hasn't any character to tell."—Indianapolis Journal.

THE WOMAN'S CLUB.

Our Vaunted Practice of Making Love Matches.

THE HOLMES CASE POINTS A MORAL

Americans Need to Mend Their Morals—Good, Dutiful and Innocent Girls Easily Victimized.

"The most significant phase of the Holmes investigation," said the club woman, as she returned to her guests at the tea-table in the drawing-room after seeing her young daughters off for a game of tennis in the park under the escort of an old member of the family, "is the number of 'good and dutiful' girls he seems to have got away with without being called to account by a single parent. One wonders if there are any 'good and dutiful' parents.

"Now, I am considered fussy over my girls because they are chaperoned to and from school and in all public places. I have been reminded that it is un-American. If it is, then Americans need to mend their morals. The Holmes case points the moral. Every one of his victims were 'good and dutiful' and innocent girls, according to the testimony of the people who knew them, yet they were allowed to go far from home, in nearly every case without any necessity for their doing so, seek employment and live among strangers, their parents grossly ignorant of their surroundings or companions.

"Finally a letter would come announcing that the 'good and dutiful' daughter was to be married—to a man of whom the home folk had never heard and whose name was not even in the city directory, had they so much as inquired. After that the daughter, who had always written regularly every week, maintained an unaccountable and undutiful silence. The home folk grieved over this neglect, but made no efforts to find the girl, apparently reconciled to a complete change of character of the absent girl. Every one of these cases is so plain that, the facts placed in the hands of the police, the disappearance could have been traced to Holmes and his career wound up years ago.

"It seems that as parents Americans are sunk in hopeless lethargy. It arises, I think, from our vaunted practice of making love matches. The idea of arranging a marriage is revolting to our ideas, as it should be. But we are carried to the other extreme, where interference or even curiosity about the future husband of a daughter is considered unwarrantable. If the daughter makes a bad match because of some temporary infatuation with a scoundrel we are sorry that her life is ruined, but we complacently wash our hands of the whole affair. This inalienable right of our daughters to bestow their hearts where they please is an institution so sacredly guarded that girls, even under their parents' roof, have miscellaneous acquaintances visiting them whom the parents never met. I think it is Howells who makes a mother apologize to a daughter for entertaining her 'company.' That would be humorous if it were not tragical."

"Where are the 'good and dutiful parents,' careful of their daughters' welfare, associates and future happiness?"

"Well," I'm one of them, or tried to be, and I'll tell you how I came out," said the equal-suffragist. "It's the first time I ever ran against the 'inalienable right,' and I'm thankful I have but one daughter, so I won't have to do it again.

"You know Marian attended the library school at Columbia and was appointed librarian in a town in the Berkshire hills, Massachusetts, at a flattering salary. She had a good deal of attention from the summer cottagers, and finally wrote me that she was to be marired to a wealthy New York man. I had just been reading the story of Miss Cigrand and I knew exactly what a 'good and dutiful' parent ought to do. I telegraphed to the authorities to withhold a license until I arrived. Then I got on the train.

"When I arrived there was a pretty kettle of fish. The young man was insulted and Marian in tears, and an officious local paper had written the whole thing up, ridiculing me and making a dime novel out of the simple and commendable wish of a mother to know all about the man her daughter was to marry. The wedding came off, but my son-in-law is resentful, and I know that in my own daughter's house I will be non persona grata and that her husband is convinced that I am a disagreeable, meddling person. Nice state of affairs, that."

"Yes, you are a marked character from this time forth," said the visiting delegate from a country club. "But you got off easy, after all. I was visiting in New York once, when the daughter of a prominent woman eloped with a man of whom the poor mother had never even heard. It was too late then to prevent the miserable child—he was only 17—from making a failure of her life by marriage with a man her inferior in every way. But the mother, distracted with grief and anxiety, wished to satisfy herself, at least, that the couple were actually married. So she hurried after them and overtook them at a New Jersey resort where she compelled the craven little wretch to produce proofs of the marriage. He kept her in suspense and giggled while she implored with tears rolling down her cheeks, so far was he from even the semblance of manhood.

"The whole scene happened in a public place, the wretch enjoying the notoriety, and the mother, gray-haired, agonized with anxiety, representing dignity, right, intellect, and character, as against a pair of silly children so gayly wrecking human happiness, was lampooned and held up to public ridicule."

"How did she make the acquaintance of such a young man?" asked the club woman.

"I think I can tell out of my own experience," said the young matron with a blush for memories not more than half a dozen years old. "If you remind me of it I'll tell you later."

"In our little town in southern Michigan," resumed the visiting delegate, "there is a lawyer who is guardian of his dead sister's three daughters. They grew up under his roof, and he was so careful of them that people laughed at him. The eldest one, when grown up, went on a visit to an older brother in Colorado, and while there met her fate in a young ranchman. She wrote back to her uncle the news of the engagement.

"Most people would have felt that they were doing their full duty to inquire about the young man from the girls' own brother, who was a neighbor of his. Not so the Quixotic uncle, whose turst was too sacred. He made the long trip to Colorado, hunted and fished and dined with that aspirant for his niece's affections; inquired his credit, examined into the titles of his property, his manner of caring for it, learned who his associates were, the extent of his education and the books he read. Not until satisfied on all these points did the uncle say, 'Bless you, my children,' and retire.

"Now, when a visitor comes to our little hamlet we relate this story."

"As an example?" inquired the club woman.

"No, as an illustration of the eccentricity of our distinguished citizen. The story never fails to amuse.

"As a genreal thing, however," said the club woman, "I believe that professional and society people guard their young daughters."

"They think they do," said the young matron. "I remember a guilty feeling I had, when about 16, on our hearing a remark made in my mother's parlor by an intimate friend of the family and the mother of my chum. The lady remarked to my mother: 'I am so glad Mrs. B——'s boarding school is so near and the girls can go back and forth on suburban trains in a few moments, since they cannot make miscellaneous acquaintances as so many girls do.'

"Edith and I were in the library studying at the time. We looked at each other guiltily, for we both had silly affairs on, she with a handsome brakeman, I with a college student, who always boarded my train. It had gone so far that we even had signals. And it was arranged that we should play truant some afternoon and all go to the matinee. I thought it all so romantic. Oh, I blush, and blush in shame for the silly things I said to a silly boy, and thank God he was no worse than silly. We did have the afternoon at the matinee and ice-cream afterward, when another youth was introduced to flirt with Edith. No, I never told my mother until after I was married, but it never happened again, because the second youth was bad and insulted Edith. That frightened us."

"Yes," said the club woman, "I have seen the girls on the trains. When I put my daughters in this school I asked if a teacher escorted them home and the principal replied that it was not necessary, as none of the pupils lived at a great distance and American girls can be trusted. Can they? I hardly think so. Between the ages of 12 and 18 they are bundles of romance and silliness and from very ignorance may do things that prove a lifelong regret and shame. The least we can do for them is to shield their innocence until they reach years of discretion."

"What is a woman to do who is in active business?" inquired the lady doctor.

"Take Hamlets' advice: 'Get thee to a nunnery.' I am not so advanced as to believe that any duty or business has priority over the fullfiling of one's duty as a parent. But here is an extreme case," said the club woman.

"I know a woman who was left with a young daughter to provide for. She writes for the press, travels as correspondent, and lives in a trunk. She is an agnostic, but she bundled that daughter off to Notre Dame until the gril was 18 and felt at ease throughout the most critical period of the girl's life."

"Made a mediæval angel out of her," commented the lady doctor.

"Not a bit of it. The girl had too much intellect and it had all the scope it wanted. Morally, she is sound and sweet as a nut and her manners are simple and gracious. She has no silly memories to mar the sereneness of her smile and she is going on now, untrammeled by premature emotions, to a useful life."

"Presiding angel over some man's hearth?" said the lady doctor.

"She is studying medicine," remarked the club woman.

DORE LOVED WILD ANIMALS.

One of Dore's favorite haunts in London was the Zoological Gardens. He was as fond of strolling from one cage to another, and watching the animals, as Landseer was. I don't suppose these two habitues of the gardens, ever met. Landseer immortalized his studies at the Zoo in his models of the king of beasts that adorn Trafalgar square.

Friends of Dore used to say that on arriving in London he would take a cab and rush off to the Zoo before he went to his hotel. Exaggeration is useful in emphasizing a fact. Dore frequently went to the menagerie at Regent's Park before he called on his human friends. There is a powerful touch of satire in one of his London pictures of the monkey house, with the visitors to the gardens seen from the interior of the cage.

USING PIPE LINES.

Oil and Grain Slide Down Metallic Grades.

CHEAP FUEL AND TRANSPORTATION.

The Requisites for Rapid Advance in in California are Coming to Hand With Certainty.

Cheap fuel, cheap transportation and small farms have each been described as essentials for local prosperity in California. There are at Los Angeles at least 100,000 barrels of cheap petroleum awaiting transportation, and the Los Angeles wells are producing oil at the rate of about 3,000 barrels per day. It takes from two and one-half to three barrels of the oil to equal a ton of coal for fuel. This fuel has made possible the existence of a rolling mill in Los Angeles for the manufacture of sheet iron, which is the only one west of Chicago. Transportation has been expensive in this State, and one reason has been the cost of coal. The Southern Pacific Company and the Santa Fe will soon be burning oil in their locomotives. The oil field at Los Angeles continues to widen in extent and in productiveness, and there is no question that large deposits of oil will be found at various points north of Tehachapi, which disposes of one of our drawbacks. To make the cost of oil fuel still cheaper it is handled at Los Angeles partly by pipe line. One pipe line is completed and in working order. Two other franchises for pipe lines have been granted by the City Council. Oil can be purchased at the wells as low as 40 cents per barrel, or even less. Delivered to customers it may be quoted at about 75 cents. It is difficult to make a contract at less than 85 cents per barrel, and in some cases contracts for a year have been made at the rate of $1 a barrel. There is oil in San Mateo county, and the indications have proved so satisfactory on the east shore of San Francisco bay that the company recently organized will probably push operations with chance of large development.

In the East the manufacturers or other producers, who can market their goods at lowest cost, have the best chance in a competitive field. The small economies count. The pipe lines from the Pennsylvania oil fields to tide water have cheapened the cost of marketing oil at New York. There is no reason why similar devices employed in California should not put us on an even footing with the East in that respect. Up in Washington a scheme has just been devised for transportation of grain from the Potlach ridge into the warehouse of Kendrick.

This scheme contemplate an eight-inch pipe to tap the heart of the ridge, through which the grain will run down hill easily into warehouses. It has frequently been pointed out that the cost of moving wheat or other products from the head of the San Joaquin valley to tide water at Stockton is very little, the grade being practically down hill. Cheap transportation will soon be provided in the valley. Arrangements are on foot to secure cheap transportation of fuel from Los Angeles to San Francisco. The other considerations, the sub-division of large tracts of land, is receiving attention. The Summit Lake Water Company is an agency in breaking up a tract of 25,262 acres in Fresno and Kings counties, to be sold to small farmers, and the land can be purchased at an average of about $5.50 per acre, without water. No part of the purchase price of any piece of land will be paid by the water company until that piece is sold by the water company to settle it. The Summit Lake Company agrees on its part not to hold any land at more than $50 per acre; also not to hold the land at a higher average price than $35 per acre. The tendency to break up large holdings is more apparent than for some time throughout the entire northern part of the State.

During the past week a capitalist from the San Joaquin Valley has been in San Francisco trying to place bonds for the construction of electrical works to be operated in connection with a flume 2,600 feet long, which has a fall of about 60 feet to the mile. The greatest enterprise mentioned during the past week has been that of the Clear Lake Electric Company, to convert the waste water power of Clear Lake, in Lake county, and Cache creek into electrical power, to be used at all points between Lake county and San Francisco inclusive. Clear Lake is 1317 feet above the sea, and the water power to be derived from that source is almost incalculable. Some anxiety has been expressed by the Lake county people as to the effect this enterprise might have upon the waters of the lake. It is explained, however, that the water is first to be taken at a place five miles below the outlet of the lake from Cache creek, which would not lower the level of the lake.

A striking piece of news comes from the East which has great interest for California. While it is conceded that we have the best soil, the best climate for the production of large quantities of fruit, and that the Eastern people like our products, the distance from the Eastern market has been a great drawback. Now the Westinghouse Electric Company and the Baldwin Locomotive Works have made a deal for the purpose of producing electric roads and electric locomotives to move all classes of freight at a high rate of speed. It is given out that the Westinghouse Company has appliances by which a speed of 150 miles per hour for any ordinary train can easily be reached; also, that the Baldwin Locomotive Works is able to turn out the necessary rolling stock, carriages, etc., to withstand this high rate of speed. The two great incorporations are immediately going to work to carry out their idea. The power that we have in waterfalls ought to add very largely to the range of our products. When we have trains moving at the rate of 150 miles an hour, or approximately that, how long will it take to reach Eastern centers of population in the United States? It surely ought to be no trick to travel 2,000 miles in a day. The bearing of this on charges for refrigeration for fruits and on the general facilities for marketing whatever can be produced here is in plain view of everybody.

There is much to record in the way of development news since last week. Confidence has returned and there is an abundance of money in the banks to carry out every legitimate enterprise. The Bank Commissioners consider the showing very satisfactory. The assets of the interior banks, under the jurisdiction of the Bank Commissioners, have increased $1,442,173. Including the increase in the San Francisco commercial banks, the total increase in the State amounts to $3,597,071, which is a gain of nearly $700,000 a month. The national banks are also in good condition. The Bear Valley irrigation plant in Southern California has been secured by the holders of the Cleveland mortgage and it will probably now be put in shape. The Sacramento Record-Union calls attention to vast quantities of material within a few miles of that city for wood pulp from which paper can be made. The number of articles which are manufactured from paper are almost innumerable.

George Gray of the firm of Simpson & Gray, Stockton, tells a reporter that he knows officially that Jim Hill, President of the Great Northern Railway, is actually constructing a railroad headed for Stockton, and that the Union Pacific will build across Nevada and come to Stockton. Friction exists between the Southern Pacific Company and the Union Pacific on account of the Utah trade. The Chicago and other lines also continue to chafe because of the diversion of overland trade in bulk to the Sunset route of the Southern Pacific Company. It is exhilarating to look out and see rails for two California railways coming into the State both by sea and overland. The Coal road at Stockton is in such hurry to begin operations that its rails are moving overland.

Various enterprises lately mentioned are as follows: The institution at Santa Rosa of the Monteith evaporative plan to evaporate fruits and vegetables; the extension of the field of Stockton Agricultural Works to the Argentine Republic, the construction of a building at the Sobrante Powder Works, Contra Costa county, for the manufacture of smokeless powder; the project for the manufacture in San Jose of fruit cans from paper; the rebuilding of the dam and completion of the canal system of the Oakdale, Stanislaus county, irrigation system; the construction of an ice factory in connection with the plant of the Kaweah Irrigation and Power Company of Tulare county. One good piece of news just received is that the Panama railroad will continue to act as an independent transportation line. It is understood that an arrangement will be made to extend the service between San Francisco and Central America points on the basis of developing the trade to the highest possible extent.

FARMERS IN CUBA.

Between the conditions of the planter and that of all other agriculturists whatever in Cuba the widest difference exists. The laborer has nothing, never has had anything, and is happy in the knowledge that he never will have anything. The small farmer, the owner of a few acres, is the most abjectly poverty-stricken son of the soils that I have ever met. He lives in the poorest habitation known to civilized men, a hut made of the bark of the palm tree. Beside it the adobe dwelling of the Mexican is a palace. It has one room, a dirt floor, neither window nor chimney. In this the family live like cattle, subsisting upon the poorest of food, as most that the soil produces must go to pay the taxes. Children run about, guiltless of the knowledge of clothes until 6 or 8 years old. Books, education, the world, are things of which they have never even dreamed.

It is true that there is an intermediate group. Between these people and the planters is a small contingent of thrifty farmers. Here and there through the country may be seen a stone dwelling with red tile roof that marks the home of one who, by some rare enterprise, has become possessed of enough land to engage in cattle raising or fruit growing. But the prosperous, forehanded, middle class farmer is conspicuous by his absenec. It is because there is no such middle class, and because the country people are either the owners of great estates or else abjectly poor, that it is a mistake to speak of Cuba as a rich country. It cannot be so while the present conditions exist. But with such a combination of soil and climate as she possesses, the island is capable of great things. Money and enterprise are needed for the development of its resources, and these are not likely to be forthcoming while the present social and political conditions remain. If the island were open to American enterprise as freely as our own territory is, a decade would suffice for the working of great changes.—James Knapp Reeve, in Lippincotts.

The Congo is the most wonderful waterway in the world. It is twenty-five miles across in parts, so that vessels may pass one another and yet be out of sight. It has twice the extent of the navigable waters of the Mississippi and its tributaries, and three times its population.

INYO INDEPENDENT.

INDEPENDENCE, CAL.

FRIDAY, OCTOB R 4 1895

We hear so much about Oregon canned horse and of the great supply of eel-food which is still on the hoof in that State that it is gratifying to have per contra statements. The North Pacific Rural Spirit has an account of an effort made by the Government agents to purchase army horses in the Willamette valley. Such horses as these were pulicly advertised for at Roseburg, Oakland and other points: "Geldings from 5 to 8 years old; from 15 to 16 hands high; to weigh from 950 to 100 pounds; of solid color, sound and of good disposition and broken to the saddle." It is said that two entire days were passed by the agent in securing four horses in one place and three at another. The Spirit concludes:

So it was with each and every point visited. Places that at one time could have furnished horses by the dozen are now considered fortunate to have any to sell. The class of horses offered were of the most ordinary type. Of the whole lot, one could not see anything that would do for an ordinary carriage team. The simple fact of the matter is there are no horses in the Willamette valley, and the worst feature of the business is there are not likely to be any for some time to come. There are no colts coming along and no mares on the farms to be bred; and what is true of Oregon is without doubt true of every other State in the Union, for the horses being bought now are not to be used in this State, but go to California, which shows that they are short of this paricular grade of horses there. Many of the farmers of Oregon will, in a short time, find themselves in a very awkward position. Instead of having horses to sell, they will have to buy, for horses, like everything else that is of this earth, will not last forever, and with nothing to replenish the worn-out stock they will be in a sad predicament. They can have only themselves to blame. They have been warned time and time again by the horse papers of the country, who were in a position to know the true condition of affairs, that the time would shortly come when the the surplus caused by the hard times and depression in business would soon be used up, and unless breeding was continued to a certain extent a shortage was bound to follow. Those who have had the foresight to raise a few good colts will reap a rich reward, for one cannot raise a horse at a moment's notice; it takes five long years to bring one up to service. The thing for the farmers of Oregon to do is to set themselves right in this matter as soon as possible—breed what mares you may have left; use the best horse you can get; raise horses that will be wanted; and our word for it, it will pay you well.

We give this matter prominence and hope it will attract the widest attention. The present surplus of poor horses will fade away. The demand will be for good work and road horses of some bottom and style. We have had too much of the indiscriminate effort to produce trotters which are of little use except on the track, and not one in a thousand of any use for that. Just as soon as the people get tired of working their own passage on bicycle pedals, they will turn again to the carriage horse. The old destroyers of misfit horses—the street car lines—have gone out. The poor horse in the future will have to die a natural death. Don't breed any more such, but get to work on a few horses of clear draft type or good field work horses or swift and stylish road stock, and it will pay by the time the crop is ready to sell. —Rural Press.

The Southern Pacific Company will fight the reductions made by the railroad commission in the United States Courts. The constitutionality of the commission will not be attacked, but the anti-election pledges of the two Democratic members of the commission will be cited as evidence that they are prejudiced. The fact that LaRue is a heavy grain shipper and therefore an interested party will be brought out. The proceedings are to be begun before Judge Morrow.

A Pittsburg Judge recently permitted jurymen to sit in their shirtsleeves on account of the heat of the weather, but refused the lawyers the priviledge because he wished them to be uncomfortable enough to hurry through with their speeches.

The Old Time Singing School.

In the old colonial days when the great and the great-great-grandmothers were young the singing school was a well established institution, writes Mary E. Estes in a very accurate article telling exactly how "the old time concert" may be reproduced at a church entertainment in Ladies' Home Journal. It was usually held in the village schoolhouse, the schoolmaster often figuring as the singing master. Thither at regular intervals through the long winter months tripped the grandmas with their escorts. Little did they imagine as they lifted up their sweet voices in unison with the strong tenors and bassos that those same airs, even the very gowns they wore, would at some distant day be reproduced for the benefit of an appreciative audience. Yet it may be safely asserted that with the exception of the colonial tea the old folks' concert is the most popular of the old time entertainments.

The success of an undertaking of this sort depends largely upon the adaptability for her office of the person having the affair in hand. She must of necessity have an accurate conception of the manner in which these entertainments were conducted in our grandmothers' day. She must also become thoroughly imbued with the spirit of that olden time.

The Aim of Christ's Work.

"Peace on earth" was the aim of Christ's work in this world, writes Edward Bellamy in The Ladies' Home Journal. The whole gist of his doctrine and the burden of his teaching consisted in counsels to men how to put an end to strife with their fellow men and live together with them in mutual helpfulness. All this teaching, which was the whole content of his gospel, was grouped about and crystallized in the golden rule, whereon our modern world is founded as on an everlasting foundation. To believe in Christ and not to believe in the golden rule as the only plan for social organization seems to us a moral and rational impossibility—an unthinkable proposition. Just this, however, our ancestors undertook to do, and it is fair to admit that they were very frank about it. They made no pretenses.

IN THE SUPER OR COURT OF THE COUNTY OF KERN, STATE OF CALIFORNIA.

S. Bachman, Plaintiff, vs. Domingo Etcharren, John Iribarne, Frank Cathery, S. Heineman and L. Bachman, copartners doing business under the firm name and style of S. Heineman & Co., John Doe and Richard Roe, Defendants.

THE PEOPLE OF THE STATE OF California, send greeting to Domingo Etcharren, John Iribarne, Frank Cathery, S. Heineman and L. Bachman, copartners doing business under the firm name and style of S. Heineman & Co., John Doe and Richard Roe, Defendants.

You are hereby required to appear in an action brought against you by the above named plaintiff, in the Superior Court of the County of Kern, State of California, and to answer the complaint filed therein, within ten days (exclusive of the day of service) after the service on you of this summons, if served within this County, or if served elsewhere within thirty days.

Said action is brought to obtain a judgment of this Court for the foreclosure of a certain chattel mortgage described in said complaint, duly acknowledged, verified, executed and delivered by said defendants, Domingo Etcharren, to John Iribarne, on the 17th day of May, 1894, to secure the payment of a certain promissory note, or instrument in writing dated May 17th, 1894, for the sum of Four Thousand Dollars U. S. Gold Coin, payable twenty four months after date, with interest thereon from date at the rate of one per cent per cent per month, payable monthly, and if not so paid the whole sum of both principal and interest thereof to become immediately due and collectable, at the option of the holder of said note, or instrument in writing, which said note or instrument in writing, after the making, execution and delivery thereof, was duly endorsed and delivered by said John Iribarne to the firm of S. Heineman & Co., and on said last mentioned day, said John Iribarne duly assigned said chattel mortgage to said firm of S. Heineman & Co., and afterwards, to wit, on the 29th day of September, 1894, said firm of S. Heineman & Co., for value received, sold, assigned and delivered said promissory note or instrument in writing, and said chattel mortgage to the plaintiff. Said mortgage conveyed the following described personal property which said property was at the date of the execution of said chattel mortgage in the County of Inyo, but is now and for more than one month last past has been in the County of Kern, and is described as follows: Twenty eight hundred head of sheep marked "D" and having an underhand over bit on each ear, together with the wool thereon and the increase thereof; also four horses, two mules, two wagons and one sets of harness and camping outfit; that the personal property conveyed by said mortgage has sold and the proceeds applied to the payment of said sum of Four Thousand Dollars, U. S. gold coin, principal with interest thereon at the rate of one per cent per month from the 17th day of May, 1894, and costs of suit, and in case said proceeds are not sufficient to pay the same then to obtain a judgment and execution against said defendants, Domingo Etcharren and John Iribarne, for the balance remaining due, and also that said defendants and each of them, and all persons claiming by, through or under them, or either of them, may be barred and foreclosed of all right, title, lien, equity of redemption and interest in or to said mortgaged personal property, and every part thereof, and for such other and further relief as may be just, all of which will more fully appear by said complaint on file herein, to which you are referred for a more full and perfect statement.

You are hereby notified that if you fail to appear and answer said complaint, said plaintiff will apply to the Court for the relief demanded in said complaint.

Witness my hand and the seal of said Superior Court of the County of Kern, State of California, this 13th day of June, 1895.

[SEAL.] F. W. CRAIG, Clerk.
T. M. McNAMARA, Attorney for Plaintiff.

Sheriff's Sale

ORDER OF SALE AND DECREE OF FORECLOSURE AND SALE.

Friederike Rhine, Plaintiff, vs. Eliza M. Hanna, John H. Parish, W. C. Doane and Thomas Crellin, Defendants.

Under and by virtue of an order of sale and decree of foreclosure and sale, issued out of the Superior Court of the County of Inyo of the State of California, on the 16th day of September, A. D. 1895, in the above entitled action, wherein Friederike Rhine, the above named plaintiff, obtained a judgment and decree of foreclosure and sale against Eliza M. Hanna, John H. Parish, W. C. Doane and Thomas Crellin, defendants, on the 17th day of September, A. D. 1895, for the sum of Two hundred and forty six 39/100 ($246.39) dollars in United States Gold Coin, besides interest, costs and counsel fees amounting to the further sum of $105.39, which said decree was on the 18th day of September, A. D. 1895, recorded in Judgment book 1 of said Court, at page 58, I am commanded to sell all these certain lots, pieces or parcels of land situated, lying and being in the County of Inyo, State of California and bounded and described as follows: The East half of the Northeast quarter of Section Thirty on and the West half of the Northwest quarter of Section Thirty two, in Township Fourteen, South of Range Forty-six East Mount Diablo Meridian, containing 160 acres; together with all and singular the tenements, hereditaments and appurtenances thereunto belonging or in anywise appertaining.

Public notice is hereby given that on Tuesday, the 15th day of October, A. D. 1895, at 12 o'clock M. of that day, in front of the Court House door of the County of Inyo I will in obedience to said order of said decree of foreclosure and sale, sell the above described property, or so much thereof as may be necessary to satisfy said judgment, with interest and costs, etc., to the highest and best bidder for gold coin of the United States.

Dated the 18th day of September, 1895.

A. M. GIVEN, Sheriff.
P. H. MACK, Attorney for Plaintiff.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT in pursuance of the power to me given in the Last Will and Testament of John Alien Hannah, deceased, (which last will and testament was duly admitted to probate) I the undersigned the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY the 5th day of March 1896, and within six months thereafter, all the right, title, interest and estate of the said John Alien Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Alien Hannah, deceased, has, by operation of law or otherwise acquired other than or in addition to that of the said John Alien Hannah at the time of his death in and to those certain lots, pieces or parcels of land situate, lying and being in the County of Inyo, State of California and particularly described as follows, to wit:

The South half of the S W ¼ section 4 and the South half of the South west quarter of Section No. 10, and the North east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., contain ng 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit: Commencing at the South east corner of the south east quarter of North west quarter of Section No. 18, in Township No. 13 South Range No. 35 East, M. D. M., and running thence West eleven chains and 18/100; thence Northwest following the meandering of the old Creek along its North bank to Edwards street, in the town of Independence; thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, as consisting what is known as the Roody place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo County, having been the residence of said John A. Hannah, deceased, at the time of his death.

Lot Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo County.

Two hundred feet undivided of and in that certain mining claim, located or located, situate, lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "Lafayette claim."

That certain lot, piece or parcel of land situate, lying and being in the County of Inyo, State of California, commencing at a point twelve and nine-tenths (12 9-10) rods south of the general corner of the Sections Nos. Twelve (12) and thirteen (13) on the South quarter and the North east quarter of Section Twelve (12) and the South west quarter and the South east quarter of Section Thirteen (13) in Township Twenty one (21) South of Range Twenty one (21) West from Boundary line and Meridian, running thence South sixty eight and seven-tenths (68 7-10) rods; thence West twenty three (23) rods; thence North westerly along a small branch or wash to a point twenty four (24) rods North of the general corner of the North east quarter and the South east quarter, and the North west quarter and the North east quarter of the North west quarter of Section No. twelve (12), in Township No. three (3) North of Range twenty one (21) West; running thence North forty one and three-tenths (41 3-10) rods; thence East eighty (80) rods to the place of beginning, containing thirty acres; together with ten shares in the capital stock of the Highland Water Company.

Bids or offers must be in writing and will be received at the residence of the undersigned at Georgetown Creek, Cal., and may be left at said place, or at the office of the District Attorney at Independence, Cal., or delivered to said Executor personally or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice, and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court. Deed at the expense of purchaser.

WILLIAM L. HUNTER,
Executor of the Last Will and Testament of John Alien Hannah, deceased.

KENDALL'S SPAVIN CURE.

STAR, LANE CO., OREGON, Feb. 8th, 1892.
DR. B. J. KENDALL CO.,
Dear Sirs:—I have used your KENDALL'S SPAVIN CURE for the last twelve years never being without it but a few weeks in that time and I have made several wonderful cures with it. I cured a 4 year old of long standing. Then I had a four year old cow badly sweenied; tried every thing without any benefit, so I tried your liniment, and in a few weeks he was well and his shoulder filled up all right, and the other, a four year old that had a "bone spavin" and Blood Spavin on the same joint, and to-day no one can tell which leg it was on. These statements can be proven, if necessary; the four year olds are now seven and can be seen any time in Tago Grove, Or. B. Z. LITTON.
—Price $1.00 per bottle.

Miss Elsie Eibeshutz arrived home on Wednesday's train from a months visit to San Francisco where she received medical treatment.

George Meads arrived in town last Wednesday evening from Mojave with a full load of freight, having three wagons. He started for Bishop this morning.

Quite a heavy gale came down the valley from the north last Wednesday evening and continued blowing all day Thursday, but only a light breeze was blowing this morning.

Sheriff Given started for Folsom on Saturday last having in charge Frank Howe, sentenced to two and a half years imprisonment, and Ma Que, a chinaman, sentenced to fifteen months.

H. E. Wilkinson will start for San Francisco on to-morrow morning's train to spend a month's vacation. During his absence Geo. S. Wool will have charge of the Weather Bureau office.

H. P. Cartier arrived home from Montana last Friday, where he had spent a visit of several months with relatives. He says business is lively there. While there he met Tom Taylor, the foot-racer.

Hon. N. D. Arnot left for his home in Alpine county on last Saturday's train. The Judge was disappointed in not being able to attend the Fair at Bishop but urgent business compelled his going to Placer county.

Suspects Foul Play.

Last week's *Lyon County Times* contains an article upon the death of Charley Johnson which reflects upon the conduct of the officials in holding the inquest and intimates that the deceased met with foul play. To every person in this community who know anything at all about the facts such an opinion is of course absurd. There is not the slightest doubt that Johnson came to his death by his own hand. His signature and handwriting were known to a dozen people who saw the letter left by the deceased and who stated that it was undoubtedly written by him. The *Times* states that parties as Dayton had received letters from Johnson in which the spelling was all right, and not at all like the letters read at the inquest; but that is entirely due to the well-known fact that in all his correspondence while at Citrus he had Mr. Beale first draft the letter and afterwards copied it. His hand writing was very fair.

Caught In the Act

For a long time past it has been a notorious fact that two Mexicans known as "Vaquerito" and "Hoolyan" had been supplying Indians with whiskey. They were both in town last Sunday and had a whole flock of bucks and squaws drunk in no time, but during the day time they were clever enough to keep the officers from catching them in the act. Just at dusk, however, George Naylor, Ivan Bonney and Avah Bell caught "Hoolyan" *en flagrante delicto* and promptly took him in. He was examined before Justice Davidson on Monday and held for trial. His true name is Julian Melino. The fellow has been plying this nefarious traffic for years and the captune is a good one.

BLACKVILLE, Iowa, Sep. 25, 1895.

Postmaster, Independence, Cal.

Dear Sir.—In the spring of 1862 three young men went from Walker river to Owens river. Steven Post; John Hoge and Jesse McGrath. I am told they named Mt. Whitney. I should like to know if it is true. Or if either of them is alive I should like very much to get his address. Perhaps some of your oldest settlers can give me some clue to either of the men or the facts in regard to the origin of Mt. Whitney's name. Nearly all the men who took part in the Indian fight about that time knew me. I built the first house in the valley of Walker River. The above named men were my friends. You will do me a great favor by answering this or placing it in the hands of some one else who will.

W. T. WHITNEY,
Blackville, Black Hawk Co., Iowa.

L. F. J. Wrinkle and attorney P. H. Mack left for San Francisco on yesterday morning's train to attend to the taking of testimony in a suit wherein Mr. Wrinkle is defendant. The action affects the title to 640 acres of land at Keeler upon which are the vats and furnace of the Soda Company.

The little Indian known as "Crazy" that was brought down from Bishop and examined as to his sanity, is enjoying himself here. He will probably be one of the number from here who will visit Bishop Fair week.

FOR SALE OR RENT.

ONE HUNDRED AND SIXTY ACRES of land, TWO HUNDRED inches of water, house and farming tools. Situated four miles south of Laws station on line of Carson & Colorado Railroad.

FIGURES REASONABLE
TERMS EASY.

Address—A. C. Stock,
Hawthorne, Nevada.

Clippings.

Reno Gazette:—Joe Scott of the "Halleck Cattle Co." makes a standing offer that to any one who will deliver 18,000 head of sheep in Owyhe county, Idaho, he will give 18,000 head of horses, provided they will take them away immediately. The horses will be gathered and turned over on the range. Mr. Scott is spending a few days at the Elko county ranch and is introducing a branding chute that will enable men to do more in one day than they would in a month where they have to throw each animal down and hold it while it is being marked. The cattle are run into a corral and from there turned off single file into a narrow passage-way 20 inches wide and 25 or 30 feet long closed at the end with a gate. The last three feet of this narrow passage-way consists of one movable panel fastened at the bottom by big hinges, and worked with a rope and pulleys at the top. When a bullock gets opposite this panel he finds himself suddenly pinched in tightly by the panel being drawn towards the opposite wall, and he is held there so he cannot squirm or kick or do anything but bellow while he takes the iron. It is not patented, but it is a big time and labor saver. Mr. Scott is buying cattle in eastern Nevada and will take them to his Montana ranch in the spring and fit them for fine beef for the Eastern "goldbugs." He thinks the future of the cattle business is much better than it has been for several years past.

Bodie Miner:—It is said the county officials will hereafter take all our unfortunate "borders" out of jail and have them work. In this way the expense to the County of boarding them can be greatly lessened. This is undoubtedly a move in the right direction. Other counties in the State are doing this, and why should Mono's tax-payers put up money to board lay-breakers who might as well earn their own board while under the County's "protection."

Walter Ober, the Inyo foot-racer, has been here several days. He says he is going to run in a race at the Bishop Fair with P. A Polley of Riverside, Cal. It is said some of the Bodie sporting men are going down and back Ober for $500.

Rev. S. W. Albone has arrived from Independence and will hold services at the M. E. Church next Sunday evening at 8 o'clock.

Carson News:—Nevada gold mines are attracting considerable attention of late. Several important deals have been made, and as Pine Nut is one of the most promising districts in the State, it is sure to come in for its share of attention. Where, over a territory of many square miles, deposits of pure gold running up into the thousands can be found within ten feet of the surface, as has been done in Pine Nut time and again, there is certainly reason to believe that a little systematic development work would produce good results, and it is a wonder that the attention of capital has not been attracted to this district before to-day.

There are now seventeen cases of smallpox at the Indian school, and in addition to that, five cases of what is termed kine pox, resulting from vaccination.

Lyon County Times:—At Last the expected has come to pass and the Sutro Tunnel is closed down entirely, not a man being at work. The management says operations will be resumed as soon as the company can raise money to square up the indebtedness. The company is indebted to those who have worked there for several months wages.

The freeze of last Saturday and Sunday mornings knocked out the tomato plants and injured what fruit was not ripe. Ice half an inch thick formed on still water.

Yerington Rustler:—It is reported that the C. & C. Ry. Co. have purchased six new passanger coaches from an Eastern railroad.

The following named men came down from Bishop last Wednesday, having business in the Land Office: Charles Wonacott; Robert McPherson; Phillip P. Keough; John L. Pourland; Albert C. Harwood; M. C. Hall; Chas. Day; Carl Fadder; Ross May; John M. Cooper.

Observer.

Coolgardie.

Rich new finds are being constantly reported from Coolgardie gold fields. Coolgardie, Australia, is an accessible point, reached by steamer to Fremantle, thence by rail to Southern Cross and team to destination. The trip to Australia on the fine steamers of the Oceanic Steamship Company via Honolulu, Samoa, and New Zealand is pleasure sailing the day long. This line tickets passengers to Cape Town, South Africa. Map of Coolgardie district and Pacific ports reached by the Oceanic Steamship Company is mailed free to any address by the O. S. S. Co. 114 Montgomery St. San Francisco.

Shakespeare and Bacon.

A famous historian well known personally in Boston told the following story when he was asked what he thought of the Shakespeare-Bacon controversy: "I was once librarian in a small town, and it was my custom to catalogue books on the real meaning of Daniel, astrology, modern spiritualism, etc., under the general head 'Insane Literature.' When any volume written in support of the Baconian theory appeared, I catalogued it under the same head."—Boston Journal.

BRUSSELS AND TAPESTRY.

The Difference Between These Two Kinds of Carpets Explained.

By placing a brussels and tapestry carpet side by side a clearness and sharpness are noticed about the brussels carpet which are absent from the tapestry. In the latter there is a mistiness about the colors, and the pattern lacks that sharpness and delicacy which characterize the former. This is due to the process of manufacture. A brussels is a yarn dyed, and a tapestry may be described as a printed fabric, but the printing is done upon the yarn before the process of weaving.

The whole method of manufacture is most ingenious. In the making of a five frame brussels no fewer than 1,280 ends of face yarns are required for the weaving of one piece of standard quality, each frame consisting of 256 bobbins, and 256 ends only can come to the face at each pick of the pattern. Therefore 1,024 ends of yarn are hidden in the body of the fabric. There are many qualities of tapestry, but in the production of the standard quality only 216 ends of face yarn are required, instead of 1,280, which shows at once that the brussels carpet has the great advantage of being thicker, softer and altogether a more durable cloth apart from other advantages which it possesses. There is a limitation in the number of colors used in a brussels. In tapestry there is no limit. In the brussels the whole of the colors used show a more or less striped appearance at the back of the fabric.

In a tapestry they do not show at the back at all. This fact is made use of by householders in purchasing carpets, this being about the only way the average person can tell the difference between them. In order to pass off tapestry as brussels some ingenious makers have resorted to the striping in a regular manner of the backs of the former. The stripy effect in the latter is broken and irregular. A casual observation of the clearly defined character of a brussels pattern should enable a buyer to distinguish between the two fabrics.—Furnishers' Gazette.

MISCELLANEOUS.

UNITED STATES LAND OFFICE,
INDEPENDENCE, CAL.,
July 29, 1895.

TO WHOM IT MAY CONCERN:

Notice is hereby given that the Southern Pacific Railroad Co. (Main Line) has filed in this office a list of lands situated in the townships described below, and has applied for a patent for said lands; that the list is open to the public for inspection, and a copy thereof, by descriptive subdivisions, has been posted in a convenient place in this office for the inspection of all persons interested and the public generally.

Within the next sixty days following the date of this notice, protests or contests against the claim of the company to any tract or subdivision described in the list, on the ground that the same is more valuable for mineral than agricultural purposes, will be received and noted for report to the General Land Office at Washington, D. ABSOLUTELY PURE

When Lee Surrendered

By SALLIE PATE STEEN.

And all this time Glen's heart was torn by a thousand fears. Her imagination intensified the real dangers of his situation, and the unsettled state of the country, just before the close of the war, warranted in a great measure her anxiety. He might be made a prisoner at any moment, or shot as a spy. Many a night the girl awoke sobbing and panting from frightful dreams, and the fact that the whole responsibility of the household rested upon her shoulders—that upon her devolved the duty of sustaining her timid and gentle mother—rendered her position a thousandfold more trying. When her brother left home they had hurriedly fixed upon a rendezvous where she might meet him at certain times, but experience had taught her that her visits to the deserted little shanty, deep in the woods, which they had selected, were not unattended with danger.

Of any personal peril she did not stop to think, but there were scores of runaway or discontented slaves, eagerly looking forward to their expected freedom, who would gladly bear tidings of a Confederate soldier to those whom they considered their best friends and liberators. But these papers must be delivered into her brother's hands. She could not breathe freely until this was done. It was late in the afternoon when she made her preparations for the long walk. It was not safe to meet her brother until night had fallen, but the moon would rise on her homeward way, and her mission once accomplished she would know no fear. At last she was ready to set out. Missy put up her lips for a goodby kiss, and her mother overwhelmed her with whispered precautions and messages to her boy. At last Glen was out of the house and walking swiftly down the long cedar avenue. As she passed through the great gates she noticed Nelse skulking behind one of the trees, and sharply ordered him back to the house.

For a moment a suspicion of the boy shot through her brain. He had been unusually surly of late and rebellious of authority, but this she had attributed to the general disaffection which now hung like a dark cloud over the relations of slave and master. She dismissed the fear from her mind as she hurried onward. When she reached the wood the sun was almost setting, and the dense shade of the trees made a twilight under their thick boughs. She had advanced but a few steps—the hut was still far out of sight, and its occupant, if he had already come, far out of hearing—when she was startled by a rustling in the bushes behind her. It was some wild animal, she told herself—a squirrel, a snake, possibly, gliding through the undergrowth. If—her heart stood still at the thought—it were anything else, it were equally perilous to advance or recede. She turned swiftly to face the danger. Directly before her, creeping along in the bushes, her quick eyes discovered the crouching form of Nelse.

"Nelse," she called, her voice shaking with scorn and anger. The old habit of obedience was too strong upon him for open resistance, and he slouched forward, cringing under her blazing eyes, but his rebellion was not quenched.

"Don't yer hit me, Miss Glen," he whined. "I'se mos' free now, I knows I is, and you dasn't hit me. 'Deed you dasn't."

"You should answer for this, if a whole regiment of Yankees backed you," she said. "Now go."

And Nelse needed no second bidding. He sprang away like a deer, and his mocking laugh came back to the girl's startled ears. But she had not a moment to lose. She understood too well what his next move would be. He had gone back to the house to inform upon her. There was a short cut which she had not taken, on account of its publicity, and of this he and they who returned with him would avail themselves. Of this new complication she dared not tell her brother. She knew his rash impetuous temper, and that rather than allow her to encounter any danger alone he would simply wait and give himself up to his enemies. There was but one course open to her. She must hurry on at her utmost speed, give him the papers, and without arousing his suspicions, urge him to instant departure. All this she determined upon as she hastened onward with reckless speed. But the hut was still at a considerable distance, and the way was rough and difficult, even to her nimble feet. When at last she reached the shanty and sank into her brother's arms, she was breathless from fright and exhaustion.

"But, dear, I cannot keep you a moment," she panted, after he had glanced over the papers she thrust into his hands, "not even to answer questions. You don't know the danger we are in or the risk I have run in coming. Oh, Frank, it would break mother's heart if anything should happen to you. No, dear, we women are not in any danger. The soldiers are quartered upon us, but they are civil enough in their bearing. But, oh, Frank, you must hurry. Let me give you mother's love and her blessing and her kisses, with dear little Missy's and mine, and then you must go."

"And not a moment to talk with you, Glen?"

"Not a moment. Is that Black Bess tied out yonder? Wait, I will go with you to mount, and then you must ride like the wind."

It was quite dusk in the wood.

Black Bess whinnied with pleasure and snuffed daintily as Glen passed her hand caressingly over the creature's satin neck. Her brother held her for a moment in a close embrace; there was a whispered "God bless you," a quick vault to the saddle, and then the spirited mare, with her gallant rider, dashed forward out of sight. Glen watched them until the last glimmer of Confederate gray had vanished, and then turning, with tear filled eyes and a beating heart, saw Captain Campbell not ten rods distant, leaning quietly against a tree, with his arms folded on his breast.

In an instant the indignant blood rushed hotly to her face and throat. He evidently expected her to speak. Indeed, he lifted his cap and advanced a step, but her pause was only momentary. With her head up, she went swiftly past him, noticing him no more than if he had been the tree against which he had leaned. With one stride he was beside her.

"Will you accept my escort, Miss Helen?" he asked courteously. "This wood is a lonely place, and particularly unsafe in these unsettled times and at this hour."

"It seems infested with spies at any rate," she said haughtily. "I could scarcely expect you to relinquish your role so quickly for that of protector. But to spy upon a woman!" In her uncontrollable excitement she had turned in the narrow pathway to confront him, and her face shone white in the darkness. "When you and your soldiers forced yourselves upon us, Captain Campbell, we accepted the fortunes of war as gracefully as we might, and treated you, if not in the spirit at least in the letter of courtesy, as our guests. Do you know that a southerner—yes, the humblest of us—would sever his right arm from his body sooner than be guilty of what you have seen fit to consider your duty? And a gentleman would scorn to accept information from a base slave who betrays his master!"

"Perhaps the latter character is an exotic which exists only south of Mason and Dixon's line, Miss Helen."

His tones were perfectly calm. If she had not been so swept out of her ordinary self control she might have detected a faint amusement in his voice, but her passion had blinded her perceptions.

"And now, if you have fulfilled your mission," she said after a pause, "you will permit me to find my way home."

"My mission will not be fulfilled until I have seen you safe at your mother's door," he said gravely, as he lifted his cap and fell a pace behind her. If her life depended upon it she could not have uttered another word of protest. There was nothing to be done consistent with dignity but to hurry homeward and rid herself as quickly as possible of his hated presence. As she pressed swiftly forward, trying to forget that she was not alone, but hearing always that steady, firm step behind her, a hundred questions buzzed in her brain. Why was he alone, and on foot?

She had expected to see a squad of cavalry dash from behind the trees and scurry forward in the direction which Black Bess and her rider had taken. Was he armed? No; she had not thought of it before; but now, as if his presence had been photographed upon her memory, she saw him as he had leaned carelessly against the tree—in a dark blue frock coat, with his cap pushed back from his brow and not even his sword dangling from his side—as peaceful a figure as one might meet on an afternoon stroll. What could it all mean? She was faint with excitement and perplexity. The way seemed interminable, and it had grown very dark. An owl hooted close at hand and the wind sighed in the pine trees above her, and still that firm step sounded behind her, bringing with it—how dared she acknowledge it to herself—a certain sense of protection and comfort. Once he stretched out his hand to hold aside an overhanging bough that she might pass, and then, thank heaven! they cleared the woods, the way grew smoother, and at last the lights of home twinkled before them.

As they entered the long, dark avenue which led to the house it seemed like going into the gloom of another wood. Strange to say Glen was feeling wildly that this silence must be broken—that she must say some word of acknowledgment or dismissal. As she turned her foot caught in the protruding root of one of the old trees, and she would have fallen heavily forward had not a pair of strong arms caught and held her in a close embrace.

"Glen, my poor child, have you hurt yourself?" When the first spasm of pain from her wrenched ankle was over, she heard his low voice in her ear. "Am I cruel to say I cannot be sorry if it has given you to me for one moment? My darling, don't struggle so. I love you, Glen; do you hear me? Love you! What do all the wars of the universe matter to us? Nothing; though I were a traitor for saying so. You do not hate me?" There was only a low moan for answer. "But when this war is ended you will let me come back and win you?"

"You may not care to come back then," she said defiantly. She had drawn herself away from him, though the effort to stand without his aid was blanching her lips. "You may not care to come then. We may be the conquerors."

"No, my poor child, that will never be. For your sweet sake I might for a moment forget myself and my country and echo your wish; but when your gallant commander lays down his arms, when Lee surrenders, Glen, may I come back and claim you?"

"When Lee surrenders!" she repeated mockingly, and then she remembered no more.

CHAPTER IV.

When she returned to consciousness she was lying in her own bed with Maum Betsey's black face bending anxiously over her.

"Dar you is, honey," she said, with a great sigh of relief. "Bless my life, but I thought dem eyes nuver was gwine ter open, and yer ma's jes gone plum 'stracted 'bout yer. She stepped to her room for some mo' arnica, and honey"—Maum Betsey raised her finger warningly—"don't yer tell her how you come ter be heah."

The caution was given not a moment too soon, for just then the door opened softly and Mrs. Helen came hurriedly in. Not that Glen could have divulged something of which she herself was totally ignorant, but the old habit of shielding her mother from all anxiety, which she had shared in common with Maum Betsey ever since she was a girl in short dresses, asserted itself now. When her mother's pale face bent over her she was able to look up brightly and reassure her.

"It is nothing, mother; only the slightest sort of a sprain; you see, I was walk-

"This is not my ghost, darling."

ing so rapidly—but I am perfectly well now. I—I"—becoming vaguely confused—"don't quite remember how I came here, but Maum Betsey found me and put me to bed, so as not to alarm you any sooner than was necessary."

"And your brother, my poor child?"

"Oh! he got off nicely. He was in good spirits, and says we shall hear from him in a few days at farthest. But, mother, I must send you to bed. You look as tired as I am, so good night." But when the door closed gently after her mother Glen raised herself on one arm and looked Maum Betsey eagerly in the face.

"Mammy," she said, "how did I get here?"

"Why, bless yo' life, chile, de capen brung you. You didn't think a meracle done happen ter my old jints, so's I could fotch you, did you? Lawd! when he comed roun' ter de kitchin do', and called me, sorter soft like, wid you in his arms, des es limp es a dishrag, you could a' knocked me down wid a fedder. But he mighty quick 'splained it, and den I seed de coas' was clar, case old Miss was singin Missy to sleep in her room, so we crope in an' up de staircase, an' he laid you down jes as easy as if you'd ben a baby. But Lawd! ain't I gwine ter give dat Nelse a tas' o' my strop in de mawnin'."

"Did Captain Campbell tell you about Nelse?"

"Cose he did. He brung him roun ter me by de shoulder. 'I hain't teched dis young rascal,' he said; 'but he d'serves as sound a thrashin' as you can fin' it in yo' heart to giv' him,' and den he tored off lak mad down dat short cut to de woods."

There was a long pause, and then the girl broke the silence with a sobbing, pitiful cry: "Oh, mammy, mammy! I am so tired. Can't you sing me to sleep like you used to?"

"'Deed I will, honey, 'deed I will. You's all wukked up, I knows you is. Nuver min', nuver min'."

Maum Betsey patted the girl's hand gently, rocking her own body to and fro as if she held in her arms the baby she had nursed so many years ago, and Glen nestling in her pillows was soothed by the senseless lullaby crooned in the quavering old voice.

Baa, baa black sheep,
Whar you lef' yo' la-a-m?—
Way down yander in de valley.

She was roused in the morning by the trampling of horses, the jingle of spurs and a bugle call on the lawn below. Maum Betsey, who had kept faithful watch all night by the girl's bedside, roused at her startled cry. "It's de sojers, honey," she said drowsily. "I clar, I furgot dat Mars Capen' done cha'hged me to tell you dat he done got his orders, and hed to march de fust ting dis mawnin'."

And so upon that day Glen took up life anew with an added burden—a secret, awful burden that weighed upon her girlish heart. All through that fatal month, in which the March winds clothed the woods with beauty, the days went by in that old house, wrapped in a mist of fire and blood and carnage. No news of the outside world reached them. No communication stirred the pall of dread and anxiety which had settled down upon them, but at night they could see the red light of fires blazing against the quiet skies, and shuddered in their beds when the sullen boom of cannon shook the earth. Not one word or line came from the absent son and brother, and to the anguish that was whitening her mother's hair Glen dared not add one pang by disclosing this traitorous, disloyal, nameless feeling that had grown up in her heart. Oh! that she could crush it out like a poisonous thing—this strange madness which had changed her from a careless girl to an anxious, saddened woman. The old rooms and the quiet wood where she often wandered to escape her mother's eyes seemed to mock her with memories of things that had passed away forever.

It was one day late in April, when she was returning from one of these aimless rambles, that she saw a body of horsemen moving along the road before her. They might be a squad of cavalrymen like those who had passed and halted many days before, she thought, unconsciously quickening her steps. But no, they wore the Confederate gray, a straggling, disorderly band, torn and tattered, with unkempt hair and beards. Many of them reeled in their saddles, with songs and reckless laughter, but she felt no fear of them. She put her hands to her mouth, trumpetwise, and shouted:

"What news? Has Lee surrendered?"

And the leader, swaying heavily over his horse's neck, shouted back with an oath:

"No, miss, and he'll never surrender!"

"He'll never surrender!" they all yelled in a wild chorus, as they put spurs to their maddened horses and disappeared in a cloud of dust.

When she reached the house her mother met her, with a new light on her stricken face, and led her gently in, and there upon the sofa lay her brother, pale and worn and wasted indeed, but sound in body and limb. "It is all over, Glen," he said, springing up to meet her and clasping her in his arms; "it is all over, and Lee has surrendered." He broke down in a burst of sobs.

And now a strange hope awoke in Glen's heart and lived there. It budded with the spring, and blossomed with the summer flowers that opened this year to shed their petals upon many graves; but when the autumn came and the wood dove moaned all day in her plaintive tones and the wind awoke in the pines, a newspaper, the first in many weeks, founds its way to them. It was out of date, but still welcome, and Glen went to the open window to read it and there, in a list of the dead, she saw his name.

She was alone, but she did not cry out or faint. She had never been guilty of anything so weak and womanish but once in her strong young life, but she stepped out upon the lawn, though it was raining heavily, and went like a wounded thing down the long dark avenue of moaning cedars. "He is dead," she said to herself, when at last she reached the great gates and stopped; "dead, and he will never know that I prayed he might come back to me—that no matter what happened he might come back—that he might only, only come back."

Through all the wind, and the falling rain, and the darkness did he hear that despairing cry? For he was there, clasping her in his passionate arms.

"It was not I. This is not my ghost, darling," he was saying, as he showered kisses upon her white face; "I have come back in the flesh to claim you mine, Glen—mine—always mine!"

* * * * * *

"And to think," she said, lifting her happy eyes to the tall man who leaned against a tree beside her, leisurely smoking and watching her as she rested on her royal couch of pine needles, "to think that in this very spot I was once so very, very angry with you, Alan!"

"And to think," he answered, bending down to pat the sturdy youngster who, seated in his mother's lap, was pulling all her bright hair down with his brave hands, "that just four years after a southern girl—a Virginian of Virginia—should confess that she blessed the day 'when Lee surrendered!'"

THE END.

THE ROAD-RUNNER.

Prominent among the quaint productions of the Sierra country is the road-runner, often called the "chaparral cock," and again the "cock of the plains." Like all the bold challengers of the bird creation, the road-runner is crested. He is no relative of the grouse, being, indeed, an unique creation. Strangely enough, he is classified with the cuckoos, which are denizens of the groves and are gentle, if not spiritless. But in our road-runner, the slight, short legs of the cuckoo have become long and strong, almost matching those of the wild turkey. The feet, designed apparently for climbing or perching, are also long and strong, with two sharp toes reaching forward and two turned backward. A friend in Santa Fe, N. M., tells me that he has seen a road-runner take a telegraph pole, and with three skips, as it were, mount to its top.

He has something of the look of the great crested log cock—the gallant high strutter of the "woodpeckers." A long, strong, sharply pointed bill provides the chaparral cock with as keen a weapon of offense as any raven's beak, but it never by any chance dips into carrion. A brilliant eye with the glitter of the mustang's is in the large, well-poised head. As though to proclaim his carnivorous habit, a small red gule, bare of feathers, is planted on the neck below each cheek.

This cock of the plains is the picture of sinewy strength and lightness. His hue is dark, with many horizontal flecks of white. His glossy black tail—over a foot in length—is held up proudly, but straight back. He uses it as a rudder to steer his fleet passage over the ground. The jack-rabbit for a 10-yard stretch has not half this bird's swiftness. Our road-runner will not waste his strength to long racing, but shoots with arrowy snakes, tarantulas and the deadly vine-speed to his covert or point of attack.

He is the foe of all vermin, especially of gerone. He often compasses the death of large snakes by surrounding them with cactus spines, and then tantalizing them till they impale themselves on the sharp spikes. With his wings, which he disdains to use in flying, he can strike the threatening snake-head a blow that will so stun and scatter the senses that the prey is easy to the relentless enemy.

This bird loves the ardent sun, the spiky cactus, the thorny mesquite bush, and the serried bayonets that guard the yucca. All these plants of the desert furnish sure hiding places on the exposed plain for the chaparral cock and his faimly. Wary and fierce as he is by nature, he seems to know well that he is of friendly meaning to man. His boldness gives him a certain confidence or trust, and he is easily tamed, becomes semi-domestic, and at once is man's sure ally in destroying the sly pests of the granary, with the spiteful centipedes and scorpions that sneak into houses. He is worth a dozen lazy cats to the Mexican ranchero.

The tail of the chapahrral cock—made of many broad, stiff feathers not (plumes)—did not grow in Darwin's sentimental house of sexual selection. Its owner has to "get his living," and cannot afford to dawdle. This tail—unique and unrivaled among bird-tails—swings from side to side like a broad oar, as the bold, industrious cock turns a corner. No boatman ever feathered an oar so skillfully and masterfully in rounding turn; no rope-walker ever used his blancing pole more adroitly. With it the bird can arrest his swiftest flight, and make the sharpest angle in his course, zig-zigging, almost lightning-like, across your field of vision. Such doubling was never done by any fox-afield as is possible to our bird, skimming in airy grace like a keen skater over a field of ice.

It is said that in winter this adventurous bird migrates afoot several hundred miles southward, much after the manner of the wild turkey. It is found in winter along the Gulf of Mexico and the Gulf of California. Thus his range is the whole breadth of the continent in the latitude 30 to 35 degrees. Let us hope that he will long remain to enliven these plains and hillsides and to mitigate the pests of this "white and bright land" of New Mexico.—Our Animal Friends.

A relic of one of the most extraordinary surgical casesever heard of is preserved in the Military Hospital at Plymouth. This is the heart of one Samuel Evans, a private grenadier in the Second Regiment of Foot, who died in the above hospital sixteen days after he had been shot right through that organ.

What is the only pain of which everyone makes light?—A window-pane.

SOME VERY CURIOUS TREES.

The largest orange tree in the South is a gigantic specimen which grows out of the rich soil in Terebone parish, Louisiana. It is fifty feet high and fifteen feet in circumference at the base. Its yield has often been 10,000 oranges per season.

The "tallow tree" of China has a pith from one inch to two feet in diameter according to the size of the tree, which is composed of a greasy wax, which is so highly volatile that it often catches fire spontaneously, consuming the tree to the very ends of its roots.

The largest oak tree now left standing in England is "Cowthorpe's Oak," which is seventy-eight feet in circumference at the ground. The oldest tree in Britain is Parliamentary oak, in Clipstone Park, London, which is known to be 1,500 years old.

The largest apple tree in New York State is said to be one standing near the town of Wilson. It was planted in the year 1815, and it is on record that it once yielded thirty-three full barrels of apples in a single season.

There are 413 species of trees found growing within the limits of the United States. The curiosity of the whole lot is the black ironwood of Florida, which is 30 per cent. heavier than water. Well-dried black ironwood will sink in water almost as quickly as will a bar of lead.

The "life tree" of Jamaica is harder to kill than any other species of woody growth known to arboriculturists. It continues to grow and thrive for months after being uprooted and exposed to the sun.—St. Louis Republic.

The Town Trustees of St. Helena granted L. Grothwell a franchise to build an electric road along the main street of St. Helena, also to construct and operate an electric light plant. Grothwell already has franchises from the County Supervisors and the Napa City Trustees, and proposes soon to begin work on an electric road from Napa to Calisotga.

SMALL BEGINNINGS

Make great endings sometimes. Ailments that we are apt to consider trivial often grow, through neglect, into atrocious maladies, dangerous in themselves and productive of others. It is the disregard of the earlier indications of ill health which leads to the establishment of all sorts of maladies on a chronic basis. Moreover, there are certain disorders incident to the season, such as malaria and rheumatism, against which it it always desirable to fortify the system after exposure to the conditions which produce them. Cold, damp and miasmi are surely counteracted by Hostetter's Stomach Bitters. After you have incurred risk from these influences, a wineglassful or two of Hostetter's Stomach Bitters directly afterward should be swallowed. For malaria, dyspepsia, liver complaint, kidney and bladder trouble, nervousness and debility, it is the most deservedly popular of remedies and preventives. A wineglassful before meals promotes appetite.

The reason why many New York schoolmarms don't marry is because they don't like to give up seventy-five-dollar positions for two-dollar dudes.

There is more catarrh in this section of the country than all other diseases put together, and until the last few years was supposed to be incurable. For a great many years doctors pronounced it a local disease, and prescribed local remedies, and, by constantly failing to cure with local treatment, pronounced it incurable. Science has proven catarrh to be a constitutional disease, and therefore requires constitutional treatment. Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, O., is the only constitutional cure on the market. It is taken internally in doses from 10 drops to a teaspoonful. It acts directly on the blood and mucous surfaces of the system. They offer one hundred dollars for any case it fails to cure. Send for circulars and testimonials. Address

Try Germea for Breakfast.

The Onward March

of Consumption is stopped short by Dr. Pierce's Golden Medical Discovery. If you haven't waited beyond reason, there's complete recovery and cure.

Although by many believed to be incurable, there is the evidence of hundreds of living witnesses to the fact that, in all its earlier stages, consumption is a curable disease. Not every case, but *a large percentage of cases*, and we believe, **fully 98 per cent.** are cured by Dr. Pierce's Golden Medical Discovery, even after the disease has progressed so far as to induce repeated bleedings from the lungs, severe lingering cough with copious expectoration (including tubercular matter), great loss of flesh and extreme emaciation and weakness.

SCHOOL OFFICERS TEACHERS

NOTE THE FOLLOWING:

SAN FRANCISCO, CAL., Feb. 23, 1895.

To the Educational Public—

We are pleased to announce that we have disposed of our entire Educational business to the WHITAKER & RAY COMPANY, who will conduct a general School Book and Supply business. We turn over to them all orders that we may hereafter receive in this line, and would refer our past Educational patrons to them.

MR. CHAS. M. WIGGIN, who is a member of the Company, and will have charge of the business here, has been in full management of our Educational Department for many years, so that we feel assured that your orders will be promptly and carefully filled.

We earnestly recommend them to the Educational public, and wish them every success. Very truly,

THE BANCROFT COMPANY,
H. H. Bancroft, Pres't.

We are making a specialty of the Educational Supply Business, and have largely increased the stock we purchased from the above long-established firm. Those interested in Educational matters will find an attraction in inspecting our stock of

SCHOOL AIDS — SCHOOL FURNITURE
TEACHERS' BOOKS — LIBRARY BOOKS
PRIMARY HELPS — SCHOOL APPARATUS
PEDAGOGICAL BOOKS

HORSE MEAT.

Horses Now Being Slaughtered for Food.

KILLED WITH A SLEDGE-HAMMER.

Skinned, Cut Up and Canned, and Every Part of the Animal is Utilized And Sold.

Horse meat killed in the United States is now on the market, and from now on no one can be absolutely sure of the meat he buys. Canned corned beef masquerading as the genuine article may really be the product of Western horses which have been slaughtered because it is cheaper to use them for food than for work.

The slaughtering of horses for food is a new enterprise in Portland, Or. That there is great interest in this question is apparent from the fact that the projectors of the enterprise have been overwhelmed with inquiries regarding methods of killing, canning and use of the various products. If this first attempt to sell horse meat succeeds, capital will doubtless engage in the same business, and the animals now roaming the prairies, half starved and semi-wild, will be slaughtered to make food for man.

This first slaughter of horses occurred Tuesday, July 23. It was to have occurred the day before, but the horses had not arrived in time. This delay was caused by the trouble experienced in getting the horses to swim the Columbia River to Umatilla, where they were to take the train for Portland, en route to Linnton, where an abattoir has been built.

They were a rough-and-tumble lot, of all ages and sizes, Cauyses and half-breeds alike, handy with their teeth, kicking or biting each other on the slightest provocation while waiting for the foreman of the slaughter-room to, barber like, cry "Next!" then be driven up the inclined plane to a closed pen, where a butcher and a sledge-hammer were waiting to send them to the elysian horse plains, perhaps to be ridden by the shades of departed Indians in the happy hunting grounds, where no sleet covers the grass in winter to starve the poor range pony.

The abattoir buildings are fitted up with every convenience. They stand in an old orchard on the banks of the Columbia.

In a field of growing oats are the corrals, from which the inclined roadway leads to the slaughter-room in the upper story. On the ground floor are large wooden tanks for steaming the fat out of the meat, a number of smaller tanks of galvanized iron, two large vertical digestors or retorts, a press for pressing the oil out of the meat, a kiln, heated by steam, for drying the bones; a bone-cracker, resembling a rock-crusher; a disintegrator or machine for grinding the refuse into a fertilizer, a boiler and an engine. All of the by-products will be utilized, so that the profit is not only in the flesh.

Near the abattoir were several horses which, as one of the butchers said, "broke their fool necks jumping down an embankment trying to get away."

Before the slaughter could commence the carcasses of these animals had to be got out of the way. This was quickly done. The legs were cut off at the knees, the mane and tail were removed, a slit was made the whole length of the skin, and the heads were skinned and also a part of the neck.

Then a rope was made fast to this loose skin, so that it could not slip; a chain was put around the neck and fastened to the trunk of a tree, and a steady-going pair of old horses were hitched to the rope. In ten seconds the skin was off; a few cuts and slashes and the carcasses were in the steam tank being converted into fertilizers.

The horse is a pachydermatous animal, like the hog, whose hide grows close to the flesh, so that it cannot be removed in the same manner as the hides of oxen and sheep.

The method of killing the horse was about the same as that of killing a steer. The horses were trotted up the inclined roadway from the corrals and each was inclosed in a pen. Then the executioner hit them on the forehead with a sledge-hammer, and they fell senseless. The doors of the pen were opened, or rather lifted, the carcasses drawn out on the floor, dressed and hung up. Trenches in the floor and chutes carried the offal out of sight, and in a little while a number of carcasses were suspended by the gambrels from the iron tracks above. The pile of hoofs in one corner and a pile of horse tails in another were all that remained to show that anything unusual has taken place.

Immediately after being stunned by the blow from the hammer, another man comes along with a big knife which he slashes across the throats of the unfortunate beasts. It may be said in favor of this mode of execution that it must be quite painless. The blow from the hammer at once deprives the animal of consciousness. The subsequent gash with the knife deprives it of life.

The flesh, after it has been quartered and hung for awhile, acquires a bluish tinge, which is not agreeable to one who has been accustomed to eat real beef. It looks very tough and sinewy, and on the whole extremely uninviting. It is asserted by some who have tasted of horse flesh that it is quite as agreeable as beef, and in fact that the difference can hardly be detected. In Berlin and some other cities on the Continent it is said that horse meat is more tender and more toothsome than much of the beef sold there, and that in many of the restaurants it is surreptitiously served as beef. In the roast the peculiar flavor of the horse flesh can always be detected, but in hashes and stews the deception has worked very well.

Every part of the animal's carcass is put to some use. The meat is eaten, the hide sold for various purposes and the hoofs and bones for manufacturing glue and the blood for manufacturing albumen.

The chief condition observed when a horse is subimted for slaughter is that he shall be in good bodily health. The age does not appear to make any particular difference. In the case of animals which have met with accidents, such as a broken leg from a fall in the street, the animal is likely to have contracted a fever, and it is not advisable to kill him in this condition.

As a matter of fact, horse flesh is perfectly harmless, and there is no good reason why people should consider the habit of eating it a revolting one. The animal is much cleaner in its mode of life than the cow or bull. It carefully avoids dirty food and water whereas the cow will invariably select the dirtiest water to drink. Still this may not be of much importance in view of the fact that men eat and enjoy lobsters and pigs.

It may be a source of wonder why horse meat should be killed at all, as, at first thought, it might seem to be more expensive than beef. Such, however, is not the case. A much larger profit can be made, under certain conditions, from the sale of horse meat than from the sale of regulation beef. Good, fat horses with ringbones, incurable spavins and other diseases can be bought for $3.50, while good beef costs considerably more than this. The introduction of cable and trolley cars is throwing many a horse out of a job. Most of these creatures at the time of their being supplanted are already broken down by their few years of street-car service. In some cases such animals have been bought up for the abattoir. In view of this fact it is just as well to be careful about the meat you buy. Since most of our butchers have their meat killed for them, it is possible that they also may be deceived, and may sell you horse flesh under the impression that they are giving you beef. This, indeed, seems scarcely possible, yet it is well to be careful.

As to sausages, one is always so uncertain in regard to the materials of which they are composed that the problem of detecting whether horse flesh be present or not seems a hopeless one. Even in this city cases have been discovered where owners of bologna-sausage factories have designedly and knowingly substituted horse for other flesh in the composition of their sausages.

DRUG FADS.

The discovery on the streets Thursday of a woman unconscious from the effects of an over indulgence in camphor has brought to light the fact that the habit, while a strange one, is by no means a rarity in St. Louis. A number of druggists and physicians who were seen yesterday testified to this effect. Camphor eating is not as pronounced an evil as the excessive use of some other drugs, but it is nevertheless an existent evil.

"Only last week," said Mr. Fernow of Fernow's pharmacy, "a woman called here and said: 'Please give me a dose of camphor.' She didn't say what she wanted it for. I offered to give it in solution or in any palatable form possible. However, she insisted on the ordinary gum camphor, and she got rid of a chunk of it that surprised me. 'Why,' she exclaimed, I take it that way all the time.' "

At Judge & Dolph's pharmacy a gentleman stated that "many people carry a lump of camphor about in their pockets, and take a bite at it at frequent intervals." Camphor is supposed to have a sedative effect, but that depends largely upon the quantity taken and the mode in which it is taken. Essence of camphor consists largely of alcohol, and its effects would naturally be similar to that of any other intoxicant. Camphor in itself is a stimulant and an irritant, and when consumed to excess would usually lead to disagreeable sensations in the throat and stomach. The after result will be a diminution in the rate and strength of the pulse, together with giddiness, dimness of vision and faintness. Another quality attributed to camphor and alluded to by several druggists is that of allaying the passions.

Probably the improper use of camphor has hardly reached an extent that would justify the use of the word fiend in speaking of its devotees, as in the case of morphine and cocaine. People my be addicted to the camphor habit without being slaves to it.

Quinine is another article that is said to be subject to unreasonable usage. How such an unpalatable and penetrating drug can fasten itself upon any one as a habit or a fad seems remarkable, until it is remembered that the efficacy of quinine in malaria and certain kindred ailments induces many to regard it as a panacea for all torubles to which flesh is heir. The consumption of quinine in St. Louis is simply extraordinary. Drug stores which supply it at cut rates get rid of tremendous stocks of it each week. Quinine victims, with their nervous headaches and general shakiness, are numerous, and the first indication of sickness is usually made the pretext for immediate doses of the bitter powder.—St. Louis Globe-Democrat.

The receiver of the Wichita (Kas.) National Bank has brought suits for over $200,000, the greater portion of which is money borrowed on personal notes.

Some wish they did, but no man disbelieves.—Young.

BICYCLING.

The Good Effects of the Wheel Noticed.

IN THE CITY AND SUBURBAN TOWNS

Wayside Inns Springing Up Along the Cyclists' Route—Good Roads Badly Needed.

As a revolutionary force in the social world the bicycle has had no equal in modern times. What it is doing is, in fact, to put the human race on wheels for the first time in its history. The proportion of people who are riding bicycles in nearly every community is astonishingly large. In many instances, it may be said that nearly every able-bodied man, woman and child has a wheel, and is a regular rider. When we consider the increase in rapidity of locomotion which is attained, and the fact that it is self-supplied with such ease, it is not surprising that the changes required to meet the demands of the new order of things are so many and so radical as to amount virtually to making the world over again, so far as traveling is concerned.

This is peculiarly the case in the great cities. In and about New York, for example, there are at present something like half a million bicycle-riders. In the city itself, on pleasant holidays, they swarm like flies upon all the parkways and other thoroughfares having asphalt or macadam pavement. It is very clear that sooner or later they or the vehicles must give way, for both cannot find room to remain with safety. Indeed, there have been many fatal accidents already, some of them shocking in the extreme. The dangers increase as the number of wheelmen multiplies. In a collision with any kind of vehicle drawn by a horse the bicycle-rider is certain to get the worst of it. His vehicle, instead of being in any way a protection, is a menace to his welfare the moment it comes in contact with any other moving body. The fact that he cannot stand still for a moment is also an element of additional danger. These conditions make it an absolute necessity that in all communities in which there are large numbers of wheelmen there should be separate roadways set apart for their especial use. No city park should be laid out in future without its bicycle pathway, nor is it liekly to be. The need of a separate roadway for horseback riders has been recognized in all our great parks, yet in a roadway filled with carriages an equestrian is much safer from harm than a bicycle rider. At present the wheelmen outnumber the horsemen a hundred or more to one, and the need of separate provision for them is consequently too obvious to be questioned.

But it is not in the parks alone that such accommodation is necessary. There has been much discussion in the New York press for some months past about providing a suitable roadway for bicycles from one end of the city to the other, so that riders may pass to and from their business on their wheels. It has been urged that the covering with asphalt of a cotinuous or connected line of streets would supply this, but this is doubtful. The chances would be that heavy wagons and carriages of all kinds would seek the same line of travel because of the superior roadbed, and that it would become too crowded to be either a safe or a speedy thoroughfare for bicycles.

It is not impossible that in time we may see in all our great cities lines of streets reserved for bicycles. This might be done were all the streets of the city paved equally well, and it is one of the most beneficent effects of the bicycle that it is making the advent of this condition of our city streets certain in the near future. There are enthusiasts also who predict that in New York it will not be many years before a lightly built elevated structure will be run through the streets on the water front for the exclusive use of wheelmen.

If separate thoroughfares of any kind are set apart for this use, the result will be a considerable loss of income to the street transit companies. It is a fact that many trolley lines running between Western cities and their suburbs have suffered serious financial loss through the use of the bicycle, since thousands of persons travel to and fro between their offices and their homes on wheels. But while the transit companies have been injured in this way, the whole country has been the gainer by means of the widespread demand for good roads which the advent of the bicycle has aroused. Many States, led by Massachusetts and New Jersey, have taken up the subject seriously and systematically, and the next few years are certain to see great progress made in its direction.

Massachusetts in 1893 appropriated $300,000 to be expended by a highway commission in scientific road-building, and about forty sections of such roads are now under construction. New Jersey has spent many thousands of dollars in the same way, and its number of good roads is increasing year by year, each new one being the most persuasive kind of argument for others. The recent Legislature of New York State recognized the needs of wheelmen more specifically by passing a bill authorizing the construction of a bicycle roadway upon the top of the Croton aqueduct, running for forty miles through a beautiful part of the country north of the city.

An interesting effect of the new order of things is the revival which has been started in the old wayside tavern business. Within the next few years we are certain to see comfortable inns spring up along all the roads which are suitable for bicycle riding. The wheelman cannot carry much luggage, and is especially unable to find accommodation for food. His ability to travel easily fifty or seventy-five miles a day makes comfortable lodging places at night and comfortable eating places by day great desiderata along his pathway. There are old inns within a radius of fifty miles of New York City that have known scarcely more than a customer a week for years which are now overrun with wheelmen and are adopting themselves rapidly to the new situation. Good inns, like good roads, will add immeasurably to the attractiveness of the country and will spread a love for country life among the dwellers in cities which will be in all ways a benefit to us as a people.

The bicycle is, in fact, the agent of health and of a wider civilization. It will give stronger bodies to the rising generation than their fathers have had, and it will bring the city and the country into closer relations than have existed since the days of the stage-coach. What the summer boarder has been doing for the abandoned farms and deserted villages of New England the wheelman is doing for regions surrounding our great cities. He is distributing through them modern ideas and modern ways of living, and is fructifying them with gentle distillations of city wealth. Above all, he is teaching their peoople that a sure way to prosperity lies before them in the beautifying of the country in which they live, and in the preservation of all its attractive natural features.

ODD, QUEER, CURIOUS.

Statistics prove that nearly two-thirds of all the letters carried by the postal services of the world are written, sent to and read by English-speaking people.

According to the commander-in-chief of India, fifty thousand out of seventy thousand men composing the army have been sent to the hospitals within two years.

A German has invented a small house, capable of holding four or five persons, to be used in diving and working in sunken ships, and valuable wreckage of other character.

The war news of the hostilities between China and Japan cost the newspapers a large amount of money. Every word telegraphed from China costs $1.60, and from Japan $2.52.

There are no undertakers in Japan. When a person dies it is the custom for his nearest relatives to put him into a coffin and bury him, and the mourning does not begin until after burial.

What is asserted to be the oldest lifeboat in existence, is preserved at South Shields, as a valued relic. It was built in 1830, and during more than fifty years of active service was instrumental in saving 1,028 persons.

All the wars of Napoleon Bonaparte cost his country $1,275,000,000, while the wars of Louis Napoleon cost France $2,210,000,000. The former made the enemy pay most of the expense; the expense of the wars waged by the latter was borne by France.

Citric acid, the active principle of limes and lemons, was first extracted by Scheele. It is found in considerable quantities in many fruits besides these, the acid of commerce being, it is said, extracted from almost any fruit, the cheapness being the main factor in selection.

It is said that heat holidays have been established by law in the public schools of Switzerland. Recognizing the well-known fact that the brain cannot work properly when the heat is excessive, the children are dismissed from their tasks whenever the thermometer goes above a certain point.

DIFFENENCE NOT WANTED.

"It is not always pleasant to be treated with too much deference," remarked a woman who was growing old and did not like it. "A young person who evidently meant to be civil got up and offered me her place in a street car the other day, and I was so vexed I could have boxed her ears; I flatter myself I am quite as able to stand as she was."

"What makes me perfectly furious," said her companion, a girl of society who was not so young as she once was, "is to have these chits of debutantes show me such a vast amount of respect. I believe the horrid little things do it on purpose. They rise when they speak to me, and the other day at Mrs. X—'s reception some of my sister's friends drew back to give me precedence, and actually courtesied when I spoke to them."

In fact, very few persons find acceptable the consideration shown to them on account of superior age, and young people are advised to show more tact in their treatment of their elders.

"I find Miss C— so extremely well-mannered," commented a matron who by no means considers herself passee. "She actually has the good-breeding to treat me with friendly equality, and does not jump to pick up my handkerchief, or give me a chair, and make me feel generally as if I were separated from her by a chasm of years as most of her set do. For my part, I think deference from a younger woman to an older one very bad form."

Bees can learn to tell the time of day as well as a clock. A gentleman noticed lately that a large number of bees were frequenting the flowers on his lawn, and every day when he came home to lunch, he put a piece of sugar on a brick in the garden for them. They soon learned the time when they might expect the sugar, and now, when he goes out at noon, he finds about a hundred bees waiting for their lunch.

According to the New York Commissioner of Labor, the introduction of type-setting machines has reduced the number of employes in printing offices from twenty to sixty-six per cent.

MARIE BARBERI.

Condemned to Die in the Electric Chair.

WOMEN TRYING TO SAVE HER LIFE.

A Curious Social Study Whichever Way It Comes Out, for it Concerns the New Woman.

New York is rapidly turning topsy turvy over the case of Marie Barberi, the first woman ever sentenced to die in the electric chair in Sing Sing Prison.

Marie, as all the world ought to know by this time, is the young Italian woman who cut the throat of her lover, Dominico Cataldo. For that offense she is now in Sing Sing under sentence of death—a condemned murderess in the first degree. If she dies according to her sentence she will be the first woman to feel the judicial voltage of the State, and the second to experience capital punishment in the State of New York.

Will she die?

Some philosopher has somewhere remarked that the more revolting the crime the more charming the criminal—meaning, of course, in the eyes of criminalators who perpetually haunt murderers' row and leave a trail of crocodile tears and blush roses.

The rule applies with double force to women murderers, therefore Marie Barberi is the center of all the sloppy sentiment in the State. At Sing Sing she passes her days in the odor of adulation and pity. It is doubtful if she ever before had so good a time.

Outside the prison preachers, politicians, lawyers, business men, new women—yes and countesses—are moving heaven and earth to secure her pardon. Before October, when her case comes up on final appeal, Governor Morton will be confronted with a petition signed by 100,000 persons, embracing every class and condition of men and women, citizens of every State from Sandy Hook to the Golden Gate.

At Newport and Narragansett and Bar Harbor, society, yielding to the blandishments of the Countess di Braza di Savorgnan, gladly gives its pity and its cash to "help along the good cause."

The whole sisterhood of new women is crying out against this new example of "the oppression of woman by man." A woman tired by a jury of men, sentenced by a man judge to be executed by a man! A curious fact is that even the sane and level-headed Susan B. Athony is leader of this cry.

An interesting feature of the advocacy of Barberi's cause by the rich, the fashionable and the strong-minded is that no one of any of these classes either cared a ha' penny or knew a jot about the Barberi until she attained the bad eminence of a convicted criminal. It was impossible that they should. The woman was of that class of newly imported Italians not necessarily criminal or immoral, but too often both. The testimony at her trial proved that before she met Cataldo she had forfeited the respect of most men and of all good women. True, Cataldo was a debased brute. He touched the level of his depravity when he answered her demand for marriage with this rejoinder:

"Marry? Pigs marry; not I."

Marie met brutality with brutality. Baffled in her desire for marriage, she deliberately planned murder. She tracked Cataldo to a saloon where he sat with friends, engaged him in talk, and when the chance offered laid open his throat with a razor.

Yet this is the woman of whose case Susan B. Anthony has written:

"My opinion is ever and always against murder, whether by the individual or by the state, but especially am I opposed to the state's murdering a young woman who cannot understand our language and for a crime that is condoned in a man, young or old, with scarce a reprimand. The law refuses to punish the man who, under promise of marriage, robs the woman of her chastity. When the forsaken creature takes summary vengeance upon her cruel seducer the law consigns her, without judge or jury of her peers, to a most ignominious death—whether by electrocution or hanging—for women in the State of New York have no political peers among men save those inside the State prisons, the idiot and lunatic asylums.

"All decency, all justice, is outraged at the barbarism of judicial murder of man by man in accordance with his own man-made and man-executed laws, but when he proceeds to perpetrate the atrocity upon the defenseless head of woman all nature revolts and cries 'Hands off!' at least until women are enfranchised and together with men shall decide what shall be the law and who shall execute it. The whole state of affairs, the two mora codes, the foraging upon poor, ignorant girls—a mere harmless pastime for men—and then consigning their victims to shame and death, all cry out for power in the hands of women to make, shape and control their own moral code not only, but that of men also. Things are surely all one-sided now.

"I hope that the Governor will commute the poor girl's sentence, and that the law for judicial murder will be annulled by the next legislature."

Here is what the Countess di Brazza, already mentioned, says:

"Marie knelt on one side praying in her cell at Sing Sing, ruthlessly separated from the persons to whom she clung as does a drowning man to a straw. On the other resounded the prayers of the people demanding that as a person of position and influence who had come forward the countess must make good her guaranteed help to Marie. This compelled her to feel that she must permit no exaggerated sentiment of courtesy toward one-man power or a one-sided view of justice to further delay the outburst of public sympathy. If her sisters did right to seek to help this unfortunate girl and her family at all, they are still doing right in continuing to them their moral support.

"It would be as difficult at the present moment to stop the circulation of the pleas for the pardon of the girl at Sing Sing as to stem the force of God's ocean, for the waves of sentiment are mightier than the justice which has been exhibited in the recent trial of Marie Barberi. From Texas and Massachusetts have already come news of mass meetings, and from Maine to California requests for the shipment of blank pleas for pardon.

"America is above all things a Government for the people and by the people, and who is the man or woman who would dare to prevent the outworking of our highest inspiration for good?

"Mercy, mercy, mercy! we cry for Marie Barberi and all unfortunate women, and shall continue to do so as long as there is need of it."

It is not pretended that such a creature is not entitled to mercy. That is one thing. But to move heaven and earth in the sacred name of justice to exempt from lawful punishment a creature whose liberty would be a fresh menace to the community, because she is a woman—that is another story.

LIGHTHOUSE LIBRARIES.

The popular impression concerning the lighthouse-keepers is that they spend their leisure time in resting their heads on their hands and gazing far out to sea, watching for shipwrecked mariners, sea serpents and other things. As a matter of fact, however, they don't spend any more time in this manner than they can help. They have their domestic operations just the same as people on shore. In favored locations they are levenable to cultivate a little ground and raise their own vegetables. But they are really very often lonesome, and were more so until recently, when it occurred to some philanthropic Government official that it would be a good idea to provide these watchers by the sea with something in the way of reading matter. The idea took shape in the construction of portable libraries, to be filled by the Government, sent to one lighthouse station, and at regular intervals to be called for and passed on to the next one on the list.

The library now furnished to light-stations is about two feet high, two feet wide and eight inches deep, of shellacked white pine, strengthened with heavy brass trimmings. It has two shelves. Its two doors are secured, the one with an inside bolt and the other with a mortised lock. On the sides are hinged handles. When locked the library cases can stand rough handling.

The cases of the libraries are so constructed that they make a neat appearance when set upright on a table; when closed and locked they are ready for transportation. Each contains on an average about forty volumes of a proper admixture of historical and scientific works, besides poetry and good novels. An exchange of libraries takes place once in about three months, usually at the time when the lighthouse inspector makes his quarterly inspection. Each station to which a library is furnished thus has the use of about 150 different books each year. There are now about 700 of these libraries in circulation, and more are in preparation. Preference is given in their distribution to those lighthouse stations most distant from towns and villages.

A TRAVELLED STICK.

In September, 1892, the daughter of the blacksmith in Canna, an island of the Hebrides, was wandering on the shore, gathering driftwood for fuel, when in a small bay, about a hundred yards distant from her father's house, she picked up a piece of wood bearing the inscription, cut with a knife, "Lachlan Campbell, Bilban, March 23, 1892." On taking it to her mother she became much concerned, as this was the name of her own son, who was a boiler maker in Spain, and, as would be the case with most people, she feared that this message from the sea was the harbinger of evil tidings regarding her son. The family of the proprietor did their best to calm her terror, exhorting her to wait for an explanation.

When writing to her son, she told him what had happened, and was greatly relieved on receiving a reply assuring her of his well-being, but was astonished to learn that he perfectly remembered how, when on a holiday, he had written as described on a piece of wood and had thrown it into the sea from a rock near Bilban. We all know the power of ocean currents, and need not be surprised at this piece of wood having been carried about for six months, but the marvellous, and, except for undoubted evidence, the incredible circumstance in this case is that this piece of wood, after its long drifting, should have been washed on the shore within a hundred yards of where the writer's mother lived, and that it should be picked up by one of his own family and taken home. Had any novelist dared to picture a message delivered as this was by means of an ocean current, every reader and certainly every critic, would have denounced the outrageous demand on faith. And yet the apparently impossible actually occurred in Canna.—Philadelphia Telegram.

To be angry is to revenge the faults of others on ourselves.—Pope.

ROYAL PRINCESSES.

Interesting Dusky Females Have a Lively Time.

TWO DRINK AND ONE CHEWS.

Noble Dames of the Royal Court Who Couldn't Resist the Engaging French Officers.

Madagascar's royal princesses have been prominent, though—from this distance—shadowy figures in all the stirring and dramatic scenes of the war that France is now waging to re-establish her protectorate over that savage isle.

The Sunday World has published full details regarding the personality of the Queen of Madagascar and the Prime Minister, who is also her husband, but authentic descriptions of the other members of the royal family or of the women of the island themselves have not been obtainable. A French man who served his Government at Antansanarivo, the capital, for several years has returned, and gives some interesting side lights upon the manners and customs of that far-off spot.

The Queen's sister, the Princess Rasendranora, is the second lady of the land. She is fat and a little past forty years of age. For years she has kept the gossips of the capital busy discussing her scandalous adventures. She has been married three times and is at present single, her third husband having mysteriously disappeared, as did his two predecessors. It is said she never was very beautiful, even from a native's point of view, but now she is extraordinarily homely and repulsive. She gets shockingly drunk at intervals, and the recent excitement of addressing the populace and urging them to enlist to repel the invasion of the hated white men threw her into the wildest frenzy.

In point of rank the Queen's aunt, Ramasindrasana, comes next. She bitterly hates the French, and since they have been in control of the island her house has been the place where numberless plots and conspiracies have been formed. The meaning of the words virtue and morality is unknown among the women of Madagascar, and the Princess Ramasindrasana is no exception. She is married, but the number of her favorites has been great, and they have succeeded one another with dizzying rapidity. As Catherine of Russia used to do, she sends them in exile to remote quarters of the island, and they are put to death if they return before they are forgotten. The Princess Ramasindrasana is also far from being beautiful or young. Her favorite drink is rum and she chews tobacco.

In her palace (a frame house) on the square of Andalho, at the capital, there are two chairs that are reserved for European visitors. The Princess herself sits on the floor, upon a mat.

The two Princesses and the daughter of Rasendranora, the young Princess Razafindrandriamintra—she is but fourteen, and has, as yet, no history—are the only ones who at present have the rank of "Royal Highness," but they would lose this if the ex-Queen should be chosen from another branch of the family of Andrianampoinimerina, which has occupied the Madagascan throne for more than a century.

The other Princesses, though near relatives of the Queen or the sovereigns who have preceded her, make up the crowd of ladies of honor, or Sakaizandriana, friends of the Queen. Some of them are married and lead tolerably regular lives, but the most of them are single, that is, unmarried, though many of them act as housekeepers for European residents.

Ordinarily these noble dames wear the national costume, which is a loose, white robe, but on great occasions they put on European dress. Their civilized gowns always fit them very badly and are most striking in color, their general effect being made more striking by the bare and dusky feet of the wearers peeping from under the lace-fringed skirts.

From the very first the Frenchmen have been popular with the feminine nobility and gentry of the Madagascan capital and court. When M. Le Myre de Villers and his party halted at Antananarivo in 1886, at the conclusion of France's last war, the brave "marsoutins," of his escort threw the feminine entourage of Ranovalo III. into such a commotion that the Prime Minister, her husband, had to interfere. An edict from His Excellency forbade noble women and ladies of the court from "frequenting the vasahas," as the white men are called, and this measure, which for a time was strictly enforced, gave rise to an incident which is worth recording as illustrating the method of thought of the Queen and her Prime Minister.

There was one native woman—a Duchess—who lived with one of the French residents. So content was she with her lot that she swore she would kill herself rather than obey the new law and leave her European master. Through the intervention of her friend, who had great influence with the Prime Minister, an excpetion was made in her favor. A new decree was issued, authorizing this dusky Venus to remain with her vasaha and serve him as interpreter, and a copy of this amendment was filed, gravely and in due form, with the Minister of Foreign Affairs at Paris.

The common people marry and give in marriage, but faithfulness is rare and, though many of them profess Christianity, the Seventh Commandment is never observed by either of the parties to the marital contract. Both before and after marriage the morality of the natives is unspeakably bad.

INYO INDEPENDENT.

Irv. H. Mulholland,
ITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY, OCTOBER 11..... 1895

The demand that our Government grant to the Cuban patriots formal recognition as belligerents grows rapidly. The center of sympathy appears to be at Chicago, where on Monday night of last week four thousand persons came together in a public meeting called in the interest of the struggling islanders. Speeches were made by a dozen notable men, including a United States Senator and the Governor of the State. The attendance was largely well-known and responsible people who manifested their sentiments by the adoption of a set of resolutions expressing sympathy with the Cubans, demanding their recognition as belligerents and urging their cause upon our Government as a duty under the Monroe Doctrine. While this meeting was intended only as an expression of local sentiment, it brought out letters and telegrams of approval from all parts of the country from men prominent in political and business life. Senator Call of Florida, Ex-Governor Alger of Michigan, Senator Cullum, and others equally influential, were among the writers, and all breathed alike a spirit of warm friendship for the islanders. In Cuba the fighting goes on with varying fortunes, but the insurgents are steadily holding their own. Their weakness is their absolute dependence upon the outside world for arms and ammunition, and while sympathizers in this country and Mexico are ready enough to supply them, it is not an easy thing to get past the blockade which Spain maintains with her fleet. Providence seems, however, to be on the patriot side. A month ago the Spanish war ship "Barcastigui" was sunk in collision in Havana harbor, and on Tuesday of this week another ship—the "Cristobal Colon"—was wrecked by a typhoon while paroling the north island coast. These disasters leave the blockade weak and will allow the Cubans, with the help of outside allies, to stock up for a new campaign of offensive operations.

The agent of the Standard Oil Company in this city declares that the company will appear in this locality as a buyer and transporter of oil. The important feature of the ingress of this company in the field is the conviction of its managers, after a long and careful examination, that the supply here is well nigh inexhaustable. Another interesting and satisfactory feature is the diminution of the imports of coal, in quantity as well as in price, caused by the increasing consumption of the home combustible product. The greatest event to Los Angeles in the past few years has been the discovery of oil, and the happiest feature of it is its acknowledged permanency by the greatest producer and dealer in the product in the world.—Los Angeles Express.

Lieutenant Peary has been "rescued" and has got back home from the Arctic. The net result of his costly expedition was the discovery of a meteorite and the findings of some of the bones of the Greeley party. This whole thing of Arctic exploration is a blooming farce. Hundreds of lives and vast sums of money have been expended, with no result which is of any value to any one.

A comet is after us. According to a dispatch from Paris there are all the conditions described by Professor Flammarion in his book "La Fin Du Monde," incidental to the predicted destruction of the world in the collision between it and the comet of Faye. All over Western and Central Europe rivers are drying up and there is much fever and suffering.

A plan to remove the Chinese capital from Peking to some more secure place in Central China has been reported. If instead, the heads of the horde of corrupt and thievish officials hovering about the young Emperor were removed the Government would ultimately feel a greater degree of security.

The bureau of labor statistics of Illinois has created a great sensation by issuing a report in which it is charged that a great majority of the wealthy tax-payers of the state avoid the payment of taxes by perjury, and that the Assessors are parties to the crimes.

KENILWORTH IVY.

If You Want the Real Thing, Never Go to Kenilworth Castle For It.

"'Could I get some slips of Kenilworth ivy anywhere about the ruins?' I heard a woman ask of the lodgekeeper at Kenilworth castle one day," said a traveler.

"'You are an American, aren't you, madam?' asked the keeper, with a smile.

"'Why, yes, but what of that?' responded the lady, with some slight embarrassment.

"'All American ladies come and ask me for Kenilworth ivy after they have searched in every nook and corner of the ruins for it,' explained the keeper. 'They have told me how common it is in America and how much it is prized, and generally explained that they have promised to take some of the real thing back from Kenilworth ruins for friends at home. They tell me they expected to find the ruins of Kenilworth castle overgrown with the beautiful "Kenilworth ivy," and that it is generally supposed in America that such is the case, and that the ivy first came from here or is named after these ruins because of its abundance here.'

"The woman nodded assent to all this, and the keeper continued:

"'But what you know as "Kenilworth ivy" doesn't grow in or about Kenilworth ruins, as you've no doubt discovered.' And he smiled again, and the woman also smiled in an embarrassed way, for she had been hunting every inch of the ruins over, looking for the plant. 'From the description of the plant which Americans give me I think it is what we call ground or wood ivy that you treasure so much. It has a small, bright green leaf and bears a tiny white flower. It grows on the ground in the thickets and under the hedges in cool places, but I never saw it growing on a wall as the common ivy does. I don't think there is much of it anywhere hereabouts, but it grows in abundance in some places farther south. The American ladies always seem very much disappointed when I tell them "Kenilworth ivy" doesn't grow here in Kenilworth, and I'm very sorry I can't give you some, ma'am.'

"And the woman turned away, with a little sigh, as she thought of the hanging basket at home which was to have been filled with 'real Kenilworth ivy' and of the many friends to whom she had promised slips of the 'real thing' when it had grown. The ruins of Kenilworth castle are covered with thick masses of ivy, but it isn't 'Kenilworth ivy,' but just the common kind."—New York Sun.

ALIAS SUMMONS

IN THE SUPERIOR COURT OF THE COUNTY OF KERN, STATE OF CALIFORNIA.

S. Bachman, Plaintiff, vs. Domingo Etcharren, John Iribarne, Frank Cathery, S. Heineman and L. Bachman, copartners doing business under the firm name and style of S. Heineman & Co., John Doe and Richard Roe, Defendants.

THE PEOPLE OF THE STATE OF CALIFORNIA, send greeting to Domingo Etcharren, John Iribarne, Frank Carthery, S. Heineman and L. Bachman, copartners doing business under the firm name and style of S. Heineman & Co., John Doe and Richard Roe, Defendants.

You are hereby required to appear in an action brought against you by the above named plaintiff in the Superior Court of the County of Kern, State of California, and to answer the complaint filed therein within ten days (exclusive of the day of service) after the service on you of this summons, if served within this County, or if served elsewhere within thirty days.

Said action is brought to obtain a judgment of this Court for the foreclosure of a certain chattel mortgage described in said complaint, duly acknowledged, verified, executed and delivered by said defendant, Domingo Etcharren, to John Iribarne, on the 17th day of May, 1894, to secure the payment of a certain promissory note, or instrument in writing dated May 17th, 1894 for the sum of Four Thousand Dollars, U. S. Gold Coin, payable twenty four months after date, with interest thereon from date at the rate of one per cent per month, payable monthly, and if not so paid the whole sum of both principal and interest thereof to become immediately due and collectable, at the option of the holder of said note, or instrument in writing, which said note or instrument in writing, after the making, execution and delivery thereof, was duly endorsed and delivered by said John Iribarne to the firm of S. Heineman & Co. and on said last mentioned day, said John Iribarne duly assigned said chattel mortgage to said firm of S. Heineman & Co. and afterwards, to wit: on the 24th day of September, 1894, said firm of S. Heinman & Co. for value received, sold, assigned and delivered said promissory note or instrument in writing and said chattel mortgage to the plaintiff. Said mortgage conveyed the following described personal property which said property was at the date of the execution of said chattel mortgage in the County of Inyo, but is now and for more than one month last past has been in the County of Kern and is described as follows: Thirty eight hundred head of sheep marked "D" and having an underbit and overbit on each ear, together with the wool thereon and the increase thereof; also four horses two mules, two wagons and four sets of harness and camping outfit; that the personal property conveyed by said mortgage be sold and the proceeds applied to the payment of said sum of Four Thousand Dollars, U. S. gold coin principal with interest thereon at the rate of one per cent per month from the 17th day of May, 1894 and costs of suit, and in case said proceeds are not sufficient to pay the same then to obtain a judgment and execution against said defendants Domingo Etcharren and John Iribarne, for the balance remaining due, and a so that said defendants and each of them, and all persons claiming by, through or under them, or either of them, may be barred and foreclosed of all right title, lien, equity of redemption and interest in or to said mortgaged personal property, and every part thereof, and for such other and further relief as may be just, all of which will more fully appear by said complaint on file herein, to which you are referred for further particulars.

You are hereby notified that if you fail to appear and answer said complaint, said plaintiff will apply to the Court for the relief demanded in said complaint.

Witness my hand and the seal of said Superior Court of the County of Kern, State of California, this 13th day of June, 1895.

[SEAL.] F. W. CRAIG, Clerk.
T. M. McNAMARA, Attorney for Plaintiff.

ORDER OF SALE AND DECREE OF FORECLOSURE AND SALE.

Friederike Rhine, Plaintiff, vs. Eliza M. Hannah, John H. Parish, W. C. Doane and Thomas Crellin, Defendants.

Under and by virtue of an order of sale and decree of foreclosure and sale, issued out of the Superior Court of the County of Inyo, of the State of California, on the 18th day of September A. D. 1895, in the above entitled action, wherein Friederike Rhine, the above named plaintiff, obtained a judgment and decree of foreclosure and sale against Eliza M. Hannagan, John H. Parish, W. C. Doane and Thomas Crellin, defendants, on the 17th day of September A. D. 1895 for the sum of Two hundred and forty-six 30-100 ($246.30) dollars in United States Gold Coin, besides interest, costs and counsel fees amounting to the further sum of $105.30, which said decree was on the 18th day of September, A. D. 1895, recorded in judgment book 1 of said Court, at page 58, I am commanded to sell all those certain lots, pieces or parcels of land situated, lying and being in the County of Inyo, State of California and bounded and described as follows: The East half of the North-east quarter of Section Thirty-one and the West half of the North-west quarter of Section Thirty two, in Township Fourteen, South of Range Twenty-six East, Mount Diablo Meridian, containing 160 acres; together with all and singular the tenements, hereditaments and appurtenances thereunto belonging, or in anywise appertaining.

Public notice is hereby given that on Tuesday, the 15th day of October, A. D. 1895, at 12 o'clock M. of that day, in front of the Court House door, in the County of Inyo I will, in obedience to said order of sale and decree of foreclosure and sale, sell the above described property, or so much thereof as may be necessary to satisfy said judgment with interest and costs, etc., to the highest and best bidder for gold coin of the United States.

Dated the 18th day of September 1895.

A. M. GIVEN, Sheriff.
P. H. MACK, Attorney for Plaintiff.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY the 8th day of March, 1896, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows to wit: Commencing at the South-east corner of the south-east quarter of North-east quarter of Section No 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 98-100; thence North-east following the meanderings of the bank of said Creek along its North branch to Edwards street, in the town of Independence; thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hannah, deceased, at the time of his death.

Lot Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dispricada Lode."

That certain lot, piece or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the north-west quarter and the North-east quarter of Section No. twelve (12) and the South-west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South sixty-eight and eleven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence North-westerly along a small branch or swale to a point twenty four (24) rods North of the general corner of the North East quarter and the South east quarter, and the North-west quarter and the North east quarter of the North-west quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres: Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court. Deed at the expense of purchaser.

WILLIAM L. HUNTER.
Executor of the Last Will and Testament of John Allen Hannah deceased.

Dated, Independence, Cal., February 11th 1892.

KENDALL'S SPAVIN CURE.

STAR, LANE CO., OREGON, Feb. 8th, 1892.

DR. B. J. KENDALL CO.,
Dear Sirs:—I have used your KENDALL'S SPAVIN CURE for the last twelve years never being without it but a few weeks in that time and I have made several wonderful cures with it. I cured a lame of long standing. Then I had a four year old colt badly Sweenied; tried every thing without any benefit, so I tried your Liniment, and in a few weeks he was well and his shoulder filled up all right, and the other, a four year old that had a Thoroughpin, and Blood Spavin on the same joint, and to-day no one can tell which leg it was on. These statements can be proven, if necessary; the four year olds are now seven and can be seen any day at Cottage Grove, Or. S. Z. PAXTON.

—Price $1.00 per bottle.—

Religious Services.

Order of services until further notice will be as follows:

Independence—Every Sunday evening at 7 o'clock.

Lone Pine—Every Sunday morning at 11 o'clock, except the second Sunday in the month, and the Saturday evening before the second Sunday of each month at 7:30 o'clock.

Fort School House—The second Sunday in the month at 11 o'clock a. m.

Georges Creek—The first and third Sunday of each month at 2:30 o'clock p m

All are cordially invited to be present at these services.

Thos. H. NICHOLAS,
Pastor.

R. S. Miner Esq. left on last Thursday's train for Bridgeport.

A. J. Davis came in from Mazourka last Saturday bringing $21 worth of gold.

F. W. Holbert came down from the north end of the valley last Saturday.

A debating society was formed at the Fort school house last Saturday evening.

The new mill over at the Hirsh mine is expected to start the first of next month.

Miss Maud Cook left on last Saturday's train for Hawthorne where she will visit with her sister, Mrs. A Church.

Tom Ferguson came in from Mazourka last Saturday bringing a little over seven ounces of gold from his placer claim.

Some cattlemen from Visalia passed here last Sunday, going south. They had been in the valley buying cattle and had about 200 head.

The only news from the races at Bishop so far was received this morning; Oscar Wilde, Eibeshutz's horse won the trotting race yesterday in four heats.

The cattlemen have all arrived home from the mountains with their cattle, the bands belonging to Webb & Whitmore, Cook, Mairs and Robinson arriving the last part of the past week.

The *Index* of last Wednesday says the the Fair is a success all around, there being a good attendance visitors as far north as Carson being in attendrnce, one of them biinging a handsome thoroughbred stallion on Monday's train. The asttendance from here was very fair.

The following gentlemen arrived on last Wednesday's train from San Francisco and the east: T. Walker of San Francisco, Joseph E. Truitt of St Louis, Trenmor Coffin of Carson and S. D. Mathews, they are visiting the valley and looking over the land.

In the case of McGann vs. Hines, in the Justice court, Justice Davidson last Saturday rendered a decision as follows: That the Defendant in a reasonable time deliver to the Plaintiff two horses; and each side pay half the costs of suit; but if the Defendant fails to deliver the horses to the Plaintiff, the Plaintiff to have judgment for the sum of $80, and each side pay half the costs of suit. The Plaintiff will probably take an appeal to the Superior Court.

Arrangements are now being made for the holding of the Teachers Institute here the first part of next November. The committee are making arrangements for the building, music and reception of visiting teachers and their friends. State Superintendent Black, accompanied by another able gentleman from the city, will be here. A grand ball will be held on Friday, the last night and a pleasant evning will undoubtedly be spent. An entertainment will also be held each night of the week. Some members of the different committees will meet to-morrow, when further arrangements will be known.

The Milton Lyceum.

On Saturday evening a meeting was held at Camp Independence to reorganize the Milton Lyceum.

The following officers were elected for three months: President, Mr. F. Moore, Vice President, Miss Maggie Gorman; Secretary, Mr. Carl Walter; Treasurer, Miss Annie Bell.

A constitution and by-laws were adopted by which the society will hold regular meetings once in two weeks; the exercises to consist of declamations, readings, debates, music and literary paper—"The Milton Star."

The subject for the next discussion will be, Resolved; that "The statesman has done more for the advancement of civilization than the soldier."

CARL WALTER,
Secretary.

SUPERVISORS PROCEEDINGS.

TUESDAY, October 8, 1895.
10 o'clock A. M.

Board of Supervisors of the County of Inyo, State of California, convened at above stated time in regular session pursuant to law.

Present: Supervisors Frank Shaw, A. C. Freeman, J. R. Eldred, J. J. Stewart, and Frank Fitzgerald, Chairman, presiding.

Minutes of preceding meeting read and approved.

The Clerk, as directed by the Judge of the Superior Court, proceeded to read the report of the last Grand Jury to the Board. Consideration of the same was passed for the present.

Claims against the County were examined and allowed as follows:

On General Expense Fund.

Board adjourned to meet Wednesday. October 9, 1895, at 9 o'clock a. m

FRANK FITZGERALD,
Attest: D. J. HESSION, Chairman.
Clerk.

WEDNESDAY, October, 9, 1895.
9 o,clobk A. M.

Board of Supervisors of Inyo County, State of California, met at above stated time pursuant to adjournment.

Present, Supervisors Frank Shaw, A. C. Freeman, J. R. Eldred, J. J. Stewart and Chairman Frank Fitzgerald presiding.

Claim of Arthur Smith reconsidered and laid over until next regular meeting.

Claim of P. W. Forbes, expenses attending Justice Court and postage, allowed on General Expense Fund. $22 10

Claims against the County were examined and allowed on the Hospital Fund as follows:

T. C. Boland, burial expenses of indigent	$ 10 00
H. Rhine, Hospital supplies	17 25
G. L. Albright, coffin for indigent	10 00
Mrs. M. Lewis, Hospital contract	264 00
I. J. Woodin, County Physician and member of Insanity commission	101 25

Petition of citizens of Lone Pine praying for allowance for Mathias Romero, an indigent person who cannot be removed to the County Hospital, read and ordered that the sum of $10 00 per month be paid to J. J. Stewart for the said Romero, and the Auditor is hereby ordered to draw his warrant in favor of J. J. Stewart for the same.

Resignation of C. J. Shalton, Constable of Second Township, read, accepted and office declared vacant.

Communication from H. E. Wilkinson Observer Weather Bureau, asking permission to display weather and temperature flags from the flag-staff on the Court House, said display not to interfere with the display of the National Colors, granted.

Upon sufficient evidence and due proof being first presented and made to the Board, that ordinance No. 51 of this Board, which was passed and ordained by this Board on the 5th day of January, 1894, was duly published as required by law. It is hereby ordered that said ordinance No. 51 has been and was duly published according to law.

Written opinion of the District Attorney was read and ordered spread upon the minutes of the Board as follow:

To the Hon. Board of Supervisors of the County of Inyo, State of California.

I have the honor to acknowledge receipt of the following queries, relating to your power and authority:—

First. Has the Board of Supervisors legal power to aid indigent sick persons whose physical condition will permit of their being removed to the County Hospital.

Second. Has the Board of Supervisors the power to aid the dependent poor of this County, by paying them at their homes a monthly stipend for their maintenance and support.

The power of the Board of Supervisors to provide for the care and maintenance of the indigent sick or otherwise dependent poor of the County, is contained in subdivisions 5 and 6 of Section 25 of "An act to establish a uniform system of county and township governments;" which with the opening clause of said section 25 is as follows:

Sec. 25. "The Board of Supervisors, in their respective counties, have jurisdiction and power, under such limitations and restrictions as are prescribed by law"

Sec. 5. "To provide for the care and maintenence of the indigent sick or otherwise dependent poor of the county; erect officer, and maintain hospitals and poorhouses in their discretion, therefore, or otherwise provide for the same; and for such purpose to levy the necessary property or poll tax, or both, therefore; provided, the Board of Supervisors shall appoint (not let to the lowest bidder) some suitable person or persons to take care of and maintain such hospitals and poorhouses, and the Board shall also appoint (not let to the lowest bidder) some suitable graduate in medicine to attend such indigent sick or otherwise dependent poor."

Sec. 6. "To provide a farm in connection with the County Hospital, or poorhouse, and make regulations for working the same."

It will be oceserved that the Board of Supervisors may pursue either of two methods, in careing for the indigent sick or otherwise dependent poor; and should they provide a hospital for the indigent sick; then, such hospital, and the care and sustenance provided therein, is the only aid that can properly or legally be provided by the Board of Supervisors as permanent relief.

Contrary to my impressions, I find that the Board have only provided for the care of the "Indigent sick", permanently, and by providing a hospital for their shelter, with food and medical attendance to be provided therein; and for that purpose, the Board of Supervisors have entered into a contract with one Margaret Lewis for the care of the indigent sick of this county, for the term of one year from the 10th day of May, 1895, including medicine, nursing, board, lodging, washing, the burial and funeral expenses of any indigent sick person who may die under her care.

Section 229 of the act above quoted provides that the following shall be a county charge: "The necessary expenses incurred in the support of the County Hospitals, poorhouses, and the indigent sick and otherwise dependent poor, whose support is "chargeable to the County."

"The contingent expenses necesary incurred for the use "and benefit of the County."

The Board having made the foregoing provision for the care and maintenance of the indigent sick of the County, as well as providing for medicine, lodging, washing, and funeral expenses, the proper place for any such indigent sick person to procure aid and sustenance, permanently, is with the person and at the place provided by the Board of Supervisors.

The care and sustenance of the indigent sick being a proper charge against the County, it is the duty of the County to even care for such persons before they gain admittance to the County Hospital, should the same be necessary, and to provide conveyance for such persons as may be entitled to enter the same. It therefore is my opinin that indigent sick persons can only receive permanent aid in the County Hospital.

On the other hand; I fiind that the Board of Supervisors have made no permanent provision for the dependent poor of the County; nor have they provided any poorhouse, and in fact, have made no provision for such dependent poor whatever, except that they have ordered a monthly stipend to be paid to such as they deem to be a county charge

One of the first duties of government, as well as that of individuals, is to provide for such persons as by reason of sickness or other misfortune, may be unable to earn a livelihood, and in in fact every percept, both devine and human is in favor of this duty.

Having fully investigated this matter; and finding that the Board of Supervisors have made no other arrangements for the maintenance of the dependent poor, I am of the opinion that the Board of Supervisors have power to aid the dependent poor of this county, by paying them, at their homes, reasonable monthly sum for their maintenance and support; otherwise, under existing regulations (or lack of them,) the dependent poor might or would perish, or be thrown entirely on private charity.

Respetfully submitted.

P. W. FORBES,
District Attorney of the County of Inyo.

Board adjourned to meet at 1 o'clock p. m.

1 o'clock P. M.

Board met pursuant to adjournment at above stated time, all members present.

Communication of Chas. Wonacott, asking for an extention of time for one year to a certain right of way heretofore granted by this Board, was read and upon motion by Freeman, seconded by Eldred, it was laid over until the next regular meeting by the following vote:

Aye; Shaw, Freeman, Eldred, Stewart, Fitzgerald.

Statement of fines in Justice Robert O'Neal's Court of the first Township examined, approved and accepted.

Claims were examined and allowed on General Expense Fund as follows:

Geo. L. Drake, Constable fees $58 30 allowed	$ 43 30
W. E. Smith, Constable fees $68 80 allowed	61 30
C. J. Shalton, Constable fees	31 05
G. W. Naylor, Constable fees	10 00
J. W. Murphy, Coenstable fees	13 05

Petititon of Geo. W. Huckaby, praying for private road, laid over from last meeting being under consideration, was laid over until next regular meeting.

Petition of citizens of Big Pine and vicinity concerning a monthly allowance heretofore granted to J. G. Mitchell and charging Supervisor J. R. Eldred with improper conduct in connection therewith, being under consideration.

It was moved by Stewart and seconded by Freeman, and by the following vote: Aye; Shaw, Freeman, Stewart, and Fitzgerald, Eldred not voting. Ordered that the same be rejected, and further ordered that it is the sense of this Board that Supervisor Eldred was in no way improperly connected with said allowance, and that the charges contained in said petition against Supervisor J. R. Eldred are not well founded.

Claim of Geo. T. Rives heretofore laid over considered and rejected.

Ordered that the monthly allowance now being paid to A. J. Gould, Mrs. Wilson and M. Whooley be discontinued on and after Nov. 1, 1895. And further ordered that the monthly allowance of $20 per month now being paid to Mrs. Keppler be reduced to $15 dollars per month after November 1, 1895.

Petition of citizens of Indpendence and vicinity praying for monthly allowance for Emilie Tiebeaut considered and rejected.

Board adjourned to meet at 9 o'clock a. m. Thursoay, October 10, 1895.

THE HOSIER'S GHOST

I.

"Look well at that window."

We have become epicures in the supernatural. The respectable and conventional ghost and the haunted chamber of the old manor house no longer serve our turn. A specter to command our respect must be, nowadays, of original habits, and so stand somewhat apart from the other members of his extensive clan.

I was therefore not a little pleased when, a few years ago, I succeeded in lighting upon a specter of somewhat unconventional type.

My treasure trove was acquired as follows:

I happened to be detained for a short time in a small and exceedingly tumbledown old town in the middle of the Black forest.

The place of which I speak is little better than a large village, though in deference to the feelings of its worthy inhabitants, who consider it no doubt as the "hub of the universe," I have dignified it with the appellation of town, and it lies quite out of the ordinary run of tourists, high and dry above the restless ebb and flow of the great excursional ocean.

Let us call the old place by the name of "Dummelsheim;" it will do as well as any other name, and will convey a delicate and not unmerited compliment to its respected inhabitants.

Dummelsheim, then, lies in one of the loveliest of the many lovely green valleys which run like tongues of verdure between the pine clad heights and crags of the Black forest. It is set down on a small patch of tableland, above which rise some wonderful shapes of crag and pine forest, and below which a little mountain stream rushes frantically night and day, raging and tearing its little life out among the great bowlders and between the fern clad banks, yearning to obliterate itself in the nearest river that offers a refuge.

I happened to be detained in this place on special business for a whole fortnight.

A fortnight in Dummelsheim, with nothing to do, represents about five years of ordinary existence in length and tedium.

I explored the lovely valley, not without duly feeling the charm of its peace and isolation; I drank, as in duty bound, very many tumblers of the peculiarly nauseous spa water, of which the Dummelsheimers are so unreasonably proud; and then time began indeed to hang heavily on my hands. There was no gaming table, no theater, no concert hall; a few noisy Gasthauser in which German lieder made night and morning hideous, and where the lager beer was the worst that money could purchase, afforded the only amusement of which the stupid little place was capable.

To be sure there was "billiards." Every one plays billiards in Dummelsheim, otherwise its folks could not exist. Even billiards, however, with cork pool and the fearful delight of overturning your opponent's cork with its pile of silbergroschen, begins to pall upon one in time, and ere my fourteen days' sojourn drew to a close I became not only weary of poor little Dummelsheim, but began absolutely to loathe the place. I could not leave it however. A certain event had to happen, a letter to arrive, and before my time I could not stir.

At last I discovered a diversion. It came in the shape of a compatriot, a resident compatriot. Not that in appearance or garb he was much of an Englishman. Twenty years' residence in Dummelsheim had made him more German than the Germans, and had quite obliterated the handiwork of the good old land that gave him birth. He had all but forgotten his mother speech, and when he endeavored to use it his sentences were patched together by the Teutonic words and phrases which came most readily to his tongue. He was as regardless of his personal appearance as the most inborn of the Dummelsheimers and as devoted to the consumption of tobacco as the best of them. It was supposed that he was a bachelor. At any rate, of "womankind" he had none, and lived alone with merely the intermittent aid of a supernaturally hideous frau at those times when scouring and cleansing became a bitter necessity.

It was in a cafe that I first met with him. I thought when I first saw him, "What a dreadful shaggy old German that is; no one could mistake his nationality, at any rate." He seemed to be a part and parcel of the green, moldy place, a sort of human lichen, an animated fungus, on two short and sturdy legs. And his smoking and spitting were an honor to his adopted country, and would have been creditable even in a citizen in San Francisco, or a dweller in "Poverty Flat." However, a compatriot is a compatriot, and if one has to scrape the dirt from his countenance in order to recognize him, the operation must be gone through for the sake of the dear land of our fathers.

My German Englishman proved, as a companion, decidedly better than none at all, and in his morning rambles with me pointed out with great care what he knew of the antiquities of the little town; showed me a wood where one of the Dummelsheimers had once, in a fit of playfulness, applied a hatchet to the back hair of his betrothed, and also the jail in front of which he was afterward hanged as a punishment for his little escapade. Many other spots of interest, where incidents of a less tragic though still striking character had occurred, were also designated by his kindly walking stick as we strolled along. After a day or so my newly found friend began to resume his native speech, so long disused, and by that time I also had learned to translate into ordinary English his quaint and puzzling Anglo-German expressions.

So we managed to get on very well together, and I found him an interesting if a slightly dirty old man. The town, when explained by such a cicerone, was invested with quite a new charm of interest. It was quaint enough without any extraneous help, and the houses, being for the most part ancient timbered edifices, and the gables leaning forward with age and hanging over the streets, one obtained every now and again a street vista of delicious picturesqueness, in which the ancient houses, nodding toward each other, seemed to be whispering forgotten and piquant scandal of the good old German days.

There were at every turn and corner abundant "bits," which an artist for an illustrated paper would have found very handy, and sketches of which he could have rapidly converted into current coin of the realm.

I am no artist, but to my great surprise I discovered that my dear and dirty new found acquaintance and countryman was. One day, having accompanied him to the queer and humble lodging which he inhabited, I found on the walls certain indubitable proofs of his artistic bent. There were many admirable sketches in chalk and sepia of striking points in the valley, and of certain buildings and objects in the town itself.

The fountain in the market place was there with its great St. Christopher as its center figure. There were the porch of St. Christopher's church, the quaint turret at the angle of the town hall, and the crumbling ruins of an ancient fortress on the Ganzberg. Among other things I noticed a sketch of a certain picturesque old house which I had indeed seen, but the locality of which I did not remember at the time.

I mentioned this fact.

"Ach nein, I have not shown you him. He is in the Lederstrasse," he replied. "We will see him together auf morgen."

On the morrow, accordingly, we walked together to the Lederstrasse.

As we entered the dirty old street my companion remarked, "I have never been in this street for twenty years or more, and I never wish to enter it again."

My curiosity was roused.

"Why?" I inquired.

"I got so great a fright here once, and I was so much laughed at," he answered.

"Why, what is there about this street to frighten you? It is old enough, certainly, and quaint enough, and smells rather—pah!" I exclaimed, as a full flavored German stench saluted my nostrils; "but nothing terrible, after all."

"Well, mein Herr, it is not the street; it is that house, and—the ghost in it," the Anglo-German replied, with a sort of shudder, so to speak, in his voice.

"Oh, oh! then you have not lived long enough yet, and you are not quite a boy, to get rid of your superstitions, eh? You are still afraid of ghosts, are you?"

"I was afraid of what I saw," he replied, with a certain amount of dignity, as if hurt by my light manner and my tones of mockery.

My curiosity was of course aroused, and I doubt not yours, reader, would have been by this speech, and I was about to question him further when, pointing with his stick, he said briefly:

"That's the house there."

I looked and recognized in the ancient timbered edifice on the farther side of the street the original of the chalk sketch in his lodgings.

It was a tumbledown pile, with overhanging stories and carved "barge board," having, moreover, a curiously twisted chimney of ancient, ruddy brickwork, and certain obscure remains of armorial bearings over the door. There was a date which, however, I could only make out in its state of dilapidation to be fifteen—and something or other.

The edifice seemed to have been long deserted, and the grass was growing in tufts among the stones at the front door as if the passers by had long been accustomed to avoid a too near acquaintance with the old tenement.

Indeed, something about the building said as plainly as the German version of Tom Hood's poem could have said:

The house is haunted.

Nay, the very street itself seemed to be haunted. It was in a great part deserted. The tumbledown buildings on either side of the picturesque house seemed to be devoid of occupants, and the few sordid and wretched houses in the street which appeared to enjoy the presence of tenants had, to my imagination, and in the gathering dusk of evening, a scared and terrified aspect.

"Look well at that window," said my conductor, pointing to a large, battered casement just above the door, "and when we go I will tell you what I know about it. That will do," he continued, taking hold of my arm; "you have seen it, and it is not good to stay in the street; it chills the blood, I imagine."

"Indeed it does," I replied, and we moved off, not, I fancy, without a thrill of pleasure at leaving behind us the ghostly atmosphere of the Lederstrasse. A few crows, fitting inhabitants of the desolate street, were wheeling about the roofs and chimneys of the house as we departed.

II.

I went with my acquaintance back to his lodging, and there, over a plentiful supply of lager beer and the smoke of two big pipes, he told me his experience of the house and street we had quitted.

"Twenty years ago—I was rather younger then, I fancy; I mean not in years merely, but in life and hopes—I had recently come to this town, and before I was long in it I heard much talk about a queer ghost, quite unlike any ghost I had heard or read of, which was said to haunt the Lederstrasse, and which the people of the town so much dreaded.

"Hans Hubbler, down the Ganzstrasse, had seen it when a boy, and old Frau Hertzler had all but died from fright when she was sixteen years old in consequence of a mere glimpse of it. It was the celebrity of the little town as well as the bete noir of the little place.

"Well, mein Herr, I laughed at all of the stories, and grew very courageous over the matter in my cafe when the night grew late and the bottle was low. Some of the fellows there tried to chaff me on the score of my nationality. 'Ein Englander,' they said, 'always asserts that he will brave anything—dog or fiend or fraulein—but let him be set to the test and he is not always so brave as a lion.' Then one of them said:

The form was that of a man.

"This Herr Englander here, he has a card enough and is brave, but let him face a test we will give him if he be a brave Englander, and we shall see.'

"So one night in the Restaurant Klippart, in the milk market—I remember well that night. Ach, mein Herr, is that door fast? So! I remember that night. I was fired with courage, and I said, when they spoke of the ghost, that I would face it, come what might.

"A grin of incredulity passed over the countenances of my listeners, and they puffed away at their pipes in contemptuous silence. At last big boned Krantz Hubscher, the butcher, made me a bet that I would not sleep for one night in the old house in the Lederstrasse alone.

"'Done!' I cried, and the money was staked; not much, a few silbergroschen, and I was pledged to an adventure.

"It struck me afterward that a great number of the ghost stories I had myself read turned upon some unused house or room and an undertaking to sleep there; but further than this, as you will see, my case had little resemblance to any other spectral adventure. Nor did this render my case less real or less terrifying.

"'What sort of a ghost is it?' I asked; 'tell me just that, so that I may know what kind of an appearance I am about to face.' 'Ach nein!' they said, 'mein Herr must just see him as he is, and enjoy him as he will.'

"So the night was fixed upon and the key of the ancient house procured. A mattress and some candles, and also a pistol at my request, were taken into the biggest and best room, that one just over the doorway. A good bottle of Zeltinger and a supper for me were got ready, and a roaring fire of big logs was built up in the afternoon in the fireplace there.

"The people living in the Lederstrasse were much astonished and a good deal interested at the unwonted glare in the windows of the haunted house, and, when they were informed of the reason of the illumination, expressed a good deal of pity for the mad Englishman whose craze had tempted him to brave the ghost of the locality.

"Night came—a dark night it was in November, with windy gusts every now and again sweeping down the street and among the crazy old chimneys. There was a pale, gibbous moon that showed itself at intervals from between the drifting clouds, in a very weird and uncanny fashion. 'Just the night for a ghost story,' I said to myself, and thought, as I felt a little thrill come over me, 'Shall I pay the small bet and have done with the matter? Shall I cry off and smoke my pipe at home and turn into my bed at my usual hour in peace?' No! I decided, after a bit of consideration, I will go through with my undertaking now, come what may, and show these Germans what an Englishman can do, and will do, at need.

"So I made all my preparations for my adventure, and about ten o'clock entered the house with two or three friends, who had resolved to accompany me in order that they might see me comfortably disposed of.

"The crazy old stairs creaked a good deal as we went up them, but the room looked exceedingly cozy, for the great logs were smoldering in the chimney, and cast out an agreeable heat. In all the corners and hanging from the beams were many dingy cobwebs, the work of generations of spiders, undeterred from their work by the house's evil reputation. Save these cobwebs, my mattress, a couple of chairs and a small round table, upon which stood my supper and the good bottle of Zeltinger, the room was unfurnished.

"As a further aid to courage I had provided myself with a flask of eau de vie, and of course had my pipe.

"My friends, having cast an approving glance around the room, sat down smoking for a few minutes, then bade me guten abend and gute nacht, and left me to my meditations.

"I listened to their heavy boots as they went stump, stump, stump down the stairs, and to the street door as it shut to with a bang.

"I was alone in the house of evil repute.

"'Stay a bit,' I said to myself; 'this is perhaps a joke, a trick, and it will be with the living Germans that I may have to deal. Well, the pistol will give an account of them; but I will make myself as safe as I can.'

"So I took from my pocket a screwdriver and a paper of big screws, and with a quiet smile at my own cunning—for of these screws I had said nothing to any one—proceeded forthwith to screw up the door.

"The door made fast, I walked round the room and carefully took stock of it. There was a small corner cupboard. I opened this; nothing there but spiders, their webs and the carcasses of their victims.

"On the other side of the fireplace was a very low door, about the height of my shoulder. Another cupboard, I thought, and endeavored, for a long time without success, to pry it open. When at last it yielded, I discovered, with some surprise, a step and another low door, evidently strongly nailed up, and which, from its appearance, had been for ages in the same condition.

(TO BE CONTINUED.)

SYRUP of FIGS

ONE ENJOYS

Both the method and results when Syrup of Figs is taken; it is pleasant and refreshing to the taste, and acts gently yet promptly on the Kidneys, Liver and Bowels, cleanses the system effectually, dispels colds, headaches and fevers and cures habitual constipation. Syrup of Figs is the only remedy of its kind ever produced, pleasing to the taste and acceptable to the stomach, prompt in its action and truly beneficial in its effects, prepared only from the most healthy and agreeable substances, its many excellent qualities commend it to all and have made it the most popular remedy known.

Syrup of Figs is for sale in 50c and $1 bottles by all leading druggists. Any reliable druggist who may not have it on hand will procure it promptly for any one who wishes to try it. Do not accept any substitute.

CALIFORNIA FIG SYRUP CO.
SAN FRANCISCO, CAL.
LOUISVILLE, KY. NEW YORK, N.Y.

WALNUT GROWING IN VENTURA COUNTY.

Quite a number of walnut trees have been set out in the vicinity of Saticoy, Ventura county, in late years. The three and one-fourth acre walnut orchard of D. S. Blackburn yielded a little over $700 last season. Mr. Dickenson's walnut orchard paid $115 per acre, dry as it was. The ten-acre walnut grove of Geoge Sweatt is one of the best kept and has made nearly the best growth of any orchard around there. During the four years it has been set out the land has produced an average of $20 per acre each year in the bean crop raised between the trees. This grove bore a full flour sack full of nuts last year and is well fruited this year. No finer property could be desired than the walnut orchard of Elijah Burton, on Saticoy avenue, adjoining the Overmire place. This was planted four years ago and has made a fine growth and is now coming into bearing. Mr. Burton has planted Royal apricots between his walnuts and these are in bearing this year. Fred M. Smith has his grove planted to Lady Washington beans.

It is a very common thing for a reindeer to have a horn broken off, and it is very easily done. Indeed, by the middle of winter, nearly every reindeer has lost one or both of its horns, or fragments only are left.

The leading decorations of the Legion of Honor is a red ribbon worn in the buttonhole.

The Attractive Exhibit of the "New California" Range by Steiger & Kerr.

No exhibit at the Fair is more worthy the attention of every good housekeeper than that made by Messrs. Steiger & Kerr of the "New California" Range. We hear much talk on all sides about patronizing home industry. Now here is the opportunity of putting the theory into peactice, and deservedly so, too, for the "New California" Range possesses not only all the good qualities of the imported stove or range, but several new ideas in addition. It really becomes the duty of everyone interested in the welfare of San Francisco, about to purchase a range, to at least request their dealers to show them the "New California." It can then stand on its merits alone, and it will then appeal to the would-be purchaser the equal if not the superior of the imported article.

Thousands of dollars have been invested to bring this range before the public, and thousands of dollars will annually pass into the hands of the workmen who construct it. Messrs. Steiger & Kerr had the pluck to invest their capital in this home industry, and are certainly entitled to the patronage of every true Californian. All interested in home industry are cordially welcomed at the works, 350 Main street.—*San Francisco Evening Post, August 24, 1895.*

HIS LATEST DISCOVERY.

Dr. Ricord's Compound Pennyroyal Pills for female irregularities—safe, sure and reliable; express, $2.50. Also, Ricord's rubber goods for hygienic and private use. Maison et Cie, Paris, France. Agents—Root's, 6th and Howard, S. F., Cal.

Try Germea for Breakfast.

GREAT BOOK FREE.

When Dr. R. V. Pierce, of Buffalo, N. Y., published the first edition of his work, The People's Common Sense Medical Adviser, he announced that after 680,000 copies had been sold at the regular price, $1.50 per copy, the profit on which would repay him for the great amount of labor and money expended in producing it, he would distribute the next half million *free*. As this number of copies has already been sold, he is now distributing, *absolutely free*, 500,000 copies of this complete, interesting, valuable common sense medical work ever published—the recipient only being required to mail to him, at the above address, this little COUPON with twenty-one (21) cents in one-cent stamps to pay for postage and packing *only*, and the book will be sent by mail. It is a veritable medical library, complete in one volume. It contains over 1000 pages and more than 300 illustrations. The *Free Edition* is precisely the same as those sold at $1.50 except only that the books are bound in strong manilla paper covers instead of cloth. Send NOW before all are given away. They are going off rapidly.

COUPON No. 114

RENEWING THEIR YOUTH.

A STRANGE STORY FROM A NEBRASKA VILLAGE.

The Villagers Excited Over the Increased Health and Vigor of the Older Inhabitants—The Experience of Two "Vets."

From the World-Herald, Omaha, Neb.

A *World-Herald* reporter was attracted by the evidence of renewed activity of some of the older inhabitants of the village of Bruce, a suburb of Omaha, Neb., and enquired the cause. Mr. Andrew Finkenkeler, who was a member of Company B of the First Iowa Volunteers during the war, made the following explanation so far as he himself is concerned:

"In July, 1866, while my company was on the march through to Austin, Texas, I was attacked with rheumatism of the worst kind in one leg, at Alexander, La. Being weak I was sunstruck and remained unconscious for several hours. Every summer since I have been unable to stand the heat of the sun, and have been compelled to give up my work. There was in my head a bearing-down feeling, which increased until it seemed my head would burst, and it caused a ringing in my ears, and palpitation of the heart set in, so that the slightest noise would set my heart thumping. Several times it has rendered me unconscious for from seven to ten hours at a time. In addition to this the rheumatism extended up my entire side until it drew my head down on my shoulder. I lost my strength and flesh and was totally unfit for work.

"For twenty-eight years I have consulted physicians and taken their prescriptions without deriving any material benefit. My ailments increased in intensity until I was assured that there was no hope for me. During last year I went into the butcher business, but the dampness from the ice used increased my rheumatic pains to such an extent that I was not only compelled to quit the business, but was confined to my house and bed for nearly six months.

"In November last I read in the *World-Herald* a case of a man who had been entirely cured from the ailments from which I was suffering, by the use of Dr. Williams' Pink Pills for Pale People. On November 28 I purchased a Box. In a week I was astonished to know that I felt better than I had for six months past, and before I had used half a box the ringing in my ears began to lessen in volume and finally left me. The pain from the rheumatism gradually left me, so that within one week from the time I took my first pill I was able to sit up in bed. On January 1st I was able to go out and walk around a little. The palpitations of my heart entirely ceased. On February 9 I was so thoroughly cured that I accepted a position as night watchman in the Forest Lawn Cemetery, remaining out of doors from 6 p. m. until 6 a. m. I have gained in weight from 141 pounds, which I weighed in November last, to 172 pounds, which I weigh now."

For nerve building and for enriching the blood Pink Pills are unexcelled. They may be had of druggists or direct from the Dr. Williams' Medicine Co., Schenectady, N. Y., for 50 cents per box, or six boxes for $2.50.

If you think nobody cares for you just stand up at the circus. You will be surprised at finding how many people will take an interest in your uprising and downfall.

SWEPT BY A CYCLONE

Of approbation to the pinnacle of popularity, Hostetter's Stomach Bitters has acquired a commanding position, which has occasionally made it a bright and shining mark for knaves, who seek to foist upon the community spurious compounds in the guise akin to that of the real article. These are mostly local bitters or tonics of great impurity, and, of course, devoid of medicinal efficacy. Beware of them and get the genuine Bitters, a real remedy for malaria, rheumatism, kidney trouble, dyspepsia, nervousness, constipation and biliousness. Physicians of eminence everywhere commend the great invigorant, both for its remedial properties and its purity. A wineglass thrice a day will soon bring vigor and regularity to a disordered and enfeebled system.

A Boston paper has a column of clipped items under the heading of "Looted Wit." "Diluted Wit" would be proper.

$100 REWARD $100.

The readers of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages, and that is Catarrh. Hall's Catarrh Cure is the only positive cure now known to the medical fraternity. Catarrh being a constitutional disease, requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system, thereby destroying the foundation of the disease and giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in its curative powers, that they offer One Hundred dollars for any case that it fails to cure. Send for list of testimonials.

FROM JAPAN.

The Buddhist Celebration of All Souls' Day.

FLOWERS AND RICE FOR THE DEAD.

Japanese Have No Need of Chiropodists—Where Postmen and Messengers Run—Other Gossip.

According to the Shinto and Buddhist calendars this is All Souls' Day in Japan and everybody is celebrating it. Loving hands have laid fresh flowers and foliage before the tombs of the dead as we do on Decoration day, and in every house bouquets and bowls of rice and sweetmeats have been placed upon the shrines and before the ancestral tablets, for their spirits are abroad tonight and pervade the atmosphere to receive the homage of the living. It is a great holiday and a time especially favorable for changing a residence or occupation or commening new work. Services have been going on since dawn in the temples and will continue until midnight—prayers and masses for the souls of the restless dead—while sampans, the long, clumsy boats they use here, decorated with bright colors, have been poled up and down the canals, bearing priests of the Buddhist faith, and temporary altars at which prayers have been offered continually for the repose of the souls of those who have died by drowning.

Holidays in Japan are very frequent. The banks recognize forty-one, and suspend business as they occur annually. Each district and precinct in the city of Tokyo has its own anniversaries, and they occur so often that a festival is going on somewhere nearly every night. But tonight everybody in Tokyo is interested, and in fact everybody in Japan.

The street cars in Tokyo charge only 1 sen for a ride—that is, half a cent.

They make their own bicycles in Japan now and call them jin-ten-sha, which means literally man-wheel-vehicle.

There is a Chinaman in Yokohama named Ah Look.

There are no chiropodists in Japan. The people go barefooted except for straw and wooden sandals and tabis, which are low stockings that fit closely over the foot. When it rains they put on high wooden clogs, which are held to the feet by cords that pass over the instep and between the first two toes. There is a Chinese chiropodist in Yokohama who attends to the feet of foreigners, but the Japanese who wear the native costume never need his services.

Japanese kites do not have tails, but have a lot of thongs rigged upon them like an Æolian harp, which make a noise like a buz-saw.

The Japanese fold the kimino from left to right upon the living and from right to left upon the dead, and it is a very bad omen to get mixed up on that matter, as foreigners usually do.

The children in the public schools are uniformed according to grade.

The only lottery in Japan is owned and managed by foreigners on the foreign concession in Yokohama under the protection of the consul of a European nation, in violation of the laws. It was formerly conducted by an American, and was started with American capital, but when the Japanese government complained of it the consul-general of the United States ordered it off the reservation. But instead of closing out, the institution was transferred to a nominal European ownership, under the jurisdiction of a consul who approves of the lottery business and protects it.

The laws against gambling are very strict, as are those against opium smoking. The only places where opium smoking exists to any degree are in the foreign concessions in Yokohama, Kobe, Nagasaki and other ports. There it is not interferred with. The other day in Tokyo two men were sentenced to two years' imprisonment each for indulging in the vice, and the man who sold them the opium got six years.

On the fourth of July the Japanese shouted "Bei-koku banzai" whenever they saw the United States flag. "Koku" means country, "banzai" means live forever (literally 10,000 years,) while "bei" is the term used in both China and Japan to describe America.

The roofs of the houses are thatched with straw, sometimes two feet thick, or ornamental steel-colored tiles of porous clay. Modern slate is being introduced, however, by the government. In the country people plant the iris and other flowers at the apex of the roof, which adds much to the picturesqueness of their dwellings. This custom is said to have originated in an ingenius method adopted by the women to evade an edict of the shogun. They used upon their faces a powder made from the roots of a certain plant which disfigured them and ruined their complexions, and he issued an order prohibiting its further cultivation "in the ground." Therefore they planted it on the roofs of their houses. The Japanese yell "Oi! Oi! Oi!" into a telephone. The Spaniards call "Oyez."

The Japanese soldiers wear on the top of their knapsacks little tin arrangements that have given rise to the story that the entire army in China was furnished with field glasses. But they are not field glasses at all, but only little cylinders which contain a day's rations of rice.

Before every temple in Japan is either a fountain or a tank filled with running water, where people may bathe their hands, and their faces, too, if they please, before they say their prayers.

There is a suggestion of Palm Sunday in the Japanese custom of hanging a little bunch of green over the door of a dwelling on the 1st day of June.

In the interior the working-women wear tights of blue cotton.

The Japanese farmers train their pear trees over trellises as we train our grapes.

On nearly every block in Japanese cities is a public oven, where, for a small fee, housewives may have their dinners and suppers cooked for them. It is a great measure of economy. They prepare the dishes ready for cooking at home, then take them to the oven, and while they are cooking sit around and gossip with others who are there on the same errand. This saves them the expense of fuel and an oven of their own, and in hot days their houses are not heated up by the fires.

The postmen and messenger boys of Japan run at a jog-trot when they are out on duty.

The "soraban," or adding machine, is used by everybody, in the banks, shops and counting houses.

All of the cashiers in the large commercial houses of Japan, particularly those of foreigners, are Chinamen, and are called "shroffs." They have a guild, whose headquarters is in Hong Kong, and the whole guild is responsible for each member. In other words, each shroff has every other man in the guild on his bond. The employment of Chinamen for this service is explained by the statement that, as a rule, they are more accurate and honest than either Japanese or foreigners. A Chinaman will cheat you if he gets a chance, but if you trust him with money it is perfectly safe; and if he makes a contract or utters the words "can do" he may be depended upon. The Japanese are not so reliable. The manager of the Hong Kong and Shanghai bank in a public speech at a banquet given him recently, when he was retiring from active business after a service of forty years, declared that he had never known a Chinese defaulter. But here they tell of two cases. One Chinese shroff ran away with about $50,000 of his employer's money, and another forged orders upon the government customs warehouse by which he secured 84,000 cases of kerosene oil and sold it for his own benefit. Before his dishonesty was discovered he retired from the employment of the company and his whereabouts is unknown.

Mr. George Racine, the buyer for a large Paris silk and fur house, told me that in dealing with Japanese he always made written contracts with a heavy forfeit, but never required any writing from a Chinaman, whose word is as good as his contract. Mr. Racine says: "If a Chinaman says 'can do' to me it is equivalent to a bond with good security."

It is also the custom of foreigners in Japan to employ Chinese superintendents or foremen to take charge of Japanese laborers. These are called "compradors." It is also customary for business men to have a Chinese "banto," who is a sort of private secretary, confidential clerk, valet and messenger combined. A business house requiring a large number of laborers contracts with its comprador to furnish so many coolies at a fixed price a day, and he gets his commission or "squeeze" out of the coolies—perhaps 1 to 2 cents a day from each.

A foreign merchant in Yokohama very seldom handles any of his own money himself. His shroff will not permit it, but receives all that is paid in, pays all bills, keeps the bank account, and is the only one who knows the combination of the vault in which cash is kept. If his employer wants money he writes what they call a "chit," which is equivalent to a bank check, and it is cashed by the shroff just as it would be by the paying teller of a bank. It would be quite as irregular for the president of a bank in the United States to take in or pay out cash as for a business man here to do so if he employs a shroff.

The only trade union in Japan that attempts to regulate wages and hours of labor is the Kaiyusha, or Association of Guides, who have their regular fees, charges and printed rules, and are as arbitrary in dealing with their customers as any assembly of Knights of Labor in the United States. A tourist arriving in Japan must apply at headquarters if he wants a guide, and he gets the man whose name is first upon the list, regardless of any personal preference. This is often annoying, because some of the guides are competent and agreeable, while others are not. The only way to get a particular guide is to write several weeks in advance of your arrival and apply for him. Your letter is placed on file, and when his turn comes he is assigned to you, and, whether you reach Japan before or after, his services and his pay commences on that date. Most of the guides are good cooks which is a great advantage to one who is traveling in the interior, out of the reach of foreign hotels.

They use the American brass baggage check upon the railways here.

The express service is cheap and excellent. The other day we had eight small packages to send from Tokyo to Yokohama. They left the hotel at the former place about half an hour before we did, reached the hotel at the latter place about half an hour after we arrived there, and the charge was 70 sen (35 cents).

The telegraph service is also prompt and reliable. You can send a message of ten characters in the Japanese language to any part of the empire for 15 sen, which is 7½ cents in our money, but 5 sen a word is charged for messages in a foreign language. Sometimes, however, it requires two or three Japanese characters to express the meaning of a single foreign word. There is no decoration on the walls of Japanese houses. The woodwork is usually polished in the natural grain or covered with lacquer. The walls are always of some soft gray color, without the slightest thing to vary the monotony. The ceilings are usually of polished cedar in small panels. The partitions are made with sliding screens, many of them being simple frames of pine wood, with windows of oiled paper or stainsed glass; but in the reception-rooms and other portions of the lower floors where company is entertained they are often of beautiful lacquer and gold work, and are some times painted by famous artists. Some of the screens are very valuable. A single one may be worth as much as all the rest of the dwelling. The only other ornaments are placed in a little recess called a "tokomona," which is raised about six or eight inches from the floor and is considered the place of honor. The emperor would sit there if he ever visited the house, but as he does not enter the homes of his subjects, under anycircumstances his statue or his portrait so often placed there, with an ancestral tablet, a kakemono or picture roll and a vase of flowers.—William E. Curtis, in Chicago Record.

IT WAS NOT FOR HIM.

At one of the recent Gounod rehearsals a little bit of triangular comedy took place which was not previously rehearsed and in which Mr. Agramonte had no part. During the intermission, when there is a general stir and those in the chorus talk with their friends in the audience, a Yale member of the society stood idly gazing around, dividing his time between a nascent mustache and the various pretty girls in the chorus—and by the way, what a power of pretty girls there are in the Gounod Society—when suddenly his eyes became rivited. A very sweet specimen, whose attention he had vainly tried to attract, had now turned in her seat, and was apparently beckoning to him. Could it be possible? Another glance convinced him—of course it was possible. There she was, looking straight at him and putting untold magnetism into that fascinating motion of her hand.

Here was the looked-for opportunity. He had evidently made a great hit. Moving down the aisle with the courage and assurance born of noble lineage, he took a seat beside the fair damsel. "Good evening," quoth he, encouragingly.

"Beg pardon," was the reply, "but I think you have the advantage of me."

A thin wall of ice seemed to rise up between them. Thinking possibly he should have introduced himself, he offered further encouragement by saying, "Pardon me. I am Mr. ——, of '90 and some odd."

The wall of ice grew visibly thicker. Through it came the reply: "But I fail to see how this piece of information concerns me, and I would suggest that if you have no other facts to impart more valuable it would be better to take them where they would be appreciated," and the pretty mouth shut with a bang.

This might have been discouraging to an ordinary being, but you can't bankrupt a Yale youth quite so easily.

"Pardon me, but didn't you beckon to me just now?" persisted he.

"Beckon to you!" flashed back the lady in seven volumes of withering scorn, and then as the truth dawned upon her a suspicious convulsion seized upon her face, and she gasped out agin, "Beckon to you! I should think not. There's the man I becokned to," pointing to a tall, sedate man, who had just come up and was quietly standing just behind them. The luckless youth faced about and beheld a well known Yale professor looking down at him with precisely the same smile worn in the class room when he, the youth, was floundering on the verge of a dead flunk. A few moments later an agitated representative of Yale was clinging to the arm of a classmate as he watched two people at the other end of the hall seated side by side in an attitude of the direst merriment.

"Jack, who is that young lady Professor —— is talking to?"

"That—why, don't you know? That's his wife!"—Curtain.—New Haven Register.

DANGEROUS ELECTRIC LIGHTS.

Despite the general opinion, there is considerable danger of fire from the incandescent lamp globe in store windows, through the ignorance of window trimmers. Desirous of making as light and fluffy a display as possible he winds loose and highly inflammable material around the butts of his lamps, and occasionally is bold enough to envelope the bulb itself with tarlatan, canton flannel, cotton lace, or similar light material. In notion houses, a celluloid comb is often placed where the light will show it off best to the outside spectator, regardless of the danger of ignition, or a semi-transparent sheet of like material will be adjusted close to the lamp, at the imminent risk of putting the whole window in a blaze.

It should be clearly understood that incandescent lamps throw off sufficient heat to start fires under anything like favorable conditions. Not long ago a fire broke out in a Boston dry-goods store through an incandescent lamp being allowed to remain for a few moments on a plie of cotton cloth in the packing-room. The person in charge left the room for a short time, having, as he said, "the idea that the electric lamp couldn't set fire to anything," and when he returned the cloth was blazing. Another fire broke out while a window-dresser was preparing a Christmas snow scene. The incandescent lamps in the window had not been changed for a year, except when there had been breakages. The carbon in an incandescent globe has a life of 600 hours, and as the filament wears out increasingly more heat is thrown off upon the glass bulb, and even upon the metal fittings.—New York Times.

GREATEST OF ALL.

The Yacht That Brought the Cup to America.

A PREDECESSOR OF HERRSHOFF.

How She Beat the Pick and Flower of the English Yachting Fleet—Broke England's Heart.

All sportsmen, yet perhaps not all the readers of the Herald, know that the famous yacht America, the original winner of the cup whose defense has resulted in a long and brilliant series of victories for our yachts, is still extant, and until very recently was still sailing on the waters of which she once was queen. Until recently, I say, because at the present moment she is at the Chelsea Yacht Club docks, housed and covered in.

A stiring, adventurous career hers has been. Built by Americans for the express purpose of meeting and vanquishing the yachts of England, which proudly professes to rule the waves; vanquishing them all with the greatest ease; next purchased by an Englishman and wearing the Union Jack instead of the Stars and Stripes; becoming a blockade runner during the war and actually fleeing from the very sight of the flag which she once bore to victory at the Isle of Wight; sunk to the bottom of an obscure Southern river to escape a Northern gunboat; raised to become a training ship at Annapolis, and at last finishing her career, as she began it, a yacht, dedicated to sport and pleasure rather than to the serious business of life.

She was built by George Steers, the Herreshoff of his day, and launched in March of 1851. Her principal owner was J. C. Stevens, who, in 1844, had founded the New York Yacht Club and became its first Commodore. A man of large and liberal ideas and an enthusiastic yachtsman, he already owned two famous boats, the Gimcrack and the Maria. The exploits of the latter had won her a world-wide fame, had gained great glory for American yacht builders and shown the world that England had a redoubtable rival in her legitimate descendant. But Mr. Stevens was not satisfied. He determined to own a yacht that should exceed all others afloat. With four of his friends he raised the money to build it and intrusted the work to Mr. Steers.

The year 1851 was notable for the opening of the first world's exhibit ever held. This was at the Crystal Palace, in London. It had been a pet idea of Queen Victoria and the Prince Consort. They had carried it through with all kinds of oposition and misrepresentation. When first the project was moted hardly any one had a good word to say for it. Members of Parliament in the House of Commons prayed that hail and lightning should be sent from heaven to destroy it; it was bound to be a financial failure; it would ruin Hyde Park; it would bring into London every desperate criminal in Europe. Its actual success was beyond anticipation, and as a sort of culmination to the ceremonies that attended its opening there was to be a great international assemblage of yachts at Cowes, England. Many races were arranged for. The America was sent over to represent the nation which had built her and whose name and colors she bore.

Never was there greater excitement in the sporting circles and in all classes, high and low, in England. Never did a greater crowd flock over to the Isle of Wight. The New York Herald's correspondent of that day gives a vivid picture of the hopes and fears which that crowd entertained:

"From the moment of our leaving the Waterloo road station on Thursday evening until our arrival at Cowes nothing else was talked of by railroad and steamboat passengers. Good-humored surprise was expressed by some, ill-natured annoyance by others, but the most singular unanimity prevailed through all that the 'Yankee' (as she is most improperly styled) was able to outsail creation, with the exception, at least, of another Yankee, the Maria. Yet still the lurking hope which ever filled Mr. Micawber's bosom that 'something might turn up' to save the honor of the old land, was lingering round many a heart, and now and then the cheerful assurance would burst forth that even if the America carried off the cup this time, there would be half a score of British schooners this time twelvemonth ready and able to beat her. Then she was 'only a trick of build.' She would only win once and then be found out. Besides, she was so ugly and had so little room in her, with a hundred other crumbs of comfort, the very enjoyment of which only served to mark how deep-seated was the feeling of utter despair of her being matched, at least for the present."

Among the crowds came majesty itself. The royal family and the court felt the influence of the universal curiosity which was excited to see how the stranger of whom such great things were reported would acquit herself when put to the test of actual conflict. The royal yacht, the Victoria and Albert, bore its distinguished namesakes down to the Isle of Wight to gratify this curiosity.

Shortly after 9 o'clock on Friday morning the yachts were at their stations off the clubhouse, the America laying considerably astern—a strange-looking craft enough with her long, low, black hull, her breadth of beam and her thick, stiff-looking, rakish masts. Pitted against her were fourteen yachts, of which six were schooners and eight cutters. Among these were the flower of the English sporting navy, the choicest products of transatlantic shipbuilding skill. At 10 o'clock the signal gun was fired from the clubhouse. Before the smoke had well cleared away the fleet was under way, moving steadily to the east with the tide and a gentle breeze. The only laggard was the America, which did not move for a second or so after the others. Steamers, shore boats and yachts of all sizes buzzed along on each side of the course and spread away for miles over the rippling sea.

If the British heart leaped with a momentary exultation over the slowness of the America in getting underway, it was only momentary. She soon began to creep up on her opponents, passing some of the cutters to windward. In a quarter of an hour she left them all behind, save only the Constance, Beatrice and Fairy Queen, which were well together, and went smartly along with the light breeze. In another quarter of an hour she was clear of them all. Off Sandown bay, the wind freshening, she carried away her jibboom, but as she was well handled, the mishap produced no ill effect, her competitors gaining a trifle, but not approaching her. From the moment she rounded St. Catherine's point the race was practically over.

"Pshaw!, sir! catch her! said an old seadog to the Herald correspondent. "You might as well set a bulldog to catch a hare."

When finally she reached the starting vessel, at twenty-five minutes to 9 p. m., there was no competitor in sight. The news reached her Majesty, the Queen, on board of her yacht.

"Who is second? asked the Queen.

"Your Majesty, there is no second, said the messenger.

This was true at the moment, but twenty minutes later the Aurora arrived at the stakeboat and was awarded second honors.

The victory was received by the British public with good-natured regret. Something of the popular sentiment is shown in verses that appeared at the time in Punch.

On the following Saturday the America made a visit to Osborne in response to an invitation from the Queen, who had expressed a desire to inspect her. The Victoria and Albert also dropped down to Osborne.

The royal pair, with their suit embarked at 6 in the evening in the state barge. On nearing the America the national colors of that vessel were dipped and raised again when her Majesty had proceeded on board. She remained half an hour, and was graciously moved to express admiration for everything she saw.

The Titania, a crack British yacht owned by Mr. R. Stephenson, M. P., had not taken part in the regatta. She was reserving herself for a final contest with the America, which had been arranged for the succeeding Thursday. Once more the America was triumphantly successful, winning in fifty-two minutes.

But next year her pride had a fall. No people on earth were ever more astonished than the English, when, on July 22d, in the Royal Victoria Yacht Club regatta, the America, after having led her three competitors while the breeze lasted, was passed by two of them in what was practically a drifting match at the close, and the race was finally won by the Arrow. She was an old boat, but she had profited by her owner's study of the America. He had improved her on the lines suggested by the Yankee boat.

But it is comforting to know that on this occasion the America carried the British and not the American colors. She had been purchased by Lord de Blaguiere; she was owned and manned by Englishmen.

In future contests she redeemed herself and proved that she had lost none of her old prowess by her change of ownership. Then came the period of the civil war in the United States. The sailing qualities of the America tempted a syndicate to purchase her for use as a blockade runner, and she was a yacht no more. She continued in her career as a blockade runner. Lurking about the Florida keys, dodging men-of-war and now and then slipping swiftly over to Nassau or Bermuda, the America lived the life of a pirate schooner. Finally she was caught and sent to St. Johns river, Florida. A gunboat was sent to capture her. To prevent this her Captain scuttled and sank her.

Preparations were made to raise her, and soon the prize began to move toward the surface. Great was the enthusiasm as her beautiful lines emerged from the water. She proved to be in excellent condition, although without sails, running gear or ground tackle.

She was sent to New York with a prize crew, but when it was learned that the Government wished her for a training vessel at Annapolis the captors by common consent abandoned all claim to prize money, and thus practically made her a present to the country.

Then came the year 1870, and the challenge of Commander Asbury for the America's cup, then, as now, in possession of the New York Yacht Club. It was the unanimous desire of the country that the America should be allowed to compete for the defense of the cup, which she had originally won. She had won it against a fleet, and in those days a fleet was sent out to defend it against the British challenger, the Cambria.

But, though in this race she beat the Cambria by 13 minutes and 47½ seconds, she herself was only fourth at the finish, the Magic, Idler and Silvie being ahead of her. After the race she went back to Annapolis and resumed her duties as a training ship.

Three years after she was condemned by the Government and sold to General Benjamin F. Buttler, who made constant use of her up to the time of his death. Then she passed into the hands of his son, Paul Butler, who is still her owner.

EXPENSIVE BIKES.

A Woman Visits a Factory and Stores Information.

A BLOOMERITE'S EXPLANATION.

All About Sprockets, Rims, Ball-Bearing Joints and Assembling—Some Interesting Disclosures.

Lillian Russell's appearance on a bike recently, and the fact that her wheel was an expensive one, led to some interesting disclosures by a Murray Hill belle relative to the vast amount of labor expended in turning out one of the noiseless steeds. One of the dear girls, in commenting on the swell outfit of the airy Lillian, remarked: "And she was on a new wheel, too and it looked like a very expensive one.'

"All good wheels are expensive," announced a girl with a strong face."

"But they oughtn't to be," put in a chubby little bloomerite. "Didn't you read about the case of Peter Rappold, who was charged by a Pennsylvania company with stealing a large number of parts of bicycles from their works? The real cost of manufacturing a wheel came out in the testimony, and the defendant produced a beauty which he made after his arrest. The material for its construction was purchased from large dealers at retail, and cost him $25. He said he built the wheel in one week, without assistance. The jurymen rendered a verdict of 'Not guilty' without leaving the box."

"I think Peter Rappold was a grand fraud, or at least his $25 bicycle was," said the thoughtful girl, "and I'll tell you why. I visited a bicycle factory last week, and if you could see the great amount of work, as well as the army of skilled workers required in the making of a single wheel, you would understand very readily why such a simple-looking machine costs from $75 to $150. In the first place, special machinery and very expensive labor are employed in making the bicycle. The best material is used in good wheels. To one who has never been through a factory a wheel seems only to have four different parts, the wheels, frame, running gear and steering apparatus, and, indeed, a racing man once told me that a bicycle had only twenty-six parts, but I've learned for myself that 500 is nearer the truth. All of these details are worked out by different artisans, and each separate part passes through many hands before it is finished. A queer old German at the factory told me he counted the different parts one day, and that the links, nuts, bolts and rivets of a chain numbered 138 pieces; there were over 150 miniature steel balls in the bearings; the two wheels had each thirty piano wire spokes; the saddle contained a dozen and a half pieces, not counting the rivets that fasten the leather to the metal; and each pedal had ten parts. There are also four mechanical contrivances in the valves in the pneumatic tires, and then there are the hubs, tires, sprocket, shafts, rims, frame, axles, cones, and dozens of others that I shan't mention."

"Gracious me!" interrupted a gray-haired woman, "my wheel grows more and more valuable to me as you proceed."

"In a high-grade machine the smaller parts are all made by automatic machinery, which often costs hundreds of thouands of dollars. Wheels can be made lighter now than ever before. Formerly solid steel bars were used in making the frames, but now hollow steel tubing is used. This not only lessens the weight very much, but gives added strength. And instead of the joints being made with the old heavy castings and re-enforcements, they are brazed one piece into the other. Heavy castings are also out of date now.

"Special machinery is required in the manufacture of the running gear of a wheel, and only experts are employed in operating it. Not a single detail of this gear is allowed to go into a wheel until it is positively ascertained that it will work perfectly, and each piece is handled a dozen times, and thoroughly tested for every possible strain."

"How about the rims of the wheles?" asked a young woman, who was intensely interested.

"Oh, it was jolly to see them make the rims. A man would put a sheet of steel four feet wide and twenty feet long into a cutter that slashed it into just the right widths and then cut it into the correct lengths. These strips were put into another machine that bent them into circular form, and then another one still curved them into the shape for holding the rubber tire. The ends are next soldered together, holes put in for the spokes, and all your rim needs for completion is nickeling and polishing. Mind you, the hub, washers, spokes and spoke nipples are all handled separately.

"Certain sizes of leather are soaked and put through a number of shaping presses, finally coming out saddles. The nuts, rivets, oil cups and other small parts of a wheel are made by automatic machines. These machines bite off pieces of steel, turn them about a few times on automatic lathes, when out they come finished rivets, nuts, etc. The sprocket wheels are first cut in circular form and then strung together in lots of not less than a dozen in a machine whose teeth eat out spaces in the rims. Next they make the notches, one row at a time, on which the propelling chain works. None but experienced hands can put the spokes in hub and wheel, and another puzzling trick is to get the tires in the rims. You all know how the enameling, nickeling and polishing are done. The different parts are all sent to a large room and each one thoroughly tested, and from there they go to the assembly-room, where they are put together. A bicycle is a very complicated thing and can not be made in a day."

"Well, I should say not," volunteered an entusiast who had protested vigorously against paying $100 for a wheel, "and after one considers the capital invested in machinery and buildings, the expenditure for marketing, not to speak of the expensive labor, it is easy to see that a high-grade machine costs far more than the buyer would suppose at a casual examination."

The women then began to set forth the merits of the make that each owned, but a girl who was riding a rented machine soon got tired of this and said: "I do wish cyclists and pedestrians could come to a better understanding."

"What's the matter now?" queried some one.

"Oh, nothing much, only I go bowling along the street and see a man or a woman who looks as if he or she had good sense at a crossing ahead of me. This person sees me coming and, instead of going ahead across the street, stops still and begins to calculate as to what way I'm going. Talk about bicycle faces! They are nothing compared with the average masculine pedestrian's face when he comes in contact with a cycler. His muscular contortions are something fearful, and shift from his face to his legs as the rider comes nearer, for he gyrates backward and forward, and the poor cycler comes almost to a standstill and zigzags around like a drunken man. Finally the pedestrian makes a rush at the cyclist and down they both come, but the former is never to blame. Oh, no! This could all be avoided, but I'm afraid that a convention of riders and non-riders will have to be called before anything is effected.'"—New York Sun.

FUN WITH ELECTRIC LAMPS.

Several hotel men were standing in a group in an unknown hotel recently, chating. The conversation turned upon the eccentricities of guests, says the New York Tribune. The many odd ways in which different people handle electric lights came up, and one hotel man said:

"Nearly every one now knows how the incandescent lamp is operated, but still we meet with some funny instances of ignorance. Last week we nearly had our hotel set on fire on account of a piece of stupidity on the part of a guest. The building being fireproof alone prevented a conflagration. A woman came to the house who was in the habit of sleeping with a dim light in her room, and the electric lamp bothered her. She either had to let it burn brightly or else turn it off altogether. Finally she hit upon the idea of wrapping a towel around it. Then she began to question whether the towel would catch fire. Then she adopted the happy expedient of wetting the towel. That was the worst thing that she could do. She soon dropped asleep, and of course the towel soon began to burn. A blazing piece dropped on the curtains, and soon the whole room was afire. She was badly scared, and, of course, the contents of the room were ruined."

"That was odd," said another one of the party, "but the strangest thing I have heard of was the case of a farmer who came into St. Louis. He went to a hotel where electric lamps were used. He tried for an hour to put it out, and then sent for a call-boy. The guest explained his dilemma and the boy promptly stepped up to the lamp and turned the button. There was a moment of silence and then from the place where the farmer stood there came a flash and a report, and a bullet buried itself in the wall, narrowly missing the boy. Again and again the pistol was heard until every chamber was empty. Fortunately the boy escaped, and the police entered the room and placed the farmer under arrest. The old fellow was talking incoherently and seemed mad clear through. When he finally quieted down he gave his reasons for shooting. He said that he had been trying to put out a new-fangled sort of a light and had not been able to do it. Then he called a boy, who blew it out. Just after the light went out he heard a click and knew that some one had cocked a revolver. He at once thought he was about to be murdered and robbed, and did not wait, but began shooting at once. When told of his mistake he was much chagrined and apologized most humbly."

Ths story brought forth another one from a member of the party who had not yet spoken. He said:

"When we put electric lights in our hotel we placed them so that they could be moved to any part of the room, plenty of wire being allowed for that purpose. One night a man came to the house who was untamiliar with the light, and could not find the way to put it out. Evidently he did not wish to show his ignorance, and as he could not sleep with the light burning he cast about for some way to get rid of it. Finally he drew the bureau up alongside the lamp. Then he took the globe and placed it in one of the bureau drawers and closed the drawer tightly. The result was the light was practically put out. The chambermaid found it there in the morning, and it was still burning brightly. He admitted his ignorance then, and we showed him how the machine worked."

The following is the reply which a man sent to a bill from his bookseller: "I never ordered the book; if I did you didn't send it; if you sent it I never got it; if I got it I paid for it and if I didn't I won't."

All birds that live on seeds are furnished with strong gizzards.

ALIAS SUMMONS

IN THE SUPERIOR COURT OF THE COUNTY OF KERN, STATE OF CALIFORNIA.

S. Bachman, Plaintiff, vs. Domingo Etcharren, John Iribarne, Frank Cathery, S. Heineman and L. Bachman, copartners doing business under the firm name and style of S. Heinman & Co. John Doe and Richard Roe, Defendants.

THE PEOPLE OF THE STATE OF CALIFORNIA, send greeting to Domingo Etcharren, John Iribarne, Frank Carthery, S. Heineman and L. Bachman, copartners doing business under the firm name and style of S. Heineman & Co. John Doe and Richard Roe, Defendants.

You are hereby required to appear in an action brought against you by the above named plaintiff in the Superior Court of the County of Kern, State of California, and to answer the complaint filed therein within ten days (exclusive of the day of service) after the service on you of this summons, if served within this County, or if served elsewhere within thirty days.

Said action is brought to obtain a judgment of this Court for the foreclosure of a certain chattel mortgage described in said complaint, duly acknowledged, verified, executed and delivered by said defendant, Domingo Etcharren to John Iribarne, on the 17th day of May, 1894, to secure the payment of a certain promissory note, or instrument in writing dated May 17th, 1894 for the sum of Four Thousand Dollars, U. S. Gold Coin, payable twenty four months after date with interest thereon from date at the rate of one per cent per cent per month, payable monthly, and if not so paid the whole, sum of both principal and interest thereof to become immediately due and collectable, at the option of the holder of said note, or instrument in writing, which said note or instrument in writing, after the making, execution and delivery thereof, was duly endorsed and delivered by said John Iribarne to the firm of S. Heineman & Co. and on said last mentioned day, said John Iribarne duly assigned said chattel mortgage to said firm of S. Heineman & Co. and afterwards, to wit: on the 28th day of September, 1894, said firm of S. Heinman & Co. for value received, sold, assigned and delivered said promissory note or instrument in writing and said chattel mortgage to the plaintiff. Said mortgage conveyed the following described personal property which said property was at the date of the execution of said chattel mortgage in the County of Inyo, but is now and for more than one month last past has been in the County of Kern and is described as follows: Thirty eight hundred head of sheep marked "D" and having an underbit and overbit on each ear, together with the wool thereon and the increase thereof; also four horses two mules, two wagons and four sets of harness and camping outfit; that the persona property conveyed by said mortgage be sold and the proceeds applied to the payment of said sum of Four Thousand Dollars, U. S. gold coin principal with interest thereon at the rate of one per cent per month from the 17th day of May, 1894 and costs of suit, and in case said proceeds are not sufficient to pay the same then to obtain a judgment and execution against said defendants Domingo Etcharren and John Iribarne, for the balance remaining due, and also that said defendants and each of them, and all persons claiming by, through or under them, or either of them, may be barred and foreclosed of all right, title, lien, equity of redemption and interest in or to said mortgaged personal property, and every part thereof, and for such other and further relief as may be just, all of which will more fully appear by said complaint on file herein, to which you are referred for further particulars.

You are hereby notified that if you fail to appear and answer said complaint, said plaintiff will apply to the Court for the relief demanded in said complaint.

Witness my hand and the seal of said Superior Court of the County of Kern, State of California, this 13th day of June 1895.

[SEAL.] F. W. CRAIG, Clerk.

T. M. McNAMARA, Attorney for Plaintiff.

Sheriff's Sale.

ORDER OF SALE AND DECREE OF FORECLOSURE AND SALE.

Friederike Rhine, Plaintiff, vs. Eliza M. Hannagan, John H. Parish, W. C. Doane and Thomas Crellin, Defendants.

Under and by virtue of an order of sale and decree of foreclosure and sale, issued out of the Superior Court of the County of Inyo, of the State of California, on the 18th day of September A. D. 1895, in the above entitled action, wherein Friederike Rhine, the above named plaintiff, obtained a judgment and decree of foreclosure and sale against Eliza M. Hannagan John H. Parish, W. C. Doane and Thomas Crellin, defendants on the 17th day of September A. D. 1895 for the sum of Two hundred and forty six 30-100 ($246.30) dollars in United States Gold Coin, besides interest, costs and counsel fees amounting to the further sum of $105.30, which said decree was on the 18th day of September, A. D. 1895, recorded in judgment book 1 of said Court, at page 518, I am commanded to sell all those certain lots, pieces or parcels of land situated, lying and being in the County of Inyo, State of California and bounded and described as follows: The East half of the North-east quarter of Section Thirty-one and the West half of the North-west quarter of Section Thirty two, in Township Fourteen, South of Range Thirty-six East Mount Diablo Meridian, containing 160 acres; together with all and singular the tenements, hereditaments and appurtenances thereunto belonging, or in anywise appertaining

Public notice is hereby given that on Tuesday, the 15th day of October, A. D. 1895, at 12 o'clock M. of that day, in front of the Court House door of the County of Inyo I will, in obedience to said order of said decree of foreclosure and sale, sell the above described property, or so much thereof as may be necessary to satisfy said judgment, with interest and costs, etc., to the highest and best best bidder for gold coin of the United States.

Dated the 18th day of September, 1895.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY, the 8th day of March, 1892, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South-east quarter and the South half of the South-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit: Commencing at the South-east corner of the South-east quarter of North-east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 98-100; thence North-east following the meanderings of the bed of the Creek along its North branch to Edwards street, in the town of Independence, thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy Place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hannah, deceased, at the time of his death.

Lots Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Displicada Lode."

That certain lot, piece or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the North west quarter of the North-east quarter of Section No. twelve (12) and the South-west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South sixty-eight and eleven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence North-westerly along a small branch or swale to a point twenty four (24) rods North of the general corner of the North East quarter and the South-east quarter, and the North-west quarter and the North-east quarter of the North-west quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres: Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at George's Creek, Cal., and may be left at said place, or at the office of the District Attorney at Independence, Cal., or delivered to said Executor personally or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court. Deed at the expense of purchaser.

WILLIAM L. HUNTER, Executor of the Last Will and Testament John Allen Hannah deceased.

Dated, Independence, Cal., February 11th 1892.

The Most Successful Remedy ever discovered as it is certain in its effects and does not blister. Read proof below.

KENDALL'S SPAVIN CURE.

STAR, LANE CO., OREGON, Feb. 8th, 1892.
DR. B. J. KENDALL CO.,
Dear Sirs:—I have used your KENDALL'S SPAVIN CURE for the last twelve years never being without it but a few weeks in that time and I have made several wonderful cures with it. I cured a 4 year old of long standing. Then I had a four year old colt badly sweenied; tried every thing without any benefit, so I tried your liniment, and in a few weeks he was well and his shoulder filled up all right, and the other, a four year old that had a Thoroughpin and Blood Spavin on the same joint, and to-day no one can tell which leg it was on. These statements can be proven, if necessary; the four year olds are now seven and can be seen any day at Cottage Grove, Or. S. Z. CAXTON.

—Price $1.00 per bottle.—

Pastor.

DIED.

MITCHELL—At Big Pine, Cal., October 7, 1895, John G. Mitchell, a native of Scotland, aged 55 years.

Raining again to-day.

Under-Sheriff Clark went to Olancha on Wednesday.

J. R. Moffett returned from Big Pine last Saturday.

The open season for shooting game began last Wednesday.

J. C. Crocker of Big Pine spent a couple of days in town this week.

There will be two days racing at Bakersfield on November 5th and 6th.

Roadmaster McBride of the C. & C. R. R. was in town yesterday afternoon

Mr. McPherson came down from Bishop on Wednesday returning next day.

Arlie Mairs and Arthur Smith got back Wednesday evening from a trip to the Coso Hot Springs.

P. H. Mack Esq. arrived yesterday morning from a visit to San Francisco and Bakersfield.

Perry Love came down from Round Valley early in the week and made a homestead filing.

The Keeler & Mojave Stage line is traveling "up to date" lately, making the through trip in twenty hours.

A. K. Briggs brought P. W. Bennett Esq. home from the fair and has been spending several days in town.

Charley Kaiser and Joseph Zink were down from Bishop early in the week on business in the local Land Office.

Examinations for the Railway, Mail, Indian and Department Service will be held at Reno, Nevada, October 24st, 1895.

Henry Gerken, accompanied by Joe Conda and Fred Albers, came down from Bishop last Monday and made final proof on his homestead claim.

Billy Borgwardt and Oscar Rodgers arrived here from Bakersfield on Tuesday, remaining here till Thursday morning, when they went to Big Pine.

C. W. Craig, formerly of this place is now business manager of the *Citrograph*, published by the Redlands News Company at Redlands, San Barnardino Co. Cal.

Hon. N. D. Arnot is expected frow Alpine county on Monday. There are quite a number of cases to come up in the Superior Court, including what is known as the "sheep cases."

Hon. Trenmor Coffin of Carson was in town last Monday. Mr. Coffin came down from Carson last week with a party for the purpose of making an inspection of the Eastside canal property.

A great deal of preperation is being made for the Teacher's Institute to be held here during November. An interesting programme is being prepared for each night during the week, including a grand ball to be given on the last night. See ad.

John Clarke came down from Bishop on Wednesday bringing to the County Hospital an Indian woman known as Mrs. Johnson, who came for the purpose of having a leg amputated. The injury was caused by a bullet wound received when a young girl.

J. C. Miller has opened the Capitol Saloon, on Edwards street, opposite the Court House. The place has been thoroughly refitted and a first-class stock of goods obtained. Call around and see how you like it.

The Institute.

A meeting of the Committee on arrangements was held in Independence last Saturday, all the members and Supt. Austin being in attendence. Chairman Densmore has received special rates at the hotels and from the C. & C. R. R. for the approaching Institute. Teahors will be accomodated at the hotels for $5.50 during the week and the rail-road has made a reduction of one-half on the round trip tickets. The Court House has been decided upon as the most appropriate place for the meetings to be held, and in case Court is in session during the week the School house will be used for day meetings. The committee on Programme assure a first class series of entertainments. State Superintendent Black will lecture one evening and Professor Search of Los Angeles, one evening, with music and recitations interspersed. If convenient an informal reception will be held to welcome the visitors Monday evening, the 4th. The teachers will undoubtedly meet with a cordial welcome and all are anticipating a delightful week.

The Fair.

The Ninth Annual Fair of the 18th Agricultural District, held at Bishop this year was an unqualified success. Notwithstanding the fact that the Directors were without an appropriation the programme was carried out just the same as in previous years and the entire affair was conducted harmoniously. In the place of premiums diplomas were given in most instances, and a very credible exhibition was made, more particularly in the art department. Better racing was had this year than ever before. The purses were hotly contested for by a good class of horses and the District track record was lowered. Independence will hold the Fair next year and the people of this place will pride themselves in endeavoring to equal the Fair held this year at Bishop.

Darwin Notes

DARWIN, Oct. 15, 1885.

Mrs. Loy and child came in town last Friday, also Miss Berkshire, formerly of Lone Pine.

Chas. Anthony will start for his mines in the Panament district to-morrow.

Supervisor Fitzgerald passed through town from the valley yesterday.

D. C. Lane is expected here to-morrow.

JIGGER.

E. J. Reynolds came down from Reno on last Monday's train and spent the week visiting with his people. He and B. F Gray, formerly of Keeler, have been working together for two years past at a borax marsh about eighty miles north of Reno Mr. Reynolds will join Mr. Gray at Carson in a few days and the two will go to Alameda where they are under engagement with Smith, the borax king.

R. P. Hession came down from Big Pine on Wednesday, returning to-day. He expected to start for Los Angeles on to-day's stage in company with his brother, D. J. Hession, but the latter was unable to get away, owing to a number of cases to be tried in the Superior Court next week.

Miners and prospectors should observe that the necessary assessment work will be required to be done this year in order to hold the claims. The filing of notices of intention will not be sufficient. All work must be done before the first day of January.

N. E. Conklin Esq. will arrive here next Monday and will assist P. H. Mack Esq. in conducting the sheep cases to be tried next week. Mrs. Couklin will accompany him and go to Bishop for a short visit with relatives.

Quite a number of the young people of Independence and the Fort gathered at the residence of Wm. Dean, at Camp Independence last evening where a number of happy hours were passed with music and games.

A hunting party consisting of Ed. Brown and Billy Douglass of Soda and Agent Ellis of the Indian Agency at Walker River came down on Wednesday's train and are enjoying some excellent shooting in this vicinity.

Coolgardie.

Rich new finds are being constantly reported from Coolgardie gold fields. Coolgardie, Australia, is an accessible point, reached by steamer to Fremantle, thence by rail to Southern Cross and team to destination. The trip to Australia on the fine steamers of the Oceanic Steamship Company via Honolulu, Samoa, and New Zealand is pleasure sailing the day long. This line tickets passengers to Cape Town, South Africa. Map of Coolgardie district and Pacific ports reached by the Oceanic Steamship Company is mailed free to any address by the O. S. S. Co. 114 Montgomery St. San Francisco.

Typical Saddle Horse.

The saddle horse is a modern production, based on a growing demand for something not only handsome, but comfortable as well, for saddle use. The origin of the saddler is of course found in thoroughbred blood, supplemented by the blood of easy pacers which have proved potent in imparting saddle gaits.

In appearance the typical saddler is a combination of thoroughbred and trotter, having the size, gameness and easy, clean going action of the former, with the quiet, intelligent appreciation of education at the trainer's hands which we find so marked among the trotters. All colors are found—bays, browns, blacks, chestnuts and grays, about in the order named. Stallions weigh from 1,000 to 1,200 pounds; mares proportionately less. The head is fine, neck slender, but well arched and muscular; shoulders and girth deep and ample; back short; rump close and generally sloping quarters, long and well muscled, and legs fine boned, neat, close fleshed and without feather.—E. T. Reddeck.

SUPERVISORS PROCEEDINGS.

THURSDAY, October 10, 1895.
9 o'clock A. M.

Board of Supervisors of the County of Inyo, State of California, met at above stated time pursuant to adjournment.

Ordered, that the Sheriff be authorized to move closet to north east corner of Court House lot.

Baord adjourned until 1 o'clock p. m.

THURSDAY, Oct. 10, 1895.
1 o'clock P. M.

Board convened pursuant to adjournment at above stated time.

In the matter of the issuance of Bonds of Taboose School District, Inyo County, State of California.

Whereas it appears to this Board that the Board of Trustees of Taboose school district in this County did, as authorized by law, call an election and submit to the electors of said district whether Bonds of said district should be issued and sold for the purpose of raising money for purchasing school lots, and building one or more school houses, in said district and furnishing the same.

Whereas it appears that such election was called by posting notices signed by said Board of Trustees in three of the most public places, in said district for more than twenty days before said election and by publishing notice in the Inyo Independent, a weekly newspaper printed and published in said Inyo County; not less than once a week for three successive weeks, before the holding of said election.

Whereas it appears that such notices did contain; 1st, the time and place of holding such election; 2nd, the names of three Judges to hold said election; 3rd, the hours during the day (not less than five) in which the polls would be open; 4th, the amount and denomination of the Bonds, the rate of interest, and the number of years (not exceeding eight) the whole or any part of said Bonds were to run.

Whereas it has been proved by competent evidence, to the satisfaction of this Board that such election was duly held and conducted in all respects according to law.

Whereas it appears that said Board of Trustees of said Taboose School District have certified to this Board all proceedings had in the matter of the issuance of such Bonds, as required by section 1884 of the Political Code of California.

Whereas it appears to this Board and this Board hereby finds and declares that more than two thirds of the votes cast at said election were in favor of issuing such Bonds and that said Board of Trustees met and canvassed said returns and caused an entry of that fact and the votes cast to be made upon its minutes, and

Whereas It further appears that the whole amount of bonds so voted does not exceed five percent of the taxable property of the district as shown by the last equalized Assessment Roll of the County

Now, therefore on motion of Supervisor J. R. Eldred, seconded by Supervisor A. C. Freeman, it is by this Board hereby

Ordered that the bonds of said Taboose School District, in the County of Inyo, State of California, do issue to the number of eight of the denomination of One Hundred and Twenty-five Dollars each, aggregating the sum of One Thousand Dollars. All of said bonds are hereby declared to be payable in Gold Coin of the United States of America with interest thereon in like coin at the rate of eight per cent per annum from date until paid. The interest on said bonds to be paid on the 20th day of December of each and every year. The principal and interest of said bonds to be paid out of the Bond Fund of said Taboose School District the money therefore to be raised upon the taxable property of said District

The principal of this issue shall mature as follows, to wit: One bond of $125.00 maturing December 20th, 1896 and one bond of $125.00 annually thereafter until all shall be paid.

The form of said Bonds shall be as follows, to wit:

United States of America
State of California

Bond of Taboose School District in Inyo County, California. Taboose School District in the County of Inyo, State of California, hereby acknowledges itself indebted to, and hereby promises to pay to————or to the holder of this Bond the sum of One Hundred and Twenty five Dollars, which sum the said School District promises to pay to the holder hereof at the office of the Treasurer of said County, in the town of Independence in said County on the 20th day of December, 189— with interest thereon at the rate of eight per cent per annum payable annually on the 20th day of December of each and every year from and after the date hereof, at the office of the Treasurer aforesaid on the presentation and surrender of annexed coupons or interest warrants both principal and interest payable in Gold Coin of the United States until this Bond be finally and fully paid. This Bond is one of a series of eight Bonds of like tenor and date, each numbered respectfully from number one to number eight inclusive amounting in the aggregate to One Thousand Dollars. This Bond is issued by the Board of Supervisors of said Inyo County under and in accordance with the provisions of Sections 1880, 1881, 1882, 1883, 1884, 1885, 1886, 1887 and 1888 of the Political Code of the State of California, and the issuance hereof was authorized by more than two-thirds of the votes cast by the electors in said school district voting at an election held therein on the 11th day August, 1895 which said election was held to determine whether bonds of said district should be issued and sold for the purpose of raising money for purchasing school lots and for building or purchasing one or more school houses in such District and furnishing the same.

It is hereby declared that said election was duly called, duly held and conducted and the notices thereof duly given and the result thereof canvassed and declared in accordance with the provisions of the sections of the Political Code mentioned and that all the proceedings of the Board of Trustees of said Taboose School District and of the Board of Supervisors of said Inyo County in the matter of the issuance of this Bond were regular and in strict accordance with the provisions of the sections of the Political Code above mentioned. This Bond is in the form prescribed by order of said Board of Supervisors duly made and enacted in its minutes on the 10th day of October, 1895 and shall be payable out of the Bond Fund of said Taboose School District and the money for the redemption of said bond and the payment of the interest thereon, shall be raised by taxation upon the taxable property in said district.

In witness whereof the said Board of Supervisors has caused this Bond to be signed by its Chairman and attested by its Clerk, with the seal of said Board attached this —— day of -—— 189—.

Attest————————
Clerk of Board of Supervisors

————————
Chairman of Board of Supervisors

————————
County Auditor

To each of said Bonds shall be attached interest coupons which said coupons shall be in the following forms, to wit:

Coupon.
No.

The Treaurer of Inyo County, California will pay to the holder hereof out of the Bond Fund of Taboose School District in said County on the 20th day December, 189— at his office in the town of Independence, said County, the sum of-—— Dollars for interest on Bond No.——

————————
Chairman.

————————
County Clerk.

————————
County Auditor.

Said Bonds shall be sold by the Board of Trustees of said School District to the highest and best bidder for cash in Gold Coin of the United States, provided, that the price paid in no case shall be less than par and the proceeds of the sale thereof must be deposited in the County Treasury of said Inyo County to the credit of the Building Fund of said Taboose School District and be drawn out for the purpose aforesaid.

Returns of special election in Riverside School District, voting special school tax, returned for correction.

Ordered, that W. T. Bunney be and he is hereby authorized to make a set of maps, plats and townsites of Inyo County in conformity with section 3658 of the Political Code of California as amended statutes 1895, at a compensation not to exceed five hundred dollars.

Board adjourned to meet Friday, October 11, 1895, at 9 o'clock a. m

FRANK FITZGERALD,
Attest: D. J. HESSION, Chairman.
Clerk.

FRIDAY, Oct. 11, 1895.
9 o'clock A. M.

Board of Supervisors of the County of Inyo, State of California, met at above stated time pursuant to adjournment.

Present Supervisors Shaw, Freeman Eldred, Stewart.

Chairman Fitzgerald presiding.

Minutes of preceeding meeting read and approved.

Report of Road Viewers on a proposed new road in Road District No. 3, over lands of J. W. McMurry, Charles Stewart, J. D. Shaw and others, heretofore laid over from last meeting, being under consideration, it was ordered that said report be again laid over until next regular meeting for want of funds.

ABSOLUTELY PURE

BREEZY BITS.

Teddie—What are Woman's Rights, pa? Pa—Everything they want, my boy; always remember that.—Boston Courier.

"You seem to be cultivating old Kajones. What do you see about him to admire?" "His daughter Laura."—Chiago Tribune.

Nell—I wouldn't be in your shoes for anything. Belle (sweetly)—You couldn't get into them, my dear.—Somerville Journal.

Mrs. Hazeum—How in the word did your husband get so terribly choked?

Mrs. Snapper—Eatin' boneless codfish.—Boston Courier.

It was Henry Clay, was it not, who said: "I would rather be right than be president?" "Yes, but he wasn't." "How?" "He was left."—Brooklyn Life.

"Bill Jones' Jim has got his eddication, ain't he?" "You bet! He's the best pitcher in the team, an' kin jump higher'n a hoss kin kick."—Atlanta Constitution.

Miss Amateur—Are you musical, Professor Bisten? Professor Bisten—Yes; but if you were going to play anything, don't mind my feelings.—Sing Sing Courier

Trolley Car Conductor—Settle, now, or get off. Dignified Citizen—What do you take me for, sir? Conductor—Fi' cents, same as anybody else.—Indianapolis Journal.

"You told me," said the weary collector, "to bring this bill the first." "Yes," replied the editor, "but I meant the first time I had any money."—Atlanta Constitution.

"It seems to me," observed Criticus, "that Scribbler's book reads as though he were addicted to the bottle." "Yes," assented Wagg. "To the mucilage bottle."—Harper's Bazar.

"Mr. Triolet,' said Mr. Snaggs, with a facetious air, "how is the poetic license paid?" "With postage stamps, generally," replied the maker of verses with a sigh.—Pittsburg Chronicle-Telegraph.

"I hear that you are engaged to a girl with an ideal. You are likely to find that sort of girl pretty hard to get along with" "Oh, I guess I am all right. You see, I am the ideal."—Cincinnati Tribune.

PREMATURE BURIAL.

Whatever may have happened, modern stories of premature burial in England belong to the domain of the novelist rather than the scientist. The writer of a recent newspaper article says that medical journals rarely take cognizance of reported cases, with a view probably of maintaining the infallibility of medical death certificates and preserving professional reputations. In this view we can assure him he is absolutely mistaken, and if we do not often take notice of these alleged occurrences it is either because the circumstances under which the story is told are not such as to entitle it to belief, or because no particulars are given enabling us to inquire into the facts for ourselves. We are, however, always open to conviction, and if the correspondent will furnish us with the name of the doctor who certified the death that he mentions as having occurred in his own family, we will do our best to ascertain the truth, for if these cases of premature interment really do occur even occasionally in this country, then the sooner we revise our beliefs as to the signs of death the better. But until we have had the opportunity of investigating one of these cases we shall continue to maintain our attitude of disbelief. The writer incidentally mentions that decomposition is the only reliable sign of death, but if coldness and rigor mortis do not satisfy him, we are surprised that he should accept anything short of actual disintegration of the body as convincing proof of death. Of course the one crucial early sign of death is the entire and continuous cessation of the heart's action; all other signs are of quite minor importance in comparison with this, for no matter what they may tell us, so long as any trace of movement of the heart can be made out the subject is still living; and, on the other hand, in the words of the leading authority on forensic medicine, it is impossible to admit that the heart can remain for even half an hour in a state of absolute inaction in a human being, and then spontaneously recover its activity.—London Lancet.

RUSTIC ANTIQUITIES.

There was not a single feature of the old yard that was intact. This was fortunate. Any lingering newness robs all old objects of their charm. It is not enough to be old; they must look it. We were among ruins; not the product of sudden disaster, but the havoc brought about by long use, no attempt at repair, and the general ravages of time and season. On every side we were surrounded by such ruins, and the pleasure of reconstruction was ours.

Here, for once, the imagination had full swing, and how we revelled! What we did not know we fancied, and what we fancied we fell in love with. This is the proper business of loitering. Bent upon our own amusement only, our aimless method was not a loss of opportunity, and we were acquiring as much truth as does the professional historian by his scientific procedure. Does he not sometimes go astray almost as much as the woman who said she did not believe her folks ever cleaned flax with such a machine, looking at the time, at the skeleton of a spinet?—Lippincott's Magazine.

Illy—I don't see why the doctor has to come here twice a day. He leaves medicine on his first visit, doesnt' he?

Mrs. Illy—Yes but he has to come again in the afternoon to leave an anti dote for the medicine he left in the morning.

THE HOSIER'S GHOST

"This discovery gave me for the moment what the ladies describe as 'a turn.' 'What a strange thing,' I said to myself, 'a passage leading to somewhere; just like these haunted chambers usually have. However, I will take good care that no one makes use of this passage tonight, at any rate.'

"And so closing the low door I proceeded to make it fast with some more of my great screws. As I did so and was driving the screws home I felt a queer sensation from my right hand to my elbow, something like a faint electric shock; 'pressed on the nerve somehow,' I said, and continued my work.

"This done, I had my supper, lit my pipe and drank the half of my wine. The chimes of St. Christopher's tower startled me sounding the hour of eleven. I was, however, in a peaceful frame of mind, without the least fear of anything human or supernatural, and I gazed placidly at the red smoldering logs and puffed my pipe in peace.

"Suddenly, however, the fact that the hour of midnight would soon approach gave me just a little shiver. I quickly quenched the feeling with a drop of my eau de vie.

"Nevertheless, I thought, there is no use in sitting up thus. I may as well go to bed, then I shall, without doubt, fall asleep, know nothing till tomorrow morning and be able to go home with flying colors.

"Accordingly I prepared for rest, and as I can never sleep well with my clothes on pulled off all my attire with the exception of my shirt, took a final drink of the eau de vie, laid ready my pistol and lay down upon my mattress, drawing a single blanket over me.

"I lay with my feet turned toward the glowing embers, which diffused grateful heat and gave sufficient light to enable me to discern the objects, such as they were, in the chamber after I had extinguished my candle. The feeling of security, born of the fact that I had securely screwed up the only two doors which opened into the room, did its work, and in a very little time I fell asleep.

"I cannot tell how long I slept. All I know is that I seemed to wake up from a feeling of cold, as if some one were blowing upon me with a pair of bellows. I rubbed my eyes, remembered where I was, and experienced a slight feeling of unhappiness to find that the night had not passed over and that I was still in the haunted chamber.

"The fire was all but dead, the moon, as I could see through the uncurtained window, seemed to be plunging her way among great banks and masses of cloud, the room was fitfully lighted here and there with a strange twilight of moon and fire.

"Somehow my eyes fixed themselves on the low door by the side of the hearth. Could it be possible? Was that door opening? No; impossible! I had screwed it up far too tight for that.

"Yet something strange was taking place. Whether the door was opening or something was coming through it I could not tell; but I felt that a change was taking place, and sat up in my bed in silent terror, with that peculiar sensation in my body which persons of an imaginative disposition are pleased to call 'gooseflesh.'

"Fixing my gaze firmly upon that mysterious door, I sat and watched it. Little by little the aspect of the door changed. It became white, bleached as it were, and then, to my intense horror, a something seemed to pass through it and to stand in front of it. Yes; that something gradually assumed shape and proportion. I could see the head, the body, the arms, the form was that of a man. Then, while my hair stood upright upon my head with terror, I no-

Higher and higher crept the ice cold stocking.

ticed its stern, wan face, its costume of a long bygone age, its lean and withered arms and its attenuated legs. Could it be a man in the flesh? No, clearly no; for I could see through it and discern that the little door at the back of it was fast screwed up as I had left it. This was no man in whom was the breath of life, a phantom, a form, a show, merely an image, and how inexpressibly ghastly and terrific! When I had fully realized this fact I became a prey to the most abject terror. It was true, then, about the ghost! It was no trick, no joke, that I was to be subjected to, but before me was a supernatural shape for the first time in my life. I became seized with a species of fascination as well as by terror; I gazed fixedly at the appearance, covered as it was by a strange, unearthly white light.

"It was the figure of a tall, lean man, for it had by degrees risen far above the height of the low door from which it had emerged.

"Its eyes were fixed upon me, and over one of its arms it carried a number of dark objects, the shape of which I could not make out.

"But horror of horrors! it was quietly nearing my bed.

"I arose at once and stood erect, trembling in every limb. In vain I tried to speak; my lips refused to utter a word. I could only stare fixedly and in silence at the strange, glittering figure. The form, doubtless it was, of some creature who had walked in the streets of Dummelsheim in the flesh and lived in this house some two hundred and fifty years ago, still haunting in its ancient shape the well known spots.

"The specter advanced and I retreated before it, holding out my arms as if to ward it from me.

"I never thought of using my pistol save at one moment, but the fact that the figure was transparent at once convinced me that to fire at it would be of no avail.

"Still the terrible shape approached with a silent, noiseless stride, then on reaching the middle of the room it seemed to motion me with one of its arms toward the chair.

"I hesitated. Its action became imperative and I was constrained to obey. Once seated, the specter, which appeared to have acquired a perfect control over my paralyzed senses, took something from over its left arm, and signed to me to stretch out my leg. I did so mechanically—and then—how can I convey to you the feeling that came over me as it proceeded to pull what seemed to be a stocking of ice upon my left leg? I can even now at times feel the horrible icy coldness of that spectral hose. It was a stocking that the figure was pulling upon my bare leg and foot. I was chilled to the very bone, my hair bristled, my head swam, my heart ceased to beat for a moment: higher and higher crept the ice cold stocking upon my leg. The stocking was on. This accomplished, the specter motioned me to stretch out the other leg.

"My horror now fairly broke the spell that chained me. I fled to the door, the specter glided after me smoothly and silently as a fate. I seized the handle of the door—miserable! I remembered that I had fastened myself in with the ghost! My reason seemed to be escaping me. The steel-like glitter of the specter's eyes was fixed upon me. Like a hunted and doomed animal I fled round the apartment. I leaped at the window, crashed through it, and fell into the street below.

I leaped at the window.

"I must have lost consciousness at once, for the next thing I remember was lying on my bed in my own lodgings, with my good landlady and the acquaintances who had dared me to the terrible trial standing around my bed.

"It was said for some time after that the poor Englander was going mad, as all the others who had seen the ghost of the Lederstrasse had done. I cheated them however. My head was too strong, I suppose, for I got over my fright, and after my broken leg had been set, could listen to their recital of what had taken place. I learned that those who had set themselves to watch in the street had heard first a strange, low, grinding sound—my screws no doubt—then after a long interval my frantic screams, a crash and the clatter of broken glass, and had seen me fall as a lifeless lump upon the street pavement.

"They picked me up, and one of them described that as they did so he chanced to look upward and saw at the broken window above, shining in the moonlight, a pale, shadowy face and the glitter of two bright eyes.

"It is not strange to say my right leg was broken by the fall; but it is, I think, somewhat strange to relate that my left was blackened to the knee as if scorched; nay, it is so to this day—see!"

My friend showed me his blackened leg.

"And that is all?" I asked.

"All, lieber Himmel! Is not that enough? Can you wonder after what I have told you that I don't like the Lederstrasse?"

"Wonder; not I! I would not go near the place again after dark for a grand duke's ransom. But who do they say the specter was?"

"I do not quite know. There is a legend of some hosier who once lived in that house and was rich, who fell into some disgrace, and the reigning duke of Saxe-Dummelsheim seized upon him, and with a refinement in cruelty, in order to extort from him his money, caused him to be put to a torture something in the manner of our ancient machine called 'the boot,' which crushed the leg of the victim. In this case the instrument was a hose of steel, which was at the onset icy cold and was then heated by fire to almost a red heat. The poor hosier sank under the dreadful torture.

"It is said that his ghost now seeks to avenge itself upon all who approach his ancient abode, and that he tries on them his ghastly hose; if he succeeds in getting both hose on their legs they die and his spirit is released from its wanderings."

Such was the case of the queer old Anglo-German. I went to my inn and to bed; there I lay and pondered long upon the strange story I had heard. My sleep, when sleep came, was not of the best. Every now and again I awoke with a start and a shudder, and fancied that a ghostly hosier was pulling upon my own legs the spectral hose of the story.

A day or two passed by, and one night, as I was packing my portmanteau for my homeward journey on the morrow, I was startled by a great yellow light in the sky. Soon after I heard the hoarse and blatant voice of the alarm bell. I dressed and went out, and found the whole population of the place running in one direction. I followed the stream of folk. It was a fire, some one told me, in the Lederstrasse; the haunted house was burning down. We arrived in the ancient narrow street; the sight was magnificent; the whole dwelling was enveloped in flames. No one took the slightest trouble or endeavored to get the flames under control. All were staring and gaping in idle curiosity.

"It was a bad place," some one said, "and they were well content to see it perish."

How or by whom the fire was kindled I never knew.—True Flag.

English Firemen.

Firemen's clothes in England are in the future to be made of asbestus or mineral wool. The efficiency of suits composed of this material depends on three facts. It is noncombustible, a nonconductor of heat and in no way injured by water.

AN INDIAN TRAGEDY.

Work of Bloodthirsty Redskins Quickly Avenged.

EFFECT OF TOO MUCH FIREWATER.

A Historic and Dreadful Slaughter of a Husband and Wife, Early Settlers of the Northwest.

The death of John Bonser, one of the earliest pioneers of Oregon, at Sauvie's island, near Portland, recalls one of the bloodiest tragedies that ever occurred in King county, and one which will go down in history as the greatest example the pioneers had of the evil effect of giving whisky to the Indians. The event is memorable for another reason, and that is that the daughter of John Bonser, wife of William Casto and probably the most beautiful woman in the territory, was a victim.

"I don't take much stock in the handsome, charming women we read about," said C. B. Bagley yesterday, "but Mrs. Casto, if placed in Seattle today with the face and form as when she came among us in 1864, would be among the most handsome women in the city, and I shall never forget the sensation created in our little settlement when messengers arrived from Squak valley, where the Castos moved, with the news that Mrs. Casto, her husband and John Holstead had been killed by Indians, and that a friendly Klickitat had slain the murderers."

At that time there was no bluebook, and in fact women were scarce. It is not surprising, then, that the arrival of William Casto, a man aged 38 years and a true representative of the Kentucky colonel type, with his young wife, the daughter of John Bonser of Sauvie's island, Columbia river, near Portland, should have been a memorable occasion. Mrs. Casto was a natural, not an artificial, beauty—one of those women to whom all apparel adapts itself and becomes a part of the wearer. She was admired by all and fairly worshiped by her husband. In the spring Casto took up a ranch in the heart of Squak valley, where the Tibbetts farm now lies. Here he built a small house, put in a garden and commenced clearing. In order to create an income for himself and wife he opened a small trading post and carried on the manufacture of hoop poles. The valley was peculiarly adapted to this business owing to a dense growth of hazel bush, the very article most desired. White labor was scarce, but Casto, with an eye to business, employed Indians. For a wonder they applied themselves diligently and became expert workmen.

Casto had great influence over his workmen and was looked up to by them as a sort of white "tyee" or chief. He had one fault, which goes hand in hand the world over with a free heart—he loved liquor and now and then drank too much. He also got in the habit of giving it to the Indians in his employ. On several occasions the true Indian nature, under the influence of stimulants, came out, and it required all his authority to avoid bloodshed. His neighbors, who could be numbered on the fingers of both hands, with some to spare, cautioned him not to give "a redskin whisky and arouse the devil," but he laughed at them, and when they warned him of treachery thought they spoke nonsense. He would not believe that the men whom he had treated so kindly and befriended in every conceivable manner would do him harm under any conditions. He reasoned that his neighbors did not judge the character of the native correctly and underestimated his influence. There was no reason why he should not give his Indians liquor if he so desired. He acted on this decision on the afternoon of Nov. 7, 1864, and then went to his home for supper.

The Indians got gloriously drunk and then commenced to thirst for blood. In the crowd were two of the Snohomish tribe, bloodthirsty brutes and still seeking revenge for the death of their tribesmen and chief on the Snohomish river the summer previous. Their resolve was made. Casto's life would atone for that of the chief, his wife and friend, John Holstead, for the other two. They secretly took their guns and went to Casto's house. The curtain of the room wherein all three were seated at the supper table was up, and the breast of Casto was in plain view of the assassins. There was no hesitation on the part of the Indians.

The first shot crashed through the window and pierced Casto in a vital spot. He arose to his feet, staggered and fell upon a lounge. His wife sprang to his assistance, but the rifle spoke again and she fell to the floor. The third shot hit Holstead, but not fatally, and the Indians, determined to complete their bloody work, ran to the front door. They were met by Holstead, who fought like a demon, but at length fell, his body stabbed in more than 20 places. Not content with the slaughter already done, the bloodthirsty wretches drove their knives into the body of Casto's beautiful wife in a manner most inhuman. Having finished their bloody work they left the house, never for a moment thinking their lives were in danger. In this particular they made a fatal error.

The shots fired had attracted a Klickitat Indian named Aleck to the scene. He was a true friend to the white man and held Casto, his employer, in high regard. It took him but a brief period to comprehend the situation. He concealed himself, and when the brutes came out of the house he crept up behind them. One shot was enough to end the earthly career of one of them, but the other took to his heels. Aleck followed him with a hatchet he had drawn from his belt, and being fleeter of foot caught up. Then with one swift blow the skull of the fleeing Indian was cleft, and as he fell headlong to the ground again the bloody hatchet drank blood until the head that but a few minutes before had human shape looked like a chopped pumpkin.

Out of the killing by Aleck of the two Snohomish Indians grew a feud which resulted in the death of Aleck's son. The old man was the one wanted, but he was too quick with the rifle, and they never got him. He died a few years ago, aged nearly 90 years.—Seattle Post-Intelligencer.

EXPERT MEDICAL TESTIMONY IN TRIALS.

The question of a new method of taking expert medical testimony is being actively agitated in the Academy of Medicine and in the Society of Medical Jurisprudence. Supreme Court Justice Willard Bartlett and Professor Landon Carter Gray are the leaders in the movement.

"Is a reform needed, in your opinion, in the present method of taking expert medical and chemical testimony?" Dr. Gray was asked yesterday.

"The very fact that experts are so much derided by lawyers and regarded with suspicion by the laity," he said, "is evidence of the need of a reform. Besides, those who are thoroughly acquainted with the matters on which experts are called to testify know well that it is the exception to the rule for the juries to obtain the real truth about the matter. And the jurors are the judges. In addition, the best medical men are very reluctant to go upon the witness stand, as they feel that their reputation, laboriously obtained through long years, is likely to be jeopardized by the contradiction of some utterly incompetent person."

"Is not expert testimony often rendered practically valueless by the contradictions of experts assuming to equal knowledge, and between whom the jury is unable to discriminate intelligently?"

"Undoubtedly. That is the reason why I think a reform is needed. The law ought to put experts above suspicion, and it ought to provide for some means of discriminating between the competency of experts.

"The present system is a failure because the experts are employed as partisans, are expected to go into court to fight for their own side and against the other side, and if they maintain, as they should do, a perfectly impartial and judicial attitude and admit something that is damaging to their side, they are considered to be disloyal.

"The theory of the law is that the qualities of an expert can be determined by cross examination, but this is a fallacy, for there are few lawyers—not one out of a thousand—who will coach themselves for the task, and there are even fewer lawyers who are capable of mastering the subject in such a short space of time."

"What new plan would you suggest?" Dr Gray was asked.

"I have two plans," he replied, "which I believe would go far to remedy the evils of the present method of taking expert testimony.

"I would suggest, in the first place, that the experts in jury cases hold a conference and examine the plaintiff, either before or during the trial. Second, I would suggest that in cases tried by a judge alone, the judge select two medical men of reputation in the branch of medicine under discussion to act as his medical advisers and to sit with him on the bench for that purpose, to be paid by the state or city.

"The first plan or system of conferences has been for many years the custom in Leeds, England, and is spoken of by Sir James Fitzstephen in his history of the English criminal law as having been so successful that the medical men are scarcely ever cross examined, although it should be, I think, the privilege of counsel to do this, if they so choose.

"In such a conference the medical men are almost certain to agree on the facts, as experience has shown in England and in Brooklyn since it was suggested there first by Judge Bartlett several years ago. Judge Bartlett has tried the plan with unvarying success."

"Would the first plan proposed by you make it easier to get at an expert on cross examination?"

"Manifestly it is much easier to cross examine a witness as to the validity of his conclusions when the facts are agreed upon than it is when the facts are in doubt, because the conclusions are matters that can be tested by statistics and by textbooks.

"In the cases that are not tried by a jury, but only a judge, the addition to the court of two medical advisers makes no changes in the law in any essential particular, because the judge himself is not subject to cross examination, and there is no possible hardship in associating with him two competent men to advise him, even though they are free from liability to cross examination. Moreover, the custom will not debar the plaintiff or the defendant from introducing other expert witnesses, paid by themselves, if they choose, who can be subject to the usual cross examination.

"By this double system medical men of the highest standing will feel that they can go into court with dignity without the danger of having their expert knowledge subjected to ignorant, flippant or malicious criticism."

"Suppose the experts on a jury trial could not agree on a set of facts or symptoms?"

"There has never been a failure to agree. I have been a member of several conferences of this sort, and there was no trouble about agreeing."

"How would the judge select his advisers?"

"In a large city like New York, unless the judge knew some man thoroughly competent in the branch of medicine under discussion, he could address a letter to the president of the Academy of Medicine, who could give him a list of the best men in that line. Inasmuch as the academy elects a new president every three years, there could not be much cliqueism in the names suggested.

"In the smaller communities the reputation of physicians is so well known that the judge would have no difficulty in making a proper choice."

"Could the conclusions of experts from an agreed set of facts or symptoms differ very greatly?"

"No; not if the experts in the conference were competent men.

"I am not a lawyer," said Dr. Gray in conclusion, "and therefore I am not competent to judge of what is in accordance with our code of legal procedure, but I really believe that the best method to remedy this evil of contradictory expert testimony would be to create a medical judge, with the rank and salary of a supreme court judge. He would go on circuit with the other judges and would sit as a side judge in cases involving medical matters. He should be elected by the people.

"I have been told by my legal friends, however, that this is impracticable, and I fear myself that the selection of such a medical judge would have so much politics in it as to put on the bench only the political doctors.

"The idea of medical advisers to a judge was suggested to me by the fact that in the admiralty courts in England the judge is allowed to suggest two retired naval officers, who are called the nautical assessors, and who sit on the bench with the judge in an advisory capacity, so as to keep him properly informed in all nautical details."—New York Times.

"I tell you, my brethren," cried the rector, "the devil does not stay at home; he's at work—he is abroad."

"I know what's coming," whispered the head warden to his wife. "He's going to put in a bid to be allowed to go abroad after him."

Potassium, the basis of many medicines, was discovered in 1807 by Sir Humphrey Davy.—Nashville American.

WOMEN'S FACES—like flowers, fade and wither with time; the bloom of the rose is only known to the healthy woman's cheeks. The nervous strain caused by the ailments and pains peculiar to the sex, and the labor and worry of rearing a family, can often be traced by the lines in the woman's face. Dull eyes, the sallow or wrinkled face and those "feelings of weakness" have their rise in the derangements and irregularities peculiar to women. The functional derangements, painful disorders, and chronic weaknesses of women, can be cured with Dr. Pierce's Favorite Prescription. For the young girl just entering womanhood, for the mother and those about to become mothers, and later in "the change of life," the "Prescription" is just what they need; it aids nature in preparing the system for these events. It's a medicine prescribed for thirty years, by Dr. R. V. Pierce, chief consulting physician to the Invalids' Hotel and Surgical Institute, at Buffalo, N. Y.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

How happy our neighbors might be if they would only do as we think they ought to do.

$100 REWARD $100.

The readers of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages, and that is Catarrh. Hall's Catarrh Cure is the only positive cure now known to the medical fraternity. Catarrh being a constitutional disease, requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system, thereby destroying the foundation of the disease and giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in its curative powers, that they offer One Hundred dollars for any case that it fails to cure. Send for list of testimonials.

Address, F. J. CHENEY & CO., Toledo, O.

LAND OF TRAGEDIES.

Assassinations Connived at by High Officials.

CRIMES COMMITTED IN BULGARIA

Political and Social Wickedness Which Makes it an Outcast Nation—Terrible Tortures.

Bulgaria, which just now is in the public eye owing to the fate of Stambuloff, is one of the most uncivilized of civilized nations. It is the land of the cutthroat, the torturer and the poisoner. Hedged in by great nations, all anxious to seize it, it is ever at the mercy of enemies without and of conspirators within its narrow confines. It is a veritable plague spot of diplomatic chicane, of treason, of outrages committed in the name of public honor, of political treachery and of social and moral rottenness.

Although subject to a Christian ruler, says the New York World, it is infinitely more barbaric than Mohammedan Egypt or Buddhist Siam. The murder of ex-Premier Stambuloff in broad daylight and in the principal and most crowded street of the capital, is but one of a vast number of analogous outrages, some known, others left unrecorded, which have stained its recent history.

Kidnapings, forgeries, floggings, arbitrary imprisonment and confiscation of property have been quite as frequent as the frightful butchery which was used to put Stambuloff out of the way, and the murder of that statesman will have served some purpose if it has the effect of calling the attention of the civilized world to the fact that Bulgaria is very far from being the progressive and up-to-date country that the literary guests of the craven Prince Ferdinand are so fond of picturing her to be.

Several other Ministers several of them colleagues, of M. Stambuloff, others his political opponents, have been struck down by assassins in the streets of Sofia. It was but four years ago that his most intimate friend, M. Beltcheff, the Minister of Finance, was shot down while walking by his side. The two men were not merely bound together by community of political and financial interests, but were even related to each other. Yet, after the removal of Stambuloff from the office of Prime Minister, he himself was actually charged with having shot his friend and kinsman, and his political adversaries so worked upon the feelings of the weak-minded widow of M. Beltcheff that she actually lent her name to the preposterous accusation, the result being that M. Stambuloff was arrested and was out on bail under an indictment for murder when he himself was killed.

Another Minister who met with a violent death was Major Panitza, at one time Minister of War, who was arrested by Stambuloff in person, court-martialed and shot in twenty-four hours later on charges of conspiracy against Prince Ferdinand, charges which however, have never been satisfactorily proved until this day.

Panitza was not the only distinguished dignitary who suffered death at that time, and in the same connection. There was also a Colonel Markhoff, Chief of the Military Household of the Prince and Commandant of the Palace, whose conspiracy conveys an idea of the lack of security that prevails at Sofia.

One night a grand ball was to take place at the palace, previous to which the Prince entertained a small company at dinner. The guests had scarcely taken their seats at table when an officer of the name of Major Marinoff asked his neighbor why Colonel Markoff was not present.

"Why, he has been ill for three days, and not been able to leave his house."

"You astonish me," exclaimed the Major, in tones which attracted the attention of the Prince himself, "for I would swear a solemn oath to the effect that I saw him five minutes ago coming out of His Highness' bedroom."

"That is impossible," interruted the Prince, and perceiving that he had failed to carry conviction to the Major's mind, he gave orders that the four Macedonian janissaries, who were on duty at the two entrances of the private apartments should be relieved and report to him at once in the dining-room. As soon as they entered the Prince inquired if they had seen any one within the last two hours, save those seated at the table. The men having carefully examined the faces of all those present replied in the negative, and were commanded to return to their post. During the remainder of the dinner the Major was the object of much chaff and banter on the part of every one, and was even taxed with a belief in Spiritualism.

The ladies had retired with Ferdinand's mother, the Princess Clementine, and the gentlemen were in the smoking-room with the Prince, when suddenly the curtains were pushed aside. An officer was brought in who had demanded to see the Prince upon a matter of life and death. He was brought to his Highness' presence as pale as death, and with his uniform, that of a Lieutenant of the Ferdinand Regiment, much disordered. He said that he had come to Sofia that afternoon and had gone to the cavalry barracks to see a brother officer. While there he fell asleep, but was awakened shortly after dark by the sound of voices in the adjoining room. Hearing the words "Austrian" and "Coburger" repeatedly used, he listened intently, and learned that sharp at midnight, when the Prince's ball was in full swing, two battalions of infantry and two squadrons of cavalry were to surround the palace, while a regiment of artillery with their guns were to command the palace square.

Up to this point the Prince had listened with considerable skepticism. He then inquired whether he had heard anything else. The Lieutenant replied: "Yes, Monseigneur. I heard the following remark made by one of the conspirators: 'Markoff is as well known at the palace as a yellow dog. He is familiar with all the corners and back stairs, and he has given us his solemn word of honor that as soon as ever the Prince leaves his apartments for dinner he will cut all the telephonic and telegraphic wires without any one becoming aware of the fact. The palace will thus be cut off from all communication with the outside world, and none of its occupants will be able to summon assistance from the city.'"

At the mention of the name of Markoff the smile vanished from every face, and Major Marinoff hurriedly left the room. Three minutes afterward he returned with blanched cheek, and in tones of tremulous excitement exclaimed: "So, I was right after all, sir, when I observed that I had seen that sneaking scoundrel, Markoff, before dinner. Go gentlemen," he continued, telling the others, who had meanwhile entered, "and convince yourselves that I made no mistake. The electric wires have been cut in His Royal Highness' room just beneath the bed, and every wire has likewise been severed in the aid-de-camp's room.

Messengers were at once dispatched, summoning Prime Minister Stambuloff, and before midnight Markoff, the Perfect of Police and a number of high officers and dignitaries had been arrested. Colonel Panitza, the officer who had commanded the left of the victorious Bulgarians at the battle of Slivanitza, in 1885, being, as stated above, taken a prisoner by the Prime Minister himself.

At a reception given at the palace police officials appear suddenly upon the scene, arrested and carried off to jail two of the fairest guests, ladies belonging to the high circles of Bulgarian society. Months elapsed before they recovered their liberty. The sole reason for this outrageous breach of the laws of hospitality on the part of the Prince was that the Princess happened to have been seized with a fit of vomiting after receiving an iced drink from one of these ladies, a circumstance which she at once ascribed as an attempt to assassinate her. The second lady was arrested because she was the sister of the guest who had the misfortune to hand the Princess the iced drink.

Besides Panitza, Stambuloff and Beltcheff, there is the former Prime Minister and Regent, Karaveloff, who was detained for several years in prison, repeatedly flogged and subjected to torture in order to induce him to sign documents calculated to render any future political action on his part impossible. Popoff, Milaroff Georgieff and many more Bulgarian statesmen whose names could be mentioned have been similarly subjected to torture, the most shameful case being perhaps the cruelties inflicted upon the 17-year-old Daniel Tufektchieff, whose sole offense was that he was the brother of one of the leaders of the Rissophile party, which aimed at the overthrow of Prince Ferdinand and of Stambuloff.

The boy was tortured six months before finally succumbing to his sufferings. Splinters of wood were driven under his nails; he was kept for days and nights together without food or drink; on one occasion he was left for three entire days up to his neck in a hogshead of ice-cold water; his feet and hands were sprinkled with petroleum and then set on fire; in fact, there is no torture that the most cruel oriental mind can conceive which was not perpetrated, both to induce him to make compromising revelations concerning his brother and to persuade the elder of the Tufektchieffs to abandon his plottings against the Prince and against Stambuloff. These and many other particulars concerning the tortures to which the lad was subjected are described at length in the appeal which the union of Bulgarian ladies addressed to the various governments of Europe in 1892 entreating their intervention.

It is definitely known that it was the elder of the Tufektchieffs who was the ringleader of the band who murdered M. Stamubloff the other day, although no attempt has been made to arrest him. It is no secret that Tufektchieff had sworn to take the ex-Preimers life, holding him principally responsible for his young brother's sufferings.

After Stambuloff's fall from power Prince Ferdinand had permitted him and all other political exiles and refugees, who had been driven from the country by the ex-Minister, to return. Stambuloff well knew the danger to which he was exposed. So, too, did the Government, which, however, pointedly declined to take any steps whatsoever for his protection. Indeed, Tufekcheff was actually received by the present Cabinet Ministers of Prince Ferdinand, treated by them with marked consideration and premitted to figure as their friend, associate and political ally.

Stambuloff readily perceived that, under the circumstances, he could look for no interference in his behalf on the part of the authorities if the man happened to attempt to carry out the threats which he had openly made against him. It was this, more even than the condition of his health, which lead Stambuloff to apply for permission to betake himself to Carlsbad. The Government, however, refused him permission to leave the country, holding over his head the preposterous charge of having murdered his most intimate friend, Beltcheff.

That his end was at hand became apparent when, two weeks ago, the Bulgarian deputation dispatched by Prince Ferdinand to Russia was greeted at St. Petersburg with an admonition in the Muscovite press, and verbally by the chiefs of the Pan-Slavist party, such as General Count Ignatieff, that acts, not words, could prove that Bulgaria had abandoned her anti-Russian policy and sentiments, and that, as long as Stambuloff remained at Sofia or had any political action, there could be no definite understanding between the two countries. Then it was that Stambuloff was murdered and carried home, dying, with one eye gouged out, both hands severed by the heavy, keen-bladed Macedonian yatagahns, and with some twenty or thirty stab wounds about his head and body. The police not only declined to arrest the assassins, but even threatened civilians and passers-by who sought to arrest the fight of the murderers. Within a week after this tragedy the Russian Government had announced to the Bulgarian deputation its determination to inaugurate a line of steamers from Odessa to Bourgas, besides bestowing many other significant tokens of good will.

There can be no doubt that torture is still recognized in the judicial procedure of Bulgaria. During the trial for conspiracy of Police Official Andonow the Prosecutor declared: "Andonow has been closely examined, even beaten and tortured, but he still persists in denying his guilt.' Fac simile letters bearing Stambuloff's signature likewise refer to this or that prisoner having been "tortured in jail," as if it were a mere matter of course. Possibly torture is necessary to keep under control such a crowd of cut-throats as are now assembled in the Bulgarian capital.

Kessiakoff was high in favor with the present Government and with the Prince, and he behaved with the utmost savagery during the Turkish war of 1878, forcing the wretched inhabitants of Turkish villages to dig their own graves, into which they were then cast alive or after being bayoneted and shot. He was the ringleader of the band of conspirators who kidnaped Prince Alexander, the predecessor of Prince Ferdinand, in his palace at night and carried him off into Russia a prisoner, thus forcing his abdication.

Another man high in royal and official favor at the present moment at Sofia is Duressna, who, with Nicola Tufektchieff, murdered Dr. Valkovitch, the Bulgarian Envoy and Minister Resident of Constantinople, three years ago.

It is only natural that Prince Ferdinand should hesitate about returning to Sofia, since he is to all intents and purposes assured of the same fate that has overtaken the man who placed him upon the throne, and who so repeatedly interfered to save his life. From henceforth his days are menaced, not only by those who murdered Stambuloff and who have the same grounds of animosity and revenge against him, but is likewise threatened by the numerous relatives, friends and followers of Stambuloff. As matters stand now, if the Prince were to be assassinated not a single court in Europe would or could, according to official etiquette, go into mourning. He is to all intents an outlaw, without recognition among the Powers.

A TRUE TALE.

Three small boys who live on the north side have a father who was once a small boy himself—at least that is what he says, and he ought to know.

The three small boys are abnormally fond of ice cream, a trait which they possess in common with others of their kind. A few evenings ago the family had ice cream for dinner, and the boys petitioned before the meal began for two dishes each.

"I know how much you like ice cream," said their father, benevolently. "I was once a small boy myself."

The three boys had sometimes been skeptical on this point, but they didn't say anything.

"When I was young," continued the father, "my mother used to tell me that I could have a dish of ice cream for every three slices of bread I ate. Now I'll tell you what I'll do. The boy that will eat the most bread can help himself to the ice cream and eat all he wants."

It was an unusual opportunity, and the three boys were filled with joy.

In a few minutes after dinner began the bread plate was cleared and the boys, watching one another out of the corners of their eyes, swallowed slice after slice. When the meal closed the eldest boy, having the greatest capacity, was declared the winner, and his face beamed with triumph. The idea of having all the ice cream he wanted for once in his life was a sensation bordering on the ineffable.

The ice cream was served in three brimming dishes, and everyone at the table began to eat it. After taking a few mouthfuls, however, the three boys wiggled about in their chairs, and finally laid down their spoons, sheepishly. They were so full of bread that they couldn't eat even one dishful apiece.—Chicago Record.

NANTUCKET'S STREETS.

The streets of Nantucket are not the least wonderful of its points, and they certainly demand a large share of the unwary stranger's thoughtful consideration. They are extremely narrow, the sidewalks on many being merely footpaths, scarce wide enough for one, so that if any one overtakes you and wishes to pass he must either climb the fence or cross the street. If two vehicles meet one must back out. These streets are either paved with cobblestones or made of sand, and they wind about like streams. They seem to have been laid out haphazard, and the dwelling-houses occupy all positions with reference to them but the right one, it seeming to have been a point to get a corner of the house or the rear facing the street, but never the front.—Denver News.

OUR FUTURE.

Some Pertinent Facts Concerning Transportation.

NEW ENTERPRISES TAKING SHAPE.

What It Would Cost to Double Track the Panama Road and Add More Wharves.

The headquarters of the Board of Trade of the State of California, on Market street, San Francisco, are closed. Only the flotsam and jetsam of the collection of California products remains there; nearly everything of value is on its way to Atlanta. The city of Atlanta is within a few hours' striking commercial distance of 10,000,000 people. The exposition includes large and handsome buildings and it will be the center of observation on the Atlantic coast for some months to come. California, or at least California counties, in sending forward their exhibits, have undertaken the show business in the locality where the largest immediate results may be realized. No doubt can be entertained that much larger benefit would have resulted to California had the wares and goods representative of California's soil and industries which were collected at the Midwinter Exposition been exhibited at some center of Eastern population where much less is known of California than ought to be the case. Attention is called to the fact that the Oregon Industrial Exposition will soon open and that the Manufacturers' Association of the Northwest is actively engaged in trying to persuade the people of the Northwest to make the most creditable showing in their power.

The example of the Manufacturers' and Producers' Association of California, an organization which originated with the active men in the city of San Francisco, has stimulated imitation elsewhere. In a period of four months the Manufacturers' and Producers' Association has enrolled a membership of about 1,000. In addition to the Manufacturers' Association of the Northwest, which has practically the same aims as those which actuate the Manufacturers' and Producers' Association of California, an association of manufacturers of Los Angeles is in the formative stage. A canvass is being made for members. Los Angeles claims to have about 250 factories representing a wide range of productive industries, and hopes to secure many more. The banquet which probably will be given September 27 under the auspices of the Producers' and Manufacturers' Association in San Francisco, at which only California products will be served, according to all accounts, is likely to prove a good advertisement, as the papers will abound in pictures and descriptive matter and the press associations are counted upon to send a fair account of that happening to the people of the East.

Private advices from New York are to the effect that the belief is generally maintained that the Government commission which is engaged in investigating into the Nicaragua Canal project, considering the difficulties, topographical and otherwise, and estimating the probable expense of construction and maintenance, will make a report favorable to the enterprise. A somewhat new line of facts, or at least facts newly considered, have come to hand. These relate largely to the probable cost of extending the facilities both by sea and land, which now belong to the Panama Railroad Company, and are entirely under the control of that corporation. The distance between the Atlantic and Pacific coast, along the line of the Panama railroad at the Isthmus, is less than fifty miles. The cost of paralleling the present track of the Panama railroad over this entire distance of fifty miles surely could not exceed $50,000 per mile, or say a round sum of $2,500,000. It is possible at either end of the line respectively, on the Atlantic and Pacific sides of the Isthmus, to construct works extending out into deep water which shall avoid the present necessity of lighterage thus reducing expense and facilitating the handling of freight so that the time in transit between the Atlantic and Pacific coasts and the Gulf of Mexico and the Pacific coast can be materially reduced, and it is carefully estimated at New York that these extensions to deep water ought not to exceed $500,000. Therefore, to provide the present system with a double track and the other facilities indicated, would not mean an expense much in excess of $3,000,000. It is easy to see, even estimating the value of the present Panama road plant at the price at which it was unloaded in time of emergency upon the French investors in the Panama enterprise, that the amount of earnings in gross which it would be necessary to earn on the total, need not necessarily imply interest on a very enormous capitalization. These figures are not presented as antagonistic to the Nicaragua Canal, which public men throughout the United States conceded to be a necessity for the promotion of interoceanic commerce. It is well, however, to realize that should the Nicaragua Canal be long delayed, which it is hoped that it will not be, the movement of a large volume of freight can easily be effected between the two oceans by the building of works which ought to pay for themselves in one year, and which once constructed, are in little danger of being swept away by the torrential rivers of the tropics during the rainy season.

It seems probable under the decree of foreclosure of mortgage of the Santa Fe railroad that that property may be sold within the coming two weeks. Very likely the insiders know just what will happen, but the general public of California is excluded from the confidence of those magnates of the railroad world, bondholders and investors in railway property representing interests in the various transcontinental roads, who might tell much that is of interest, if they only would, but which, there is every reason to believe, they never will tell. The Southern Pacific and Santa Fe have acted so nearly in unison in the matter of rates concerning the part of California lying north of Tehachapi that for a series of years any vicissitudes attending the Santa Fe have possessed little legitimate claim for local interest. During the heat of the conflict between the sea lies, which include the clippers and the North American Navigation Company co-operating with the Panama road, the fact that the Santa Fe reached as far north as Mojave did very little to help San Francisco, if anything. Overland rates simply went down to the point where it was necessary for the overland carriers to meet the rates between the Atlantic and Pacific coasts by sea, with the locals added. The Santa Fe practically retired from a part of the overland traffic to and from California. The lower rates which the Sunset line was able to make via New Orleans and Morgan steamers gave Mr. Huntington the lion's share of the business. It has been satisfactorily shown that of the transportation business by rail in which California is interested at least 80 per cent. of the gross earnings are derived from transportation between points within the limits of this State. The Santa Fe has no local system for distribution north of Mojave. The through lines cannot make it any more expensve for freights in either direction than the sea carriage rates and local rates added, whatever they may be. It has already been demonstrated that it is possible to regulate the rates by way of the isthmus simply by chartering a few clipper ships. California people can therefore await with calm confidence any transaction which may result under the foreclosure sale of the Santa Fe. The press dispatches sent out from New York concerning the possible acquisition of an interest in the Panama railway property by the Southern Pacific Company have been coming along with more or less regularity for a period of upwards of three years, which is a long time swopping jack-knives if any trade is expected.

Some recent events involving new enterprises and the putting in circulation of considerable sums of money may be summarized as follows: San Luis Obispo has voted to provide water works for itself and to complete its sewer system. The Suburban Water Company has been formed at Los Angeles, with a capital stock of $100,000, to acquire and lease water rights, ditches, aqueducts, etc. A mining enterprise has been organized at Quincy to work the bed of Nelson creek. A survey has been made for the purpose of bringing into Hollister the waters of Grass Valley. A new creamery will be established at Traver. San Leandro has a scheme for the building of a cannery, and an electric light plant to be owned by the town has been discussed. A new creamery will very likely be established at Selma. Redwood City is ambitiously reaching out for an opera house. The Town Trustees of Alturas have ordered the surveyor to make a survey and estimates for a water system. The Santa Clara valley irrigation scheme still progresses. Palo Alto is preparing to vote on bonds for water works. Suisun has appointed a committee to investigate the proposed site for a reservoir. The laying of pipes near San Jose for the new water company, which will secure its supply from the underground reservoir near Coyote, will be soon begun. A new creamery has been projected for Dos Palos. The excavation work on the canal of the Stanislaus & San Joaquin Water Company has reached Paulsel lake.

The Redding Free Press states positively that $300,000 has been subscribed for the proposed railway from Eureka to Red Bluff, and that the citizens of Humboldt county expect to raise the $200,000 more that is required within a week or two. "There is business for you," says the Free Press "that road will be built and Eureka will become a prominent seaport city, and every industry in Humboldt county will be favorably affected."

J. W. Hartzell, who is known in this city in connectioon with the construction of the San Mateo electric railway and who is now pushing the Stockton & Lodi terminal railway, says that there will be eight depots along the line of his road, including one at the water-front at Stockton, with sheds and a large bulkhead to be constructed at the terminal, where freight will be received and discharged upon the arrival and departure of trains; that there will be a large freight and passenger depot at Lodi. The other six will be small way stations, and the land for the buildings and side tracks has all been secured. The enterprise is progressing. The vitality of Stockton is indicated by the institution of new towns which are projected by the citizens of Stockton.

Within the next fortnight Sacramento will be in all its glory. All its prominent buildings will be illuminated by electricity derived from the power at Folsom, and the assembled Native Sons and other Californians will have a demonstration of the advantages which that city holds out as a manufacturing center, and in all other respects.

Nothing has occurred during the past week in any part of California to lessen reasons hitherto entertained for confidence in California and affairs Californian in the immediate future.

In Jewish marriages the woman is always placed to the right of her mate. With every other nation of the world her place in the ceremony is to the left.

"DOPE" DREAMS.

The Strange Hallucinations of an Opium Fiend.

IN A LAND WHERE ALL IS UNREAL.

Fairy Palaces and Burning Oceans—But the Awakening, Ah! 'tis as Freezing Cold as the North Pole.

It never gets so dark but that at almost any time of the night a few strange shadows may be seen inking themselves in and around Shillito place. This part of Cincinnati is much frequented by characters more or less known to the night watchman of this district, but with perhaps little if any account taken of them elsewhere in this practical busy world. They are only the shadows of mortals that were but are not. The merest afterglow of burnt-out coals ready for the ash bucket of eternity, and yet in many of them slumber, though far removed by eons, the green fields and running brooks of the purer earlier times.

In the words of the night watchman, they are "dope fiends," and carry with them a distempered imagination, which is lighted by the fiery touches of drowsy opiates. Before them the city's walls rise at times like gilded venetian palaces, while in the sluggish waters of the canal they see translucent mirages, and as some limpid festival floats by, deep down in their oppressed senses they hail familiar ones, who in turn kiss back their shining finger tips and move on.

"Do you see that duck coming over there? That's one of em. He'll talk—well, I should say—talk to the devil himself if he met him."

It was a pathetic spectacle. A cadaverous young fellow not over 30 years of age shambled slowly toward us. Under the electric light that spattered and winked as though a fly had buzzed into its eye, so to speak, his face looked pale and haggard. His cheeks were slightly sunken, but he wore fairly good clothes.

"If ever you get a word of truth out of one of 'em," continued the watchman, "let me know about it."

It seems that one of the earliest desecrations made by the habit is along the line of veracity. Deception is a part of the disease from its inception, while its ravages become more and more apparent in the tertiary stages. Truth to these creatures is horrible, and horrors of any and every kind they endeavor to escape.

Fortunately the fellow approached me and asked for a match. Lighting a cigarette, he drew in a deep breath and with the expiration that followed floated a cloud of smoke, dense enough to have asphyxiated an ordinary mortal. Then we talked about this and that for a little time at random, when I proposed that we have a little hasheesh together. I noticed a look of surprise in his eyes, and I wondered if I had made a "bad break." At any rate a delightful expression followed the quizzical look, and I saw that he understood. Having previously prepared for my Sultan of the Lotus Land, I unwrapped a little parcel, handed him the preparation, and feigned taking one myself. Then we fell to talking; or, rather, he fell to talking. As nearly as possible his stories are reproduced.

"My father," said he, "was a sea Captain and a big mine owner. I used to ship with him on long trips in the South. One year we voyaged from Liverpool to the south pole, starting in the latter part of June. Among the Bermudas, as you may have learned, is an island governed by a beautiful woman, who is richer than all the rest of the earth's population. The island is one solid pearl, inlaid with precious metal. The singular feature of it all is that this Queen eats nothing except consolidated sunshine. Of course, you can't understand how this could be, but by a system of refractions through lenses well understood in these islands, made of huge diamonds, sunshine is focused and refocused until it becomes a substance and resembles amber, though much more refined in appearance.

"One pellet of this substance Her Majesty swallows every three hours, and has so dieted so far as I can learn, for something over 60,000 eons; in fact, until the light her own body gives forth is far more dazzling shan a 15,000 candle power electric light."

"Does she experience any trouble in providing herself with modest wearing apparel?"

"Not at all. She also possesses the art of reducing darkness to a substance from which all her royal robes are woven, and by which her splendid graces are eclipsed when she rises at the dawn of day."

"How about her subjects?"

"They are doubtless the most loyal this side of Jasper Heritagas."

"What is the population of her empire or island?"

"Over 900, but it has been a long time since I visited the place. I brought back a pearl valued at an enormous price. It was so large I could not manage it single-handed, and at last parted with the beauty for a song—got hard up, you know."

"Well, from the Island of Pearl we shifted south by west, and ran to a steady breeze for about 60 days, when, on the night of September 2, I was awakened by a terrible uproar on deck. Getting out of my bunk as soon as I could I rushed down, and there found my father endeavoring to govern the crew, which, by the way, was a new one, gathered from Liverpool docks, for no man who ever made this southern voyage ever came back. Cincinnati is no place for young fellows like us; we all ought to go South. I never before saw such an exhibition of frenzied fear. Several had jumped overboard, and others were trying to do so. Some were beating their heads with knot ends and some had fallen in the pandemonium senseless upon the planks, while a fierce light illuminated the pictureqsue scene.

"At first I thought the ship on fire, but at a glance I saw the cause of the disturbance. The ocean was in a flame.

"The heat ascending brought inrushing currents of air from all directions, and in the circular distance I saw the riggings of innumerable vessels all bearing down upon the flames. It was awful, but, when in the midst of it all I saw my father standing perfectly composed, ordering about what few men there were who had regained their senses, I took heart.

"Our sails were full of the hurricane that carried us on, nor would my father hear to their cutting away the masts.

"On—on we skimmed, but strange to say I felt no heat, though the crew seemed to be suffocating. The water was now boiling and foaming on every side. Ship after ship disappeared about us. The last man on deck had fallen broiled, and alone father and I and the ship were hurled into the midst of it all. The old timbers creaked, when of a sudden came a terrific submarine upheaval, and an instant later we stood hand in hand upon dry land. We had been set on terra firma by an oceanic volcano, into whose crater we had drifted, and it was on this island, raised in a few moments, that my father discovered the rich ore with which he has almost demonetized the silver market of the globe. And that's how this siver fight all came about."

With a slight effort I conveyed to him the fact that I understood the whole thing better, and after a [time he continued.

"Did you ever [notice what a power there is about ice?"

I confessed that I had not.

"Now, for instance, you take an ordinary sized lump of ice and swallow it. You may not at the time notice any positive results beyond a slight chilliness, but in time that little bit of frozen stuff will congeal the secretions of your body—yes, of your very soul—and at last will freeze you up as solid as a Christmas pump."

"Then why swallow a piece of the stuff?"

"Because its' better to swallow it and have done with all arguments, for you're going to freeze anyhow, both you and I," and the poor fellow shivered.

"Yes, sir, we're all bound to freeze, never to thaw again. Whisky won't stop it—fire and clothes won't keep you out of the freeze. I well remember how one day I sat down in the warm, beautiful sun, with flowers blooming all about and the birds singing. The lambs played in the green grass, and the scented hedgegrows were white. Honey bees droned by, and lazy fields of golden wheat laved in the inspiring sunshine.

"A brook bubbled at my feet, and its waters were warm, sweet and clear. I lay my head upon my arms and breathed in a little of the natural ecstasy all around, and fell asleep. I could not have slept over three hours, when a chill, biting wind, whistling over, awoke me. I endeavored to arise, but could not, so stiff and frozen were my limbs. The ache of frozen mercury was in my bones. The brook was all ice. The fields were hard, cold and desolate. Crows cawed some where, and sullen clouds, with their artillery of sleets, waited to pelt me. I wandered up and down the trail of ice, knocking my knuckles together. They were ice. Ice had frozen over my eyes. My brain was ice. Everything was i-c-c-c-e-e-e!"

His teeth were chattering and his body was knotted up, indicative of extreme cold.

The effects of the drug were dying slowly away, and the wanderer was again coming back—a disconsolate prodigal to the realties of life, where no fatted calf awaited him.

HAPPINESS AND HEALTH.

It should be remembered that happiness and health are most intimately, if not indissolubly, associated. The man who is happy, not by transient gleams of spiritual sunshine, not by casual, gay surface coloring of his existence, but by a blessedness all through his body, is not, in the proper sense of the word, diseased. The radical idea of the term disease is inconsistent with this state.

Let us remember that life, blessedness and health are one. He who is not blessed, who is not happy, does not really live. He does not realize the idea of what we call life. The wheels of life move, if they move at all, with friction and labor and effort. All action in the line of duty is an uphill exertion and not a spontaneous vivacity.

An unhappy man cannot, in the full sense of the word, be a healthy man. Much of what physicians treat as physical disease is only a mental unhappiness. It follows from this that the best physician is he who blesses others, who makes others' souls happy by the divine sunshine of his words and presence. The sphere of his beneficent life is a contageous peacefulness and undisturbed tranquility. He ministers to minds diseased, calms their fears, allays their anxieties, solves their doubts, quiets forebodings, removes the gloom of despair, supplants their self-condemnation by a sense of pardon, and aims to pluck from the heart every rooted sorrow.—Phrenological Journal.

A public bath-house has just been opened in Turin, where a hot and cold bath, in a private room, can be had for three halfpence, from 5 a. m. to 8 p. m.

INYO INDEPENDENT.

INDEPENDENCE, CAL.

VOL. OCTOBER 25..... 1895

We would like to have some of our protectionist contemporaries that seem so grievously apprehensive for fear the country will buy more than it sell, explain just how the individuals, for individuals, not countries trade, of a country can buy more than they sell. In other words, how they can buy without selling. The fact that all trade is mutual seems beyond the protectionists' capacity to grasp. They persist in viewing, when discussing the general question of trade, buying and selling as two seperate actions, when really they constitute but one. The terms are simply terms of convenience used to designate a certain stage in the processes of trade. They designate the money stage in trade, the period when one has parted with a product but has not yet received another product, but instead the representative of the other product, money. Of course nobody ever stops at that stage of the game, but at his convenience the recipient of the money converts it into the product it stands for. Nobody takes money for its own sake, but for what it will fetch in the market. So when the party who has parted with property for money takes the latter and gets other property with it he has traded just as effectively as though he had taken this other property at first and had seen no money whatever. The latter plays but the part of a counter in the transaction. Being a sort of order on the markets, it enables the taker of it to exercise a wide choice in what he shall select to compensate him for the property he has parted with. When he makes that selection the trade is complete. Hence it is a logical absurdity to say that people buy more than they sell, or vice versa.—L. A. Herald.

A few weeks ago the State Dairymen's Association met in San Francisco, and among other things suggested the appointment of a milk inspector for that city. He was appointed and entered upon his duties. He happened to be an honest man, and one who understood his business, and a few days ago he ordered a large amount of alleged milk to be dumped into the bay, having found it to be impure. Now the milkmen are after his scalp on the charge that he was appointed illegally. They do not bring an action for damages for wasting the lacteal fluid, as it is evident they could not prove that any milk was thrown into the bay. Some one has an industry that has suffered, and the cow is not in it.

Elections will be held in eleven states this fall, November 5th being the date for all of them. Seven of these states will elect governors as follows: Ohio, Kentucky, Iowa, New Jersey, Maryland and Mississippi. New York, Pennsylvania, Virginia and Nebraska elect but part of a state ticket. Add to the above the Utah constitutional election.

The United States circuit court affirmed the decision of Judge Ross in the Stanford case and it will be appealed at once to the supreme court of the United States. The victory for Mrs. Stanford was celebrated at Palo Alto by the students. The Judges ought to know the law, but it looks like equity and justice must be on a vacation.

The London Standard estimates the capital put into the South African gold mines at about $1,500,000,000. Whether this amount represents the sums actually invested or the capital stock of the companies whose shares are on the market is not expressly stated.

The honest voters in New York will have a difficult task to perform this year. If the Republicans win it will be a victory for Boss Platt, while if the Democrats are successful it will be a triumph for Tammany hall. It is too bad both outfits cannot be defeated.

The leading bicycle manufacturers of the United States give the number sold last year at about 500,000. It is estimated that the demand for the coming year will be close to 1,000,000.

(Official.)

Treasurer's Report.

To the Hon. Board of Supervisors, Inyo County State of California.

GENTLEMEN:—I herewith submit my report of the receipts and disbursements of this office for the Quarter ending Sept. 30th, 1895. Respectfully submitted,

W. T. BUNNEY,
County Treasurer.

ALIAS SUMMONS

IN THE SUPERIOR COURT OF THE COUNTY OF KERN, STATE OF CALIFORNIA.

S. Bachman, Plaintiff, vs. Domingo Etcharren, John Iribarne, Frank Cathery, S. Heineman and L. Bachman, copartners doing business under the firm name and style of S. Heineman & Co., John Doe and Richard Roe, Defendants.

THE PEOPLE OF THE STATE OF CALIFORNIA, send greeting to Domingo Etcharren, John Iribarne, Frank Carthery, S. Heineman and L. Bachman, copartners doing business under the firm name and style of S. Heineman & Co., John Doe and Richard Roe, Defendants.

You are hereby required to appear in an action brought against you by the above named plaintiff in the Superior Court of the County of Kern, State of California, and to answer the complaint filed therein, within ten days (exclusive of the day of service) after the service on you of this summons, if served within this County, or if served elsewhere within thirty days.

Said action is brought to obtain a judgment of this Court for the foreclosure of a certain chattel mortgage described in said complaint, duly acknowledged, verified, executed and delivered by said defendant, Domingo Etcharren, to John Iribarne, on the 17th day of May, 1894, to secure the payment of a certain promissory note, or instrument in writing dated May 17th, 1894 for the sum of Four Thousand Dollars U. S. Gold Coin, payable twenty four months after date, with interest thereon from date at the rate of one per cent per month, payable monthly, and if not so paid the whole sum of both principal and interest thereof to become immediately due and collectable, at the option of the holder of said note, or instrument in writing, which said note or instrument in writing, after the making, execution and delivery thereof, was duly endorsed and delivered by said John Iribarne to the firm of S. Heineman & Co., and on said last mentioned day, said John Iribarne duly assigned said chattel mortgage to said firm of S. Heineman & Co., and afterwards, to wit, on the 2th day of September, 1894, said firm of S. Heineman & Co. for value received, sold, assigned and delivered said promissory note or instrument in writing and said chattel mortgage to the plaintiff. Said mortgage conveyed the following described personal property which said property was at the date of the execution of said chattel mortgage in the County of Inyo, but is now and for more than one month last past has been in the County of Kern and is described as follows: Thirty eight hundred head of sheep marked "D" and having an underbit and overbit on each ear, together with the wool thereon and the increase thereof; also four horses, two mules, two wagons and four sets of harness and camping outfit; that the personal property conveyed by said mortgage be sold and the proceeds applied to the payment of said sum of Four Thousand Dollars, U. S. gold coin principal with interest thereon at the rate of one per cent per month from the 17th day of May, 1894 and costs of suit, and in case said proceeds are not sufficient to pay the same then to obtain a judgment and execution against said defendants Domingo Etcherren and John Iribarne, for the balance remaining due, and so that said defendants and each of them, and all persons claiming by, through or under them, or either of them, may be barred and foreclosed of all right, title, lien, equity of redemption and interest in or to said mortgaged personal property, and every part thereof, and for such other and further relief as may be just, all of which will more fully appear by said complaint on file herein, to which you are referred for further particulars.

You are hereby notified that if you fail to appear and answer said complaint, said plaintiff will apply to the Court for the relief demanded in said complaint.

Witness my hand and the seal of said Superior Court of the County of Kern, State of California, this 13th day of June, 1895.

[SEAL.] F. W. CRAIG,
Clerk.

T. M. McNAMARA, Attorney for Plaintiff.

NOTICE TO CREDITORS.

Estate of IDA ADELIA WALKER deceased.

NOTICE IS HEREBY GIVEN BY THE UNDERSIGNED, Administrator of the estate of IDA ADELIA WALKER deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice, to the said Administrator at the town of Big Pine in Inyo county, California, the same being the place for the transaction of the business of the said estate in the said County of Inyo.

R. W. THOMAS,
Administrator of the estate of Ida Adelia Walker deceased.

Dated at Independence, Inyo Co., Cal., September 21, 1895.

B. H. YANDELL, Attorney for Administrator

DELINQUENT SALE NOTICE.

And in accordance with law, and an order of the Board of Directors, made on the 5th day of July, 1895, so many shares of each parcel of such stock as may be necessary, will be sold at public auction, at the office of the Company, Room 12, Rotunda, Mills Building, San Francisco, California, on Wednesday, the 4th day of September, 1895, at the hour of one o'clock p. m. of said day, to pay delinquent assessments thereon, together with costs of advertising and expenses of sale.

W. W. SARGEANT,
Secretary.

Office—Room 12, Rotunda, Mills Building San Francisco, California.

POSTPONEMENT.

By order of the Board of Directors at a special meeting held at the office of the company on September 4th, 1895 the above sale is postponed to Friday, the 4th day of October, 1895, at the same place and time of day.

W. W. SARGEANT,
Secretary.

Office, Room 12, Rotunda Mills Building, San Francisco, Cal.

POSTPONMENT.

By order of the Board of Directors at the regular monthly meeting held at the office of the Company on October 3 1895 the above sale is postponed to Saturday, the 2nd day of November, 1895, at the same place and time of day.

W. W. SARGEANT,
Secretary.

Room 12, Rotunda, Mills Building, San Francisco, California.

FARROW'S MILITARY ENCYCLOPEDIA.

This is the Standard Military Encyclopedia of the world and the only work of its kind in the English language. It has the endorsement of the War Department and the leading military commanders of America and Europe. It is issued in three large octavo volumes of about 1000 pages each, printed on fine paper, from new electrotype plates, profusely illustrated and handsomely bound. It is a complete library of military information both for military and non-military people. Every library should have it. Circulars sent on application. Good agents wanted.

MILITARY AND NAVAL BOOKS.

All the leading, up-to-date military and naval books. Price list furnished on application.

ORDER OF SALE AND DECREE OF FORECLOSURE AND SALE.

Friederike Rhine, Plaintiff, vs. Eliza M. Hannagan, John H. Parish, W. C. Doane and Thomas Crellin, Defendants.

Under and by virtue of an order of sale and decree of foreclosure and sale, issued out of the Superior Court of the County of Inyo, of the State of California, on the 18th day of September A. D. 1895, in the above entitled action, wherein Frederike Rhine, the above named plaintiff, obtained a judgment and decree of foreclosure and sale against Eliza M. Hannagan, John H. Parish, W. C. Doane and Thomas Crellin, defendants, on the 17th day of September A. D. 1895 for the sum of Two hundred and forty six 30-100 ($246.30) dollars in United States Gold Coin, besides interest, costs and counsel fees amounting to the further sum of $105.30, which said decree was on the 18th day of September, A. D. 1895, recorded in judgment book 1 of said Court, at page 548, I am commanded to sell all those certain lots, pieces or parcels of land situated, lying and being in the County of Inyo, State of California and bounded and described as follows: The East half of the Northeast quarter of Section Thirty one and the West half of the Northwest quarter of Section Thirty two, in Township Fourteen South of Range Thirty-six East Mount Diablo Meridian, containing 160 acres; together with all and singular the tenements, hereditaments and appurtenances thereunto belonging, or in anywise appertaining.

Public notice is hereby given that on Tuesday, the 15th day of October, A. D. 1895 at 12 o'clock M. of that day, in front of the Court House door of the County of Inyo I will, in obedience to said order of said decree of foreclosure and sale, sell the above described property, or so much thereof as may be necessary to satisfy said judgment with interest and costs, etc., to the highest and best bidder for gold coin of the United States.

Dated the 18th day of September 1895.

A. M. GIVEN,
Sheriff.

P. H. MACK, Attorney for Plaintiff.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY the 8th day of March 1896, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit: Commencing at the South-east corner of the south-east quarter of North-east quarter of Section No. 18, in Township No. 15 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 48-100; thence North-east following the meanderings of the bank of Creek along the North branch to Edwards street, in the town of Independence; thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hannah, deceased, at the time of his death.

Lot Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided of in and to that certain mining claim, lead, or body of mineral lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Perla Cada Lode."

That certain lot, piece or parcel of land situate, lying and being in the County of Inyo, State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the North west quarter and the North east quarter of Section Two (2) and the South-west quarter and the South-east quarter of Section No. one (1) in Township No. three (3) North, of Range Twenty-one (21) West, San Bernardino Base and Meridian, running thence South sixty eight and eleven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence North-westerly along a small branch or swale to a point twenty four (24) rods North of the general corner of the North East quarter and the South east quarter, and the North-west quarter and the North east quarter of the North-west quarter of Section No. twelve (12), in Township No. three (3) North of Range Twenty-one (21) West; running thence North forty-four and eleven-twentieth (44 11-20) rods; thence East eighty (80) rods to the place of beginning, containing thirty acres; together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court. Deed at the expense of purchaser.

WILLIAM L. HUNTER,
Executor of the Last Will and Testament of John Allen Hannah deceased.

Dated, Independence, Cal., February 11th 1892.

KENDALL'S SPAVIN CURE.

STAR, LANE CO., OREGON, Feb. 8th, 1892.

DR. B. J. KENDALL CO.,

Dear Sirs:—I have used your KENDALL'S SPAVIN CURE for the last twelve years never being without it but a few weeks in that time and I have made several wonderful cures with it. I cured a Curb of long standing. Then I had a four year old colt badly Sweenied; tried every thing without any benefit, so I tried your liniment, and in a few weeks he was well and his shoulder filled up all right, and the other, a four year old that had a Thoroughpin and Blood Spavin on the same joint, and to-day no one can tell which leg it was on. These statements can be proven, if necessary; the four year olds are now seven and can be seen any day at Cottage Grove, Or.

S. Z. PAXTON.

Liberty School House—The second Sunday of the month at 3 o'clock p. m. day in the month at 11 o'clock a. m.

Georges Creek—The first and third Sunday of each month at 2:30 o'clock p m

All are cordially invited to be present at these services.

Thos. H. NICHOLAS,
Pastor.

BORN.

CLARKE—At Bishop, Cal., October 17, 1895, to Mr. and Mrs. Ed. M Clarke, a son.

OLIVAS—At Laws, Cal., October 18, 1895, to Mr. and Mrs. Jose Olives, a daughter.

SKELTON—At Bishop, Cal., October 18, 1895, to Mr. and Mrs. F. M. Skelton, a daughter.

MCAFEE—At Bishop Cal., October 20, 1895, to Mr. and Mrs. L. L. McAfee, a son.

Remember the Institute, Nov. 5th.

During the last storm 84-100 of an inch of rain fell here.

J. D. Lewis Esq. came down from Bishop yesterday.

Corn and barley chopped at Bell's mill for $1.50 per ton.

The Sierra Nevadas are capped with a light coat of snow.

Ed. Murphy of Bridgeport has been spending the past week in town.

Pat Keys will crush about twenty tons of ore at Beveridge in a few days.

J. W. Murphy and W. T. Grant came in from the Coso hot springs last Friday.

E. J. Reynolds, who has spending the past week here left for Reno yesterday morning.

C. B. Rawson and Miss Grace Gifford came down from Bishop last Monday, returning next day.

Judge Arnot arrived last Monday, also Miss Georgie Johnson, and Court opened Tuesday morning.

The "Holiness Band" that stopped here for a month the past summer, is now at Yerington, Nevada.

L. F. J. Wrinkle was a passanger on last Monday's train for Keeler, returning from a visit to San Francisco.

G. Sanger and A. O Collins were among the visitors from the north end of the valley the first of the week.

John Meroney came down from Bishop last Friday and will remain here, and work in the County Clerks office.

Ed. Ring went to Bishop last Monday, returning Tuesday, and bringing down two drummers, Taussig and Marks.

H. E. Wilkinson, observer of the Weather Bureau, is expected to arrive home next Monday, from San Francisco.

Tom Davies returned from Keeler the first of the week and is again swinging the hammer in the Pioneer blacksmith shop.

Arthur Shepherd started for the city last week where he will visit with relatives for a while and then enter a college there.

O. C. Harper, who for the past five months has been clerking at Rhine's, will leave for the city the drst of the coming month.

W. H. and Ed. Walker arrived last Sunday and have been spending the past week here in connection with the sheep license cases.

Mr. Herbert Tally, son of Mrs. G. T. Reeves arrived from his home in Virginia last week and will make his future home with his parents at the Hirsh mine.

Since the last rain most all the dry-washing in Mazourka has stopped and the men have come down. Only a few of the deep diggings are now being worked.

The Superior Court.

Court opened last Tuesday morning at 10 o'clock, and the hearing of the "sheep cases" was commenced by Judge Arnot. R. S. Miner Esq. and Dislsict Attorney Forbes appearing for the prosecution, P H. Mack and F. W. Bennett Esqs for the defense. C. B. Rawson, Mark Watterson, A. O Collins, William Watterson, J. C. Crocker and G Sanger, were among the number sworn and examined. Having had experience in the sheep business they were able to give expert testimony in regard to the number of miles etc. traveled by a band of sheep in a day when passing through the valley. The first case, the County of Inyo vs. Pedro Erro, was begun Tuesday morning at 10 o'clock and terminated on Thursday at noon. The next case, the County of Inyo vs. Juan Ardolaim was begun Thursday at 1:30 p. m.

Honey Shipment

In the near future the beekeepers of this vicinity and Bishop will consolidate in the shipment and sale of this year's crop of honey. Instead of each person making a seperate shipment, as heretofore, the entire crop will be shipped at one time and will be in charge of Mr. N. J. Cooley of Bishop, who will go east with it to Minneopolis, St. Louis and other large eastern cities, where it is supposed he will be able to realize a better price than can be obtained in the San Francisco market, and at the same time putting Owens Valley honey on the eastern market, where such a high grade of honey will produce a growing demand for future crops. Two car-loads will be shipped.

Liberty Notes.

Teaching was begun in the new school house at Liberty last Monday.

The school children of Liberty District are selling flag tickets in order to buy a flag for their school.

Work was started on the Liberty Ditch this week. The Surveyors are also at work.

A number of men came down from Bishop last Faiday and made filings in the Land Office, and returned the next day. They were George Kogg, John P. Thornton, Archie Cruse, Jonathan W. Hanby, Marion J. Bradshaw and W. S. Irwin.

The hunting party that came down from Nevada last week are having very fair luck. They went out to Fish Springs for a few days, and although the weather was unfavorable, on their return Monday evening they shipped about five dozen quail and a dozen ducks.

Among the visitors from the north end of the valley the past week, in consequence of the Superior Court session, were Messrs Wattersons, S. G. Sneden Esq. and Will Yaney of Bishop and J. C. Crocker of Big Pine.

J. S. Hall, wife and two friends of Los Angeles, who have been visiting the valley for the past few week, started for home yesterday. They expressed themselves as being well pleased with the valley.

The application of the C. & C. railway for a reduction in their assessment from $2,000 a mile to $1,800 was refused by the Board of Equlization of Esmeralda county.

J. D. Mairs went to Olancha last Sunday, returning next day and bringing Messrs Shelhammer and Whittle of Los Angeles.

Quite a mumber of sheepmen have been in town during the past week, in consequence of the trial

Yosemite Road.

A public meeting will be held on Monday evening in the Superior Court room for the purpose of asking Congress for an appropriation to build a wagon road from Mono Lake, the "Dead Sea of America," to Yosemite Valley, and thus connect Eastern California and Nevada with that great and interesting summer resort. The Valley and much of its surroundings, almost down to the lake, having been set apart by Congress as a national park, our State has no right to build a road over its sacred precincts, and unless Congress will accede to the wishes of the people of this section of California and Nevada, our people will have no way of reaching the great Valley without crossing the mountains and taking the San Joaquin route, a distance of several hundred miles and a roundabout way. It is the duty of Congress to give the people of Nevada and Eastern California a safe and expeditious route over the mountains of the Park into the Valley, so that our own people and toursits from the East can visit the Yosemite Valley in the summer at the least possible expense and with safety, a very blind and dangerous trail being the only way of ingress to this great pleasure resort and wonderful Valley. The road is also needed for Government purposes, as troops are stationed in the valley every summer, and should it be nedessary to have the troops come to this section through trouble with the Indians, it would take but a few hours, with but little expense to reach this side; and supplies for them could be procured here cheaper and easier than by getting them from the San Joaquin Valley. Had the road been built a few years ago the prompt arrival of troops from the Yosemite would have quickly quelled the Indian scare here and a human life would have been saved. We hope our Senators and Congressmen will give this important matter, as it will be presented to them by this meeting, the prompt attention it deserves.—*Bridgeport Chronicle-Union.*

Coolgardie.

Rich new finds are being constantly reported from Coolgardie gold fields. Coolgardie, Australia, is an accessible point, reached by steamer to Fremantle, thence by rail to Southern Cross and team to destination. The trip to Australia on the fine steamers of the Oceanic Steamship Company via Honolulu, Samoa, and New Zealand is pleasure sailing the day long. This line tickets passengers to Cape Town, South Africa. Map of Coolgardie district and Pacific ports reached by the Oceanic Steamship Company is mailed free to any address by the O. S. S. Co. 114 Montgomery St. San Francisco.

A Rise in Silver.

A rise in silver certificates at the New York stock exchange on Wednesday of last week to 69½ on purchases of 55,000 ounces attracted general attention. This is the first sign of activity in the market for the metal in a year or so, and is due in a measure, so authorities say, to the purchases for Chinese account in connection with the war indemnity. Large amounts have been ordered direct from San Francisco since the cessation of hostilities between Japan and China, and in consequence the New York market is comparatively bare.—*Hawthorne Bulletin*

The *Bodie Miner* of October 19th says: The Ober-Burkham race for $250 a side has been declared off by Mr. Ober who has just returned from Inyo. Each had put up a forfeit of $50, which was paid over to Burkham yeterday at noon. This promised to be a very exciting race and many will no doubt be disappointed to learn that it has been declared off.

Col. L. S. Judd who is superintending operations at Mammoth, has been in town the past week. He says that everything is moving along nicely, and that the mill will be in running order and the stamps dropping before the snow flies. There are two car loads of machinery from Chicago now at the Bishop depot ready to be transported to Mammoth.

The New Woman.

"Rockaby baby, your mamma has gone, she's out at the caucus and will be till dawn; she wore papa's trousers, and in them looked queer, so hushaby baby your papa is here. Rockaby baby your mamma's a terror; she's run the conventions, declared for three fellows; she's great on a traddle, way up on a vote, so hushaby baby, your papa's the "goat." Rockaby baby the dishes are clean, papa's done scrubbing and put on the beans; your mamma is late, seems always to lag, but heaven help papa if she comes home with a "jag." So rockaby baby I'm glad you can't talk, for papa got lonesome and went out for a walk; he was met by a widow, a regular 'dream,' your papa's a dandy, but not of the "scream." So hushaby baby, for flirting's no sin, your dady was tempted, she tickled him under the chin; she was so plump and so pretty, so neat and so trim, so hushaby baby, your dad's in the swim"—*Ex.*

The Detroit Free Press says that a French writer of some note recently wrote to a friend in this country that he was studying English and making famous progress. "In small time," he concluded, "I can learn so many English as I think I will to come at the America and go on the scaffold to lecture."—*Ex.*

John W. Mackay Jr. the eldest son of John W. Mackay, the Comstock Millionair, was killed near Paris last Friday by being thrown from a horse.

A $250,000 mining deal was made in Nevada last week. The property consisted of the Buckeye group of mines.

The two murderers, Hanson and St Clair were hanged at San Quinten last Friday.

At the Nevada State Fair something over $18,000 passed through the pool box.

W. R. Hearst, of the *Examiner* has bought the New York *Journal.*

Congress meets next month.

Eloquence Interrupted.

During a political campaign, a well known lawyer in a western state was addressing an audience composed principally of farmers. Like a wise speaker—and a shrewd candidate—he tried to suit his speech to the occasion.

In a tone which he evidently considered both cordial and honest, and with a winning smile, he began:

"My friends, my sympathies have always been with the tillers of the soil. My father was a practical farmer, and so was my grandfather before him. I myself was born on a farm and was, so to speak, reared between two stalks of corn."

Here his eloquence was rudely interrupted by the trumpet tones of a farmer in the rear of the hall.

"Jimminy crickets!" he shouted, "if you ain't a pumpkin!"

The house "came down," and the candidate, for the moment, at least, was sadly embarrassed.—Youth's Companion.

"I've turned highwayman," said the sofa.

"What!" exclaimed the chair.

"Yes; I held a couple up last night."—New Bedford Mercury.

MISCELLANEOUS.

Adjudication of Insolvency.

IN THE SUPERIOR COURT IN AND FOR Inyo County, State of California.

In the matter of J. White Smith, An Insolvent debtor.

J. White Smith having filed in this Court his petition, schedule, and inventory in Insolvency, by which it appears that he is an insolvent debtor, the said J. White Smith is hereby declared to be an insolvent debtor. The Sherid of the County of Inyo is hereby directed to take possession of all the estate, real and personal of the said J. White Smith, debtor, except such as may be by law exempt from execution, and of all his deeds, vouchers, books of account and papers, and to keep the same safely until the appointment of an assignee of his estate. All persons are forbidden to pay any debts to said insolvent, or to deliver any property belonging to him, or so any person, firm, or corporation, or association for his use. The said debtor is hereby forbidden to transfer or deliver any property until the further order of this Court, except as herein ordered. It is further ordered, that all the creditors of said debtor be and appear before the Hon. N. D. Arnot, acting Judge of the Superior Court in and for the County of Inyo, State of California, in open Court, at the Court room of said Court, in the town of Independence, County of Inyo, State of California, on the 1st day of November, 1895, at 10 o'clock a. m., of that day, to prove their debts and choose an assignee of the estate of said debtor.

It is further ordered, that this order be published in the Inyo Independent, a newspaper of general circulation published in the County of Inyo, as often as the said paper is published before the said day set for the meeting of creditors.

And it is further ordered, that, in the mean time, all proceedings against the said insolvent be stayed.

Dated October, 23, 1895.

N. D. ARNOT.
Acting Judge of the Superior Court.

ABSOLUTELY PURE

A TALE OF THE TOWN.

A good story is being told on a well-known Cleveland man who is much given to playing jokes. In this incident, however, the man referred to poses as the unhappy victim, and not the perpetrator of the joke, says the Cleveland Plain Dealer.

One day not very long ago, as the gentleman who delights in playing jokes was walking along one of the down-town streets, he was met by a friend whom he had often succeeded in making ridiculous by his good-natured trickery and who had repeatedly avowed his intention of getting even with him.

It was directly in front of one of the banks where they met, and as they came within speaking distance the friend extended his hand very cordially and said: "Why, hello, So-and-So; glad to see you. Won't you go and have some lunch with me today?"

"Yes, thanks, I'd be pleased to," said the other.

"Well, get right in to my bugy" said the friend, pointing to an elegant rig in front of the bank, "and I'll be ready in a few moments." So saying, the friend went into the bank, while his unsuspecting companion got into the buggy, pulled the duster over his lap and prepared to enjoy the ride home with his friend. He had been sitting in this position for about five minutes when a tall, fine-looking woman with a couple of small bundles came out of a dry goods store two or three doors east of the bank and walked toward the buggy. They did not see each other until the lady got very close to the buggy, as it faced in the opposite direction to the store from which she was coming, and the man was sitting on the side next to the street.

As soon as the lady reached the buggy and was about to deposit her bundles on the seat she saw the intruder, stopped short and gazed at him in utter amazement.

She was the first to speak, and said in a rather haughty manner: "What are you doing in my buggy?"

The man now saw this was one on him, and turning very red in the face he stammered out: "Oh—er—ah, I guess there's some mistake. Beg your pardon."

So saying the poor victim beat a hasty retreat and started toward the bank, where he found his friend just inside the door, nearly convulsed with laughter.

It is perhaps needless to state that the pair remained down-town to lunch that day.

PREPARED FOR EMERGENCIES.

A clergyman, well known for his love of "horseflesh," was driving through a country village the other day, breaking in a new horse, when he overtook a doctor of his acquaintance on foot.

"Jump in, doctor," he cried, pulling up. "I've got a horse here that is a perfect treat to sit behind."

The doctor jumped in, and the parson drove off.

The horse was "a treat" in the sense of speed and skittishness, and presently stood stock still, and shot both hind legs underneath the trap, splitting it to pieces and throwing out both the occupants.

The doctor jumped to his feet, feeling himself all over to see if he was injured. The man of cloth also got upon his feet.

"Look here!" exclaimed the doctor, "what on earth do you mean by inviting me to ride behind a horse like that."

"Well, you see," gasped the jovial cleric, "luckily there are no bones broken; but when breaking in a beggar like this I like to have a doctor with me!"—Pearson's Weekly.

Experts Strickler and Hart, who have been examining the books of the Denver County Treasurer's office, made a report to the County Board today which shows that the deficiency for which the former bondsmen of Treasurer Wygant are responsible is about $210,000. This money was on deposit in banks which are now defunct.

KNOWLEDGE

Brings comfort and improvement and tends to personal enjoyment when rightly used. The many, who live better than others and enjoy life more, with less expenditure, by more promptly adapting the world's best products to the needs of physical being, will attest the value to health of the pure liquid laxative principles embraced in the remedy, Syrup of Figs.

Its excellence is due to its presenting in the form most acceptable and pleasant to the taste, the refreshing and truly beneficial properties of a perfect laxative; effectually cleansing the system, dispelling colds, headaches and fevers and permanently curing constipation. It has given satisfaction to millions and met with the approval of the medical profession, because it acts on the Kidneys, Liver and Bowels without weakening them and it is perfectly free from every objectionable substance.

Syrup of Figs is for sale by all druggists in 50c and $1 bottles, but it is manufactured by the California Fig Syrup Co. only, whose name is printed on every package, also the name, Syrup of Figs, and being well informed, you will not accept any substitute if offered.

THE CIRCLE OF CACHETTE

By ROBERT C. V. MEYERS.

[Copyright, 1891, by American Press Association.]

I.

"Are you well, Cachette?"

Mlle. de Boncour was in a considerable quandary. And she had never been in such a thing as a quandary till she became enthused over some Americans in Paris, their delightful chic, their ravishing sang froid, their piquant extensions of les convenances. She at that time told the compte, her brother, that she feared the ancien regime had become passe, while she was confident that she belonged to New France under certain conditions, to the New World under any circumstances. Of course this greatly shocked the compte, and his friends to a man blamed him for having permitted Natalie so much latitude of association with the American ladies and their peculiar ideas of the eternal fitness of things.

When Natalie met a Vassar girl, in a costume by Felix, who told her that she worked for her living, the die was cast. Natalie was poor herself, the little diamonds bequeathed her by her grandaunt representing all the wealth she possessed, and the compte's unique speculations on the Bourse made even those tentative at times.

She determined to emulate the Vassar girl, wear toilets by Felix, and earn her own living. She knew she dare not approach the compte with this determination, so she watched some American girls to find out the most effective way to cut loose from old, if picturesque, associations.

When one lovely young thing, with eyes the color of heaven and cheeks like tender young rose leaves, told her she had traveled around the world "all by herself" and not a shadow of harm had happened to her, Natalie watched her chance and went to Tiffany's to sell her grandaunt's quasi-historic diamonds. She was told that the stones were only large enough to be used in collar buttons, and was referred to a dealer with a generous type of nose, who offered her what seemed to her to be a ridiculously small sum of money for the jewels. But the Vassar girl worked for her living, and here was money sufficient to carry Natalie to New York and something over; besides, the jewels were ridiculously small also. She let the diamonds go, wrote a letter to her brother that caused him to tear his hair and expunge her name from the family register and become the laughing stock of the Bourse for a bad quarter of an hour, and Natalie sailed for America and freedom, carrying a handbag and a cage, in which fluttered her pet canary.

I believe there was something else that actuated her in this stage of her mad career, and that was that le compte had told her he intended to arrange a marriage between her and the old Marquis d'Epinville, whose head shook when he walked, who wore horribly large white artificial teeth, who drank the delectably green absinthe openly on the boulevard and called Natalie "ma femme."

At any rate, Natalie sailed for the states, and landing in New York went to a beautiful hotel that almost took away her breath by its charges. In New York she met many of those she had known in the colony at Paris. But, not strange to say, they were not quite so friendly when they heard under what circumstances she had come to our hospitable shores, and one woman and mother threatened to write to the compte.

Then the Vassar girl, who it turned out earned her own living by tying her papa's white cambric cravats of evenings, for which task she received a yearly stipend which ran away into four figures, did not ask her to the house on the avenue, and informed her that for her part she would have thought it quite delightful to be the Marquise d'Epinville, especially as the marquis was so old and sure to have another stroke of paralysis soon. But Natalie was not to be discouraged, the combination of French nerve and American ideas is a motor whose power is only to be gauged by pneumatics.

Natalie first of all moved from the beautiful hotel and established herself in a charming flat with a professional chaperon old enough to be anybody's mother and plain enough to be the syndicate stepmother of all the virtues. Now Natalie defied criticism and made her effort toward making her way. She could not go back to Paris, that was certain, and she did not intend to let America "go back on her," as a young man said, the Vassar girl's brother, who met her and admired her, but told his sister she'd better be a little careful, you know.

Natalie could embroider ravishingly; she had learned how to do it from the patient sisters in the convent where she had been educated. She embroidered now. It is not altogether an everyday event to have the sister of a count embroidering your table covers and putting your initials upon your linen, so the orders came in with considerable merriment and the pay was generous—you could hardly offer the sister of a count, a might-have-been marquise, the beggarly sum you might give to some poor soul in a garret.

So Natalie became more and more Americanized, and said "Chestnuts" to some of the stories of former magnificence told her autobiographically by her companion. She considered herself happy for the first time in her life. Of course there were moments when she suffered a little from mal du pays, when the lilies of France meant something to her after all, and she thought of mamma and papa in Pere la Chaise with the bead wreaths upon their tomb.

Yet she would look up at such times to Cachette, her canary, which she had brought away with her from Paris, and say:

"Est-ce bien vous (Are you well), Cachette?" and Cachette would twitter down to her in a wicked American way and aim for flies and say there were none on him. But after a few months patronage fell off—you cannot encourage even a count's sister, a might-have-been marquise—beyond precedent. And just then there came to town the wife of an English baronet who was known to have inspired a tender passion in the breast of a prince, and might have become a princess only that the unwritten law of royalty forbade it. Then began that awful quandary of the rent. This quandary lasted several weeks.

II.

She wanted so many unconscious sittings from the girl.

Natalie wondered if she would have to take a cheaper flat, go gradually down and down till she finally landed in the east side, which she read so much about in the papers and with so much horror. But the cheaper flat came nearer and nearer every day till at last it could no longer be kept off. The companion made room for a lower priced article in the way of a half sized maid who could scorch a chop and ruin eggs in the most accepted fashion.

Still the greatest quandary of all was not yet.

That was next to it when Natalie had not the rent for this cheaper flat, the Vassar girl passed her on the street as one suddenly struck with blindness, and for days at a time Cachette was the only living creature she saw, the "girl" not counting as a living creature, in so much as she existed for the sole purpose of spoiling whatever she undertook and warbling popular melodies to the accompaniment of piano organs that stopped under the windows.

Natalie grew wild of gaze and took walks on the Brooklyn bridge and looked at the water with speculation in her eyes.

And those eyes were remarkably fine ones, too, and consorted well with the clear white complexion and even teeth and a charming figure that came as the ineradicable bequest of a long line of cultivated ancestresses.

Then it came about that Natalie was merely "the French girl," and the flat was a less expensive one still and more heavenward, and "the girl" faded from the perspective, and money was a scarce article indeed, and the shopkeepers said that really we did not want hand embroideries any more—they had gone out, don't you see, and passementerie had taken their place.

It is possible that Natalie's Americanized ideas had undergone considerable moderation by this time, and of nights when she could not sleep for wondering how she would get through tomorrow maybe her thoughts flitted over to Paris and the gayly lighted streets and the theaters, the bright boulevards and the antiquated but kindly friendships she had once enjoyed—from all of which she was separated by more than time and distance.

"Oh, Cachette!" she would cry up to her inseparable companion with his head under his wing, "nous sommes etroitment unis!" (We are very closely united!)

Then the great quandary of all came—she could not pay the rent for even her poor flat, her gown was very shabby, and the pot au feu was neither very succulent nor nutritious—and all this in a year!

The only work she had was a kerchief for Mrs. E. Platt Clayton, and she cried so much that she could hardly see to do it and made a false stitch here and there.

In Paris she had met Mrs. E. Platt Clayton at a reception—of which more anon—and the lady held to her yet. Though it may as well be confessed just here that Mrs. E. Platt Clayton had ulterior views regarding her friendliness, and her sisters and sisters-in-law were beginning to complain; for Mrs. E. Platt Clayton had sent them so many useless embroideries that they spoke among themselves, and mutually owned that Amelia had always been a little odd and that maybe it had gone to her head. Still, eccentricity was a fad in these times—look at the English! The truth is that Mrs. E. Platt Clayton was an artist. She had been in Dresden and the little town of Sevres, and believed the afflatus had come to her and that she was a poet in china. And Natalie struck her from the first as being an ideal subject for illustration.

She worked up to Natalie before she made a direct attack on her. Then she ordered a gorgeous altar cloth, to have put which into the church would have raised a schism. When she ordered that cloth she took off Natalie's head—sketched it, you know. When the cloth was finished and she made it into an afghan for her sister Margaret's baby coach, she had stolen Natalie's arms, her hands, her hair, one eye—indeed, she might have opened a museum of comparative anatomy in a little while. And all because she designed a coup, no less than an exquisite plaque with Natalie upon it, in the style of Watteau and Poisson, the subject, "Ariadne Deserted by Perseus."

No wonder she ordered so many embroideries, she wanted so many unconscious sittings from the girl, and a model is always best, thought she, when she does not know she is posing.

She had Natalie come to her house before the girl's clothes were at their shabbiest, and John Abington, Mrs. Clayton's brother, saw the little thing and laughed long and heartily, and went to Margaret and the rest and told them Amelia's secret, and so saved the family traditions for sanity.

"And what a beauty the girl is!" thought John Abington. "A Dresden sheperdess, indeed. I never thought Amelia had good taste before."

The plaque went on and so did the rent for Natalie's flat, and so did Natalie's healthy young appetite and her power for wearing out clothing, until at last the kerchief was all the work she had, and the plaque was nearly finished But, then, this was the climax, and, as everybody knows, after a climax things can only be worse or better, never as they were before.

Natalie picked up the kerchief one day and set about working a daisy in it. All at once a diamond drop of dew lay in the heart of the daisy—a tear.

The sun touched the dewdrop and flashed up to Cachette's cage, and the bird began to shriek—to sing heavenly, Natalie would have said. Whereupon up jumped Natalie, a second dewdrop on her lily cheek.

"Quel est le prix du loyer!" she said. (What is the rent!) I will soften the heart of my landlord, who admired Cachette only yesterday!"

For the owner of the flat had paid a domiciliary visit to his tenants the day before, and had snapped his finger at the bird for making so much noise, called Natalie "Miss Bunker" and had afterward given the agent a piece of his mind for renting an apartment to a lone girl and letting her get in arrears for rent at that.

"My other tenants are ladies and gentlemen," he said, "and I won't have it. Bounce her next week."

But how was Natalie to know anything of this?

"Ce pauvre Cachette!" (poor Cachette), she said.

Cachette put his head to one side and poured out a flood of melody. Natalie took him from his cage and held him up to her cheek.

"Adieu, Cachette!" she said. "Thou art all that is left. But the landlord must be softened—did he not admire thy song yesterday? He may give me time in which to pay my rent."

She plucked a long single feather from the wing of the bird and dropped it into her basket among the flosses and silver threads with which she was embroidering her daisies.

Still wavering, loth to let it go, she kept the little feathered thing in her hand off and on till evening.

Then with a great wrench and a throb in her throat she finally decided.

She put Cachette into his cage, threw on her hat, and cage in hand went forth to the brown stone apogee of Mr. Cumbersome Brown, her landlord.

And now let Melpomene take her nap.

III.

"Take that murderous animal away."

"Rats!" snarled Mr. Cumbersome Brown, his head padded in raw cotton, for he had caught cold in his drafty flats yesterday, though he would not have owned that an ounce of air ever entered those buildings without a permit from the tenants. He had been subject to neuralgia ever since he stopped legitimate business and took to building flats.

"Rats!" said he on receipt of Cachette. "I've heard of French coquetting before, but this lays over it all. But Miss Bunker is not in it—out she goes next week. Scotts! I believe the bird is French, too, the way it winks with its eyes."

"It could not very well wink with its toes," thought Mr. Cumbersome Brown's housekeeper, Mrs. Jones, who led a life of it when her employer had one of his justly celebrated attacks.

But Natalie had gone home in the crisp evening air, shivering in her thin coat, trying to down the sense of loss that had come to her already now that Cachette was gone.

Mrs. E. Platt Clayton was in the elevator at the flats.

(TO BE CONTINUED.)

One cause assinged for the healthfulness of Chinese cities is that the people boil all water intended for drinking. They never drink cold water. The national beverage, tea, is always "on tap," even in the houses of the poor. Every little hamlet, too, has a shop where hot water can be bought for a trifling sum at any hour of the day or night.

How much pleasanter it would be to recall the happy days of our youth if it didn't remind us so forcibly that we are growing old—Texas Siftings.

ASSIST NATURE a little now and then in removing offending matter from the stomach and bowels and you thereby avoid a multitude of distressing derangements and diseases, and will have less frequent need of your doctor's service.

Of all known agents for this purpose, Dr. Pierce's Pleasant Pellets are the best. **Once used, they are always in favor. The Pellets cure** biliousness, sick and bilious headache, dizziness, costiveness, or constipation, sour stomach, loss of appetite, coated tongue, indigestion, or dyspepsia, windy belchings, "heart-burn," pain and distress after eating, and kindred derangements of the liver, stomach and bowels.

MAKING SHOT IN WATER.

The shot-making trade has a legend which recites that back in the days when guns were shot off by lighted matches and were swiveled to supports because they were too big and clumsy to be lifted to the shoulder, and when all shot was molded as bullets are today, some workmen were fastening an iron grating to the wall of a castle. They had cut out the hole in the stone, and, after placing the iron in the hole, poured some lead in to hold the iron in place, just as they do today. Some of the lead escaped and ran over the edge of the wall into the moat below. Soon afterward the attention of the soldiers was attracted to the lead in the clear water, and, dipping it out, they found that the metal, in falling from the height had become globules. After that these soldiers made their bullets by sprinkling melted lead over the castle wall into the waters of the moat.

HIS LATEST DISCOVERY.

Dr. Ricord's Compound Pennyroyal Pills for female irregularities—safe, sure and reliable; express, $2.50. Also, Ricord's rubber goods for hygienic and private use. Maison et Cie, Paris, France. Agents—Root's, 6th and Howard, S. F., Cal.

It is peculiar how soundly a man sleeps when his wife crawls over him on her way to the kitchen to make a fire.

$100 REWARD $100.

The readers of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages, and that is Catarrh. Hall's Catarrh Cure is the only positive cure now known to the medical fraternity. Catarrh being a constitutional disease, requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system, thereby destroying the foundation of the disease and giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in its curative powers, that they offer One Hundred dollars for any case that it fails to cure. Send for list of testimonials.

Books are so cheap now that the poorest people can buy and own them, and the richest can borrow and keep them.

IN THIS WORK-A-DAY WORLD

Brains and nervous systems often give way under the pressure and anxieties of business. Paresis, wasting of the nervous tissues, a sudden and unforeward collapse of the mental and physical faculties are daily occurrences, as the columns of the daily press show. Fortify the system when exhausted against such untoward events with Hostetter's Stomach Bitters, that most helpful medicine of the weak, worn out and infirm. Use it in rheumatism, dyspepsia, constipation and malaria.

Female barbers are not having much success. Gentlemen will not go to them because they dislike to be cut by a lady.

I could not get along without Piso's Cure for Consumption. It always cures.—MRS. E. C. MOULTON, Needham, Mass., Oct. 22, '94.

It is very rare nowadays that the office seeks the man; and even when such a thing occurs the chase is usually very sluggish.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

SIX WEALTHY WOMEN

The United States Have Two of Them.

OUR GREATEST MONEY QUEENS

Madame Barrios, the Widow of Barrios of Guatemala, is Another of the Sextet.

There are six rich women who deserve to be placed up near the top of the list of the world's great millionaires. This is a really significant fact. It was not so long ago that woman had no legal rights, and therefore couldn't hold property. Nowadays a woman may rejoice in having undisputed control of all her wealth. This is something she owes to the much abused legislators. Even pagan countries nowadays concede her right to possess things.

Last week the Sunday World told all about the six richest men in the world: Li Hung Chang, John D. Rockefeller, Colonel North, the Duke of Westminster, Cornelius Vanderbilt and Woh Qua, the Chinese tea magnate. Their total fortunes aggregated $1,080,000,000. Now the Sunday World picks out six richest women millionaires. Here they are and the total of their fortunes:

Senora Isidora Cousins	$200,000,000
Hetty Green	50,000,000
Baroness Burdett-Coutts	20,000,000
Mme. Barrios	15,000,000
Mary Garrett	10,000,000
Mrs. Woleska	10,000,000
Total	$305,000,000

The fortune of Hetty Green is variously estimated. She has been credited by one authority with $65,000,000. The above figure of $50,000,000 is probably approximately correct.

Isidora Cousino of Sanitago, Chile, heads the list of enormously wealthy women. She has two hundred millions of dollars. She is "getting on," as folks say in this country, in years, and, although possibly near the half century, is still remarkably beautiful, and appears more youthful than do many women who have spent their thirty years in those gayeties which tend to age them.

Her ancestors were among those who conquered the simple folks and who occupied the great countries in our neighboring continent. The lust for gold was on them all, and it was stated. Her maiden name, and this should be carefully written down, was Goyenechea. For generations not only her family, but that of her husband, had owned vast tracts of land. In her father's lifetime, even, the fortunes of the two latter had increased enormously in value. Mines were developed on their property and wealth flowed in upon them.

When her father died, Senora Cousino then, as her father's only child, inherited all of his wealth. Her husband died a short time afterwards, and with two great estates to manage Senora Cousino became a business woman. She did wonderfully well with her property, and maintains three establishments at Santiago, Macul and Lota. The first is her town house and the two latter are country estates.

Senora Cousino lives and spends her money without regard to public opinion, which, however, is not supposed to be censorious in Chile, especially to one so generous. She presented a park and a race-course to the city of Santiago, and would think little of giving away a million to any one she might fancy.

She is fond of bright young men, and has always about her a small court of clever youngsters. When the American fleet was at Valparaiso, some years ago, she invited Admiral Upshur and his officers to visit her. She sent a special train for them. They had a royal time, and the whole city of Santiago was at their disposal. They could pay for nothing in shops and restaurants, and the theaters were thrown open to them. Carriages and horses, too, were likewise free; the Senora paid the bill.

Her houses are finer than any palaces anywhere, and she is really a Queen without assuming to be one. Her coal lands alone pay her $80,000 a month, or nearly a million a year.

Miss Mary Garrett possesses a fortune which is so large that she is unable to figure how large it is. It topped $30,000,000 a long time ago. She lives in solemn grandeur in a magnificent house on Monument street, in Baltimore. The residence is magnificently furnished and a big conservatory is one of the features. An army of servants preside over the establishment, and a French chief gets $5,000 a year for looking out for toothsome dainties for Miss Garrett. The money she possesses was made in the railroad business, but, unlike the Gould millions, did not evolve from the sweat of the poor and the bitter tears of impoverished widows and orphans, whose heritage was stock in a wrecked railroad.

Miss Garrett is a student, and a business woman as well, strange as this may seem. Although getting on towards middle age, she is fond of clever persons, and the receptions she and her brother Robert used to give are pleasantly remembered. She is a Greek and Latin scholar and a skillful hand at embroidery.

Charity is with her almost a hobby, and a large part of her great income is devoted to charitable work and to the alleviation of the woes of the unfortunate. Her latest work is the founding of the Bryn Mawr school, where poor girls are prepared for college. The school building, built of Pompeiian brick, is modeled after the style of the Dutch houses of a century ago.

Miss Garrett was born in 1858, wears glasses, is slender, of medium height, and her hair is a light brown. Many a struggling musical genius owes his or her start to this little, frail, rich woman.

Miss Garrett every summer goes to Europe, with a single maid. She speaks four languages and knows every detail of the great Baltimore & Ohio railroad, which her father founded. She knows, too, what the other railroads are doing, and is a keen judge of the value of securities. Her voice is soft and low, and she is not a bit masculine, although she is masculine in her business instincts.

Few Englishwomen are better known than the Baroness Burdett-Coutts. She is unquestionably the richest of her sex in that country, and has been in the public eye for many years. She resides in London and seldom goes out of town. Her home—Holly Lodge—is just outside the city, situated on the summit of a hill. A high wall surrounds it, but fails to keep out her hosts of friends. Every day is a gala one with her, and every notable person in the country worth knowing has been her guest. She is a great patron of the arts, and has brought many a struggling artist or writer to the front.

In appearance she is very prepossessing, tall and slight, and with a fine figure for so elderly a woman. In 1837 she assumed by royal license her additional name of Burdett. She was a Miss Coutts, and inherited then the vast fortune of her grandfather. In 1871 she was raised to the peerage for her public services to charity. In 1873 she received the freedom of the city of London, and she was the first of her sex to receive that honor. In 1881 she was married to William Ashmead Bartlett, who assumed the name of Burdett-Coutts. He was 30 and she was 67.

The Baroness is a splendid musician, and plays as well as she paints. Among her remarkable jewels is a tiara that belonged to Marie Antoinette and a bracelet formerly worn by Queen Anne.

With all her benevolence the Baroness is not to be imposed upon, and has many advisers. Her mail daily contains hundreds of begging letters from all sorts of persons. As a notable figure in English high life, she is eminently respected, and has advanced the interests of her young husband, who is now a member of Parliament.

Hetty Green, the richest woman in the United States, is 61 years old and as spry as a young girl. In fact, her vitality counts in a measure for her success in handling her vast properties. Of Quaker stock, she was born in Rhode Island. Her $50,000,000, more or less, was largely inherited, although by her own shrewd methods she added much to it.

She believes now, and has for years, in fact, that she is being robbed. If it's not a suit against the executors of a will, it's an action against some big railroad company. She seems to be fond of litigation, which must cost her an enormous sum every year. A son and daughter will inherit her money. Her husband is never much in evidence, as he is a sort of invalid and likes the quiet retirement of an easy chair and something to read.

For years Mrs. Green has attired herself in a plainly made black dress and a faded bonnet to match. Thus armed she could go to a trust company, draw $1,000,000 in $10,000 bills and carry it in an old satchel without the slightest fear of being robbed.

Her daughter, Sylvia, is a good-looking young woman with a great deal of common sense. She has been courted a great deal by ambitious young men, but has cared for none of them. Mrs. Green some time ago announced that the successful man must be poor but honest, and as a result about 500 applications for preferment were received by her. It is needless to add that none of them received any encouragement to speak of. A cablegram to a German newspaper to the effect that a suitor was wanted put the Green family to much embarrassment, and bushels of communications were received from impecunious noblemen who wished to avail themselves of the offer.

Hetty Green lives so simply and does so many queer things that she is now regarded as eccentric. She washes her handkerchiefs and makes a cup of tea over the gas if she likes, and above all hates to be stared at. Her meals are taken at some dairy restaurant, and she never goes to any place of amusement. Her life is one long business tangle apparently, and if her great wealth brings her happiness she doesn't seem to show it.

The beauty of this sextet of rich women is Mme. Barrios that was, now Marquise de Roda, wife of a Spanish grandee. When she was but 14 years old, at a convent in Guatemala, General Barrios, the President, visited the school. He was a great big fellow, with fierce cavalry mustachios, and the moment he set eyes on the young girl he vowed she should marry him, and she did, but not until he had put the mother superior in prison for refusing to allow the ceremony. He idolized her, and was immensely rich. The money to an extent was of course, taken from the people of that hot country, but as Barrios was a Dictator he did as he liked.

One day he was riding on horseback past a suburb of the city, when a man in ambush assassinated him.

His widow was then 30 years of age, and the mother of seven children, all of whom are now living. Her father, Mr. Aparicio, is a coffee broker in this city, and a very charming man, too. He helped settle the estate, and did so well that when Mme. Barrios came to reside in New York she had considerably over a million apiece for each child, and "something for myself and family" she said. A type of dark beauty, young and wealthy, she had many admirers, but none won her favor until De Roda arrived. He is a Marquis and rich. Now she is living in Spain and the children are at different schools. One boy is to go to West Point.

The Marquise de Roda is a brilliant musician, the harp being her favorite instrument. A house in Paris is one of her possessions, and although she speaks English fairly well, she doesn't think she will ever return to this country to live. She has five sisters, all younger than herself, and all well provided for, although unmarried.

Mme. Woleska, a widow whose wealth is mostly in lands and towns, is of Russian birth and lives in that country. Her vast wealth was inherited and has greatly increased in value. Village after village is owned by her. Although, of course, she has hundreds of agents to collect her rents and look after her property, she is a thorough busines woman and spends two or three hours every day in going over her accounts with her head stewards.

She is up to date, too, and has seen much of the world. Improvements in farming utensils and machines she has introduced to such an extent that she gets a higher rate for leases than her less progressive neighbors. Her daughters are well married, one to a nobleman, and one son is in the army. Her life is quiet and uneventful, and the care of the management of her estate is the most exciting thing she experiences.

There are other enormously rich women in the world, but they are mostly titled. Victoria of England possesses a great private purse, but as Queen of England she has great calls upon it, especially when one of her descendants weds a princeling, who, if he were to be turned loose in the streets of New York, not knowing the language, might find life considerably of a burden. Her majesty used to give camel's hair shawls as wedding presents. They were sent to her by her Indian subjects. Now they are out of fashion, so there's a great demand for Oriental trinkets of other sorts. The potentates have been notified to change their presents.

The woman who has a small, sure income ought to be glad. It causes her no worry and suffices for her wants. The enormously rich woman has nothing but trouble, or at any rate some, and it sticks tighter than a brother.—New York World.

CYCLING LUCK.

The freedoom from punctures and the inconvenience so occasioned by persons riding pneumatic bicycles is more a matter of good luck than good management. Just as is in everyday life there seems to be persons who ride along smoothly on their inflated schemes only to have them punctured when they arrive at the most out-of-the-way place, while their fellows, perhaps riding beside them, go to their journey's end without meeting with an accident, there seems to be in the bicycle world people fated to like annoyances. I know of some people who cannot go out for a ride in an evening without having something puncture their tire, while others ride season in and season out without having to repair them once.

Speaking of the subject, Charley Petticord, one of the most experienced riders in the country, said: "I cannot realize how some people have so much trouble with their tires. Why, in the 15,000 miles I rode on all kinds of roads I have only had three punctures. You cannot say that it was because I was careful in my riding, for, as a matter of fact, I was not. I took everything as it came. I never had any trouble whatever. But there seems to be a hoodoo in the matter. Some people are bound to good luck, while others always have to pull up stream.

"Bicyclers, as a rule, are not superstitious, yet I must confess that I have no love for the number 13. When riding the thirteenth mile, as it is registered on my cyclometer, I am quite nervous. New machines with thirteen in their number in some unaccountable way always go wrong. I saw a man purchase a wheel of this sort, and he had hardly mounted it outside of the store door before a wagon ran into him and mashed it.

"The most superstitious bicyclers are those who follow up the circuit. Not long ago a well-known racer, who was here during the recent races, won an opal ring at one of the meets. It was a very fine gem, and considered quite a trophy. That same night he sat down to a poker game and lost $400. Thinking he had his share of the opal's power he gave it to a fellow bicycler. Several nights after he entered a game with his friend, and, thanks too the opal, won $200 of what he had lost back. After thinking over the matter the last unlucky man concluded the opal had worked havoc with his luck, so as he was riding along in the train he told his friend of it, and attempted to throw it out of the window. Syd Black, the trick rider, happened too be sitting next to him and caught his arm, saying: "Give it to me; I'm not afraid of an opal." That night in doing his act on the ladder he fell and had a narrow escape from a serious accident. He has got rid of it himself now. He gave it to a racer, and he is making up for that accident by always betting against the man with the opal. And he wins, too."—Pittsburg Dispatch.

Cyrus Baldridge, the financial agent for the California, Oregon and Idaho Railroad Company, who has been in Humboldt county raising a $500,000 subscription for the purpose of aiding to build a road from Eureka to Red Bluff, has completed his work.

William G. Vemer of Portland, Or., just from Alaska, says that Juneau is overrun with old and young men looking for gold without the means to take them out of camp, and he predicts much suffering and crime there during this winter.

GRAMAPHONES.

You Listen With Your Teeth to Band Music.

A STEP BEYOND THE PHONOGRAPH.

The Youngsters Will Have Lots of Fun With Them and They Will Cost Little.

"Would you like to listen to a song with your teeth?" The speaker was Dr. Emile Berliner, the famous electrician. At his elbow was a contrivance of his own invention called a "gramaphone"—a talking machine that goes a step beyond the phonograph. Its records of human speech and of music are indestructible and can be cheaply multiplied to an indefinite extent by simple mechanical means. What it has to say or sing can be heard all over an ordinary-sized house. So devoid of complexity is its construction that the complete apparatus costs only $18, and a smaller edition intended for the use of children will be sold for $5. Gramophones are soon to be placed on the market.

Dr. Berliner took a small wooden stick about ten inches long and into one end of it he inserted a sharp point of steel. On the other end he put a little piece of rubber tubing. Then he directed the World reporter to hold the rubber tightly between his teeth, while the steel point was permitted to rest upon a flat disc of metal which was inscribed with a sound record. An electric motor being set going, the disk revolved rapidly, so that the point ran along the spiral line of the record. The vibrations thus communicated through the teeth conveyed loudly and clearly to the listener the words and music of the patriotic songs, "Tramp, Tramp, Tramp, the Boys Are Marching."

While hearing the song the reporter's ears were stuffed with wads of cotton. He took them out to listen to a comment by Dr. Berliner. The latter said: "Let us try to simplify the experiment."

The inventor picked up an ordinary writing pen, the reporter put the wads of cotton back into his ears and held the end of the penholder between his teeth. The point of the pen rested upon the record on the horizontal disc. The motor was started, the disc began to revolve and immediately the words and music of the war song were repeated.

"That is just for fun," said Dr. Berliner. "It would do well enough for deaf people, but the gramaphone is designed for talking and singing out loud, so as to be heard in the ordinary fashion. Before going further I would like to show you the process by which we make our records." He led the way into a room that was filled with a strange variety of queer things, including a piano, huge tin horns and some machinery driven by electricity.

"You see this disc," said the inventor, picking up a very thin circular plate of zinc. "We will proceed to make a record on it. To begin with, I clean it by rubbing the surface with a little benzine. Next, you observe I pour over it a fluid which is one of the fats of beeswax dissolved in benzine. The benzine almost instantly evaporates and leaves the disc coated with a very delicate film of fat. Now we turn to this machine, which is a simple affair, though it looks somewhat complicated at the first glance. As you see, it consists most importantly of a horizontal revolving turntable. Upon the turntable I fasten the disc by means of a clamp in the center, and it is ready to receive the record.

"For making the record we have here a little contrivance containing a diaphragm of mica, to which is attached a delicate point or stylus of irridium. This is adjusted in such a manner that the stylus comes into contact with the surface of the zinc disc near its edge. I now affix to the diaphragm a mouthpiece, into which we may talk or sing anything we like. You do the talking or singing this time, while I start the electric motor which causes the turntable to revolve. As it does so, the stylus will scratch a fine spiral line through the film of fat on the disc. This is right; go ahead until I tell you to stop.

"That will do," interrupted Dr. Berliner, after the reporter had talked and sung into the mouthpiece for a couple of minutes. "Let us see what we have got here. I remove the disc from the turntable, and if you will look closely you can see the delicate spiral line that goes around, and around, gradually nearing the center.

Look at it through this powerful magnifying glass, and you will see that the spiral line is wavy. The wiggles in it represent the sound vibrations of your voice.

"You will have taken notice that while the disc was attached to the turntable it was kept overflowed with alcohol, which fell upon it drop by drop from a glass vessel. But for this precaution fine particles of dust from the air falling upon the zinc plate would be dragged through the fatty film by the stylus, blurring the record.

"I ought to call your attention to the fact that the stylus does not scratch the zinc plate at all, but merely cuts through the film of fat. The latter, of course, is almost inconceivably thin. All that we need to do now is to etch our plate. That is to say, we apply to it an acid which eats away the metal wherever it is not protected by the fatty coat. For this purpose we employ the red stuff in this bottle, which is a mixture of bichromate of soda and sulphuric acid. To give the acid time to do its work the zinc disc is permitted to remain in the solution for about half an hour. Then we take it out and wash off the fat, when the spiral line of the record will be found to be imperishably engraved in the metal of the plate.

"No matter what we want to make a record of, the method adopted is the same, whether it be human speech, singing or instrumental music. If the performance of a brass band is to be reproduced, we simply attach a big tin horn to the mouthpiece connected with the diaphragm.

The other day the Bureau of Ethnology sent Mr. James Mooney, of its staff, to Dr. Berliner for the purpose of making permanent records of the songs of the famous Ghost Dance popular among the Sioux Indians and certain other of our aborigines. Mr. Mooney has spent years among these savages, living their life and learning their songs. These chants of a dying people, which have an historical value he sang into the gramophone, and the records are now preserved in a safe at the Smithsonian Institution.

The hard-rubbed records of the gramophone are more durable than the pyramids of Egypt. They will last for thousands of years and will remain as perfect as ever. In future centuries it will not be considered strange to listen to the voices of people who have been dead for a great length of time. Gramophone records will be kept in the library, and the children will amuse themselves by listening to great-grandpa's voice in 1905 and the veritable accents of great-grandma in 1916. It seems by no means impossible that some day people will record their last wills and testaments by gramophone, so as to make dispute and expensive litigation out of the question.

ENGLISH STROLLING PLAYERS.

The manager comes before the curtain and announces the overwhelming respectability of his company; nothing will take place here to raise a blush on the most modest cheek; whereat the pit jeers good-humoredly, wondering, no doubt, what there is on the face of this earth which could make it blush.

"Our company," the manager goes on to say, "wintered in the Cathedral town of Hereford, and any of you who know what a cathedral town means will understand that no company, which was not of unimpeachable respectaiblity, would be allowed by the dean and chapter to stay so long."

As we are probably alone in having any clear idea of what a cathedral town means, and what sort of fearful fowl a dean and chapter is, we enjoy the joke in separateness of spirit. But, to do the manager justice, he gave us no occasion to blush.

Now comes the play, for the curtain struggles in its rising. The play is, and the females of the play are, "Faith, Hope and Charity," these three, and the greatest of these is certainly Charity. Charity is a big, strapping wench—so big, and so strapping! Run a tape around her, lengthways and breadthways, as you do around a package to see if it comes within the social limitations for parcel post, and you may get her within sixteen feet, more or less, probably more. She is an admirable low comedian, and really is it to be wondered at, bred as she has been on the applause she wins, that she plays low down for it?—the pit is in raptures over her, and sets the rear of the theatre reeling with its hobnailed plaudits.—Cornhill Magazine.

LIGHTNING MADE HIM INSANE.

George C. Krause was removed to the Middleton Insane Retreat at Hartford, Conn., recently, suffering from insanity that is due to Connecticut lightning. For two seasons, he, in common with the rest of his fellow-citizens, successfully dodged bunches of blue, yellow, white and green electric fire balls that scurried hissing about the streets, and his reason, for the most part, remained intact.

It succumbed altogether in a mad riot of the elements, plentifully speckled with lightning balls and splinters, about ten days ago, right after a knot of electric bombs had caracoled up and down his parlor windows. He dashed out of his house, shouting that red imps were pursuing him with intent to broil him alive, and, hatless and coatless, fled across the lots through a storm of rain, hail and see-sawing fire balls, into the dark, dark woods.

No one was able to overtake Krause, but he came home in the morning, after the tempest had ceased, drenched and miserable. He was quiet, though, and apparently in his right mind, and resumed his daily labor in the knitting company's works. His tarnquil mood continued until the latest outbreak, a day or two ago, of Nutmeg lightning, zig-zag shafts and chain-lightning mostly, seasoned, though, with eccentric explosive electric rockets. Again his mind gave way, and he fled, shrieking, into the forest.

Policeman Griswold of Winsted coaxed him to return home, and thence removed him to Middleton.—New York Sun.

In the United States District Court at Portland, Or., counsel for Seid Back, the Chinese merchant sentenced to pay $5,000 fine for smuggling, moved for a reduction of penalty. Counsel stated that it was impossible for Seid Back to raise the amount of the fine and there seemed no alternative but for the defendant to go to jail. If he did, under the circumstances, he would no doubt take advantage of the pauper act and be released after serving only thirty days. In that event the Government would get nothing. Upon that showing Judge Bellinger reduced the penalty to $3,000.

Any person in France who is injured by an accident resulting from a structural defect in a bicycle can recover damages from the manufacturer.

BLACK ROCK TOWER.

The Ancient Dame Who Trimmed the Lamps.

94 YEARS OF AGE AND NOW RETIRED

An Interesting Old Woman Who Saved Twenty-one Lives and Braved Danger to Help Mariners.

In these days so much is said and written of the new woman, of what she is doing and will do that one is apt to lose sight of the fact that the "old" woman did just exactly as much, only there were not quite so many of her.

No woman more fitly illustrates the truth of this iconoclastic remark than the lighthouse keeper, Kate Moore, now one of the "exempts." She has recently passed her ninety-fourth birthday, and until ten years ago, when she trimmed her lamps and climbed the spiral stairway of the tall tower for the last time, the light at the entrance to Black Rock Harbor, near Bridgeport, Conn., was for many years kept burning by her hands.

Although now so near the century mark, Miss Moore is still hale and hearty. Her hazel eyes are as bright and her intellect as quick as if she were thirty, but Father Time has rather outdone himself in writing his stenographic characters upon her face, having been aided in this doubtless by Brother Neptune, for, crossing and recrossing her face are the lines of ten thousand curious wrinkles. Time has, however, touched her brown hair with the utmost delicacy; it covers her head well and but few silver threads are visible. She still holds her self erect, although in her daily walk along the shore she generally carries a quaint, knotted staff.

Her manner of speaking is abrupt, as though she were accustomed to giving orders and to having them obeyed. Although deprived of educational advantages in the isolated home, where she lived so many years, she became a reader of books and was a writer of her experiences in a most interesting way.

She is spending her last days quietly in an old-fashioned cottage commanding a magnificent view of the Sound and of Fayerweather Island, on which the lighthouse stands. The approach to the cottage is by a flight of six steep steps cut into the elevated front yard. A Sunday World reporter who called there was met by the old lady herself and invited inside.

As she talked she held in her arms a cigar-box containing some tiny shells, which she had just gathered for use in her fancy work. When asked how it happened that she selected as her vocation the keeping of a lighthouse, she smiled and replied:

"Well, I didn't exactly select it I was brought up to it. My father, Stephen Tomlinson Moore, was a West Indian merchant, and one time, while he was here, he undertook to assist Commodore Hull in getting in a load of hay. The oxen ran away, father was injured, and the Government gave him the position. Between him and me we kept the lighthouse in our family for seventy-two years. No doubt, that seems a very long time to you; but I can remember further back than that.

"At that time the island was very different from what it is now. It was a fine piece of land of two hundred acres, with plenty of trees, while now it has but eight acres and has no foliage except the ailanthus trees which I set out twenty years ago. I planted one hundred and fifty, and many of them are still living. They're fit for nothing but a sand beach, anyway, you know.

"I've heard my father say that when my grandfather, Robert Moore, first sailed into Black Rock Harbor—or rather Pequonack Harbor, it was then—the island was quite a forest. He held a commission under King George, and he married Phœbe Tomlinson of the Housatonic River. I suppose you know that the Tomlinsons came to this country and bought a whole township on the Housatonic?

"As I was saying, the island has been ruined by gales since then. Every fifty years these great gales come, the waves dashing clear over the island, and on January 19, 1820, the last of the old trees was swept away. The lighthouse itself blew over once. I don't remember just what year it was," she said, musingly, "but I know it was on Sept. 22. It was a dreadful thing to have happen, for this was then the only light on the Connecticut side of Long Island—the only light between New Haven and Eaton Neck—and was of course of inestimable value to mariners.

"Sometimes there were more than two hundred sailing vessels in here at night, and some nights there were as many as three or four wrecks, so you may judge how essential it was that they should see our light.

"It was a miserable one to keep going, too; nothing like those in use nowadays. It consisted of eight oil lamps which took four gallons of oil each night, and if they were not replenished at stated intervals all through the night, they went out. During very windy nights it was almost impossible to keep them burning at all, and I had to stay there all night, but on other nights I slept at home, dressed in a suit of boys' clothes, my lighted lantern hanging at my headboard and my face turned so that I could see shining on the wall the light from the tower and knew if anything happened it. Our house was forty rods from the lighth use, and to reach it I had to walk across two planks under which on stormy nights were four feet of water, and it was not any too easy to stay on those silippery, wet boards with the wind whirling and the spray blinding me. I don't want to do it now," she said with a shake of her head.

"At what age did you begin the care of the light?"

"I was just twelve years old when I first began to assist my father in trimming the wicks. A few years after that his health began to fail and from then on I was practically the keeper. He died fourteen years ago at the age of one hundred, after having been an invalid for a great many years. The commission was then given to me for eight years—Admiral Case, of the United States Navy secured it for me—but I only remained four years."

"Did you stay during that time entirely alone?"

"Generally; although I had a young boy to assist me at times. But I never had much time to get lonely. I had a lot of poultry and two cows to care for and each year raised twenty sheep, doing the shearing myself, and the killing when necessary," she said, as though butchering were quite an everyday affair with women. "You see in the winter we couldn't get to land on account of the ice being too thin or the water too rough.

"Then in Summer I had my garden to make and keep, for I raised all my own stuff, and, as we had to depend on rains for all the water we used, quite a bit of time was consumed in looking after that. We tried a number of times to dig for water, but always struck salt."

"Didn't you find the life a hard one?"

"No, I don't think I did. You see, I had done all this for so many years and I knew no other life, so I was sort of fitted for it. I never had much of a childhood as other children have it. That is, I never knew playmates. Mine were the chickens, ducks and lambs and my two Newfoundland dogs."

"Do you ever feel homesick for your island home?"

"Never. The sea is a treacherous friend. In sailing to Georgia one time I was blown to the West Indies, and I've no love for such things."

"Is it true, Miss Moore, that you have, yourself, saved twenty-one lives?"

"It is," she said, modestly, "and I wish it had been double that number.

Of course, there were a great many others, washed upon the shore, half dead, whom we revived, and they all stayed with us until they received means with which to leave. They used to eat up all our provisions, and Government never paid us a cent for boarding them." "Were many of the dead washed onto your beach?" A look as though she saw the ghastly faces came into Miss Moore's eyes; she shuddered and made a little gesture with her hands, as she exclaimed:

"Hundreds! We had to keep them, too, until Government chose to dispose of them."

Miss Moore owns the property on which she lives, and has, besides, it is said, a bank account of $75,000, all of which she accumulated during her recluse existence, when her expenses were necessarily small. A part of her little fortune was acquired, so the natives say, through interests which she controlled in oyster beds near the island, the planting, gathering and seeding for market all being conducted under her supervision. She boasts that she has never seen the day she was afraid of a man. When practically inclined, oystermen or clam-diggers attempted to venture on her soil she was on the lookout, and even though the invader came well protected she would man her little boat, and, with an old shotgun that was her constant companion, row out and command a hasty retreat by the offender. She rarely wasted words on such an occasion.

"I represent the United States Government and you've got to go!" was her terse way of putting it, and she was invariably obeyed.

Another industry by which she added to her dollars was the making of decoy ducks. They were sold not only to visitors to the island as souvenirs, but the demand for them became so great among sportsmen that Miss Moore frequently had orders from dealers for two or three barrels of them at a time. When asked how she made them she replied:

"Why, I just took two blocks of wood and carved them out with a knife. It didn't take long to make one, and I liked to do it. I often worked at them in the nights that I had to stay up."

During the interview the subject of genealogy came up. In this it appears, Miss Moore is quite an enthusiast.

"My mother was descended from the Plantagenets," she said, proudly, "and Baron Boothe, of England, is also one of my ancestors, as is Gen. David Wooster."

As her visitor arose to leave Miss Moore said:

"And did the New York World send you all the way up here just to see me?"

"It ceratinly did," she was answered, "and had you been further away, I should have been sent just the same."

"Well, well," she said, slowly, nodding her head with each word, and then added, with apparently much commiseration:

"But its' too bad you didn't know when I was visiting my sister in Brooklyn, and saved yourself this long journey."

With cordial invitations to "come again whenever you can," the reporter said good-by to this very interesting but by no means new woman.

Charles B. Stewart, Chief Justice of the Indian Territory Court of Appeals and Judge of the Central District Court of the Indian Territory, has resigned.

INYO INDEPENDENT.

W. H. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.
FRIDAY, NOVEMBER 1 1895

The affair of the Marlborough diamonds presents an occasion on which the Government should be kind but firm. It is doubtless hard that a young man, even a Duke, should be called upon to pay duty on his financee's wedding presents from abroad when they are to be taken at once out of the country again. It is a case that may arouse sympathy. The presents are coming to New York only to be shipped to Blenheim, and the order for paying duty may seem a bit of cruelty. Yet, on consideration of the matter, we are sure that the Government should insist on getting the cash. We are ready to admit that the Duke of Marlborough is a decent fellow, who has a good deal of ability and behaves himself like a gentleman, instead of like a British peer. We are ready to admit that he has been boorishly treated by the New York park police for not being an expert in riding a wheel. It may even be that he deserves his good fortune in getting a good and pretty American girl for a wife. But, with all these admissions and all the sympathy that is bestowed by the world on those about to marry, there are good reasons why we should get every dollar out of the young man that the law allows. It is to be remembered that, in addition to getting a pretty and charming wife, the Duke is going to carry out of the country some $10,000,000 or $15,000,000 in good American money or its equivalent. Friendship and good will are all right, but business is business, and the Government is right to see that it saves all that is possible out of the prize that our guest is carrying off. Sixty dollars may be a good deal for the privilege of bringing a diamond brooch into the country for a day, but it is a small bit to save to the nation out of the $15,000,000 that is taking wings. Fifty cents may seem a high price to pay for showing one of her Britannic Majesty's justly celebrated shawls as the spoil of a wedding day, but it is none too much to save from the fleeting fortune. It is plain that we should have a prohibatory export tax on American heiresses and their money. But as we are so unfortunate as to have neglected this precaution it behooves the Government officers to do their best with the laws at their command. Let them hold up the Duke for every dollar of custom duty that can be piled on to his effects. We may never get another chance at him or at that fortune.

The San Francisco Examiner says: There seems to be an opportunity to have a national political convention held in San Francisco at last. The Republicans seem at least half willing to come. We want them. This is not a question of politics. It is a matter of business. The holding of the convention here would be of an estimable benefit to the State. In the first place, the thousands who would flock here would spend a deal of money. That is a narrow view of the proposition, but a practical one. But beyond all this, many of those who would attend the convention would be men who might go back to make the politics of the nation. Here they would be brought directly in contact with our needs. They would learn to know us and our ambitions. It has always been our complaint that the lawmakers at Washington did not understand us. This is a great opportunity to give them an object lesson and to get them by the buttonholes. So it is very certain that we all want that Republican Convention. We want the Democratic Convention, too, but the struggle for the former looks more promising just at present. The question now arises: How are we to get that convention? Pittsburg is bidding money for it. Those Pennsylvanians are offering $100,000 as a matter of paying up old debts and luring the delegates and committeemen their way. The convention would be worth more than $100,000 to California. Why shouldn't we offer more money.

THE CONFIDENTIAL PAPER.

The Briton Complains, Praises and Scolds In His Daily Journal.

The newspaper is a member of the family in England and regularly comes to breakfast with the other members. The London Times is a kind of oldest son among newspapers, and Punch the jolly bachelor uncle, who makes occasional visits. Englishmen take their newspapers into their confidence and have a half way of writing to them on all sorts of subjects. If an Englishman rows down the Thames and stops for luncheon at an inn and is overcharged, he writes to his newspaper, just as a little boy runs in to complain to his mamma of the rough treatment of his playmates, and later on the first letter is followed by others, in which the comparative merits and cost of light luncheons on the continent, in Seringapatam, in Kamchatka and everywhere else where Englishmen have eaten and drunk—and where have they not done these?—is discussed au fond. If horses stumble and fall in Rotten row, there are letters on the subject which go into the matter of roadbuilding, modern horsemanship and the like, with quotations from Virgil and anecdotes of accidents that happened half a century ago. Not only the more serious weekly, but also the daily newspapers, give one the impression that they feel themselves to some extent responsible for the contemporary auditing of the accounts of the day of judgment. On the other hand, the better class of English newspapers do not indulge in rash suppositions, hasty generalizations, uncertain guesses at probable future happenings and the daily exploitation of the personal affairs of notorious nobodies. And one may be permitted to say diffidently that perhaps this is preferable. If Mr. Balfour, for example, were to go abroad for a holiday, it would be considered vulgar to chronicle his doings and dinings and absolutely brutal and boorish to write particulars of the dress and behavior of his sister, or his wife, if he had one. The sense of fair play of a nation of sportsmen does not permit an editor to torment even his enemy from behind a woman's petticoats.—Price Collier in Forum.

A Question of Recognition.

Miss Kitty—Mamma, will we know folks in heaven same as we do here?

Mamma—I think there is no doubt of that, my dear.

"Will I know Jane Gopplins?"

"Who is Jane Gopplins?"

"She's the big freckled girl that lives over the grocery store down the street."

"If you are both good enough to go to heaven, my dear, you will certainly know her."

(After some moments of profound cogitation) "I won't have to speak to her, will I, mamma?"—Chicago Tribune.

A Fine Foot.

The elderly gentleman was getting a pair of shoes, and the clerk was striving to please.

"You have an elegant foot, sir," he said as he smoothed the leather down across the instep.

"Um," sniffed the old gent, eying him narrowly, "I guess you ain't the chap that was coming to see my daughter every other night till last week."—Detroit Free Press.

Dabster Misunderstood.

Figg—What kind of a writer is Dabster? Is he possessed of descriptive powers?

Fogg—Unfortunately, yes.

Figg—Unfortunately?

Fogg—Yes. In his recent sketch of a western girl he spoke of her commercial traveler manner and her generous understanding. The Chicago people allowed that the "commercial traveler manner" was a compliment of which anybody except in the effete east might well be proud, but they suspected that the other characterization was a cheap fling at the size of women's shoes, and after that his writings were a drug in the western market.—Boston Transcript.

ALIAS SUMMONS

IN THE SUPERIOR COURT OF THE COUNTY OF KERN, STATE OF CALIFORNIA.

S. Bachman, Plaintiff, vs. Domingo Etcharren, John Iribarne, Frank Cathery, S. Heineman and L. Bachman, copartners doing business under the firm name and style of S. Heineman & Co., John Doe and Richard Roe, Defendants.

THE PEOPLE OF THE STATE OF CALIFORNIA, send greeting to Domingo Etcharren, John Iribarne, Frank Carthery, S. Heineman and L. Bachman, copartners doing business under the firm name and style of S. Heineman & Co., John Doe and Richard Roe, Defendants.

You are hereby required to appear in an action brought against you by the above named plaintiff in the Superior Court of the County of Kern, State of California, and to answer the complaint filed therein, within ten days (exclusive of the day of service) after the service on you of this summons, if served within this County, or if served elsewhere within thirty days.

Said action is brought to obtain a judgment of this Court for the foreclosure of a certain chattel mortgage described in said complaint, duly acknowledged, verified, executed and delivered by said defendants, Domingo Etcharren to John Iribarne, on the 17th day of May, 1894, to secure the payment of a certain promissory note, or instrument in writing dated May 17th, 1894, for the sum of Four Thousand Dollars U. S. Gold Coin, payable twenty four months after date with interest thereon from date at the rate of one per cent per month, payable monthly, and if not so paid the whole sum of both principal and interest thereof to become immediately due and collectable, at the option of the holder of said note, or instrument in writing, which said note or instrument in writing, after the making, execution and delivery thereof, was duly indorsed and delivered by said John Iribarne to the firm of S. Heineman & Co. and on said at mentioned day, said John Iribarne duly assigned said chattel mortgage to said firm of S. Heineman & Co. and afterwards, to wit, on the 24th day of September, 1894, said firm of S. Heineman & Co. for value received, sold, assigned and delivered said promissory note or instrument in writing and said chattel mortgage to the Plaintiff. Said mortgage conveyed the following described personal property which said property was at the date of the execution of said chattel mortgage in the County of Inyo, but is now and for more than one month last past has been in the County of Kern and is described as follows: Forty-eight hundred head of sheep marked "D" and having an underhand overbit on each ear, together with the wool thereon and the increase thereof; also four horses, two mules, two wagons and one sets of harness and camping outfit; that the personal property conveyed by said mortgage be sold and the proceeds applied to the payment of said sum of Four Thousand Dollars, U. S. gold coin, principal with interest thereon at the rate of one per cent per month from the 17th day of May, 1894, and costs of suit, and in case said proceeds are not sufficient to pay the same then to obtain a judgment and execution against said defendants Domingo Etcharren and John Iribarne, for the balance remaining due, and so that said defendants and each of them, and all persons claiming by, through or under them, or either of them, may be barred and foreclosed of all right, title, lien, equity of redemption and interest in or to said mortgaged personal property, and every part thereof, and for such other and further relief as may be just, all of which will more fully appear by said complaint on file herein, to which you are referred for a full and perfect description.

You are hereby notified that if you fail to appear and answer said complaint, said plaintiff will apply to the Court for the relief demanded in said complaint.

Witness my hand and the seal of said Superior Court of the County of Kern, State of California, this 13th day of June, 1895.

[SEAL.] F. W. CRAIG, Clerk.

T. M. McNamara, Attorney for Plaintiff.

NOTICE TO CREDITORS.

Estate of IDA ADELIA WALKER, deceased.

NOTICE IS HEREBY GIVEN BY THE UNDERSIGNED, Administrator of the estate of IDA ADELIA WALKER, deceased, to the creditors of, and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within one month after the first publication of this notice to the said Administrator, at the town of Big Pine, in Inyo County, California, the same being the place of the transaction of the business of the said estate in the said County of Inyo.

R. W. TIDEMAN,
Administrator of the estate of Ida Adelia Walker, deceased.

ORDER OF SALE AND DECREE OF FORECLOSURE AND SALE.

Friederike Rhine, Plaintiff, vs. Eliza M. Hanneg, John H. Parish, W. C. Doane and Thomas Crellin, Defendants.

Under and by virtue of an order of sale and decree of foreclosure and sale, issued out of the Superior Court of the County of Inyo, of the State of California, on the 18th day of September, A. D. 1895, in the above entitled action, wherein Friederike Rhine, the above named plaintiff, obtained a judgment and decree of foreclosure and sale against Eliza M. Hannegan, John H. Parish, W. C. Doane and Thomas Crellin, defendants, on the 17th day of September, A. D. 1895, for the sum of Two hundred and forty-six 30/100 ($246.30) dollars in United States Gold Coin, besides interest, costs and counsel fees amounting to the further sum of $105.30, which said decree was on the 18th day of September, A. D. 1895, recorded in judgment book 1 of said court, at page 58, I am commanded to sell all those certain lots, pieces or parcels of land situated, lying and being in the County of Inyo, State of California, and bounded and described as follows: The East half of the Northeast quarter of Section Thirteen and the West half of the Northwest quarter of Section Thirty-two, in Township Fourteen, South of Range Thirty-six East, Mount Diablo Meridian, containing 160 acres; together with all and singular the tenements, hereditaments and appurtenances thereunto belonging, or in anywise appertaining.

Public notice is hereby given that on Tuesday, the 15th day of October, A. D. 1895, at 12 o'clock M. of that day, in front of the Court House door of the County of Inyo, I will in obedience to said order of said decree of foreclosure and sale, sell the above described property, or so much thereof as may be necessary to satisfy said judgment with interest and costs, etc., to the highest and best bidder for gold coin of the United States.

Dated this 18th day of September, 1895.

A. M. GIVEN,
Sheriff.

P. H. Mack, Attorney for Plaintiff.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT in pursuance of the power to sell, conferred in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY, the 8th day of March, 1896, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah, deceased, has, by operation of law or otherwise, acquired other than or in addition to that of the said John Allen Hannah at the time of his death, in and to those certain lots, pieces or parcels of land situated, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South half of the Southwest quarter of Section No. 10, and the Northeast quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo, and particularly described as follows, to wit: Commencing at the South-east corner of the south-east quarter of North-east quarter of Section No. 18, in Township No. 15 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 18.10; thence Northeast following the meandings of the bank of Bishop Creek along its North branch to Edwards street, in the town of Independence; thence following said Edwards street along its West line to the place of beginning, six acres 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, also comprising what is known as the Reddy place.

Lots Nos. 2, 3, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hannah, deceased, at the time of his death.

Lot Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided of in and to that certain mining claim, lead or lode, situate, lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Inspiracion Lode."

That certain lot, piece or parcel of land situate, lying and being in the County of Ventura, State of California, commencing at a point twelve and one-twentieth (12 9-20) rods south of the general corner of the Northwest quarter and the Northeast quarter of Section No. twelve (12) and the Southwest quarter and the Southeast quarter of Section No. one (1) in Township No. three (3) North of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South sixty eight and seven-tenths (68 11-20) rods; thence West twenty-three (23) rods; thence North-western along a small branch or swale to a point twenty four (24) rods North of the general corner of the North East quarter and the South east quarter, and the North-west quarter and the North east quarter of the North-west quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-one and seven-tenths (41 7-10) rods; thence East eighty (80) rods to the place of beginning, containing thirty acres; together with ten shares of the Capital Stock of the Highland Water Company.

Bids or offers must be in writing and will be received at the residence of the undersigned at George Creek, Cal., and may be left at my place, or at the office of the District Attorney at Independence, Cal., or delivered to me personally or may be filed in the office of the Clerk of said Superior Court, at any time prior to the first publication of this notice, or before the making of said sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States; one-tenth of the purchase money to be paid to the said Executor when the sale shall be made; balance on confirmation of sale by said Superior Court. Deed at the expense of purchaser.

Copper, refined, in car lots	5¾
Pig lead	3.50

Religious Services

Order of services until further notice will be as follows:

Independence—Every Sunday evening at 7 o'clock.

Lone Pine—Every Sunday morning at 11 o'clock, except the second Sunday in the month, and the Thursday evening before the second Sunday of each month at 7:30 o'clock.

Fort School House—The second Sun-
Liberty School House—The second
Sunday of the month at 3 o'clock p. m.
day in the month at 11 o'clock a. m.

Georges Creek—The first and third Sunday of each month at 2:30 o'clock p m

All are cordially invited to be present at these services.

Thos. H. Nicholas,
Pastor.

Miss Clara Elbred of Big Pine is visiting friends here.

S. C. Yandell will be in from Darwin in a few days.

Fresh butter from the Fairview Creamery always on sale at Rhine's.

H. E. Wilkinson arrived home from San Francisco last Monday.

A. M. Given will start for Folsom with his prisoner (Meleno) to-morrow morning.

Strong efforts are being made to bring the next Republican Convention to San Francisco next year.

E. L. Murphy of Bridgeport and Will Yaney of Bishop left for their homes the first part of the week.

Thos. Roland of Keeler drove into town last Sunday morning from Lone Pine, returning next day.

Mr. and Mrs. Geo. Reinhakle of Big Pine visited Independence a couple of days the first part of the past week.

Mrs. J. Bell arrived from Sonora last Monday and is visiting her brother-in-law, A. N. Bell at Camp Independence.

The entire corn crop around this vicinity has been harvested with no loss by frost. The yield is exceptionally good.

John F. Miller of Benton has been spending a few days in town. He will leave for home to-morrow morning.

George Meads passed through town last Sunday morning with his big team on his way to Mojave for more freight.

In the recent shipment of honey to the eastern market, Wm. Muth Rasmussen of Camp Independence forwarded ten tons.

The public schools of the County will have a vacation next week in consequence of the holding of the Teacher's Institute.

Miss Emma Yandell came down from Bishop last Friday, summoned by the illness of her brother, Ben. She will remain until the Teachers Institute is over.

Are you going? Going where? Why, to the grand Ball at the Pavilion next Friday evening. Yes, certainly. Everybody is going. Wouldn't miss it for anything.

M. Nash and O. C. Harper will start for Carson to-morrow morning by private conveyance. They will go as far as Bishop the first day and will make the trip in about six days.

Again has a race been arranged between Ed Ober and Cecil Burkham, to be run to-morrow for $250 a side. The distance is to be 75 yards, and Ober gives Burkham 5 yards handicap—*Bodie Miner Oct. 26.*

The new mill over at the Hirsh mine made a trial start last Friday, everything working satisfactory. The mill will be started to crushing ore the first of next week at which time the tramway will be completed.

Mrs. W. M. Richards and Mrs. A. Y. Gale came up from Keeler yesterday morning and are visiting with Miss Lena Thompson at Camp Independence. Mrs. Gale will leave to-morrow morning, while Mrs. Richards will remain and enjoy the festivities next week.

Stock To Be Sold

A Week from Saturday constable Seroy will sell 141 head of horses and mules, the property of G. W. Maxon and J. E. Lancaster, to satisfy a judgment obtained by W. H. Jenkins against them for $295, with $236 costs. The sale will take place at 10 o'clock a. m. in front of the Turf stable.—(Bakersfield) *Californian.*

COURT NOTES.

Hon. N. D. Arnot, presiding.

Monday, October 28, 1895.
10 o'clock a. m.

The "sheep cases" were all submitted by ten o'clock, at which time R. S. Miner argued for the Prosecution, after which Court took a recess until two o'clock p. m.

Tuesday, October 29, 1895.
10 o'clock a. m.

I. J. Woodin et al vs. L. De Tourneil—Trial set for 10 o'clock a. m. December 6, 1895.

TO the

Lone Pine, Oct. 25, 1895.

To The Teachers of Inyo County:—

You are hereby duly notified that a County Teachers Institute will be held at Independence on the 5th, 6th, 7th and 8th days of November, 1895.

Your attention is called to Section 1560 of the Political Code which states that "every teacher employed in a public school in the County must attend such Institute and participate in the proceedings."

Special rates will be given from all points on the C. & C. R. R. to Independence. Also, special hotel rates will be given to all teachers during the Institute week.

Respectfully,
S. W. Austin, Co. Supt.

Adjournment.

FRIDAY EVENING.

Grand Ball at the Pavilion.

Daily sessions will be held at School House. Evening sesssons at Court House.

The Milton Lyceum

The second meeting of the Lyceum was held on Saturday at Camp Independence. A lengthy literary program was rendered, which consisted of music, reading, recitations and dialogue.

The relative merits of the Statesman and Soldier were discussed by Messrs Moore, Smith, and Miss Annie Bell on the affirmative; by Carl Walter and Miss Frances Aguirre on the negative. The decision by the jury was in favor of the soldier.

"The Old Forsaken School House" was affectingly recited by Mr. Gorman.

The first number of the "Milton Star," edited by Albert Lewis was highly appreciated for its gems of wisdom and sparkling humor.

The next subject for debate is: Resolved, that California should extend the right of suffrage to women.

The exercises closed with an instrumental selection by Leon Marks.

Carl Walter, Sec'y.

Milton School Report.

Number of pupils enrolled twenty-two. The following Roll of Honor is based upon scholarship, deportment and punctual attendance: Frances Aguirre; Paulita Aguirre; Avah Bell; Annie Harbour; Carl Walter; Lema Gill; Charley; Breeding; Val. Gorman; Edith Gorman; Charlotte Putman; Carrie Schabbell.

F. Moore,
Teacher.

One thousand pounds of guilt-edge butter from the Bishop Creamery was shipped to San Francisco last Saturday morning.

N. J. Cooley started Tuesday morning for Minneapolis with over 40 tons of honey. If Mr Cooley meets with the success he expects our beemen will hereafter find a ready sale for their products and at a much better figure than they can realize in our home markets.—*Index.*

In the Matter of the Estate of James Daley, Deceased.

NOTICE IS HEREBY GIVEN, that in pursuance of an order of the Superior Court, of the said County of Inyo, State of California, made on the 26th day of September A. D. 1895, in the matter of the estate of James Daley deceased, the undersigned, the Administrator of said estate will sell at public auction to the highest bidder, for cash, in lawful money of the United States and subject to confirmation by said Superior Court, on Saturday, the 30th day of November, 1895, at 11 o'clock a. m., in front of the Court House at Independence in said County, all the right title, interest and estate of the said James Daley at the time of his death, and all the right, title and interest that the said estate has, by operation of law or otherwise, acquired since his death, in and to all those certain lots, pieces or parcels of land, situated and being in the said County of Inyo, State of California, bounded and described as follows: That certain mine and mining claim of gold bearing quartz, adjoining the Cleveland mine on the south, situate, lying and being on Fish Spring Hill, in the Fish Spring mining district, County of Inyo, State of California, which said mining claim is known as and commonly called the "Mayflower" mine and mining claim, the notice of location of the same being recorded in the office of the County Recorder of said County of Inyo, in Book F of Land, Water and Mining claims at page 201, Records of said Inyo County, said mining claim being 1000 feet in length. And also a mill site consisting of five acres, being all that certain lot piece or parcel of land, situate, lying and being in the County of Inyo, State of California, described as follows, to wit: Corner of the North-east quarter of the South-west quarter of the North-east quarter of Section number twenty-one in township ten south of range thirty-four east mount Diablo Meridian, containing five acres and with the privilege of running water through the McCarty ditch and also the right to flume said water on to said ground through the McCarty garden for milling purposes.

Terms and conditions of sale: Cash, lawful money of the United States; ten per cent of the purchase money to be paid to the undersigned on day of sale, balance on confirmation of sale by said Court.

Deed at the expense of purchaser.

H. H. HOWELL,
Administrator of the estate of James Daley deceased.

Dated October 31st A. D. 1895.

Adjudication of Insolvency.

IN THE SUPERIOR COURT IN AND FOR Inyo County, State of California.

In the matter of J. White Smith, An Insolvent debtor.

J. White Smith having filed in this Court his petition, schedule and inventory in Insolvency, by which it appears that he is an insolvent debtor, the said J. White Smith is hereby declared to be an insolvent debtor. The Sheriff of the County of Inyo is hereby directed to take possession of all the estate, real and personal of the said J. White Smith, debtor, except such as may be by law exempt from execution, and of all his deeds, vouchers, books of account and papers, and to keep the same safely until the appointment of an assignee of his estate. All persons are forbidden to pay any debts to said insolvent, or to deliver any property belonging to him, or so any person, firm, or corporation, or association for his use. The said debtor is hereby forbidden to transfer or deliver any property until the further order of this Court, except as herein ordered. It is further ordered, that all the creditors of said debtor be and appear before the Hon. N. D. Arnot, acting Judge of the Superior Court, in and for the County of Inyo, State of California, in open Court, at the Court room of said Court, in the town of Independence, County of Inyo, State of California, on the 1st day of November, 1895, at 10 o'clock a. m., of that day, to prove their debts and choose an assignee of the estate of said debtor.

It is further ordered, that this order be published in the Inyo Independent, a newspaper of general circulation published in the County of Inyo, as often as the said paper is published before the said day set for the meeting of creditors.

And it is further ordered, that, in the mean time, all proceedings against the said insolvent be stayed.

Dated October, 23, 1895.

N. D. ARNOT,
Acting Judge of the Superior Court.

[Endorsed.]

ABSOLUTELY PURE

ACHIEVEMENTS OF THE BLIND.

A unique career was recently brought to a close in the suburbs of a gerat American city. It was that of a man totally blind from early childhood, who by force of an inflexible will, had succeeded in becoming a scientific anatomist.

Although deprived of sight, he trained himself by muscular exercise to be an athlete. The loss of one sense only strengthened his determination to preserve all his other faculties in the freshness of perfection. His own success in muscular exercise brought a group of young men around him, and before he was 21 years old he was a training master for athletic sports of every sort. He opened a gymnasium with apparatus designed to carry into practice theories of his own respecting the development of the human body.

He taught large classes, led in exercises of all kinds, and performed the most difficult feats with unerring accuracy. His facility in using the apparatus and moving about the gymnasium was amazing. Visitors could hardly be convinced that the expert and fearless teacher was absolutely sightless.

His gymnasium was gradually converted into a school of health. By physical exercises conducted under his supervision, he undertook to remedy deformities of the body, and to cure patients afflicted with diseases of the lungs, digestioon and disorded nerves. He became in fact, if not in title, a physician of recognized skill, and applied many original theories to the treatment of diseases, devoting the best years of his life to a minute study of the mechanism of the human body, with a view to remedying the physical defects of other men.

Whether it is the blind boat-builder designing the finest yachts, or the blind entomologist making scientific discoveries, or the blind statesman discussing in Parliament the intricacies of finance and conducting the most laborious executive department, only the most resolute natures can win such victories as these.

Mr. Fawcett, when he met with an accident in his youth by which he lost his sight, was a student with an ardent ambition for public life. A weaker nature would have given up the first fight as hopeless, but with unflinching courage he followed the career he had marked out for himself. He continued his study of political economy by the aid of other men's eyes; trained his memory until he could carry complex tables of statistics as easily as other men could read the figures from the printed page, and achieved great distinction as a university professor and a political leader. So complete was his conquest of infirmity that Mr. Gladstone was the only man who could rival him in Parliament in the exposition of statistical questions.

"I well remember," wrote Mr. Prescott, the historian, "the blank despair which I felt when my literary treasures arrived and I saw the mine of wealth lying around me which I was forbidden to explore." He was virtually blind but with unconquerable patience he went on with his work year after year.—Youth's Companion.

GIVING HERSELF AWAY.

We are perfectly willing to admit that Mrs. Col. Yerger is a fond wife and a mother, etc., but she should not use words that she does not understand. She gave a party a few evenings ago, and Dr. Bitters was present. During the conversation on cholera the doctor remarked:

"I am very much afraid the cholera will spread all over the world, and it may even reach Austin."

Mrs. Yerger thought it would not spread.

"What makes you think it will not spread?" asked the doctor.

"You see, doctor," replied Mrs. Yerger, "some people are more adapted to cholera than others. Now, the French are more adapted to cholera than any other people. They are more choleric than the English. People that are choleric are most sure to get cholera, if there are any microbes floating in the atmosphere."—Texas Siftings.

THE CIRCLE OF CACHETTE

By ROBERT C. V. MEYERS.

"I was just going to see you, madamoiselle," said she. "How warm it is," and she threw back her sealskin cloak. "I've been to five teas. No end of a bore, and now I must rush home and get into a tight gown and go to a dinner and a ball. Not so fine as those functions where I used to meet you in la belle Paris, though. You are so quiet now—which is quite proper, seeing that you are alone here. Do you ever hear from your sweet brother, the compte? No? But I must hasten. I don't know what Mr. Clayton must think of me, for I am always out. I have not seen him for five days. He dislikes society. But then he has his club. Even my brother—you've met him—says there is no repose in me. How can one have it in this whirl? My dear, I came to see you about that kerchief. It is for my pet friend, who will marry Dr. Croll the day after tomorrow. She's æsthetic, you know, sort of silly, but very sweet and faded. Do you think you could have it by tomorrow evening? I'd like to send it around to her not later than that, you know."

They entered the flat together and Natalie made a light.

Then Mrs. E. Platt Clayton caught up the kerchief out of the basket. Cachette's wing feather stuck to it.

At sight of that feather Natalie incontinently broke down, and in the unguarded moment of acute grief told how she had just parted with her bird to some one to whom she owed a great deal, and that she kept this one feather as a memorial of her pet.

"The French are nothing if not sentimental," Mrs. E. Platt Clayton smiled to herself. Aloud she repeated that she hoped the kerchief would be forthcoming the following evening in time to send to Dr. Croll's bride elect, and then she drove home to dress for the dinner and the ball, carrying Natalie's grieved mouth with her to be incorporated in the Watteau plaque representing Ariadne deserted.

Now, Mr. Cumbersome Brown's neuralgia was worse that night than ever before. At least so he said. He always said his present attack surpassed its predecessors and that it would be positively the last one he could stand.

All night long he used strong language concerning Dr. Jobson, his physician, and such of his friends as he could think of at short notice. Being a bachelor he had no women folk to make miserable, for his housekeeper, merely remarking "It's half temper," went to bed.

In the morning it was no better, and Dr. Jobson came and made light of it, which made it all the worse. And there was Cachette on the table warbling fit to break his little throat.

All at once Mr. Cumbersome Brown glared at the songster. "Mrs. Jones," said he, with as much dignity as his flannels would permit, "take that murderous animal away. Its shrieks will split my head open." "They couldn't split it shut," thought Mrs. Jones, and she bore away Cachette, who was thrilling his high H's like one possessed. She carried the cage to the kitchen, which was at the top of the house, in the approved fashion. But Mr. Cumbersome Brown had built the house for somebody else and not himself, and every sound in the kitchen floated dowr the dumbwaiter and spread over the floors below. So he heard Cachette in the kitchen.

"That French girl shall have warning tomorrow," he said. "Then I know what I will do. I caught this cold standing in the street while Fanny Ferguson talked about her Indians and tried to get a subscription out of me. Fanny shall have the Bunker girl's bird; it will remind her of the war yells of the Cherokees in their wild woods."

He wrote a few complimentary words on a card, pressed the electric button and had Mrs. Jones with him in no time.

"This card and that bird for Miss Ferguson this minute," he said.

"It couldn't be the other minute," I suppose," thought Mrs. Jones, and she set about executing the commission, not without envy of Cachette's loud voice and corresponding irresponsibility.

Miss Ferguson, who still looked almost young behind a veil and who was acquainted with the size of the bank accounts of several unmarried men of Brown's age, was sending out circulars begging for coal for the Cherokee Nation when the gift arrived.

"My dear Mr. Brown," she wrote on one of the circulars, "your lovely thought is singing its sweetest while I pen these lines. I interpret its meaning, do you think? I suppose birds have a meaning, a language, as flowers have. What is the meaning of a canary bird? I have always been so practical myself I have given little time to the study of poetry. With you it is different; your houses are frozen music. But come to me and tell me in person the meaning of a gift of a warbling nature. Ah, how I wish my Indians might hear it! I send you a circular. A few tons of coal would be warmly appreciated by the poor, neglected children of the forest and by yours devotedly, Frances Ferguson."

She had Cachette one hour. Then the postman came, and he did not bring her any subscriptions. Loving the Indian as she did she could not fail to be gifted with an active imagination, and she began to think there might be a sinister interpretation of Brown's gift—he sent her a brazen canary instead of offering himself as a golden goose.

Besides, she now recollected that he had said yesterday when she broached the subject of coal for the Chrokees, "What's the matter with the children of the forest burning wood?" quite in paraphrastic emulation of Marie Antoinette's wonder concerning the people who were starving for bread not eating pastry. Surely Brown meant something subtle, he had held off so long as it was and not met her advances with becoming spontaneity.

"Mary," said she in a gratery way to her maid, "that bird is just shoveling gravel down my back till my spine is like a garden walk. I can't go to see old Mrs. Thumbstall today, I'm too busy. Carry this bird to her with my compliments and a headache that has come on suddenly. Tell her to give the little thing away if she doesn't like gravel down her back."

IV.

This is what was said by old Mrs. Thumbstall, who gave large subscriptions to charities in promises for postmortem carrying out:

"Mary, tell dear Miss Ferguson I shall not forget her for this sweet tribute toward brightening up an old woman's life. I am not ungrateful, and those who are kind to me I shall—think of."

When Mary was gone, this is what old Mrs. Thumbstall thought:

"I don't intend to pay Dr. Jobson's bill. I'll send him a little present instead. He ought to have a bird to enliven him in his office and entertain his patients while they wait. I'll tell Fanny it flew away if she ever asks me where it is."

When Dr. Jobson received the gift he was preparing for a most depressing operation, and was looking over his shining instruments preparatory to going to clinic.

"My medicine has been too powerful for Mrs. Thumbstall," he cogitated, "and her brain has succumbed. The first time I ever knew her to do a liberal act. But the idea of a screeching bird in the office to set my nerves on edge! By the way, there's young Dr. Croll—he's to be married tomorrow, and has sent all us old duffers invitations with an eye to presents. He shall have the dickey bird. Thomas!"

"It is the same."

He sent Thomas out for a handsome cage into which he popped Cachette, who was silent and gaped, and the affair under convoy of liveried Thomas went to the house of Dr. Croll's fiancee.

Croll was at the house of his bride of tomorrow when the cage arrived.

"Miserly old hunks!" he said. "Why, Amarylis, he has a thirty thousand dollar practice. He evidently thinks we want our new carpets and papers ruined by canary seed and splashings. I'd rather the boys should think he'd sent nothing than to see this thing tomorrow. Besides, the bird looks sick. I know what I'll do! The Rev. Mr. Cameron's fee won't be any too big tomorrow. He shall have birdie—it may stir him up, and the dropping seed on his bald head be the means of producing a sermon that is not sleepy. Clergymen are fond of the works of nature, any way. It shall go in your name, Amarylis; it shall be a graceful tribute from you for the happiness he confers upon you tomorrow."

You might have supposed that something tickled Cachette when he reached the Rev. Mr. Cameron's, he was so exceedingly buoyant. Indeed, the Rev. Mr. Cameron's docktailed spaniel wailed, and his three cherub faced little boys got out their slungshots.

"I fear it would scarcely be appreciated here," said he. "The boys have the spaniel, and I don't think they will cut his tail any shorter. Then, there are the sparrows, if they desire variety. A gift should go where it will do most good—look at our flower missions, our seashore week for the poor. Mrs. E. Platt Clayton loves beautiful things, being artistic; she shall have this concentrated song."

So the three little cherub faced boys carried away the concentrated song, resolving to have some fun with it before they gave it up.

"Bless his thoughtful heart," said Mrs. E. Platt Clayton when Cachette was brought to her as she dozed over her boudoir fire, tired out from yesterday's five teas, a dinner and a ball. "There's a good man for you! He shall have that plaque for a Christmas present if I get it done in time. 'Ariadne' does not look quite right; I'll make her frock higher in the neck, and call her 'Rebecca at the Well.'"

Just then her brother came in.

"Halloa!" he said. "Where did you get your locomotive whistle?"—for Cachette was not only buoyant, but flamboyant.

"It is rather gritty," she assented. "And I think I know somebody who would like it. John, do you remember the Compte de Boncour's sister?"

"Was she at the ball last night?" asked John with arrested attention.

"At the ball!" she said. "She is not going out. You know whom I mean, the little girl who did that preposterous thing of coming to America to earn her own living rather than marry a marquis with a pedigree a yard long."

"What about her?" asked John, with foreboding quietness. "She's not sick?—and all alone here."

"Well," and his sister told him of Natalie and her sorrow over the loss of the bird she thought she must give away to some one to whom she felt indebted.

"You were at a ball in Paris where she was," she concluded. "She remembers you quite well. She knew you at once when she saw you here that day you strolled in when she had brought some embroidery home to me."

"I remember her," he answered dryly. "And she remembers me, does she? That's not bad taste in her. Tell me a little more about her, I'm quite interested in her bold proceedings. I like bold proceedings—that's what I like about that plaque of yours, 'Washington at Yorktown,' isn't it?"

And now it is time to make a confession, which has been held back till the last moment.

It is worth while to say that Natalie, in her admiration of the ways of these United States, had out-Americaned the Americans. For a year ago in Paris she had seen at a reception in the colony a New York man. He was not presented to her, and apparently did not see her—the truth of it was that he was a plain man, and did see her and admire her vastly, but declined to know her, because her brother made much of a title and family pretensions, and patronized the newness of America.

But after that evening a strange feeling came to Natalie. She knew little about America, thought the combined forty odd states about the size of Paris and New York a small corner. She came to New York in search of the man who refused to be presented to her. Had she not heard how American girls chose their own husbands? And how can you choose a husband if you do not go after him, especially if he will not come after you?

At any rate, she came to New York, and the man was John Abington, Mrs. E. Platt Clayton's brother, who was not a society man by any manner of means, though his sister dragged him to a good many places. Natalie became shy when she found herself near him and saw the foolishness of all she had done. When she was in her poorest flat she realized that she could never be anything to him; that mints of money and the like divided them, though he had become a factor in her life by this time, and——

Well, Natalie's duplex was flaring and doing its best to burst its chimney that night when some one knocked upon her door. She thought that Cachette had done nothing for her, and that M. Cumbersome Brown had sent a gendarme (policeman) to set her out in the street. She saw Cachette in a cage before she saw who carried the cage, and her fears were confirmed. Then she looked at the man who had the cage, and she did not know if she was in heaven or —Paris.

"I told my sister I would stop for the kerchief you are embroidering for her," said John Abington. "It was too cold and too late for you to bring it. And this bird—she said you had given yours away"— But Natalie had darted forward and sprung open the door of the cage and out hopped Cachette, laughing in his shrillest notes.

She caught the bird to her, spread out one of its little wings. "See!" she cried, "a feather is missing! It is the same! Cachette, j'ai bien de la joie de vous voir. (I am delighted to see you.) You have come back to me! It is a miracle; it is a miracle! It was au revoir, and not adieu! Oh, monsieur!" and she began to weep as though her heart would break, edging as far as possible away from her visitor, with whom she was now a little angry as she was also a little angry with innocent Cachette, who fluttered out of her grasp and perched upon the window cornice where he whistled like mad. In an hour John Abington went straight home to his sister. He had heard a wonderful confession, and he had made one not so wonderful. "Amelia!" he said with decision, "I am going to the library to write to the Compte de Boncour, and I wish you to bring Mlle. de Boncour here tomorrow and keep her here with you. Do not ask me anything more now; I am a little rattled. She will tell you every thing when you go after her in the morning, and go early, Amelia. I see you understand. That's square, isn't it?"

It might be square, and in a circuitous way it had become so. For it had been a circle before it had been squared—that is, the circle of Cachette.

THE END.

A Fish That Crosses the Ocean.

The warrior of the sea, the swordfish, is barring the halibut, the largest of the food fishes, the fastest fish that swims and withal the only one that attacks and conquers the whale. Another remarkable fact is that the swordfish crosses the ocean twice each year. No baby swordfish has ever been seen on our coast, and a reward of $100 for one which was caught here a foot or less in length has never had a claimant. Swordfish breed in Mediterranean waters, and nowhere else are young and old found together.

When warm weather comes they go abroad. Crossing the Atlantic the swordfish stops awhile at Newport, Block island and Bar Harbor and returns in the cool of the autumn weather to its home and children. Swordfish average about five or six feet in length and 300 pounds in weight. They are dark above and whitish underneath, and are armed with a hard and pointed sword which projects from their upper jaw and in length equals about a third of that of their bodies.

This sword is a most powerful weapon and its owner does not hesitate to use it either as a means of offense or defense. The swords have been run through dories and ship's bottoms and even through a piece of solid oak five inches thick. Many a luckless sword fisherman has lost his life on account of the quickness and ferocity with which this remarkable fish uses his sword.—New York Telegram.

Inventions and Mining.

More inventions have been made for miners than for almost any other class of men, and there is still a grand field in mining for the inventor's genius. The danger and risk of mining are still great, and it is only through inventions that safety in this work can be obtained. The miner's hats, lights, jackets and implements for work are nearly all patented, and all of the machinery used for blasting the rocks, crushing them and smelting the ore bears the stamp of many geniuses.

At the mouth of the miner's coat and trousers pocket, to resist strain and wear and tear, are small eyelets or metal rivets, which make a large profit for the inventor. The inventor of glass covered lights which can be carried into the mines without igniting the dangerous gases that might be floating around reaps a princely fortune.—George E. Walsh in New York Epoch.

Enthusiastic Copyists.

She—I wonder why it is that the Japanese are so enthusiastic about everything from America. It is said that they are copying us in everything.

He—Until a comparatively recent period the Japanese knew nothing about kissing. They learned that from Americans, and now everything from America goes.—New York Weekly.

Ruskin's Idea of a True Wife.

In his "Ethics of the Dust" Mr. Ruskin concludes a beautiful description of a true wife with these words: "So far as she rules all must be right, or nothing is. She must be enduringly, incorruptibly good; instinctively, infallibly wise—wise for self renunciation; wise, not that she may set herself above her husband, but that she may never fall from his side."

A THANKFUL GIRL.

From the Examiner, San Francisco, Cal.

Miss Lottie Donell lives with her parents at 792 Natoma Street, San Francisco. She is a young lady nineteen years of age, and of prepossessing appearance. She is one of many thousands of young women who are blessed with many personal charms, but who are hindered from an enjoyment of them by a constitution impaired by constant disease. Ever since she was ten years old Miss Donell has been a sufferer from a rheumatic affection of the wrist, and since she was thirteen years of age she has been subject to various female weaknessess which have kept her physical vitality at a very low stage. Thus, as she says, she has been a victim of disease ever since she can remember. When she was a little girl at school she was always placed at a disadvantage with her playmates on account of her frailty of body and timidity of manner. She could never join in any of the more boisterous games, although she always longed to do so.

But the embarrassing conditions of Miss Donell's life have all been eliminated within the past year, and the change is wholly due to the effective work of Dr. Williams' Pink Pills.

"It must be remembered," said Miss Donell in telling of the great relief that Dr. Williams' Pills had afforded her, "that at the time I began taking the pills I had been for years a confirmed invalid. My wrist was swollen out of all proportion by the chronic rheumatism that had long since settled in it. The female complaints from which I had so long suffered had wasted my body away until I was but a mere shadow of my former self and I had really come to think that the brightness and happiness of life was not meant for me. I had not the energy to perform even the most simple of my household duties, and, in a word I was completely 'run down.' I began to take Dr. Williams' Pills while I was in this condition and before I had taken half a box of them I realized that they were doing me good. I began to feel lively again and to lose that lax feeling in my limbs. I felt so happy over the momentary relief that had been afforded me that I resolved to continue taking the pills. After taking several more boxes I was more than convinced of the high merits of the pills, for I was then wholly relieved from the rheumatic pains in my wrist and I had so far regained my vitality of body that I really believed I had never experienced the enervating effects of those wasting diseases which are so peculiar to women. It is a very great pleasure to me to be able to tell my young lady friends of the relief that has been afforded me by Dr. Williams' Pills and I will surely continue to recommend their use to all who are afflicted with the complaints from which I suffered."

Dr. Williams' Pink Pills contain, in a condensed form, all the elements necessary to give new life and richness to the blood and restore shattered nerves. They are an unfailing specific for such diseases as locomotor ataxia, partial paralysis, St. Vitus dance, sciatica, neuralgia, rheumatism, nervous headache, the after effects of la grippe, palpitation of the heart, pale and sallow complexions, all forms of weakness either in male or female. Pink Pills are sold by all dealers, or will be sent postpaid on receipt of price (50 cents a box, or six boxes for $2.50—they are never sold in bulk or by the 100) by addressing Dr. Williams' Medicine Co., Schenectady, N. Y.

There are some cities which would never be heard of were it not for their baseball nines.

$100 REWARD $100.

The readers of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages, and that is Catarrh. Hall's Catarrh Cure is the only positive cure now known to the medical fraternity. Catarrh being a constitutional disease, requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system, thereby destroying the foundation of the disease and giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in its curative powers, that they offer One Hundred dollars for any case that it fails to cure. Send for list of testimonials.

FITS.—All Fits stopped free by **Dr. Kline's Great Nerve Restorer.** No Fits after the first day's use. Marvelous cures. Treatise and $2.00 trial bottle free to Fit cases. Send to Dr. Kline, 931 Arch St., Phila., Pa.

Dr. PIERCE'S Golden Medical DISCOVERY

Cures Ninety-eight per cent. of all cases of Consumption, in all its Earlier Stages.

Although by many believed to be incurable, there is the evidence of hundreds of living witnesses to the fact that, in all its earlier stages, consumption is a curable disease. Not every case, but *a large percentage of cases*, and we believe, *fully 98 per cent.* are cured by Dr. Pierce's Golden Medical Discovery, even after the disease has progressed so far as to induce repeated bleedings from the lungs, severe lingering cough with copious expectoration (including tubercular matter), great loss of flesh and extreme emaciation and weakness.

KIDNEY

Bladder, Urinary and Liver Diseases, Dropsy Gravel, and Diabetes, are cured by

HUNT'S REMEDY

cures Biliousness, Headache, Jaundice, Sour Stomach, Dyspepsia, Constipation and Piles.

HUNT'S REMEDY

ACTS AT ONCE on the Kidneys, Liver and Bowels, restoring them to a healthy action, and CURES when all other medicines fail. Hundreds have been saved who have been given up to die by friends and physicians.

STILL TALKING.

Mr. Depew Tells Why Americans Go to England.

CHAUNCEY INTERVIEWED ABROAD.

He Says it is Because Hotels are not Fashionable, and Many Cannot Afford Cottages.

We have had more American visitors among us this summer than has ever been known before, and still they come. The present American exodus to Europe has surpassed, by a long way, that of the Paris Exhibition year, and it previously stood as the record.

We are charmed to see them all. Their birght womenkind give our great thoroughfares a piquancy which October, alas! will remove. No doubt though some brides will remain, and that is something for thanks, especially on the part of bridegrooms. Happy fellows! They will thank not merely their stars, but the stars and stripes.

I quite forgot when I saw Mr. Chauncey Depew the other afternoon (writes a Sketch representative) to ask if the bachelor portion of Debrett has anything to do with the summer flight here of the daughters of the republic. Why not? Sometimes, you know, our peers and baronets and folk go over to America. But I am sure Mr. Depew would have laughed me to scorn; nay, he would have made a joke of my question.

Why does America come to England so much? More accurately—Why does America come to Europe? I couldn't have gone to a better authority than Mr. Depew for the answer. And, then, he is simply the interviewer's paradise. If Mr. Depew tires of railways and politics, of making eloquent speeches, and telling the best after-dinner stories, of being regarded as a future American President, and so on—if he tires of these things, what a newspaper man he would make!

"Why do Americans come to Europe?" he repeated, turning over a bundle of letters in his sitting-room at the Savoy. "Oh, for several reasons. A voyage across the ocean gives the only complete rest and change which a busy people such as we are can get. That is the great reason. I take my own experience. If I go somewhere in the States for an outing, my telegrams and letters follow me, to be answered."

"So that, really, you don't get rid of the drag of business?"

"Just so. Not only that, but I have to reply to those telegrams and letters without the assistance of my office machinery. I have not the data I require beside me, and I have not the stenographers and typewriters. In every instance when I have tried to find change and rest at home, I have returned to my work within three days. Coming to Europe, you get seven claer days' rest either way, and I can speak very distinctly of the benefit in health to be derived from that."

"What about the relative cost of the two ways of taking a holiday? Does that point come in?"

"Formerly, it was fashionable in America to go to the great watering places and live at hotels. It is not so any more. A fashionable family must have a cottage and must entertain. Accordingly, fashionable people can spend a vacation in Europe at much less cost than they could spend it, say, at Newport or Bar Harbor, two of our favorite resorts. For the man who is not fashionable and wealthy, who does not need to have a cottage and entertain, who closes up his home, and goes to the seaside and lives in a hotel—for him a European trip is, of course, relatively more expensive."

"But he gets a greater return for his money?"

"Quite so. The holiday costs more, but it is better, which brings to me a second reason why Americans come here. To people living in a new country, it is an unceasing delight to visit the cathedrals, the picture galleries—all the historic places of Europe. A younger people must always preserve a deep interest in the older part of the globe, from which they sprang. There is a magnetic power in the associations of ancestry, whether that ancestry is near or remote. A man or a woman likes to visit the localities with which his or her family may at one time have been connected."

"Perhaps we get even more American women visitors than men—not fewer, certainly?"

"I can only remind you that Paris fashions still govern the world, and that, naturally, American women come to Paris for them. Their husbands, their fathers, their brothers, will come with them, or the American girl will come alone, for she can be trusted by herself anywhere in the world. There! I feel sure, too, that she is made very welcome wherever she goes, as certainly, for her own sake, she ought to be. The flight of Americans to Europe every year is likely, so far as I can judge, to grow greater and greater in volume. The bad times in America somewhat stopped it for a few years; but affairs have now re-entered upon prosperity, as witness, for one evidence, the phenomenal passenger traffic to Euorpe this year."

"Now, if Americans come to Euorpe for these reasons, why, turning the question about, don't more Europeans go to America?"

"We have but little to attract them but our scenery, which is unsurpassed—none of those things which the centuries have reared in Europe. We are young people, as I said before, and a young people cannot possibly have the same attractions for visitors that an old people have. Moreover, I find on the part of Europeans a disinclination to undertake long journeys. We Americans think nothing of the trip of 3,000 miles across the Atlantic. However, I have little doubt that the amount of European travel to America will, in course of time, greatly increase."

"A personal word, Mr. Depew, to wind up, if I might? You have noticed the mother-in-law story that your name has been giving wide circulation to in the English papers?"

"You mean the story of the young and newly-married friend who wrote me for a railroad pass for his mother-in-law, in order that she might visit the happy pair. Oh, yes; it's quite true. I marvel that you should have doubted it. The detail that the return portion of the pass must be used on the third day seemed to be most important. It had to be used on that day; there was no help for it. I have not had a letter of thanks from my young friend yet on the head of the return date for that pass; but, no doubt, it's among the bundle of letters and telegrams which I have missed by coming away to England. Now, there's another story you may have read, and not a bad one, either."

"Well, how does it run?"

"I read it in one of your papers since I came to London, and it's to this effect: When Jenny Lind first visited America, a telegraph boy handed her a elegram. She was so much pleased with his intelligence that she asked him if he would like to hear her sing, and gave him an order to the opera. Years afterward, the tale goes on, a gentleman called upon Jenny Lind in England, and asked: 'Do you remember giving an order in Albany, in America, to a telegraph boy to hear you sing?' 'Yes.' 'You see that telegraph boy before you. I have climbed the ladder of success; I am now president of the Chicago & Northwestern railroad, and my name is Chauncey Depew.'"

"Yes, it's a pretty story, Mr. Depew. It's so natural, and truthful-looking, too."

"A delightful story, only it contains four errors. I was never a telegraph boy; I never saw Jenny Lind in America; I never called upon her in England; I was never president of the Chicago & Northwestern railroad."

I thought it a great pity that a good story should be spoiled in this way.—The Sketch.

A LEAD PENCIL WITH A RECORD.

In the splendid cabinet of J. T. Fillmore of Lawrence county, S. D., among other curious relics and specimens, is an old-fashioned lead pencil, three-quarters of an inch long, that was carried through the War of the Rebellion by Major J. B. Fairbank, who contributed it to Mr. Fillmore's collection with the following "biographical" sketch:

This pencil is a veteran of the Civil War. When it enlisted it was round and of full length. When the war was over it was, like many another veteran, "badly used up." During its service it campaigned in dust and mud over the hills and plains of Maryland and Virginia, through the swamps of Mississippi, across the mountains of Kentucky and East Tennessee, and again through Virginia from the Wilderness to Appomattox. It has watched upon the picket line in daylight and in darkness, in heat and in cold, in rain and in snow. It has taken part in many skirmishes and more than half a score of general battles, and in addition it went through the siege of Petersburg, and was engaged in several of the assaults upon that stronghold. With it for eight months, while the owner was First Sergeant of his company, he kept the daily record and report of the company. It wrote the number and the name of those on "detached service," of the "absent with leave," of those detailed for the ordinary duties of the camp, or, occasionally, for some special duty, perhaps the most difficult known to the soldier; of the sick in quarters, and the number present for duty. At the roll-call after battle it has noted the names of men as "killed in battle," "wounded in battle," "died of wounds," "died of disease," "discharged on account of wounds received," disease contracted in the line of duty." In its humble way it has written its humble page in the history of the most eventful epoch of all time.

BUILDING BETTER WARSHIPS.

The success of our ship builders in turning out first-class men-of-war has stimulated the building of merchantmen, and with every prospect that a few more years will see the United States flag carried to every port, as it once was. The decline of commerce carried in American bottoms was not due to lack of good seamanship and technical knowledge on the part of our sea captains, nor to the fact that we lacked in ingenious appliances for expediting the handling of cargoes and the ships themselves, but to other causes. Americans have always lead in ingenuity, and this fact stands out boldly in the results obtained in our battleships, cruisers and gunboats. Notwithstanding the fact that England has ever bent all her energy toward the securing and production of the most powerful warships, we have at a later day come into the field and taken advantage of all that she has done, and what is better, improved upon it. The battleship of even but twenty years ago has been revolutionized, and in view of this it is perhaps well that we did not at that time attempt to build what was then a modern navy. Facts go to prove that we are now able to beat the English in their own special field—that of building warships.—Los Angeles Herald.

Sleeplessness is one of the greatest dangers to health.

CURIOUS RELICS.

A Strange Race Heretofore Unknown to Scientists.

INVENTED THE GAME OF NINE-PINS.

They Used Ivory Combs, Painted Their Faces, and Rowed in Huge Galleys Without Sails.

The remains of a new race of people have been discovered in Egypt. The race is not by any means new in the sense of being recent, but its existence has been unknown to modern science. Prof. Flinders Petrie, the famous British Egyptologist, is the happy discoverer.

This race sprang up and probably died out in ancient Egypt thousands of years after the civilization of the Egyptians proper had been in existence, but the respectable antiquity of five thousand years is credited to it. What makes it peculiarly interesting is that it possessed a civilization of its own evidently distinct from that of the Egyptians, and one which was well developed in certain directions.

The ground where Prof. Petrie made his discoveries is in the Nile Valley, between Ballas and Nagada, about thirty miles below Thebes. The last named city was the place of origin of the Twelfth or Theban Dynasty of Egyptian kings, a comparatively parvenu family, who flourished about 2500 years before Christ. Egypt, which had already passed through a large variety of civilizations, began life anew under this dynasty. The foundation of Thebes is to a great extent enveloped in mystery. That the newly discovered race has anything to do with it seems a possibility, but that idea is not apparently entertained by Prof. Petrie.

The ruins of Thebes are the most extensive in Egypt and the region has been searched with the greatest industry by archæologists and vandals for many years.

The Nile flows through the ruins of the ancient city, dividing it into four principal quarters, Karnak and Luxor on the east bank and Cournah and Medinat Habu on the west bank. Between 1500 and 1000 B. C. Thebes attained its greatest dignity. It then supplanted Memphis, the ancient capital of the Pharaohs. The local god of Thebes was Amen-Ra or Jupiter Ammon, representing the force of the sun, who became the ruling deity in Egypt.

Thebes was filled with magnificent temples and palaces, to which additions were made as late as the second century A. D. by the Romans. It was enriched by the spoils of Asia and Ethiopia. Homer described it as the city of a hundred gates. In the Persian conquest of Egypt Cambyses obtained a spoil of $1,000,000 from the city, and greatly contributed to its downfall.

Gournah, one of the quarters of Thebes, is the palace of the Memnoneion, containing a statue of Rameses II. weighing 887½ tons. In the same quarter is the Vocal Memnon, or Colossus of Amenophis III., supposed by the ancients to emit a sound at sunrise. The temple of Karnak is of bewildering extent. The great hall is 170 feet by 329, and has a central avenue of twelve columns sixty feet high and ten in diameter.

Thebes is now populated exclusively by Arabs, who guide visitors through the ruins and have been engaged for several generations in disposing of all portable antiquities.

Prof. Petrie made his discovery at a spot on the border of the desert, three miles from the Nile, on the west side of the river. He was no doubt led to choose this locality for his operations by the fact that it had apparently been in some past age an agreeable dwelling place. Thebes and the whole country for miles around are known to him by heart.

The remains were found on the side of a plateau about 1,400 feet above the river, which in some past age reached to that height. Its volume, it has been calculated, was then fifty times greater than it is now. The place of the discoveries was therefore originally a river bank.

The date of 3000 B. C. has been assigned to the remains by Prof. Petrie. That would place them between the Seventh and Ninth Dynasties, a period of great trouble and confusion in Egyptian history. It has been conjectured that the new people were of Libyan origin, but there is no authoritative scientific verdict on the subject.

The new people did not embalm and mummify their dead, as did the Egyptians, but buried them in a sitting position, as if to help them to rest.

The discoveries include skulls of the new race, with the hair still remaining; a vase with a galley, hills and ostriches painted on it; a carved figure with tattooing marks on the body; another carved figure showing the type of art followed by the new race; a portion of an ivory comb, with a human head carved on it, another ivory comb; a piece of pottery in the form of a bull, supposed to have held charcoal and to have been used as a foot-warmer; a slate palette, used to grind malachite, with which these people used to paint their eyes and faces; a porphyry vase, hand made, pots on which are marks supposed to be the nearest approach to writing known by the new race, and a game of nine-pins.

The briefest consideration of these things shows that the new people were somewhat advanced in certain directions and very primitive in others.

The very neat game of nine-pins could hardly be improved upon. It is a remarkable testimony to the stupendous antiquity of skittles, bowling and kindred games.

The pins and the ball are of syenite, a kind of rock. The latter are about the size of peas. They had to be rolled through a doorway composed of three strips of stone, which would be knocked down and make a throw worthless if the ball were not aimed with precision. The pins in the English game of skittles are still set up in the same way as these.

These ancient people could hardly have pretended that nine-pins in this form was an athletic exercise. They played for the sake of the skill to be displayed, and also probably for the drinks and the stakes. They were, no doubt, a sporting people for this sporting implement is the most skilfully devised article left by them.

Although the human remains were not embalmed, hair was found on several of the skulls. That hair is 5,000 years old! It is judged from the teeth of the combs that the hair was worn long, but there is not much of it left now.

The shape of the skulls will, of course, be useful in helping to trace the origin or affiliations of the new people. They are large at the top, the foreheads are high and the general development is fairly high, although the lower part of the face is somewhat prognathous.

From the condition of many of the bones Prof. Petrie was forced to the disagreeable conclusion that the departed race indulged in what he calls "ceremonial cannibalism." He does not infer that they made use of one another as a regular diet, but that at a funeral the guests partook of certain portions of the deceased. Apparently they cooked the meat on the bones and then restored the latter. This was done, no doubt, with a solemn purpose, possibly a religious one. The same custom among other races is based on the idea that the virtues of the deceased are imparted to the eater, and that his memory is most effectively preserved in this way.

The discovery of combs is one of the facts which show a curiously unequal development of civilization. Certainly the use of combs indicates a considerable amount of renfiement and cleanliness. There are many Oriental races to whom they are unfamiliar today.

The combs are of ivory, well made, and of a convenient shape. One of them, which has a three-branched ornament at the top, would not look out of place on the head of a Broadway girl. Another, from which the teeth are missing would be more remarkable and more effective. The top or handle bears the head of a very peculiar-looking old gentleman.

Their pottery shows that they did not possess the potter's wheel, which is an important test of the advance of civilization. The pottery found is very plentiful. It is all hand made, but is very accurately formed.

There are a great number of small vases of alabaster, porphyry, breccia and other hard stone. These substances are of course difficult to handle, but all the vessels are very symmetrically made. The curves are perfect.

The new people, it is evident, had great skill with eye and hand, but not great artistic taste. A model of a human figure is the highest artistic achievement which has been brought to light.

It is really a very creditable piece of work and nearly correct anatomically. It represents a well-formed young woman with her arms in the air. She is tattooed all over. Her head, hands and feet are missing, but from her build and attitude it would not be unreasonable to assume that she was a ballet dancer or some other kind of dancer.

In contrast to this is the crude painting on a vase representing a galley on a river. Prof. Petrie explains that it has two cabins and is rowed with oars. There are forty-three oars on a side. The oarsmen are hidden.

It has a mast, but there is no indication of a sail on it. The new people had no knowledge of the noble art of sailing. There is a crosstree on the mast, with some design carved on it which probably served to indicate the name of the boat or that of the owner. The ensign on the mast in this case is apparently five hills. Other galleys depicted on their vases have three and four hills, an elephant, a palm branch and a bow and arrow.

Ranges of hills are represented on both sides of the galley, and three ostriches stride along in one corner, adding life to the scene. This picture is certainly an old master.

Prof. Petrie has come to the conclusion that these poeple painted their faces. Whether this practice was confined to the fair sex is not known, but it is not probable that it was. Man at that early period of history had not grown out of the little vanities which he has now relegated to woman.

The Professor discovered the slate paletes on which they kept their paint. He believes they used principally green paint made from malachite. Taste has somewhat changed in the matter of face-painting since then, but the effect must always be about as pleasing.

Another figure, which apparently represents an old man with spectacles and a pointed beard, is said to show most accurately the art tpye followed by the new race. Its curious resemblance to an aged journalist of some notoriety in New York will be generally noticed.

Many of the vases bear scratched marks, evidently made with a purpose. Probably they indicate the owners of the articles, and are the nearest approach to writing known to this people. This art, as it is understood among more civilized races, was evidently unknown to them.

The condition of the new race was in reality very primitive as compared with that of their Egyptian neighbors. They existed between the seventh and ninth dynasties, or about 3,000 years before Christ. As early as the fourth dynasty, for 3,600 years before Christ, the notation of time, the decimal system of numbers, weights and measures adjusted to a pound of 1,400 grains, the geographical division of the country and the division of the year of 365 days into twelve months and three periods of four months of thirty days were known.

The form of the buildings at that early period indicates a knowledge of geometry and the mathematical sciences. A considerable knowledge of astronomy and chemistry was also possessed, and medicine and anatomy had reached a considerable degree of development at the earliest traceable period of Egyptian civilization.

The art of literary composition existed in the eleventh dynasty, and Cheops himself, the builder of the great pyramid, was an author of renown.

Architecture was one of the earliest and most highly developed of Egyptian arts. The arch was constructed in the eleventh dynasty, eight centuries before it was discovered by the Romans. Columns were in use as early as the fourth dynasty. The symmetric arrangement of the temples, with their rectangular courtyards and halls of many columns and gateways slightly converging towards the apex, was one that for durability has never been equaled by other architects. The masonry is still the wonder of the world.

Sculpture and painting were highly developed, though on conventional lines, and were chiefly adapted to architectural purposes.

In the fourth dynasty the Eygptians were expert with the harp and flute; in the twelfth with the lyre, and in the eighteenth with the guitar, trumpet, drum, tambourine and a host of other instruments.

All these facts, of course, do not detract from the interest which will be taken in the discovery of a new and inferior race which intruded itself on the mother of civilization. Where did this race come from? and what became of it? will be questions that will give Egyptologists food for thought for many a year.

Already a very perplexing feature of Egyptian history is provided by the dynasty of the Hyksos or shepherd kings. This is said to have been established by a horde of nomads from Arabia and Syria who followed the Assyrian invasion of Egypt at the close of the twelfth dynasty, about 2500 B. C.

They gained possession of lower Egypt, ruling through the agency of the legitimate kings, who were shut up in cities and not allowed to get away. Then came a dynasty of six Hyksos kings, called the fifteenth.

The savage shepherds adopted the civilization of the Pharaohs as thoroughly as possible, but were hated by the people. They introduced some gods of their own into the old worship and also left their impress on Egyptian art. The Winged Sphinx is believed to be one of their artistic fancies.

It is calculated that the sojourn of the Hebrews in Egypt from 1300 B. C. to 1700 B. C. took place during the Hyksos domination.

The Hyksos were overthrown by Aahames I., founder of the eighteenth dynasty, and a prince of the ancient royal blood. A period of foreign conquest and aggrandizement followed.

One of the monuments of this period was the obelisk, now in Central Park, which was erected by King Amenhotep II. It stood for fourteen centuries before the Temple of the Sun at Heliopolis. It was removed with the obelisk now in Paris to Alexandria by the Emperor Augustus and there remained for nineteen more centuries.

Whether the newly discovered race has any connection with the Hyksos dynasty, about whose origin there is much doubt, is a qeustion that may be discussed.

HYPNOTIC TALK.

"Now, Wally," said Edgar, with a friendly smile, "I just want to make an experiment. If you make no resistance I think I can hypnotize you. What you have to do is to maintain a passive mental attitude. Try to think of nothing whatever. No, not even of me. Come, try to be serious. There, lean back and make yourself comfortable. So, that will do. Now turn your eye to this light, and don't forget that your mind is to be kept entirely inactive. I will count 60 seconds by my watch."

The young lady scrupulously obeyed these instructions. In twenty seconds her eyes twinkled, after forty they closed completely.

"Ah! I knew I should do the trick!" Edgar triumphantly exclaimed. "Now, Wally, I command you to reveal to me the secrets of your heart. Whom do you love? Tell me, I say!"

An expression of reluctance flitted for a moment over the maiden's face; then she began in a monotonous drawl:

I love Edgar P. and—"

Yes! Yes!" exclaimed the enraptured Edgar. Go on; tell me all the secrets of your heart!"

I love Edgar P.," she went on in the same tone, and I would love him still more were he not so stingy. I should like to go to the theater twice a week, but he only takes me there once in three months. I wanted diamond rings, and he gives me rings with cheap stones. I should like to have gone for a drive once or twice a week, but he never invites me. When I walk out with him and feel hungry he never thinks of treating me to oysters. When I—"

Enough!" the young man cried. Wake up! I command you!"

And so saying he made a rapid exit, without waiting the result of his command.—Das Neue Blatt.

STORY OF REAL LIFE.

What Electric Research Will Soon Bring Us.

HAVE HARNESSED THE LIGHTING.

Now that Niagara is in Chains, the Next Step will be to Put a Bridle on the Sun Itself.

"The starting of the great electical plant at Niagara last week may be said to open a new epoch in human progess," said Dr. Emile Berliner, the famous electrician. "Power is to be furnished from the falls eventually at any desired point within a radius of 100 miles. It will light the city of Buffalo, and I should not be at all surprised if at a future day New York city were illuminated by its means. Water power will certainly be employed before long on an immense scale for the production of electricity. Take Switzerland, for example, which has unlimited water power. Twenty years hence all of the electricity utilized in that country will be obtained without burning any fuel.

"The greatest problem before electricians today is the transformation of heat into electricity direct. As things are now, fuel must be burned to make steam; the steam works an engine; the engine operates a dynamo, and the dynamo generates the current. This elaborate process involves an enormous loss of energy. When the problem I speak of has been solved life will be easier. Biddy will get up in the morning and start a fire, the heat of which will fill a series of storage batteries. These batteries, without intervention by human hands, will do most of the work of the household during the day. They will light the dwelling, keep the machine fans revolving, run the sewing machine, and control the family elevator and the dumb waiter.

"When we know how to transform heat into electrcity direct we shall be able to use the sun's rays for manufacturing the strange and potent fluid. Think what that will signify! Power will then be as cheap as sunlight, and nobody will be obliged to do mechanical or bodily labor. Such an epoch will surely realize the long-hoped-for milennium. The time is already near when steam engines will be done away with, revolutionizing the economy of mankind. Even now there is a tendency to replace belting in factories with separate small motors for each lathe or other machine, a dynamo in the engine-room supplying the current. Thus an important saving of power is accomplished.

"We do not need to look to the future for electrical wonders. The present is giving birth to marvel after marvel. Successful experiments have been made recently in telegraphing between ships several miles apart at sea. They represent the infancy of what is destined some day to take the shape of an important and useful invention. The idea is expressed by assuming the case of two vessels that are sailing parallel courses, separated by a distance of five miles. Each of them drags behind her 5,000 feet of wire cable. Under these conditions the ships are able to exchange telegraphic messages. In a similar fashion Preece, the English expert, has sent signals from the mainland to an island four miles away, wires being stretched along the shores.

"The principle involved is easily explained. I suppose that you know why signals over a submarine cable are much slower than on land. It is because the water surrounding the cable retards the current. The current rushing through the wire produces a counter-current in the surrounding medium. If the cable could be floated on the surface it would work as well as on land. As it is, it would be easier to telegraph to the moon than to Europe, if a connection by wire could be made. The same point is inovlved in signaling between parallel wires miles apart; a signal sent over one makes a counter-current over the other. If a wire were run from Newfoundland to Florida, another wire being stretched from Scotland to the Pyrenees, signals sent over one would be recorded by the other. Thus it would be practicable actually to telegraph across the ocean without any connection by wire.

"It is slowness of signals by submarine cable that makes the service so costly. How about telepohning beneath the ocean, you ask? Such a thing is out of the question. It is not possible to send a telephone message through more than twenty-five miles of water and make oneself understood, unless an extremely heavy wire is employed. The difficulty is due to the retardation of the current, as in the other case. A telephone line has been established between London and Paris, across the bottom of the English Channel. Merchants have found it much more economical than the telegraph. I understand that, to save time, professional talkers are employed to transmit the messages. Such an expert can talk at the rate of 200 words a minute, and thus a letter of 1,000 words may be sent at the expense of the hire of the instrument for five minutes. A stenographer at the other end takes down the letter, which is delivered by a messenger to the person addressed.

"The long-distance telephone overland has ceased to be regarded as extraordinary. People talk from Chicago to Boston without thinking of the marvel of it. Before very long New York and other Eastern cities will be connected with San Francisco by telephone. There is no difficulty about that, save that the establishment of such a trans-continental line would require a good deal of capital, mainly because the copper wire employed would have to be very heavy and copper is costly. The greater the distance, the heavier the wire must be. The next step in the development of the telephone will enable a number of persons to talk over the same wire simultaneously and by this means the cost of long-distance telephoning will be much reduced. Experts are working on this problem now.

"The Bell Company spends $100,000 a year for experiments. In its Boston laboratory thirty experts are constantly engaged in working on telephone problems. An invention that is even now approaching perfection is the theatrophone. This contrivance will make it possible for people to step into a public office and listen to grand opera, comic opera, or the songs and funny dialogues of a variety show, choosing among such attractions as pleases their fancy. Of course, such a device may be turned to account as a household convenience, so that the well-to-do citizen will be able to listen to a play or opera without leaving his dwelling. Concert music will be on tap in private houses at a cheap rate per month, and one can hear Sousa's band or the finest vocal performances in the study or drawing-room at home by turning on the proper switch.

"Prof. Trouvelot, the astronomer, has recently observed sounds in the telephone corresponding to explosions of hydrogen in the sun. Such explosions are frequently to be seen through the telescope—catastrophies on a gigantic and appalling scale, the smallest of which would suffice to wholly destroy a planet the size of the earth. Simultaneously with each solar explosion, as the sun to the earth. Just eight minutes after each solar explosion, as reported by Professor Trouvelot, a peculiar crackling sound is heard in the telephone. Electricity, you know, has the same velocity as light. In fact, the two are supposed to be closely related. This idea is confirmed by experiments of Tesla, who produces in an open room what looks like a gas-jet, though it is nothing but a discharge of electricity from a metal point, generated by a current at a high rate of alternation.

CITY UNDER THE SEA.

The city authorities of Rovigno, on the Peninsula of Istria, in the Adriatic Sea, have discovered, a little south of the peninsula, the ruins of a large town at the bottom of the sea. It has been observed for some years that fishermen's nets were sometimes entangled in what appeared to be masses of masonry, of which fragments were brought up from the sea bed.

Then a diver declared that he had seen walls and streets below the water.

The city authorities decided to investigate. They sent down a diver, who, at the depth of 85 feet, found himself surrounded at the bottom of the sea by ruined walls. He says he knows they were the work of man. He is a builder by trade, and he recognized the layers of mortar.

Continuing his explorations, he traced the line of walls and was able to distinguish how the streets were laid out. He did not see any doors or window openings, for they were hidden by masses of seaweed and incrustations.

He traced the masonry for a distance of 100 feet, where he had to stop, as his diving cord would not permit him to go any farther. He had proved beyond a doubt that he had found the ruins of a once inhabited town which, through some catastrophe, had sunk to the bottom of the sea.

Some people think that they can identify this lost town with the island mentioned by Pliny the Elder under the name of Cissa, near Istria. This island cannot now be found, and it is thought by the Baltimore Herald that the submerged town [may have been a settlement on the island that so mysteriously disappeared.

LEFT HIM IN GREAT DOUBT.

She was probably what is technically known as a "summer girl." She looked like one in her yellow dimity gown. At any rate it was summer and she was a girl. She sat on the bluff overlooking the lake. She had with her a young St. Bernard whose tawny coloring harmonized beautifully as she perfectly well knew with the pale yellow of her frock.

Down on the beach was a young man with a couple of collie pups. He began to whistle to the summer girl's dog, and the dog started up. The young girl laid her hand on his collar. The young man whistled and kept on whistling to it. The dog struggled. The girl let him go. It would have been undignified to try to hold that squirming puppy any longer. None the less the girl was irritated. The dog was decidedly becoming to her and she wanted him.

Presently the young man climbed the bluff, the three puppies frisking up ahead of him. He stopped to speak to the girl and wondered at her coolness. She managed to get her hand once more on the collar of her own beastie. The young man and his dogs departed. The girl's dog insisted on going with them. The young man, noticing it, called back: "What's the matter? Won't your dog stay with you?"

In the sweetest tones the answer came: "It doesn't matter. I know he's perfectly safe with you and the other puppies."

And the young man is still in doubt as to whether he should be pleased or otherwise.

When General Lafayette was on his last visit to this country two young men were introduced. He said to one: "Are you married?" "Yes, sir," was the reply. "Happy man!" remarked the General. He then put the same question to the other who replied: "I am a bachelor." "Lucky dog!" remarked the General.

INYO INDEPENDENT.

W. H. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY, NOVEMBER 8 1895

Eastern papers are discussing the question whether pugilism is brutal. Judged by the jawbone work of Corbett and Fitzsimmons an answer in the negative may be confidently given.

A Boston girl who married a Chinaman thinks she has done as well as Miss Consuela Vanderbilt. A Chinaman's ancestry reaches away back of an Englishman's, and all that the Duke of Marlborough has to recommend him is his ancestry.

San Francisco has raised $72,000 towards the $100,000 fund needed to get the next National Redublican Convention, and twenty of the twenty-seven necessary votes. The good work goes on, and the prospects brighten for getting the convention.

Mrs. Maud Booth is giving the Salvation army a big boom in California. She has got President Jordan of the Stanford University, several members of the faculty of that institution and many leading people of San Francisco interested in the cause to the extent of becoming lay members and contributing $5 a year to the cause. The Salvationists are getting a recognized place in the forces of civilization.

The South African gold fields are of commercial importance to California and the coast. They furnish a market for California mining machinery, Oregon lumber, and have so far given employment to over one hundred skilled California mining men at annual salaries ranging from $2500 to $60,000. The predicted crash in South African mining stocks will have no more relation to the prosecution of gold mining than the bursting of similar bubbles on this coast had on the actual business of mining.—[Mining and Scientific Press.

Considerable is asserted regarding the ability of electricity to succeed steam as a transportation motor; but when, as was demonstrated a few days ago, one can leave Chicago and be in New York in time to witness the close of a theatrical performance in that city on the evening of the same day, it must be conceded that the steam locomotive is not likely to become obsolete. An engine and train in a most remarkable run on the 24th of last month, on the Lake Shore and Michigan Southern Railway, between Chicago and Buffalo ran one mile a the rate 92.3 miles per hour.

Much has been said about the morbid curiosity of people who crowd, push and almost fight their way into Judge Murphy's court, where W. H. T. Durrant has been under trial for the murder of Blanche Lamont. While it is true that scenes have been disorderly to the last degree and that well-bred persons have apparntly forgotten nine-tenths of their early training in a mad desire to see and hear the proceedins in this world famous case, it must be borne in mind that they have had extraordinary interest in the matter from the Easter Sabbath when they were thrilled with horror at the frightful belfry discovery, to the present time, and that the interest has grown so intense as to make them unmindful of the rules of etiquette. Is this strange? The man or woman who is not deeply interested in the Durrant case must have sympathies as oblivious to responsiveness as are the bodies of the poor girls who were lured to their death. I cannot look with calm severity upon people who have temporarily lost their heads in attempts to witness the rise and fall of the curtain in this home drama. Surely the must conservative must be stirred out of their accustomed calm in a natural wish to watch the movements and listen to the speech of the dramatis personae. Most devoutly it is to be hoped that San Francisco will never know the like of it again—this tragedy that has aroused throughout the entire community a sensation of personal antagonism against so incarnate a fiend as the perpetrator of this most awful double crime.—S. F. Town Talk.

THE TIME TO IRRIGATE.

It Is a Question Where Experience Outweighs All Rules and Theories.

There is no golden rule telling us exactly when to irrigate our plants. It is a question which the experienced irrigation farmer has to settle, and each individual case has to be settled separately. It is a question where experience outweighs all rules and theories, and the experience has generally to be learned by failures or partial failures.

Nevertheless there are natural laws and facts, a knowledge of which will greatly aid us, and of these a writer in The Eddy Argus considers the following as most important:

When to apply water is governed by the needs of the soil and the plant. The soil needs it all through the winter months. The plant also needs it toward the end of the winter. This much, I think, we may safely decide upon. The moisture felt in the soil from the winter irrigation should be sufficient to start the spring growth. Now, as 75 per cent of the growth of nearly every plant consists of water, it follows that it must be well supplied with this at the time when the great growth is being made. This should be in middle or late spring. Also at this time are our drying winds most prevalent, and the quick evaporation from the leaves has to be met by an equal supply of moisture from the rootlets, and here let me remark that for every cubic foot of water evaporated from the leaves a cubic foot of air has to enter the soil to replace the moisture taken out, and if the air cannot enter freely the moisture cannot come out freely, and the plant will wither or burn, no matter if there are oceans of water below. It is therefore as essential to keep the soil open as to supply water. If a plant appears to want water, examine the soil six inches from the surface and see if it be dry. If not dry, it is probably cultivation that the plant requires.

During the hottest months of summer the plant growth is partly suspended and the tissues are hardening, and it is probable that little if any irrigation will be needed. The fall rains will render irrigation still further unnecessary. After cropping it would be very desirable and I think would pay well to irrigate and plow, leaving the land rough and moist for the winter frosts, except, of course, where it is desired to put in a crop such as oats or rye.

Except for these general rules, it would be misleading to say when to water. One plant can stand and require water enough to kill another plant. A tree may flourish well under a liberal supply of water, but it may not bear fruit. Water enough to rot one tuber may be needed by another. A good deal of experience may be saved, it is true, by a knowledge of botany. If you learn the natural surroundings and climate of a certain class of plants, for instance, you will know more or less what to do in the matter of irrigating them, but the only true way is to study the needs of each individual plant.

Fire Losses on Farms.

It is generally believed that the houses, barns and other buildings on farms are seldom destroyed by fire, but the statistics show that they are very frequently destroyed, generally because there are no adequate means at hand to put out a farm fire when it is once started. One-fourth of the farm fires are of unknown origin, one-fifth are caused by lightning, about one-tenth are of known incendiary origin, one-sixth are caused by defective flues in farm dwellings, nearly 4 per cent are caused by bad stoves or stovepipes, one-eleventh are caused by sparks on roofs; children, kerosene, carelessness with matches, lights in barns and spontaneous combustion cause about 1 per cent each; while the other fires may originate from gasoline stoves, locomotive and steam thrasher sparks, furnaces, fireplace and open grates, smokehouses, ashes in wooden receptacles and other causes.

Farmers usually insure their buildings for full value, but carry little insurance on their removable contents. There are many total losses. Insurance men generally charge a higher rate on barns than on dwellings and discriminate between old and new structures, between well and poorly constructed buildings, between good and bad chimneys, between unincumbered property and that with an ironclad mortgage, between property occupied by the owner and that by a tenant, and between large breeding barns with numerous employees and those which are tended by the owner and his family. The farmer should provide the best possible means for extinguishing fires which may arise on his property. Too much care cannot be taken with all inflammable oils and other materials, with matches, tobacco, ashes and lights.—Orange Judd Farmer.

Here and There.

Alfalfa proved a great success in Nebraska last season.

The western drought has been followed in many sections by want and famine.

Our farmers have more hesitation about feeding wheat to horses than to any other class of live stock.

Millet is used chiefly as a "catch crop" for hay, since it can be sown in spring whenever it is discovered that a seeding of the permanent grasses has failed, or that a hard winter or insects have destroyed the clover. It may be sown when too late to plant corn.

Dishorning cattle is gaining favor in Wyoming.

The three best varieties of tomatoes treated at the South Dakota station were Dwarf Champion, Early Ruby and Early Advance.

The Western Rural announces that an automatic irrigation machine capable of raising 3,000,000 gallons of water per day is something the country has long been looking for, and that the Michel siphon water elevator, the invention of a French hydraulic engineer, meets the want more completely than anything before seen.

FACTORY - SAN FRANCISCO - CALIFORNIA.

ALIAS SUMMONS

IN THE SUPERIOR COURT OF THE COUNTY OF KERN, STATE OF CALIFORNIA.

S. Bachman, Plaintiff, vs. Domingo Etcharren, John Iribarne, Frank Cathery, S. Heineman and L. Bachman, copartners doing business under the firm name and style of S. Heineman & Co., John Doe and Richard Roe, Defendants.

THE PEOPLE OF THE STATE OF CALIFORNIA, send greeting to Domingo Etcharren, John Iribarne, Frank Carthery, S. Heineman and L. Bachman, copartners doing business under the firm name and style of S. Heineman & Co., John Doe and Richard Roe, Defendants.

You are hereby required to appear in an action brought against you by the above named plaintiff in the Superior Court of the County of Kern, State of California, and to answer the complaint filed therein, within ten days (exclusive of the day of service) after the service on you of this summons, if served within this County, or if served elsewhere within thirty days.

Said action is brought to obtain a judgment of this Court for the foreclosure of a certain chattel mortgage described in said complaint, duly acknowledged, verified, executed and delivered by said defendant, Domingo Etcharren to John Iribarne, on the 17th day of May, 1894, to secure the payment of a certain promissory note, or instrument in writing dated May 17th, 1894 for the sum of Four Thousand Dollars U. S. Gold Coin, payable twenty four months after date with interest thereon from date at the rate of one per cent per cent per month, payable monthly, and if not so paid the whole sum of both principal and interest thereof to become immediately due and collectable, at the option of the holder of said note, or instrument in writing, which said note or instrument is writing, after the making, execution and delivery thereof, was duly endorsed and delivered by said John Iribarne to the firm of S. Heineman & Co. and on said mentioned day, said John Iribarne duly assigned said chattel mortgage to said firm of S. Heineman & Co. and afterwards, to wit: on the 29th day of September, 1894, said firm of S. Heinman & Co. for value received, sold, assigned and delivered said promissory note or instrument in writing and said chattel mortgage to the plaintiff. Said mortgage conveyed the following described personal property which said property was at the date of the execution of said chattel mortgage in the County of Inyo, but is now and for more than one month last past has been in the County of Kern and is now as follows: Thirty eight hundred head of sheep marked "D" and having an underbit and overbit on each ear, together with the wool thereon and the increase thereof; also four horses two mules, two wagons and four sets of harness and camping outfit; that the personal property conveyed by said mortgage be sold and the proceeds applied to the payment of said sum of Four Thousand Dollars, U. S. gold coin principal with interest thereon at the rate of one per cent per month from the 17th day of May, 1894 and costs of suit, and in case said proceeds are not sufficient to pay the same then to obtain a judgment and execution against said defendants Domingo Etcharren and John Iribarne, for the deficiency remaining due, and so that said defendants and each of them, and all persons claiming by, through or under them, or either of them, may be barred and foreclosed of all right, title, lien, equity of redemption and interest in or to said mortgaged personal property, and every part thereof, and for such other and further relief as may be just, all of which will more fully appear by said complaint on file herein, to which you are referred for further particulars.

You are hereby notified that if you fail to appear and answer said complaint, said plaintiff will apply to the Court for the relief demanded in said complaint.

Witness my hand and the seal of said Superior Court of the County of Kern, State of California, this 13th day of June 1895.

[SEAL.] F. W. CRAIG, Clerk.

T. M. McNamara, Attorney for Plaintiff.

NOTICE BY CLERK ON APPLICATION FOR DISCHARGE.

IN THE SUPERIOR COURT OF THE COUNTY OF INYO, STATE OF CALIFORNIA.

In the matter of Bertrand Rhine, An Insolvent Debtor.

NOTICE IS HEREBY GIVEN to all the creditors of Bertrand Rhine, the above named insolvent, who have proved their debts, that said insolvent has this day applied to this court for a discharge from his debts, and that Saturday, the 23rd day of November, A. D. 1895, at 10 o'clock, a. m., at the Court-Room of said Court, at the Court-house in Independence, County of Inyo, has been fixed as the time and place for said creditors to appear and show cause, if any they have, why said insolvent's application should not be granted, and he be discharged from all his debts, in accordance with the statutes in such cases made and provided.

Witness my hand and the seal of said Superior Court, this 25th day of October, A. D., 1895.

[SEAL.] D. J. HESSION, Clerk.

Dated October 25, 1895.

P. H. MACK, Attorney for Insolvent.

DELINQUENT SALE NOTICE.

INYO MARBLE COMPANY OF CALIFORNIA.

Location of principal place of business: San Francisco, California. Location of works, Inyo, Inyo County, California.

NOTICE—There are delinquent upon the following described stock, on account of assessment No. 27, levied on the 5th day of July, 1895, the several amounts set opposite the names of the respective shareholders, as follows:

Names.	No. Cert.	No. Sh's.	Am't
I. J. McDonald Trustee	294	5000	$5 00
I. J. McDonald	453	250	25 00
I. J. McDonald Trustee	454	2 23	2 23
Jacob Lotz Trustee	497	4000	400 00

Sheriff's Sale

ORDER OF SALE AND DECREE OF FORECLOSURE AND SALE.

Friederike Rhine, Plaintiff, vs. Eliza M. Hannah, John H. Parish, W. C. Doane and Thomas Crellin, Defendants.

Under and by virtue of an order of sale and decree of foreclosure and sale, issued out of the Superior Court of the County of Inyo, of the State of California, on the 18th day of September A. D. 1895, in the above entitled action, wherein Friederike Rhine, the above named plaintiff, obtained a judgment and decree of foreclosure and sale against Eliza M. Hannah, John H. Parish, W. C. Doane and Thomas Crellin, defendants, on the 17th day of September A. D. 1895 for the sum of Two hundred and forty six 39-100 ($246.39) dollars in United States Gold Coin, besides interest, costs and counsel fees amounting to the further sum of $105.30, which said decree was on the 18th day of September, A. D. 1895, recorded in judgment book 1 of said Court, at page 518, I am commanded to sell all those certain lots, pieces or parcels of land situated, lying and being in the County of Inyo, State of California and bounded and described as follows: The East half of the Northeast quarter of Section Thirty one and the West half of the North-west quarter of Section Thirty two, in Township Fourteen, South of Range Thirty-six East Mount Diablo Meridian, containing 160 acres; together with all and singular the tenements, hereditaments and appurtenances thereunto belonging, or in anywise appertaining.

Public notice is hereby given that on Tuesday, the 15th day of October, A. D. 1895, at 12 o'clock M. of that day, in front of the Court House door of the County of Inyo I will, in obedience to said order of said decree of foreclosure and sale, sell the above described property or so much thereof as may be necessary to satisfy said judgment, with interest and costs, etc., to the highest and best bidder for gold coin of the United States.

Dated the 18th day of September 1895.

A. M. GIVEN, Sheriff.

P. H. Mack, Attorney for Plaintiff.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY the 8th day of March 1892, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise, acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows to wit: Commencing at the South east corner of the south-east quarter of North east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 88-100; thence North-east following the meanderings of the bed of Oak Creek along its North branch to Edwards street, in the town of Independence, thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hannah, deceased, at the time of his death.

Lot Nos. 2 and 4, in Block No. 22, in the town of Independence County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided of in and to that certain mining claim, lead or lode, situate, lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dispirada Lode."

That certain lot, piece or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the North west quarter and the North-east quarter of Section No. twelve (12) and the South-west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South sixty eight and eleven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence North-westerly along a small branch or swale to a point twenty four (24) rods North of the general corner of the North-east quarter and the South-east quarter, and the North-west quarter and the North-east quarter of the North-west quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West, running thence North forty-four and eleven twentieth (44 11-20) rods; thence East eighty (80) rods to the place of beginning, containing thirty acres: Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court. Deed at the expense of purchaser.

WILLIAM L. HUNTER, Executor of the Last Will and Testament of John Allen Hannah deceased.

Order of services until further notice will be as follows:

Independence—Every Sunday evening at 7 o'clock.

Lone Pine—Every Sunday morning at 11 o'clock, except the second Sunday in the month, and the Thursday evening before the second Sunday of each month at 7:30 o'clock.

Fort School House—The second Sunday of the month at 3 o'clock p. m.

Liberty School House—The second Sunday of the month at 3 o'clock p. m.

day in the month at 11 o'clock a. m.

Georges Creek—The first and third Sunday of each month at 2:30 o'clock p m

All are cordially invited to be present at these services.

Thos. H. NICHOLAS,
Pastor.

A thin coat of ice formed on the water here last Monday night.

Bert Rhine arrived home on Thursday's train from a short visit to Bakersfield.

Irv. H. Mulholland returned home last Monday from a two weeks visit to Los Angeles.

J. R. Moffett, as Commisioner, will sell at public auction on Nov. 23rd, at Independence, about 150 head of horses and mules.

The Durrant case went to the jury last last Friday afternoon, and it took the jury just twenty minutes to convict him of the murder of Blanche Lamont.

At the ball to-night the grand march will commence promptly at 8:30. This will be the grandest affair of the kind ever given at Independence, and will be the best attended.

Mr. John Fiehman and wife, Thos. Boland and J. A. McKenzie came up from Keeler last Saturday. Messrs Boland and McKenzie returned Sunday and Mr. and Mrs. Fiehman the next day.

We regret that, owing to ill health, we are unable to give as full a report of the Institute proceedings as the importance of the occasion warrants. The good effects of the affair will be better appreciated the more they are understood.

Scott Broder is at work on a run of ore for Tim Madden at his arrastra at Fish Spring. He will work about thirty tons which Tim expects will go about sixty dollars per ton. Mr. Madden is a hard worker and merits every success he may meet with.

Professor Search arrived here last Tuesday to take part in the Teacher's Institute and departed for his home at Los Angeles to-day. State Superinten- Black arrived Wednesday evening and will leave to-morrow morning. While here both gentlemen delivered a series of lectures, the practical good effect of which cannot be overestimated

The Milton Lyceum

The last meeting of the Milton Lyceum was held Nov. 2nd. The Vice President, Miss M. Gorman occupied the chair

The programme included a large variety of musical selections and declamations, literary paper, essays.

The question of women suffrage was enthusiastically debated on for an hour. The ladies argued with the force of conviction; the gentlemen opposed suffrage on the grounds of long established custom. The jury, consisting of Mrs. Richards of Keeler, Messrs Baker and Ring, decided unanimously for the Affirmative.

The subject for discussion November 16th is: "Resolved: That there is more pleasure in city than in country life.'

CARL WALTER, Sec'y.

MISS M. M. GREGORY,
Teacher.

The Institute.

The gathering of the teachers of the County in attendance at the Teacher's Institute has made this week one long to be remembered by our townspeople. A short entertainment was given on Monday evening to welcome the visitors, and the regular institute work begun at 10 o'clock Tuesday morning.

Miss Lillian Shirley was chosen as Secretary. Supt. S. W. Austin opened the meeting with a few remarks as to the purpose of the meeting and the work to be covered—In closing he introduced Mr. Frank Densmore Esq., Chairman of the Board of Education, who, in behalf of Independence warmly welcomed the teachers. His words echoed the sentiment of all our townspeople. Mr. Austin then introduced Prof. P. W. Search, Superintendent of Schools of Los Angeles, who arrived Tuesday morning from his Southern home to give us his valuable aid during the week. Prof. Search is a teacher of twenty-five years and has taught some 50,000 pupils. In his talks during the week, this gentleman proved himself a friend of every teacher, and above all the friend of every child in our schools. His talk Tuesday morning was a plea for the child, and a warning to the teacher not to treat his or her school as a whole, but to study the individual nature of each child, and to study out a method to best benefit each child. The spirit of the practical Philantrophist was evident throughout his lectures.

The afternoon session began at 1:20 and were opened by a violin solo by H. C. Hampton. Vice-President Shannon acted as president in the absence of Supt. Austin. The first discussion was had by Mr. Janvier, on the subject of "Grammer as an aid to correct speech." Mr. Janvier's paper was followed by a short one on literature by Mr. Moore. Mr. Austin then distributed a number of maps showing the growth of the English language from the Aryan tongue to the present day and gave a few statistics showing the rapid increase of English speaking people during the past fifty years.

Prof. Search then gave a short talk on "Motives," in which he impressed upon the teachers the fact that they must inspire every pupil with a proper motive for good conduct and study—that motive should not be fear of punishment or anxiety for reward or to be placed head of the class, but the fact should be in some way impressed upon the pupil that he is working for his own good and must attain the best self development in order to take his place in the great school of life. This talk was followed by a "round table" talk, with Prof Search in the chair. This is a somewhat novel method of bringing the teachers into touch. A large circle of chairs is formed and a discussion set under way, every teacher giving an opinion, or dropping his mite into the box. At 4 oclock p. m. the Institute adjourned to meet at 9 a. m. Wednesday at the school house.

Tuesday evening an entertainment and lecture by Prof. Search was enjoyed at the Pavilion. The entertainment consisted of a piano duet by Mrs. Nellie Densmore and Miss Maggie Gorman, a recitation by Miss Lilian Shirley and a comic song by Mr. Fred Scott. Prof. Search then followed with a lecture on educational economy which was listened to attentively by the large audience. The gentleman maintained that cheapness in school materials—either in instructor or aparatus—was the most expensive method a state or county could pursue; that real economy consisted in securing for our children the best instructors and enough of them to handle the children well and give each child the individual attention he demands.

The day's work Wednesday morning opened with a prayer by W. G. Dixon. After roll call the minutes of the preceding day were read and approved. It was then moved and carried that all persons holding teacher's certificates in the county, be added to the list of honorary members of the institute. Some very interesting talk followed on work in the primary grades. The discussion was lead by Mrs. Belle McClure and participated in by Miss Maud Truscott and Miss Kate Arcularius. A general discussion then followed in which all the members joined. Mr. Scott then followed with an able paper on history, advising the teachers to keep in view the main purpose of this study, the inculcating of patriotism. This he declared to be the central thought of all history work, and not the stringing together a list of dates and events, perplexing and arduous to the pupil. Miss Eva McGee read a short paper on methods and devices used in history teaching. Then followed an intermission of ten minutes after which Prof. Search made a plea for the "bad boy" or stupid boy of the school. He called attention to the fact that many of our great men, Daniel Webster, and others were not bright boys, by patient directory and noble examples attained their ideals. The "bad boy" on the other hand is usually a quick witted boy, overflowing with an exuberance of spirit, which the teacher must not try to bottle up, but only turn in the right channel.

The afternoon session was commenced by Mrs. Austin, subject, drawing. The lady, with the aid of board work, diagrams, and charcoal work, kept all interested for an hour, and as a result, it is not unlikely that several of those present registered a solemn vow to learn to draw and thereby acquire one of the most valuable aids to successful teaching. W. G. Dixon gave a talk on teaching the natural sciences, geology, zoology, botany and natural history. Chart outlines were shown and methods illustrated. The afternoon was closed by a short address from Prof. Search on "What Constitutes Results." Harmony in schoolroom work was advocated, that is the pupils of all grades working upon the same subject at the same hour. This unity of work undoubledly secures the best results. Both teacher and pupil does better work in this way. The meeting then adjourned until Thursday morning.

A large audience gathered Wednesday evening to enjoy a musical entertainment, and a lecture by Prof. Search. Those who took part in the programme were Mr. Fred Scott and Miss Agnes Chalfant, piano duet; Louella Robinson, recitation; vocal quartet, Messrs Scott, Hampton, Morrris and Stroud. Prof. Search lectured on "Why we should educate," and gave some valuable statistics in favor of the chances of the educated man to those of the uneducated one. Miss Elsie Eibeshutz then favored those present with a vocal solo, and the quartet closed the evenings performance with a comic song. Supt. Austin then introduced State Supt. Black, and invited all who wished to do so to come forward and meet the gentleman.

Thursday morning was taken up with papers and discussions on arithmetic work in the various classes and was ably handled by State Supt. Black; Mr. Shannon; Mr. Hampton; Mr. Moore; Miss Truscott and Miss Shirley. The afternoon was devoted to a talk on "the evil effects of alcohol" by Dr. Howell; a discussion on physiology by Mrs. Rhine and Miss Doss; a few remarks on course of study by Supt. Black; after which that gentleman answered a number of queries made by the teachers. Prof. Morris closed the afternoon with a short talk on the Ideal in Education. This gentleman, the principal of the Bishop Acadamy, proved himself to be an able educator and is inspired in his work by the highest motives.

Coolgardie.

Rich new finds are being constantly reported from Coolgardie gold fields. Coolgardie, Australia, is an accessible point, reached by steamer to Fremantle, thence by rail to Southern Cross and team to destination. The trip to Australia on the fine steamers of the Oceanic Steamship Company via Honolulu, Samoa, and New Zealand is pleasure sailing the day long This line tickets passengers to Cape Towe, South Africa. Map of Coolgardie district and Pacific ports reached by the Oceanic Steamship Company is mailed free to any address by the O. S. S. Co. 114 Montgomery St San Francisco.

NOTICE BY CLERK ON APPLICATION FOR DISCHARGE.

IN THE SUPERIOR COURT OF THE COUNTY OF INYO, STATE OF CALIFORNIA.

In the matter of P. Beyeye and Francois Higata, parties doing business under the firm name and style of P. Beyeye & Co., Insolvent Debtors.

NOTICE IS HEREBY GIVEN to all the creditors of the above named insolvents, who have proved their debts, that said insolvents have this day applied to this Court for a discharge from their debts, and that Saturday, the 7th day of December, A. D. 1895, at 10 o'clock a. m., at the Court room of said Court, at the Court house, in Independence, County of Inyo, has been fixed as the time and place for said creditors to appear and show cause, if any they have, why said insolvents' application should not be granted, and they be discharged from all their debts in accordance with the statutes in such cases made and provided.

Witness my hand and the Seal of said Superior Court this 8th day of November, A. D. 1895.

[SEAL] D. J. HESSION, Clerk.

Dated November 8, A. D. 1895.

P. H. MACK, Attorney for Insolvents.

Notice for Proposals.

NOTICE IS HEREBY GIVEN that sealed proposals will be received by the Board of Trustees of the Taboose School District for the construction of a school house in said District. Plans and specifications can be seen at the office of A. Stecker, Independence, Cal., Inyo INDEX, Bishop, Cal., and W. B. Moore, Tibbetts, Inyo Co., Cal. Said bids will be opened on the 17th day of November, 1895, at 2 o'clock p. m., and the Board reserves the right to reject any and all bids.

W. B. MOORE.
Clerk of Board of Trustees.

Dated November 4, 1895.

MISCELLANEOUS.

NOTICE OF SALE OF REAL ESTATE.

IN THE SUPERIOR COURT OF THE COUNTY OF INYO, STATE OF CALIFORNIA.

In the Matter of the Estate of James Daley, Deceased.

NOTICE IS HEREBY GIVEN, that in pursuance of an order of the Superior Court, of the said County of Inyo, State of California, made on the 26th day of September A. D. 1895, in the matter of the estate of James Daley deceased, the undersigned, the Administrator of said estate will sell at public auction to the highest bidder, for cash, in lawful money of the United States and subject to conformation by said Superior Court, on Saturday, the 30th day of November, 1895, at 11 o'clock a. m., In front of the Court House at Independence in said County, all the right, title, interest and estate of the said James Daley at the time of his death, and all the right, title and interest that the said estate has, by operation of law or otherwise, acquired since his death, in and to all those certain lots, pieces or parcels of land, situated and being in the said County of Inyo, State of California, bounded and described as follows: That certain mine and mining claim of gold bearing quartz, adjoining the Cleveland mine on the south, situate, lying and being on Fish Spring Hill, in the Fish Spring mining district, County of Inyo, State of California, which said mining claim is known as and commonly called the "Mayflower" mine and mining claim, the notice of location of the same being recorded in the office of the County Recorder of said County of Inyo, in Book F of Land, Water and Mining claims at page 201, Records of said Inyo County, said mining claim being 1000 feet in length, And also a mill site consisting of five acres, being all that certain lot piece or parcel of land, situate, lying and being in the County of Inyo, State of California, described as follows, to wit: Corner of the North-east quarter of the South-west quarter of the North-east quarter of Section number twenty-one in township ten south of range thirty-four east Mount Diablo Meridian, containing five acres and with the privelege of running water through the McCarty ditch and also the right to flume said water on to said ground through the McCarty garden for milling purposes.

TERMS AND CONDITIONS OF SALE: Cash, lawful money of the United States; ten per cent of the purchase money to be paid to the undersigned on day of sale, balance on confirmation of sale by said Court.

Deed at the expense of purchaser.

H. H. HOWELL,
Administrator of the estate of James Daley deceased.

Dated October 31st A. D. 1895.

P. W. FORBES and P. W. BENNETT, Attorneys for Administrator.

Adjudication of Insolvency.

IN THE SUPERIOR COURT OF THE County of Inyo, State of Caliornia,

In the matter of George Collins, An Insolvent Debtor.

George Collins having filed in this Court his petition, schedule, and inventory in insolvency, from which it appears that he is an insolvent debtor, the said George Collins is hereby declared to be insolvent. It is hereby ordered that A. M. Given, Sheriff of the County of Inyo be, and he is hereby appointed Receiver of the property of said insolvent, and that upon his giving a bond to the people of the State of California, conditioned as required by law, and in such sum as the Court may order, and qualifying he take charge and possession of all the estate, real and personal of said George Collins, Insolvent debtor, whatsoever and wheresoever situate, except such as may be by law exempt from execution, and of all his deeds, vouchers, books of account and papers, and to keep and care for and dispose of the same until the appointment of an assignee of his estate. All persons having the same or any part thereof (including the Sheriff of the County of Inyo) in his or their possession are hereby directed to deliver said property to said Receiver and all persons owing money to said insolvent are hereby directed to pay the same to said Receiver, and that said Receiver keep the said property, or the proceeds thereof, till the further order of this Court. And all persons are hereby forbidden to pay any debts to said insolvent, or to deliver any property belonging to such Insolvent to him, or to any person, firm, or corporation, or association for his use, and the said debtor is hereby forbidden to transfer or deliver any property, until the further order of this Court, except as herein ordered. It is further ordered, that all the creditors of said debtor, be and appear before the Hon. N. D. Arnot, acting Judge of the Superior Court, of the County of Inyo, in open Court, at the Court room of said Court, in the town of Independence, County of Inyo, on the 15th day of November, 1895, at 10 o'clock a. m., of that day, to prove their debts and choose one or more assignees of the estate of said debtor.

It is further ordered, that this order be published in the Inyo Independent, a weekly newspaper of general circulation published in the County of Inyo, as often as the said paper published before the said day set for the meeting of creditors.

And it is further ordered, that in the mean time, all proceedings against the said insolvent be stayed.

Dated, November 6th, 1895.

N. D. ARNOT,
Acting Judge of the Superior Court.

[Endorsed]

Filed November 6th, 1895.

D. J. Hession, Clerk.

P. W. FORBES, Attorney for Petitioner.

HIS FIRST ELEVATOR RIDE.

If any suburban residents have lost a small and very unsophisticated negro boy during the last twenty-four hours they may get some clew to him by putting a keen-nosed dog on his trail near the west entrance to the Treasury Department.

He was very small, and from his dress and actions could scarcely have ever seen the inside of the city before, to say nothing of a big public building.

His shoes were muddy and dusty, as though he had tramped in from the country, and his cloth cap was of the variety that grows only in the country cross-roads stores, though it had evidently been out of the store for a long time.

His clothes were homespun, and his kinky hair showed evidence of hayseed.

The first that was seen of him he strolled into the Treasury about noon, apparently enjoying the inalienable right of the American citizen to inspect a big public building.

He was evidently somewhat awe-struck by the massive walls and long, dimly-lighted corridors, but he wandered on, and wandered aimlesly into the elevator whereElevator Man Leech, who runs the vertical railway, was sitting in the corner waiting for business to come his way.

Close on the heels of the little negro came a clerk, who hurriedly called, "Second floor," and Mr. Leech pulled the lever, sending the elevator skyward.

The little darky had started with quick suspicion when he heard the rattle and saw the grated door slide out of the wall and lock him in.

But when he felt the floor jump up under his feet and saw the walls drop away outside, he let out a yell that would have scared a wooden Indian, grabbed frantically for something to hold on to.

It was not a momentary fright.

The youngster evidently thought he was being hoodooed or on his way to the haunts of the ever-dreaded night doctor, for he continued to yell ear-piercing shrieks that roused all that end of the Treasury.

He shook as though with the ague, and the kindly elevator man, who had no thought of playing a practical joke on the boy, quickly dropped the car back to the first floor and opened the door.

The sight of liberty seemed to put starch into the youngster's legs, but he never stopped yelling, and, darting out of the door like a jack rabbit with dogs after him, he fled down the corridor and out of the door past the startled watchman, and the last seen of him from the doorway he was still running.—Washington Post.

AIR AS A MOTIVE-POWER.

A test of compressed air as a motive power for rapid transit cars will shortly be made in Baltimore for the purpose of demonstrating the efficiency and comparative cost of this means of propulsion. For this purpose two cars are being built at the shops of Ryan & McDonald at Curtis Bay, and it is expected they will be completed and ready for their trial trip next week. Air compressors for the purpose of charging the cars are being constructed, and will be ready at the same time. The new cars may make their first trips on the Baltimore, Catonsville & Ellicott City Railway. The experiment may also be made on the Traction Company's power houses without trouble. The new cars will be of the ordinary size and dimensions, with the same seating capacity as those now used. The controlling device for the motorman is simple and positive in effect, occupying no more platform space than the ordinary brake handle. All the other mechanism is under the car floor. In process of operation the air is compressed to from 1000 to 2000 pounds per square inch and stored in the station tank. With sufficient storage capacity in the station, the time occupied in charging the cars, either automatically or by hand device, need not take more than half a minute. The storage capacity of the seamless steel flasks or containers in the car is sufficient to operate the car from twelve to fifteen miles or more, according to the pressure. After passing through a reducing valve and being lowered to whatever is desired as a working pressure the air is circulated through hot water, and the mixture of heated air and vaporized water passes to the motors, working expansively. The mechanical features of the motors are substantially identical with those of a steam locomotive. It is said the manipulation of the car is simplicity itself, that it is noiseless, and operates without jars and jerks and is under perfect control at all times. As great a rate of speed as desired may be attaiend, and, besides, compressed air as a motive power is said to stand at the head of the list as far as economy is concerned.—New York Journal.

HOW TO CHOOSE A WATERMELON.

Many people have ill luck in selecting watermelons. They get one which is either too green or too ripe, or of poor flavor. An invariable rule among experts is to judge a melon by its weight, while in some instances the color is taken into account. Many people think that the deep green melon is the best variety. But the weight is of far more importance. If, in lifting it, the melon appears to be light for its size, it is liable to be not more than half ripened and to be dry. If, however, it is heavy the rule generally is fulfilled that the melon will be matured and of a rich and juicy nature.

About a third of the entire population of the world speak the Chinese language or its allied dialects.

THE MAN WHO STAID.

By B. O'NEILL.

I.

"Take care of yourself, old fellow."

"Goodby, Len."

"Take care of yourself, old fellow."

"Let's hear from you when you get home."

"Don't forget us."

"No danger of that, boys, and if any of you ever come to old Richmond, remember I live there, and my mother will be as glad to see you as I shall." The speaker is a young man, hardly thirty, and as he sits in the buckboard taking leave of the little crowd of men who have assembled to bid him goodby, his handsome face and well knit form are such as to attract attention at once. After an absence of years, Len Hawley is going home. To him, as well as to the men who surround him, the parting means a great deal, even though they strive—with that intensely American dislike of exhibiting any emotion—to conceal their adieus under an air of everyday unconcern. After one has seen the days lengthen into weeks, the weeks into months and the months into years with one set of comrades, when it comes to parting, the days long past bring up their memories to pass in review, and while no one speaks of them, all are conscious that they are present.

"Oh, you'll be back again, Len; you can't stay away," says one of the men to whom he has been speaking, more to break the silence that is becoming uncomfortable than for any other reason.

The young man merely shakes his head. He, as well as all the rest, knows that after years spent together this parting will for the most of them be forever. Out of the little frontier mining town many another comrade has gone just as he is going—never to return. Many another who day after day had dreamed of going, as he now is going, lay resting under the sod in the mountains around, whose crests are just beginning to be gilded with the rays of the early summer sun.

"Well, everything is on board, Jose, and you can drive around and pick up Mr. Dunsmier and his wife, and then turn yourself loose." It is the stage agent giving his last commands to the driver.

As the team of four half broken bronchos swings into the street the young man's face smarts and burns at the words he had just heard, and in the embarrassment they cause him he almost forgets to respond to the farewells shouted after him. He feels almost like jumping from the buckboard and rejoining his comrades he has left. He has hardly recovered his self possession as Jose stops his team at a house in front of which are already waiting a man of his own age and a woman some years younger. The man, with much domineering, at last has the trunk, of which he seems so solicitous, placed to his satisfaction in the buckboard, and, with the lady, takes the rear of the two seats. With a crack of the whip Jose turns his team into the road and the weekly mail between Prescott, Arizona, and San Diego, California, has begun its six hundred miles of travel over mountains and across deserts to meet the steamers of the Pacific.

Whether or not the mass of letters and papers piled in the bottom of the vehicle will all reach there, or whether any of it will, is a question. While it is the boast of the contractors that they run strictly on schedule time, they give no guarantee assuring the safe delivery of anything, even of the passengers they carry. All they pretend to do is to run the gantlet. If they get through, they will "bring the mail in on time;" and after waiting without avail an hour for its arrival when it is due it is useless to expect it. Another week will elapse, and then a new driver, driving a new team, will come in and explain just where and when the Indians "jumped and took in" the missing mail, and in confirmation of what he says, as likely as not, he will turn over to the postmaster a mass of rifled letters, so stained and black with blood that the readers will have to puzzle long over them before they can decipher their contents. It is a standing rule, though—one that all drivers are urged to observe strictly—that, if absolutely necessary to lighten the load in order to escape from an Indian attack, the mail bags containing papers are to be sacrificed first, and those containing letters are to be thrown off only in extreme emergencies.

Such is human nature that constant association with danger brings at last a callousness, and while all the passengers who have taken seats on this particular morning may have thought of the dangers in a general way, not one has conceived it possible that his or her fate may be the same as has met those whose graves they so often encounter close by the roadside. Each of the men has prepared for a possible attack by arming himself. Two at least of the passengers—Len Hawley and Mrs. Dunsmier—are thinking how unfortunate the coincidence that has thrown them together to make this long trip in company. As for Mr. Dunsmier, he merely thinks how unfortunate he is to be forced to make it at all. In the past, when Mrs. Dunsmier was simply Mamie Manning, the admitted belle of the little frontier settlement, she and Len Hawley had been lovers. That was before the man who now sat beside her had come into her life, and, as she and the man she had discarded sat together for the first time in months, neither could refrain from thinking of the past—of the quarrel, so trivial in its beginning, that had caused them to drift so wide apart that reconciliation was impossible.

As for Len Hawley, when he had heard of her engagement to another, he had determined to forget her by gathering together the little property he had and beginning life anew elsewhere. It was hardly a year since the engagement that bound them together had been broken, and already, he thought bitterly, she had fallen into the arms of another.

Some said that when Mr. Dunsmier, the rich mine owner, had first exhibited an interest in her, she had sought the opportunity to discard Hawley. Much as the latter may have felt his loss, outwardly he appeared indifferent. He could not believe that she had simply cast him aside for money, and when the plainer spoken portion of the community in referring to the marriage intimated that after all it had been merely a matter of bargain and sale, he would have told them they lied had it not been for showing how deeply the wound still rankled. Of this woman he could never think aught but good. Strive as he would, he felt that he never could cease to love her. He would not blame her for what she had done. Who could tell what her motives had been? Might she not have loved Dunsmier as she had in the past loved him—perhaps even more? He only wished that she would be happy.

As for Dunsmier himself, he had never liked him. In fact, there were very few who did. Selfish, overbearing and unscrupulous, Dunsmier loved money as he loved nothing else on earth. To him it was a god, to be deified and worshiped above all else. It was his boast that with money anything could be obtained, and when he had first begun to visit Mamie Manning, during her engagement to Hawley, his arrogant display of wealth, as well as his ill concealed contempt of those of less means, had incensed Hawley so much that the quarrel that broke the engagement ensued, and Mamie had been pleased to charge it to his jealousy. After that it was easy for her to defend Dunsmier, and then the drifting apart had begun, until she stood at the altar as Dunsmier's bride.

From that day Hawley had determined to leave the country. He had gone for the last time to look at the house which, during their engagement, Mamie and he had planned and of which they had superintended the building. As he went from room to room he thought of the many times they had gone through them together, planning for the future and dreaming dreams that were never to be realized. For the last time he had locked the door, and, taking the key from it, had cast it from him. Somehow he could not bear the thought of giving it into the possession of another. That had been months ago, and the house still stood vacant. As the buckboard passed it in the early morning he unconsciously noted how the six months had changed it, and he wondered if the woman behind him had noticed it. It was to have been their home. For nearly two years it had been the one theme of all others that pervaded their talk, and now—he would not think of it, though. After all it might be for the best. He would leave it behind him as she was leaving it, and in his old home in the east he would strive to forget it.

In the company of the dear old mother, whom he had not seen for years, the memory of the woman who had entered his life only to mar it would in no time pass away. How, though, would he explain to his mother that this woman, of whom he had written so lovingly, who herself had called her "mother" in her many letters during their engagement, was now the wife of another—that, after all, she whom he had thought so true had proved false? He could hardly bear to think of it. Somehow her presence this morning—her blue eyes and brown hair, which he had so often kissed and caressed—had opened afresh wounds that he had thought healed, and try as he would, he was unable to put from him the thought of the love that had once been theirs. He strove to think of home. Would there be many changes to be seen? How glad his mother would be to see him! Thank God! after all the years of absence, he was going back with enough to make her last days ones of ease and plenty. He would never leave her.

She was the one of all the world who would understand what had befallen him, and who would know how to sympathize with him in his sorrow. How good and true had this old mother been to him—so different from the woman who had given him up for the money of the man whose name she bore. Through all his thoughts, though, ran the memory of their courtship. He could smell above the sweet scent of the pine, so heavy on the mountain air, the same faint perfume that had always been her favorite, and which he had grown to love and regard as almost a part of her existence. He wondered how, after all that had passed, it could still find favor with her. To him it brought only pain. In vain he strove to forget it all by listening to the objurgations hurled by Jose at his horses whenever that individual thought he detected any disposition to shirk on the part of any of them.

II.

"Mulas y vacas!" (mules and cows), would Jose exclaim, in his most withering sarcasm at what he conceived to be derelictions of his team; "will you not return anything for the care and love I have lavished on you?"

Whatever the delinquencies Jose proclaims against may be, they are more imaginary than real. The mountains have been left behind, and the road is now in the valleys, where the Spanish bayonet, the flat green leaves of the prickly pear and the sagebrush have taken the place of the pines and the oaks of higher altitudes. The travelers have only stopped twice—to change horses and to eat the noonday lunch. The sun has passed the meridian and is beginning to sink toward the west. The occasional cracking of Jose's whip and the muffled fall of the horses' feet in the heavy dust as they trot along are the only sounds which break the stillness of the desert. Far up in the deep blue of the heavens above a vulture floats lazily, without an apparent effort. It seems so graceful, as it circles, that one cannot refrain from watching it, although the upturned eyes ache and burn with the glare of the summer sun. Heat and thirst and silence. Everything is parched and brown, and the yellow earth, where it is not covered by sand or dust, is baked and cracked in every direction, thirstily waiting for the winter rains that are yet months away. Even the rocks, rough and jagged pieces of lava, are black as if burned with the all pervading heat.

The three passengers sit in silence, longing for the next station, Camp Date Creek, more than ten miles away. It will, at least, be a relief to reach it, if only to refill the canteens that have become so warm that the water they contain has ceased to be refreshing.

Suddenly Jose rises in his seat and looks long and earnestly off to the left, where half a dozen clouds of dust are rising in the air. They are so light that he can hardly tell whether they are only the whirlwinds peculiar to the desert or men on horseback. As he looks, though, in each of the little clouds of dust occasional glimpses disclose a group of horsemen, riding at full speed. He looks again—all are looking in the same direction—and as he drops to his seat and says, simply, "Indios," all know that he is confirming their worst fears.

He stops the horses, and, handing the lines to Hawley, jumps from the wagon. Drawing his knife, he steps to the rear of the wagon, where the heavy trunk, placed there in the morning by Dunsmier, is lashed. As he starts to cut the ropes that tie it to the buckboard, Dunsmier divines his intention and turns on him fiercely.

(TO BE CONTINUED.)

A SPACE WRITER'S SCHEME.

The trade for writing for the press "on space," that is, by the page, column or line, has given rise to many expedients to fill space with as little effort as possible. Many followers of this occupation have shown great ingenuity in getting as large an account of white paper as possible to their credit by making frequent paragraphs in their "copy." A French author who was once employed to contribute a continued story to a newspaper, and who was paid for his work by the line, was in the habit of introducing very frequently such passage as this into his story:

"Have you seen him?"
"I have."
"No!"
"Yes."
"Where?"
"Here."
"When?"
"Today."
"Then he lives?"
"He does."
"Ah!"

The publisher of the newspaper at length rebelled at what he regarded as an attempt to make money out of him by sharp practice. He sent for the writer and said—

"I must have a new contract. We will pay you hereafter by the letter and not by the line."

"But my contract says that I'm to be paid by the line."

"Yes, but your contract does not say that I shall not end the story when I please. If you do not consent, I shall put the words 'The End' at the close of the next installment of your story and print no more of it."

The author pondered a minute.

"Very well," said he, "I will take my pay hereafter by the letter, providing you let the story run on until I have quite finished it."

"It is agreed," said the publisher.

When the publisher came to read the next installment of the story, he found that the author had introduced two new characters who stammered dreadfully, and whose talk ran after this manner:

"C-c-c-c-c-c-c-c-can you not b-b-b-b-break the d-d-d-d-d-dreadful news g-g-g-g-g-g-gently to our m-m-m-m-m-m-m-m-m-master?"

"N-n-n-n-n-n-e-e-e-e-e-e-e-e-ver, G-g-g-g-gaston," murmured the grief stricken Valentine, "I should r-r-r-r-r-rather b-b-b-b-burst upon him s-s-s-s-s-s-s-s-s-s-suddenly with the an-n-n-n-n-n-nou-ou-ouncement, and not prolong his s-s-s-s-sufferings with sus-p-p-p-p-e-e-e-e-ense!"

The horrified publisher saw before him, in this sort of dialogue, the possibility of the indefinite of continuance of a story paid for by the letter, which was little less than a dreadful and terribly costly alphabetical procession. He sent for the author and restored the old arrangement.

As soon as the author again began to collect his pay by the line, poor stuttering Gaston andValentine were overtaken by an untimely fate, and the short paragraphs were resumed.—Washington Post.

AN UPRIGHT MAN.

There is certainly some slight feeling of humiliation in being bent down and obliged to creep along for fear of a snap in the spinal column. It is such a plain show of decrepitude that we feel embarrassed. It is seen every day when lumbago takes a good hold on a stitch in the back. There is very little sympathy for one in such a plight, for it is so well known that St. Jacobs Oil will cure it promptly and that neglect is the cause of so much disability. Why not keep the remedy always on hand and prevent such discomfort?

If you want to give pleasure to the pretty woman, do not talk to her of her own beauty, but of the ugliness of other women.

It Will Pay

To make some provision for your physical health at this season, because a cold or cough, an attack of pneumonia or typhoid fever now may make you an invalid all winter. First of all be sure that your blood is pure, for health depends upon pure blood. A few bottles of Hood's Sarsaparilla will be a paying investment now. It will give you pure, rich blood and invigorate your whole system.

Hood's Sarsaparilla

Is the One True Blood Purifier.

Hood's Pills are tasteless, mild, effective. All druggists. 25c.

PAVING BLOCKS OF GRASS.

A new industry has recently been started in Norfolk. It is a plant for the manufacture of paving blocks out of fibers of grass growing on salt water marshes. The grass is subjected to a heavy pressure and large square blocks come out of the press, when three circular saws take hold of the block and cut it into smaller blocks of about five and a half inches thick, provided lengthwise with long wire. These blocks are then subjected to a bath in three different kinds of oils, which make the fiber supple. The Manufacturers' Record is authority for the statement.

It isn't always lucky to have a horseshoe hung over a door. An Atchison girl was seriously injured the other day by one of these emblems of good luck falling upon her head.

HOW'S THIS!

We offer One Hundred Dollars reward for any case of catarrh that cannot be cured by Hall's Catarrh Cure.

F. J. CHENEY & CO., Toledo, O.

We, the undersigned, have known F. J. Cheney for the last 15 years, and believe him perfectly honorable in all business transactions and financially able to carry out any obligations made by their firm.

WEST & TRUAX, Wholesale Druggists, Toledo, O.
WALDING, KINNAN & MARVIN, Wholesale Druggists, Toledo, O.

Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system. Testimonials sent free. Price 75c per bottle. Sold by all druggists.

It is said that "brains will tell." Sometimes they will and sometimes they will not. Sometimes the more brains a man has the less he tells. It doesn't always answer for brains to tell.

KEEP YOUR WEATHER EYE OPEN.

Fraud loves a shining mark. Occasionally spurious imitations spring up of Hostetter's Stomach Bitters, the great American family remedy for chills and fever, dyspepsia, constipation, biliousness, nervousness, neuralgia, rheumatism and kidney disorder. These imitations are usually fiery local bitters full of high wines. Look out for the firm signature on the genuine label and vignette of St. George and the Dragon.

A Pittsburg girl whose lover is a whitewasher named Kelsey, always calls him "Kelseymine."

I cannot speak too highly of Piso's Cure for Consumption.—MRS. FRANK MOBBS, 215 W. 22d St., New York, Oct. 29, 1894.

An Arkansas lover wrote to his sweetheart: "There is not a globule of blood in my heart that does not bear your photograph."

HIS LATEST DISCOVERY.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted . . . . . Sold by druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

Buy your Cloaks and Fur Capes at actual wholesale prices. Factory, 20 Sansome street, San Francisco—up stairs. Garments made to order without extra charge.

Dr. Ludlum Hill, 1443 Market street, near 11th, S. F.; no charge for extracting when plates are made; old plates made over like new; teeth from $8 per set; extracting 50c; gas given.

FITS.—All Fits stopped free by Dr. Kline's Great Nerve Restorer. No Fits after the first day's use. Marvelous cures. Treatise and $2.00 trial bottle free to Fit cases. Send to Dr. Kline, 931 Arch St., Phila., Pa.

Try Germea for Breakfast.

KNOWLEDGE

Brings comfort and improvement and tends to personal enjoyment when rightly used. The many, who live better than others and enjoy life more, with less expenditure, by more promptly adapting the world's best products to the needs of physical being, will attest the value to health of the pure liquid laxative principles embraced in the remedy, Syrup of Figs.

Its excellence is due to its presenting in the form most acceptable and pleasant to the taste, the refreshing and truly beneficial properties of a perfect laxative; effectually cleansing the system, dispelling colds, headaches and fevers and permanently curing constipation. It has given satisfaction to millions and met with the approval of the medical profession, because it acts on the Kidneys, Liver and Bowels without weakening them and it is perfectly free from every objectionable substance.

Syrup of Figs is for sale by all druggists in 50c and $1 bottles, but it is manufactured by the California Fig Syrup Co. only, whose name is printed on every package, also the name, Syrup of Figs, and being well informed, you will not accept any substitute if offered.

NODS APPROVAL.

All Paris Now Wears Knickerbockers or Bloomers.

PANTALOONS UNIVERSALLY WORN.

Princes and Peasants Assert that No Woman Shall be Unsexed Because She Wears Them.

All Paris is mounted on bicyclette—all feminine Paris is in pantaloons!

My belief is that the artists of any former period, meeting Mme. Casimir-Perier and her contemporaries in pantaloons, would all accord that the dress is esthetically correct; that it suits the machine and becomes the woman, and so completes a harmonious ensemble. For harmony, observe, is the complete word in a country where art is first, last and all.

The dress being worn today in Paris by women on the wheel is of biege wool—that is to say, dust-gray, or the color of the road—and is composed of knickerbockers and a figaro or a blouse. The knickerbockers that last year and before hung out very full at the bottom to simulate a skirt makes today no such awkward pretense, but, refined greatly in line, they grow smaller toward the knee, and still being ample they follow the lines of the figure with much more art. The figaro, under temporary cloud for other wear, has found itself here a precious convenience. In the back it fits the figure, and yet is free to slide up and down from the belt line, like the parts of a cantilever bridge, with every motion of the wearer, and in front it permits a charming melange of chiffon jabots to fall out and below the belt, giving a hint of luxury and fine texture within, temporarily masked. The hat is a sailor with wings, or else an English felt, creased through the middle. There is, perhaps, a white veil; there is a necktie that escapes from beneath a turned-down collar, with a touch of the negligee in the fluttering ends, and it is in gay color either striped or plaid; the stockings are of bright bars or Scotch plaid, and make a color focus to the colorless dress; low shoes of brown leather leave the ankle free.

This dress, as it fulfills the conditions demanded for swift movement through space and rapid exercise of the legs, appears incontestably esthetic; as it is molded admirably to the woman, it would seem without dispute to be feminine. French women evidently agree that it is both, for the cultivated of all classes, bourgeoise, aristocrate and princesse, have adopted it and the sport with unanimous consent. This they would never have done if there were in it any default of taste, for women will not make themselves ridiculous, and Parisian women, with an art critic to cry at them from every corner, would hardly find it possible to make a great mistake.

The taste of Paris has judged bifurcation of the lower garment to be on the bicycle both beautiful and feminine.

It is absurd to say that a woman is unsexed because she displays two legs instead of one. Two legs are natural to all human creatures, and one is made neither masculine nor feminine by their avowal. A skirt, the garment we are habituated to see on women, does not suppose two legs, far less rapid motion with them; it supposes only one; it postulates the inactivity of those who are waited on by others and who are condemned to muscular repose, and was formerly an appendage of kings as well as women. Far from having in it anything essentially feminine, it is neutral; it is a disguise, a domino.

The Parisians saw in the problem of bicycle dress, not an adaptation of masculine dress, but simply a problem of clothing two legs for rapid movement. The conditions were new, but the women were always women.

Modesty in dress varies with climates, but it can nowhere by rights be a synonym for the feminine. Rather, the terms are authentic, and if femininity must be disguised for the sake of modesty to the degree of inconveniencing a legitimate sport it does not appear that we have yet attained the summit of civilization. But instead of being true modesty, is not this reluctance to adopt a useful dress to be set down to the sex egotism that prevails in communities where art is not greatly developed and has not yet influenced the feelings or the needs of the people? It is, then, because we are still educationally defective that we see in the knickerbockers only masculine travesties and translate this idea into the actual dress.

The esthetic merits of the fashionable Paris bicycle dress over the dress with a skirt are to be deduced in part from the outlines it makes and the relations of these outlines to the wheel. The point of greatest importance in any object, esthetically, is the center of its action, and the greatest pleasure to be derived from an object in motion is to see the movement that propels. This point for the bicycle is under the feet of the rider. Here, then, at the feet is the starting point to which all else is subordinate, and it follows that the space about the feet should be kept clear of all drapery, that the movement may be perfectly seen.

This done, it is the legitimate work of art to increase the interest at this point, as by color with light shoes, or with plaid stockings that focus the color of the dress. The next point of importance in the object under consideration is the center of support of the rider. This support lies between the seat and the handles. The seat should appear to uphold the weight, and to this end the width and apparent bulk of the draperies, as shown by the outlines, should lie above the line of support. Thus also an effect of greater lightness and adequacy will be given to the machine. Now a skirt forms in outline a pyramid with apex above the seat and width near the ground, and suggests a dragging weight instead of sustained lightness. It also cuts straight across the center of action at the feet, hiding the movement and destroying the principal beauty of the machine. The trousers, on the other hand, are in perfect accord with the esthetic demands. They leave the mass of the draperies above the seat and the ankles in free play to explain the action below.

These are some of the reasons why it would seem that an unprejudiced French woman—as, say, a former shade of the Bois—coming unforewarned upon rider and wheel, must find the dress ideally correct, and why when we shall finally have adopted the dress and learned in a mechanical way to make it properly, as we will, there will not linger with us a feeling that we have followed an extravagant fashion. It is the difference between generations of inherited art feeling and little or no art feeling at all.

To return to French women. I do not know the present opinion of French doctors on bicycle exercise for women, except it may be judged by the increase of the sport. Four years ago French writers cried out: "No, decidedly it is not a sport for women; it will ruin their health. But today bicycling women are innumerable. In front of the cafes of Buresnes, a village at one of the gates of the Bois, in all that glittering, interminable line of overlapping wheels that take siesta while their owners take refreshment, fully one-half seem to belong to the women, and as many women course the Bois on wheels as men. Whatever result may come of it, the flowing tide has become a maelstrom.

The dress is rough wool all the year round, and for the most part remains a light brown, but fine ladies may course their chateau grounds in more luxurious stuff and colors than taste would wear on the public domain. Rich dress is of dark green or blue cloth, with leather appliques. For the bodice favor lies between the figaro and blouse. For wear with a blouse the latest chic is a belt of elastic fastened with straps of leather, in width from three to six inches, and preferably white or pale gray. It is comfortable, as it gives with the wearer's movements; also its contrast to the darker costume gives character to the blouse dress. An occasional costume has the figaro prolonged into a short basque of some three or four inches depth, but these are inferior in both beauty and popularity to the other two mentioned forms. Stockings are of plaid or other pattern that serves to break up the long lines, or else they are of brown or black.

In country wayside inns and in the pavillions of the park charming pictures are to be seen of groups of two or three veloce women taking their rest. They are in poses of relaxation, their faces are flushed with the cutting wind, and they sip idly their coffee or lemonade all in murmuring of hairbreadth escapes by the way. It is a phase of the times, and the bicycle has entered into the manners of the day.—Ada Cone.

A CLEVER POKER PLAYER.

After all, next to absence of body, there is nothing so desirable in moments of danger as presence of mind.

Young Bigley, the commission merchant, was walking in from a little poker party—he had captured the entire "kitty"—in the western addition about 2 a. m. the other morning, when he observed that he was being followed by a couple of suspicious looking characters who were wearing rubber shoes.

"Great Scott!" murmured Bigley, breaking into a cold perspiration, "if they are footpads I'll be stood up and sandbagged; if they're policemen and I run I'll get shot sure."

But a successful poker player has loads of nerve, so Bigley struck an idea. He quietly made a pad of some letters in his pocket, slipped a pencil behind his ear, and walked boldly up to the men.

"Can you gentlemen show me the house where the bank clerk suicided this evening?" he asked.

"Holy smoke," said one of the highwaymen. "Here we've been following a —— journalist all this time."

And striking Bigley for a couple of cigarettes, the disgusted boodlers pocketed their sandbags and hurried off.—Texas Siftings.

The German Government is considering the advisability of sending a special commission to examine into and report upon the condition of agriculture in the various countries of Europe and the United States. It is not probable that the commission will visit England, but the agricultural attache who has just been appointed to the embassy in London will report upon the position and prospects of English agriculture.

"This is your little sister, Tommy," said the father, showing him the baby; "you will love her dearly, will you not?" "Y-yes, of course," replied Tommy, inspecting the latest arrival, "but it'll cost a great deal to keep her, won't it?" "I presume so." "Yes," said Tommy, with a long-drawn breath; "and when I asked you the other day to buy me a white rabbit, you said you couldn't afford it."

Will B. Smart—Ah, Sharpe, just in time for the debate. (aside). Who have you brought with you? Justice Sharpe—John Johns, a deaf mute friend of mine. Will B. Smart—Good! We will be delighted to have him take a hand in our debate.

AN ODD CORNER.

All That Remains Now of the Bonanza Days.

SAN FRANCISCO'S PAUPER ALLEY.

Queer Characters Wasting Away Their Lives in a Futile Endeavor to Make a Fortune in Stocks.

The saddest of all sad spots in San Francisco is a narrow little by-way that runs past the Pacific Mining exchange, from California street through to Pine street. It is known everywhere up and down the Pacific coast as "Pauper alley," and scarcely a middle-aged stranger ever comes to the metropolis of California, either on pleasure or business, that does not sooner or later ask where is Pauper alley, and what cable cars will land him on Nob Hill. To the newspaper readers of the last generation both localities are well known in connection with the stupendous fortunes that were closely connected with Pauper alley and Nob Hill, accumulated in less than a decade. To the person of philosophic mood there is more abundant food for reflection in Pauper alley than amid the famous mansions of the bonanza millionaires on Nob Hill.

Pauper alley twenty-two years ago was the busiest thoroughfare in the world. The bourse, Fleet street and Wall street are veritable graveyards in comparison with the alley in those days. In the palmy days of the Comstock it was thronged day after day with shouting and excited men, scurrying boys bearing messages here, there and everywhere, and brokers and mining experts rushed back and forth in mad haste lest a fortune would momentarily be swept from them.

Today Pauper alley is as dead and deserted as one of the mining camps that once furnished the material for its excitement. Where the speculators once congregated by thousands and a living throng of humanity passed in an incessant stream from one stock exchange to the other now only a few can be seen, and these stand idly talking over the good old times. All the old manipulators, whose daring deals made them celebrated on 'change in those days and whose faces once were familiar to the denizens of the alley, have passed away or sought other means of livelihood. All that remains now of even a semblance of the bonanza days are the few old human wrecks who still haunt the dark doorways and nooks around the stock exchanges and gamble away their few dimes and dollars with a hopeless yearning for the good old days to come again.

Among them are many old characters whose eccentricities and strange apparel have made them konwn to every broker and business man around that neighborhood. Every one has been given a nickname. One old fellow goes by the name of John or "Cash" Phillips, and his business is the selling of mining privileges on a small margin, no offer being rejected. He was worth at least $220,000 twenty two years ago, and went to Europe one summer with his whole family and four or five servants and several poor mining friends. He blew in $35,000 in six weeks. He lost his all in one speculation in southern Nevada. His long black coat, high water trousers and shoestring watchguard have long made him a familiar sight on 'change, and besides these oddities he differs from his associates in the fact that he usually meets his obligations with good hard cash. That's why they call him "Cash." His method of operating is extremely simple and as a rule sure. For a small consideration he gives a man the privilege of buying a fixed number of shares at a stated price within a certain number of days. The price is usually put at a figure the stock has no chance of reaching and of course Philips makes the premium. The other man gets his profit out of the excitement attached to stock speculation.

Another one of the old-timers is "Jack." People have forgotten his other name. Once he was a heavy operator and dealt in shares by the thousand. He operated several months with Ralston & Sharon. He got over $150,000 from "Lucky" Baldwin in one lick. Now his money is gone and he never speculates, but the old habit still sticks to him, and he comes down every day and watches the others at the hopleess game. One of his eccentricities is to eat tobacco, and he is never seen without a piece in his mouth. If you ask him about a certain stock and the probability of a rise or fall he will tell you that it will go up sure, and then as a sad smile flits across his thin face as if recollection of his own former prosperity, will tell you to follow his advice and—go broke. He is a good-natured old chap, and all have a kind word for him.

One of the most famous "chippers," as they are called, was "Coal Oil Tommy," a little German who burst upon the stock horizon a number of years ago with quite a sum of money in bank. His right name was William Fedocious, but from the first day of his appearance at the exchange he was dubbed "Coal Oil Tommy," from the circumstance that he peddled coal oil among the Chinese and always had his wagon tied in front of his broker's office during the hours of speculation. He was a good customer for the brokers, and it is said that Thomas Atkinson who got most of his business, hasn't smiled since "Coal Oil Tommy" gave up the idea that he was a second Mackay. Tommy made $60,000 in one week in July, 1875, in Belcher gold stock. He lost it all and $20,000 with it in less than two months. He threw himself in the ocean out at the Cliff House, in hope of suicide, but was fished out and kept in jail for a week until he decided to live awhile longer. The last heard of the poor fellow he was tending a billiard table in a Sacramento saloon.

The brokers, besides dubbing the "chippers," do not hesitate to give nicknames to some of their own ilk, and many of these are quite humorous. One of these is "Bonanza" Cohen, who made $1,000,000 once, but only lives in the recollection of it now. "Calamity Bill" is another who derives his sobriquet from always being the first man to inform a victim of a fall in stock, and last is "Windy Dick," who makes more noise than any other two men on the floor when he enters the exchange. On his appearance the members sometimes tie handkerchiefs over their ears or raise a red flag to signify "strong head winds." Probably the best known character around the exchanges is Denis Kearney, the one time sand-lot orator and Chinese exterminator. In 1876 he was the most famous champion of the laborer's rights there was in the United States. It is an open secret that Stanford, Huntington, Flood and Sharon feared his power at that time more than that of any one else. Denis has been a "chipper" in stocks for many years, but his deals lately have been few and far apart.

Of all queer characters that still live in the hope that a fortune is to be made in mining stocks the queerest is the woman speculator. In a row on a long bench at the Pacific exchange a dozen or more of her class can be seen day after day wasting away their lives in a futile endeavor to make a fortune in stocks. No matter if they have money or not, down they come every morning and take their seats, never leaving until the janitor closes the room. Hard featured, untidy, slovenly in dress, they sit through the day whispering among themselves or staring with vacant eyes into the distance and dreaming of the fortune that will never come. Some among them have hardly enough clothing on their backs to keep them warm, yet every cent they get goes into stocks, and where some of them get it nobody knows.

Among them are several who have been noted characters around the brokers' offices for years. The most famous of these is Mrs. Forrester, formerly of London. She seems to glory in her position, and the others look up to her as if she were a veritable queen. Her power was gained through her claims to be a clairvoyant and prophesying on the future of stocks. The gift has not made either her or her subjects rich, but she still has a large following. She intends to quit and go back to England, so she says, when her fortune is made.

Kitty O'Hara ranks next to Mrs. Forrester. Kitty also claims to be a clairvoyant, and she is possessed of a book in which is a spirit cipher. With this she started out once to break Mackay and Flood, but for some reason or other the spirits were not strong enough, and the deal broke them. Since then they devote their energies to selling "sure tips."

Another figure is Mrs. Tracy, better known as "Calico Mary." Mary has played the game so long that one would think she would give up hope, but after twenty-five yeras she still comes around daily.

The "Chippers" and brokers will soon be things of the past, however, and the strange characters that once hung around Pauper alley and the exchanges will only be matters of local history in a few years. They are picturesque, but they will not be missed.—H. G. T., in Chicago Record.

ODDS AND ENDS FROM ABROAD.

While Queen Victoria is at Balmoral portions of the front of Windsor Castle, near the royal library, will be restored.

The yield from taxation in Spain for July shows a decrease of 3,259,105 pesetas as compared with the corresponding month of last year.

Mme. Stambuloff, accompanied by her mother and children, is expected to reside in Dresden for the future. She was educated at Dresden.

Hair dye has become to be considered so detrimental to long life that a Paris insurance company refuses to insure the lives of persons who use it.

There is a rumor current abroad to the effect that the two rival branches of the royal house of Spain are likely to be united by the marriage of Don Jayme, eldest son of Don Carlos, with one of the sisters of young Alphonso XIII.

M. Gerard, the French Minister in Peking, has telegraphed to Paris that the Chinese Government agrees to make reparation and pay an indemnity of 4,000,000 francs for the recent outrages on French missionaries in Szuchuan.

A plaintiff in a London county court declined either to be sworn or to make an affirmation, saying that he had been confirmed in the Episcopal Church and had been taught to speak the truth. Without waiting to argue the judge non-suited him.

A Presbyterian minister in Dunedin, after preaching a sermon on gambling, called upon his congregation to stand up, as a solemn pledge that they would never attend a race meeting; and with one or two exceptions the whole congregation rose to their feet.

The recent admission of twenty Greek students to the Turkish Government school by order of the Sultan is stated to be connected with an intention on the part of the government to appoint them ultimately to administrative posts in Armenia. It is, however, believed that the Armenians would strongly oppose such appointments and would refuse to be governed by officials of the Greek Church.

CARVED HER FATHER.

European Criminologists Studying an Odd Case.

WOMAN'S HORRIBLE CANNIBALISM.

Made the Flesh Into Sausages While Under Maniacal Influences After Reading Swift's Essay.

European criminologists have learned of a most extraordinary case of human depravity, the details of which surpass in horror anything ever recorded even in the annals of cannibalism. At Langwaltersdorf, a village belonging to the possessions of the Prince of Schoenburg-Waldenburg, in the Kingdom of Saxony, a young peasant woman, who lived in a cottage with her father, a robust old man of seventy, killed her parent and cut up the body after the manner the carcasses of pigs are treated. Her name is Anna Jungnitsch, and she is now in custody. Her trial will be attended by the eminent criminologist, Lombrose, and other experts.

One of the remarkable features of the case was the finding in Anna's room of a German translation of Swift's notorious treatise on unhappy Ireland, styled "A Modest Proposal for Preventing the Children of the Poor from Being a burden to Their Parents and for Making Them Beneficial to the Public."

In this infamous essay, printed in pamphlet form in 1729, and since then quoted in thousands of volumes as the last effort of Swift's "genius and despair," the author in all seriousness advocates "that of the hundred and twenty thousand children born annually to Irish beggars, twenty thousand may be reserved for breed, and that the remaining hundred thousand may, at a year old, be offered in sale to the persons of quality and fortune through the kingdom; always advising the mother to let them suck plentifully in the last months, so as to render them plump and fat for a good table."

Swift explains "how many dishes a child will make at an entertainment for friends, and when the family dines alone; he tells of the use of the fore and hind quarters which will be very good boiled on the fourth day," etc.

The copy of this treatise found in the murderess's room, hidden behind an old bureau, was evidently torn from a book of select readings; its pages showed many finger marks, and those passages relating to the butchery were underlined with colored pencil. It appears, therefore, that Anna was incited to the terrible crime by reading one of the classics, a fact that singularly contradicts the notion that all evil information is permeated by penny-dreadfuls.

Anna Jungnitsch as the investigation has proved, murdered her father during the night from Monday to Tuesday in their cottage, which they alone inhabited. On Tuesday and Wednesday she was seen to carry an extraordinary number of pails of water into the house; but, as she was known to be a very cleanly woman, that attracted but passing attention. When old man Jungnitsch had not been seen for several days, inquiries were made of the daughter, who said he had gone away to a near-by village and she did not know when he would return.

On Friday, for some unexplained reason, it was rumored that Anna had killed her father, and witnesses came forward to inform the police that on Monday afternoon she had threatened him for destroying some of her plants in the garden. When the officers came to search the cottage they found the place scrupulously clean. Apparently all the rooms had been freshly scrubbed. The old man's bag of tools was in its place—an axe, a saw and several hammers. They, too, were suspiciously clean.

The officers found Anna engaged in sausage making. She appeared unconcerned and offered the men some of the tasty-looking sausages that were finished. They refused, because policemen cannot partake of refreshments or food in the house of a suspected person.

Langwaitersdorf is a very small place; there is no butcher in the village, the inhabitants buying their meat either in the next town or procuring it by killing some of their live stock. The report that Anna was making sausages and that the meat vat in her cottage seemed to be well filled with pickled pork therefore created talk. The woman had not been to the town of late and the Jungnitsches did not keep pigs. Where did the meat she had boastingly exhibited to the officers come from? The City Judge had all the butchers of the town interviewed. Neither of them had sold meat to the Jungnitsches for months. The Judge then caused the woman's arrest. She was not taken to the station, however, but placed under guard in a room of her own cottage, the Judge hoping that he might be mistaken in his awful surmise. He personally led another searching party through the house. They found a blood-stained shirt and socks behind the rafters of the roof. These articles, it was evident, had belonged to the old man.

The Judge, placing the ghastly proofs before him on a table sent for the supsected woman, who, catching sight of them, had a maniacal fit, and began at once to assault the persons who were guarding her. She is an undersized woman, very thin, almost emaciated looking. She had been in ill-health for many years, yet she fought with the prowess of a professional rowdy. When she was finally subdued and placed in a strait-jacket she made the astounding statement, "I have killed father and he makes excellent eating."

During the fracas a number of villagers had collected before the house and one by one they had penetrated into the impromptu court-room. When they heard Anna's statement they could hardly be restrained from assaulting the woman. The Judge cleared the room and began a judicial examination.

It appeared that the inhuman daughter killed her father before midnight Monday with an ax.

"Did he not offer any resistance?" asked the Judge.

"How could he?" grinned the woman. "I waited till he was asleep."

She removed the body from the bed to the kitchen, which has a stone floor, and caught the blood in a vessel, "for making black pudding." Anna had frequently aided her father in cutting up pigs, and the knowledge thus gained she employed in carving the unhappy old man's body. The terms she used in describing the act were those employed by pork butchers. "Then I cut chine (back bone) with the saw; also the head, but did not open the head," she explained, in a business-like way.

"Then I cut off the legs, which I desired to salt and cure, and removed the heart, kidney and liver. The liver I ate boiled with turnips on Tuesday, and it was as good as kirmess" (feast). "The inner fat, what there was of it (this in a disgusted tone of voice) I have melted down for lard. The rest I cut up in pieces and it is now in the vat, packed in layers with salt and spices."

"On Tuesday I baked three loaves of bread, boiled a lot of sage and minced finely some of the fat and lean meat from the loins and arms, not forgetting pepper, salt and allspice. Those sausages are beauitful, the finest I have ever tasted."

The Judge had heard enough. He ordered that the woman be loaded with chains, according to German police regulations affecting murderers, and taken to prison in town. One more question he put to her, however. "Why did you cut up your father's body after killing him? Was it to hide the evidence of your crime?"

"Well," said the woman, with a grin, "if you had allowed me a few weeks' time, your Worship would have searched in vain for proof, would you have not? I had also read in a book that human flesh makes good eating, and I meant to have all these good things."

A renewed search of the premises proved that Anna had spoken the terrible truth. It seems that she scalded the body after the murder, and after collecting the blood in a vessel. The blood had been partly used for "pudding." The top of the vat was found to be covered with salt, and under it were discovered layers of the flesh in a sauce of salt and spices. Seven sausages made of the father's flesh were also found. Anna had eaten at least twenty pounds of her father's flesh.

SHOOTING AT A BALLOON.

The use of the balloon for dispatch carrying and for military reconnoissance is likely to play a great part in the next war. Its only drawback is the fact that its huge size makes it a splendid target, and the equally damaging fact that, being chiefly a collapsible gas-bag, a shot-hole in any part of its great bulk brings it down. For this reason a good deal of uncertainty has existed in the minds of military men as to the usefulness of the balloon in campaigning.

Recent experiments in Austria, however, are calculated to give great comfort to the aeronauts, and to show that the objection just mentioned is not so great as might at first be supposed. These experiments had for their object the determination of how easy it would be to hit a balloon in the air. To make the task of the marksmen as light as possible, captive balloons were used; that is, the balloons were tethered to the ground by ropes. In one case, such a balloon, at a height of 4265 feet, or more than three quarters of a mile, was fired at from a distance of 4400 yards (two and a half miles) and was struck nine times without being brought down. Another time a captive balloon 2625 feet high, was attacked from a distance of 5500 yards, or more than three miles, and was not brought down until after the fifty-sixth round. In this case a heavy gale made the balloon plunge, and rendered aim very difficult.

Mr. Suarez, Consul-General of Bolivia in London, writes to the Times: "I think it right in the interests of humanity, and especially on behalf of the numerous persons in these islands who suffer so terribly from consumption, to draw attention to the great benefits such sufferers would derive if they would undertake the journey to Bolivia. The air in the reigons of La Paz, Sucre, Oluroo, is so highly rarefied and dry that it kills the bacilli, the length of time required depending upon the stage the disease has attained; patients in the first or second stage would be completely cured after a short sojourn, but those in the third stage would probably have to remain a few years. No doctors or medicine are required, the air being all that is necessary, although an almost complete abstinence from alcoholic drinks is essential. If persons in the earlier stage of the complaint would go without delay they would after a few months be able to return completely restored to health. Numerous persons suffering from consumption are annually sent to Italy, etc., where a cure is hopeless, whereas if they would only undertake the longer journey to Bolivia they would in most cases regain their health."

"Is she intellectual?" "I don't know, but I rather think not." "What leads you to think she isn't?" "Well--er—the fact is, she's pretty."

AT CLOSE RANGE.

The Moon Brought to Our Close Observation.

MAGNIFIED MANY TIMES FOR US,

And at Last we Shall See if She Has Any Queer People on Her—A Frenchman's Hope.

Not only today but in all ages men have been anxiously endeavoring to solve the mystery of the moon. The ancients made her their goddess, and entered upon no new undertakings without first asking her advice and consulting the probabilities of the influence with which even today many superstitious persons endow her.

The lens has long been regarded as the means by which we will be enabled, if at all, to study the moon's mysteries. The only question has been how to make a lens large enough. It seems to have been recognized that there is a limit to what may be called the carrying power of a lens. Alvin Clark of Cambridge, is the man who makes big lenses, and he has about reached his limit.

Two of these record-breaking lenses are in the great Chicago telescope, and two more are about to be set in the recently mounted telescope in the Paris Observatory. A French scientist, M. Deloncle, proposes to use these lenses for a novel purpose. The plan is said to be more than three-fourths realized. It will require glasses of over forty-nine inches in diameter. A famous French lens-maker is at work on these glasses for an instrument which M. Deloncle calls the siderostat.

With this M. Deloncle hopes to interview the moon and to establish once for all whether that interesting and much-discussed planet is inhabited. It will tell us whether the moon has cities, monuments and large buildings and also explain its signals to us, if it has any.

Says a French writer of it: "The invention is an ingenius one and demands for its perfection a man, convinced he is right, having, so to speak, plenty of 'pluck.' It is the natural outcome of all that has gone before, from Metius to Mantois; but it belongs especially to the particular genius of its author, because no one before him, not even the most learned astronomers, had dared to imagine so strange and yet so useful an instrument for stellar observation. It is the cannon of 103 tons, the Eiffel Tower, the Great Eastern of optics. The Siderostat surpasses anything of its kind. It does not even bear any resemblance to existing telescopes.

"The spectators will stand and it will lie, pointing its long horizontal tunnel at a mirror fourteen inches in thickness and weighing 13,000 pounds. The image of the satellite will be reflected, and coming out of the ocular will be projected on a screen upon which two, three, five hundred spectators may see the moon. A magnifying glass will enlarge the image to enormous proportions and a very delicate mechanical contrivance will set the mirror in motion, so that it will follow the apparent movements of the planet. The scheme will be gigantic: it will truly be 'Twentieth Century!' The question arises among the doubtful: Will it be practical? Alter ait, negat alter!

"Unfortunately Mme. Moon the indispensable prima donna of this lunar theater, often disappoints us. In the first place, there will be many evenings when, following in the footsteps of her capricious human sisters, she will decline to come forth from the shadows her cloudy boudoir. Photography may be brought into requisition, and, like the understudies on the real stage, take the role of the sulking primma donna. In which case the siderostat will be vulgarized to the mean part of a huge magic lantern, which misfortune, for the sake of science, it is to be hoped will never transpire.

"No, the real success of this great invention, the only one to hope for, in fact the only one really intended by the inventor, is a purely scientific one. What joy, what glory for him, the new Archimedes, when he shall be able to cry out to expectant humanity, the new Eureka: 'I have found it! I have seen it!! The moon is inhabited!!!' "

At Peukuhl, a small village in Prussia, a farmer died last March. Since then one of his sons has been sickly, and somehow a rumor was started that the dead man would not rest until he had drawn nine members of the family also into the grave. To "conjure" the spell a near relative must open the grave and decapitate the corpse. Accordingly the sick son, armed with a spade, went to the cemetery, exhumed his father's body and cut off his head.

MUCH SMALL GAME IN MICHIGAN.

There is great plenty of small game in Southern Michigan this year, with every prospect of good hunting this fall. The dry summer has been especially favorable to the increase of rabbits and quail. In some regions the quails have bred twice, while because of the absence of heavy rains few young rabbits have been drowned in the burrows.

The occasional contributor seated himself comfortably and replied to the busy editor's civil nod with a pleasant "how d'ye do?"

"Would you have any objection," he said, "if I should drop into poetry occasionally?"

"Not the least," the busy man replied, "provided you don't bring me any of it."—Chicago Times-Herald.

INYO INDEPENDENT.

W. H. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.
FRIDAY, NOVEMBER 15.....1895

The grand jury of Kern county made their report last week, and it shook things up like a dynamite explosion. Nearly every county official is roasted to a turn, the supervisors especially coming in for a fricasseing.

In Massachusetts on Wednesday of last week, the women voted three to one against female suffrage. This will afford a text for Dr. Anna Shaw to tell the women that if they don't want to vote, (which they evidently don't) they ought to be made to want to.

The British lion is snapping and snarling in all directions. Its latest move is to have the Dominion Government to hasten troops to that part of Alaska which is in dispute between the United States and that country. It may go to far in the game of bluff.

Now that the whole Miisisippi Valley has been shaken up by an earthquake, the waves of which went as far east as the base of the Blue Ridge and as far north as the waters of Superior and south as the delta of the Mississippi, our good friends at the East will be less disposed to charge up all seismic disturbance to California. Compared with the late shake-up in the Central and Southern States, we have had nothing worth mention in the way of tremblors in California.

The Cuban leader now comes to the front with the announcement that the freedom of his people is near at hand. He has the Spaniard corralled and will soon gather him in. It was just about time for such a dispatch. The last we had was from the Spanish leader, in which he stated that he was about to crush the rebellion, and that not enough of it would be left in ten days' time to be spoken of. The remarkable regularity with which these for and against dispatches appear is proof of the perfect impartiality of the news agencies in Cuba. But really these peace and war alternations are becoming monotonous.

A paper that is so valuable to all interested in mines and mining, in the buying and selling of minerals and metals, to capilists and wage-earners that it can afford to be absolutely independent and advocate what it thinks for the good of the interests it represents, whether its views are popular or not, is certainly a rarity. The Engineering and Mining Journal of New York is in that enviable position where every one must take and read it whether they agree with its opinions or not. It is a great and valuable paper as any one can see by writing to "The Engineering and Mining Journal, New York," for a free sample copy.

Japan has at last issued her bulletin of intention regarding Corea. She declares that non-interference will be her policy and she calls upon all nations to assume a like attitude. She keeps forces in Corea, she says to preserve the peace only. The Japanese troops in Corea now preserving the lines of communication with the forces on the Liao Tung Penisula will be withdrawn so soon as that peninsula is evacuated. This declaration expreessly disavows conquest, and it will, if sincere, greatly hamper Russian plans. If Japan really means what her bulletin declares, Russia will be short one excuse for invasion of Corean territory. The appeal of Japan in this matter will address itself with great force to other Powers, but that Russia will take sufficient Corean territory to assure the Czar's navy a free outlet to the Pacific at any season of the year may be assumed confidently. It is wholly unlikely now that England will antagonize this movement provided she is permitted to press her demands upon China and enlarge her possessions in that quarter. To accomplish this war will probably be declared against China by the British Government. Russia will then protest and the likelihood of the two great nations becoming embroiled over the matter is therefore strong.

NOT A BRIDAL PARTY.

But the Massachusetts Man Wanted to Know All About It.

They were wandering up and down the waiting room of the Grand Central station, and neither seemed inclined to talk much, although from the glances they occasionally bestowed upon one another it was plain that there was a degree of relationship existing between them. Suddenly the young man left the young woman's side and crossed to the newsstand, where he purchased a paper. Returning, he conducted his companion to a seat.

Hardly were they seated before one of those inquiring individuals who must talk to somebody placed himself in the next seat and eyed them inquisitively, to their visible annoyance. He could not curb his propensity to talk, and thus began:

"Strangers in the city?"

"Yes," said the man shortly.

"Taking a train?" was the next query.

"Yes."

"Maybe you are going my way?" continued he of the inquiring turn of mind.

"Maybe. We are going to Boston."

"Ah, you belong there?"

"I do," was the man's answer.

"Fine city," went on the inquisitive one. "You don't see the papers filled up with divorces and scandals there as you do here. I belong to Massachusetts myself. Worcester is my home, and a divorce case or an elopement is a rarity. You seem to have gone into matrimony recently?" looking at them patronizingly.

"Rather," was the tired response.

"Might I inquire your business?"

"Certainly. I am a detective."

"On your honeymoon?"

"No," answered the detective, folding up his paper. "I'm taking back a prisoner."

"Why! You don't mean to say"—looking at the woman in astonishment.

"I do."

"I thought she was your wife."

"So she is, and my prisoner. To save you inquiry, she eloped with another man the day I married her, and I tracked her here."

"And you are taking her back to justice?"

"No, to marry her. I guess the job wasn't properly done, so we're going to do it over again."

"Is she from Boston too?"

"No. From Worcester."

"Oh!" The inquisitive man said no more.—New York Recorder.

A FAMOUS NOVELIST.

A Graphic Pen Picture of Hall Caine and Something of His Character.

Hall Caine is said to resemble Shakespeare in the keen intelligence of his features and in the intellectual height of his prominent forehead. He possesses a highly nervous organization, and his first novel came near bankrupting him in health. His best work is done after midnight in the early morning hours. He is a native of the isle of Man, a Manxman, and is 45 years old, or thereabouts. Much of his time is spent in travel, when he exerts his powers of observation and gathers material for future use. His home is in the English lake country, overlooking Derwentwater and above the town of Reswick. It is called "Hawthorns."

The novelist is also at times a poet, as he occasionally writes some verses for publication. He has decided religious tendencies, which take the form of investigation. He contemplates writing a life of Christ, and as he excels in terse, epigrammatic sentences his style would be in the direct line of Biblical truths. He is conscientious and painstaking in all his literary methods, and his readers recognize in him one who has sincerity as a superstructure for every romance of which he is the architect.—New York Advertiser.

Meant For the Minister.

A popular minister in Fifeshire, in the good old times, used at Christmas to be inundated with hampers filled with good things. On one occasion an enormous turkey was sent to him by the thoughtful kindness of a neighboring farmer, but as the minister's family had already provided for the Christmas dinner the bird was sent to the market and sold.

A passerby, seeing this fine specimen of poultry, said, "What a splendid turkey! Just the thing for the minister's Christmas dinner!" To the minister it was again sent.

The provident wife sent it again to the market and sold it again for a handsome sum.

Another friend, similarly struck with the splendid proportions of the turkey, purchased it and sent it to the minister. The good woman, not wishing to fly in the face of Providence, said at last:

"It is clear that the Lord means us to have this turkey," and with the approbation of the family it formed part of the Christmas dinner.—Youth's Companion.

A Clever Woman.

The director of a Chicago bank tells about how his wife overdrew her account at the bank last month. "I spoke to her about it one evening," says he, "and told her she ought to adjust it at once. A day or two afterward I asked her if she had done what I suggested. 'Oh, yes,' she answered. 'I attended to that matter the very next morning after you spoke to me about it. I sent the bank my check for the amount I had overdrawn!"

Did, Though.

Policeman (to wheelman, who is riding on the side path)—See here, young man, you can't ride there.

"Can't, eh? Well, you just watch me!" And he shot out of sight.—American Wheelman.

The brooches used in Rome during the first and second centuries very often had a martial appearance. They were fashioned after swords, helmets, battleaxes and bows.

ALIAS SUMMONS

IN THE SUPERIOR COURT OF THE COUNTY OF KERN, STATE OF CALIFORNIA.

S. Bachman, Plaintiff, vs. Domingo Etcharren, John Iribarne, Frank Carthery, S. Heineman and L. Bachman, copartners doing business under the firm name and style of S. Heineman & Co., John Doe and Richard Roe, Defendants.

THE PEOPLE OF THE STATE OF CALIFORNIA, send greeting to Domingo Etcharren, John Iribarne, Frank Carthery, S. Heineman and L. Bachman, copartners doing business under the firm name and style of S. Heineman & Co., John Doe and Richard Roe, Defendants.

You are hereby required to appear in an action brought against you by the above named plaintiff in the Superior Court of the County of Kern, State of California, and to answer the complaint filed therein within ten days (exclusive of the day of service) after the service on you of this summons, if served within this County, or if served elsewhere within thirty days.

Said action is brought to obtain a judgment of this Court for the foreclosure of a certain chattel mortgage described in said complaint, duly acknowledged, verified, executed and delivered by said defendant, Domingo Etcharren, to John Iribarne, on the 17th day of May, 1894, to secure the payment of a certain promissory note, or instrument in writing dated May 17th, 1894, for the sum of Four Thousand Dollars, U. S. Gold Coin, payable twenty four months after date, with interest thereon from date at the rate of one per cent per cent per month, payable monthly, and if not so paid the whole sum of both principal and interest thereof to become immediately due and collectable, at the option of the holder of said note, or instrument in writing, which said note or instrument in writing, after the making, execution and delivery thereof, was duly endorsed and delivered by said John Iribarne to the firm of S. Heineman & Co. and on said last mentioned day, said John Iribarne duly assigned said chattel mortgage to said firm of S. Heineman & Co. and afterwards, to wit: on the 24th day of September, 1894, said firm of S. Heinman & Co. for value received, sold, assigned and delivered said promissory note or instrument in writing and said chattel mortgage to the plaintiff. Said mortgage conveyed the following described personal property which said property was at the date of the execution of said chattel mortgage in the County of Inyo, but is now and for more than one month last past has been in the County of Kern and is described as follows: Thirty eight hundred head of sheep marked "D" and having an underbit and overbit on each ear, together with the wool thereon and the increase thereof; also four horses two mules, two wagons and four sets of harness and camping outfit; that the personal property conveyed by said mortgage be sold and the proceeds applied to the payment of said sum of Four Thousand Dollars, U. S. gold coin principal with interest thereon at the rate of one per cent per month from the 17th day of May, 1894 and costs of suit, and in case said proceeds are not sufficient to pay the same then to obtain a judgment and execution against said defendants Domingo Etcharren and John Iribarne, for the balance remaining due, and also that said defendants and each of them, and all persons claiming by, through or under them, or either of them, may be barred and foreclosed of all right, title, lien, equity of redemption and interest in or to said mortgaged personal property, and every part thereof, and for such other and further relief as may be just, all of which will more fully appear by said complaint on file herein, to which you are referred for further particulars.

You are hereby notified that if you fail to appear and answer said complaint, said plaintiff will apply to the Court for the relief demanded in said complaint.

Witness my hand and the seal of said Superior Court of the County of Kern, State of California, this 13th day of June 1895.

[SEAL.] F. W. CRAIG, Clerk.

T. M. McNamara, Attorney for Plaintiff.

NOTICE BY CLERK ON APPLICATION FOR DISCHARGE.

IN THE SUPERIOR COURT OF THE COUNTY OF INYO, STATE OF CALIFORNIA.

In the matter of Bertrand Rhine An Insolvent Debtor.

NOTICE IS HEREBY GIVEN to all the creditors of Bertrand Rhine, the above named insolvent, who have proved their debts, that said insolvent has this day applied to this Court for a discharge from his debts, and that Saturday, the 23rd day of November, A. D. 1895, at 10 o'clock, a. m., at the Court-Room of said Court, at the Court-House in Independence, County of Inyo, has been fixed as the time and place for said creditors to appear and show cause, if any they have, why said insolvent's application should not be granted, and he be discharged from all his debts, in accordance with the Statutes in such cases made and provided.

Witness my hand and the Seal of said Superior Court, this 25th day of October, A. D., 1895.

[SEAL] D. J. Hession, Clerk.

Dated October 25, 1895.

P. H. Mack, Attorney for Insolvent.

DELINQUENT SALE NOTICE.

INYO MARBLE COMPANY OF CALIFORNIA.

Location of principal place of business: San Francisco, California. Location of works, Inyo, Inyo County, California.

NOTICE—There are delinquent upon the the following described stock, on account of assessment No. 27, levied on the 5th day of July, 1895, the several amounts set opposite the names of the respective shareholders, as follows:

Sheriff's Sale.

ORDER OF SALE AND DECREE OF FORECLOSURE AND SALE.

Friederike Rhine, Plaintiff, vs. Eliza M. Hannagan, John H. Parish, W. C. Doane and Thomas Crellin, Defendants.

Under and by virtue of an order of sale and decree of foreclosure and sale, issued out of the Superior Court of the County of Inyo, of the State of California, on the 18th day of September A. D. 1895, in the above entitled action, wherein Friederike Rhine, the above named plaintiff, obtained a judgment and decree of foreclosure and sale against Eliza M. Hannagan, John H. Parish, W. C. Doane and Thomas Crellin, defendants, on the 17th day of September A. D. 1895 for the sum of Two hundred and forty six 30-100 ($246.30) dollars in United States Gold Coin, besides interest, costs and counsel fees amounting to the further sum of $105.30, which said decree was on the 18th day of September, A. D. 1895, recorded in judgment book 1 of said Court, at page 518, I am commanded to sell all those certain lots, pieces or parcels of land situated, lying and being in the County of Inyo, State of California and bounded and described as follows: The East half of the North-east quarter of Section Thirty-one and the West half of the North-west quarter of Section Thirty two, in Township Fourteen, South of Range Thirty-six East, Mount Diablo Meridian, containing 160 acres; together with all and singular the tenements, hereditaments and appurtenances thereunto belonging, or in anywise apertaining

Public notice is hereby given that on Tuesday, the 15th day of October, A. D. 1895, at 12 o'clock M. of that day, in front of the Court House door of the County of Inyo I will, in obedience to said order of said and decree of foreclosure and sale, sell the above described property, or so much thereof as may be necessary to satisfy said judgment, with interest and costs, etc., to the highest and best best bidder for gold coin of the United States.

Dated the 18th day of September, 1895.

A. M. GIVEN, Sherriff.

P. H. Mack, Attorney for Plaintiff.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY the 8th day of March, 1892, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise, acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit Commencing at the South-east corner of the south-east quarter of North east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 98-100; thence North-east following the meanderings of the bed of the Creek along its North branch to Edwards street, in the town of Independence, thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hallahah, deceased, at the time of his death.

Lots Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate, lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dispricada Lode."

That certain lot, piece, or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the North west quarter and the North-east quarter of Section No. twelve (12), and the South-west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South sixty-eight and eleven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence North-westerly along a small branch or swale to a point twenty four (24) rods North of the general corner of the North East quarter and the South east quarter, and the North-west quarter and the North east quarter of the North-west quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres: Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney, at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court. Deed at the expense of purchaser.

WILLIAM L. HUNTER. Executor of the Last Will and Testament John Allen Hannah deceased.

DIED.

GROB—In Reno, Nov. 6, 1895, Estella Ray, infant daughter of Fred and Jennie Grob, aged 7 months and 4 days.

COURT NOTES.

HON. N. D. ARNOT, presiding.

FRIDAY, Nov. 8, 1895.

Emma J. Spear vs. Fred Spear—Defendant failed to appear; decree granted plaintiff.

Sam Yandell came up from Keeler on yesterday morning's train.

Thanksgiving day this year will fall on Thursday, November 28th.

W. M. Wills went to Los Angeles last Monday, going south by way of Nojave.

Arthur Robinson has so far recovered from his recent illness as to be on the street again.

Under-Sheriff Clark will soon remove to the Laird house, formerly occupied by W. M. Wills.

Co. Surveyor Seeley went to Lone Pine last Sunday and has been spending the week there.

Miss Clara Eldred of Big Pine remaind over after last week's festivities, and is visiting friends here.

L. Gill, Esq. has been appointed District Attorney of Riverside County, with a salary of $2000 per annum.

The weather has been cold and stormy for the past two weeks and some snow has fallen in the high Sierras.

Chas. Richel and Hattie B. Bulpitt made final proof last Saturday on their desert land filings near Bishop.

Judge Arnot left for his home in Alpine County last Saturday. He will return about the first of next month.

William Arcularius came in from Darwin last week, where he has been hauling ore for several months past for D. C. Lane.

Rudolph Schober and Jacob Schober came down from Bishop early in the week and made final proof on two land entries.

Pat Keys came in from Beveridge last Tuesday, bringing in 37 ounces of gold bullion from his last run of tailings at the McEvoy mill.

Carpenters are at work constructing a new store building for A. A. Neil at Tuckrock. It will be a two story structure, about 34x40 feet.

Wilford Watterson came down from Bishop by private conveyance last Tuesday, remained here over night and started for Mojave next morning.

The Institute.

Friday last completed the work of the Teacher's Institute. Spelling was discussed for an hour or so; Prof. Search, Supt. Black and Mr. Shannon taking active parts in the discussion. It was decided that oral spelling was a waste of time and that written spelling was most beneficial to the child. Mrs. I. H. Mulholland read a short paper on geography and conducted a class in sand modelling. Mr. Wilkinson, Weather Observer at Independence, then talked on the work of the Weather Bureau and made a number of practical suggestions for the teaching of climatic influences. He kindly offered to explain any points that were found perplexing and said he would take pleasure in shewing the apparatus of the station to any one of inquiring mind. Mr. Austin then introduced Mr. Stroud of Bishop who described a trip to Alaska. The word picture of this region, its sea coast, ice burgs, glaciers and midnight sun, was most vivid.

Friday afternoon Miss Lillian Shirley read an interesting and elevating paper on morals and manners, after which Mr. Hampton gave a number of practical suggestions on this work. After a few words of farewell from Prof. Search and Supt. Black, the Institute passed resolutions of thanks to the various persons who had assisted in the work, and in making their stay in Independence pleasant. A reception was held at the Court House Friday evening for those who wished to meet Mr. Black; and the grand ball given on the same evening by the Harmoy Orchestra, proved to be the ball of the season, the hall being well filled until dawn.

Thanksgiving Day.

Governor Budd has issued his proclamation for Thanksgiving Day, as follows:

In accordance with long-established custom, now sanctioned by legislative enactment, I, James H. Budd, Governor of the State of California, by virtue of the authority vested in me by the Constitution and laws of the State, and in consonance with a like proclamation of the President of the United States, do hereby proclaim Thursday, the 28th day of November, as Thanksgiving Day.

This day, essentially American, originating with the early settlers of New England in grateful remembrance for manifold blessings, has been adopted and continued by nearly every State in the Union as a time set apart for reunion of families, the exercise of charitable deeds, and the doing of generous acts. Both as a Nation and a State, we have much to be thankful for, and it befits us to testify our gratitude therefore, by assembling in our respective places of worship, there to express our thanks for the blessings we as a people have received.

In the midst of enjoyments and pleasures forget not the stranger and the wanderer, but let the day be marked as one of generous hospitality, impressing our hearts with the reality and thuthfulness which should characterize Thanksgiving Day.

Graham—Woodin.

In its issue of November 1, 1895, *Our Mineral Wealth* published at Kingman, Arizona, contains the following:

Tuesday evening at the residence of Judge W. G. Blakely, William Henry Graham to Doctor Louise Laura Woodin. Judge Blakely performed the ceremony. The happy couple expect to make Kingman their future home. The lady is a physician and will likely practice her profession here in Kingman and surrounding country. Mr. Graham is from California while the bride is from Philadelphia.

Thanksgiving Entertainment.

There will be an entertainment given in the Methodist Church in Independence on Thanksgiving Evening Nov. 28. The literary exercises will consist of musical selections, declamations, recitations and addresses, followed by a social. Ice cream, cake, and coffee will be supplied abundance.

A cordial invitation is extended to all. The admission is twenty-five cents; the proceeds will go to the Milton Sunday School.

A Surprise Party.

Miss Lena Thompson was given a surprise party at her home at Camp Independence, by her young friends, last Tuesday evening. Music, singing and games made the evening pass pleasantly until half past 10 o'clock, when all were shown the dining room, where a table was filled with tempting delecasies. The decorations were of a floral character and very pretty. Good-bys were said at midnight. The young hostess was assisted by her friend, Mrs. Richards in entertaining her guests.

Another instance of destruction was witnessed last Tuesday evening. Some person started a fire in the foothills west of town, and the high wind blowing at the time soon scattered it over the neighboring hills and into the canyons, destroying a large amount of dry wood and timber.

The contract for carying the mail between Darwin and Modock has been let to J. C. Johnson of London, Kentucky, from November 30, 1895, to June 30, 1898, for the sum of $207 per annum. It quite likely that it will cost Mr. Johnson a handsome bonus to complete his job.

Rudolph Schober arrived here from Bishop with his big team last Wednesday evening, and went on south the next day. He was loaded with grain and hides and will bring back a load of merchandise.

Clouds blew over the mountains from the west last Sunday night, and the storm hung over the mountains all day Monday, clearing off in the evening, the weather remaining clear the balance of the week.

The "Mayflewer" gold mine, together with a mill-sight, the property of the Daley estate will be sold at public auction at Independence two weeks from next Saturday.

Bullion Attached.

The *Walker Lake Bulletin* of Nov. 13th says:

Last Friday the C. & C. R. R. Co. attached a bar of bullion that was shipped by L. J. Hanchett from Silver Peak. The attachment papers were served on the Wells-Fargo agent here, and the bullion was detained at this place. It is reported that Hanchett is indebted to the railroad company for a large amount.

We are informed that John Chiatovich has attached the ore, amalgam and other property of the company at Silver Peak for debts owed.

This is a most unfortunate condition of things, and will probably result in the closing down of the mines and mill at the Peak. Rumor has it that the men working at the mines have not been paid for several months, and they will be obliged to pack their blankets and strike out without a dollar in their pockets.

Late reports from the mines are very favorable but unless Mr. Hanchett can settle the attachments, which is doubtful, he will have to suspend operations.

A railroad from Truckee to Lake Tahoe is among the probabilities of the near future.

The trial of James Heney for embezzling mint bullion was begun in Carson Monday. Johnny Jones' trial will follow Heney's.

It is said there are fifty men in Virginia City who are suffering from miners' consumption, and who in all probability will not survive the winter.

Hair Cutting by Electricity.

The electrical hair cutter, it is claimed, consists of a comb, over the teeth of which is stretched a platinum wire. A switch arranged over the handle of the comb enables the barber to throw a current of electricity through the teeth, and thus raise the temperature to a bright heat. The comb is then passed through the hair, which it "cuts" or singes off. The locks are, it is claimed, rather benefitt by the process, as the hairs do not "bleed" as when cut by scissors. One of the most notable features of this process is the evenness of the "cutting," for the reason that the "comb" is always in a straight line, and since the hot wire is not a live flame, it does not set the hair on fire, as is often the case when using a gas flame or taper, in the old process of singing.

Within the past twenty days Henry Miller, of the late firm of Miller & Lux, has purchased from farmers in this section at least 3,000 tons of hay, at an average price of $2.50 per ton.

A. C. Haah and W. K. Ball have recently shipped 38,000 pounds of Nevada honey, in the comb and strained, to Ohio

'The beautiful snow' struck this valley with a soft, dull thud on Sunday last.—*Yerington Rustler.*

Miss Lula McLaren remained here for a few days after the Institute was over and visited with friends; returning to her home at Bishop yesterday morning.

R. S. Miner Esq. was a passanger on last Saturday's train, bound for his home at Bridgeport. He will return in time for court the first part of next month.

Order of Adjudication of Insolvency.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of George A. Free, An Insolvent Debtor.

George A. Free, having filed in this Court his petition, schedule and inventory in Insolvency from which it appears that he is an Insolvent Debtor the said George A. Free is here by declared to be insolvent. It is hereby ordered that the Sheriff of Inyo County be, and he is hereby, appointed Receiver of the property of said Insolvent, and that upon his giving a bond to the People of the State of California, conditioned as required by law, and in such sum as the Court may order, and qualifying, he take charge and possession of all of the estate, real and personal of said George A. Free Insolvent Debtor, whatsoever and wheresoever situate, except such as may be by law exempt from execution, and of all his deeds, vouchers books of account and papers, and to keep and care for and dispose of the same until the appointment of an Assignee of his estate. All persons having the same or any part thereof (including the Sheriff of the County of Inyo) in his or their possession are hereby directed to deliver said property to said Receiver, and all persons owing money to said insolvent are hereby directed to pay the same to said Receiver, and that said Receiver keep the said property, or the proceeds thereof, till the further order of this Court. And all persons are hereby forbidden to pay any debts to said Insolvent, or to deliver any property belonging to such Insolvent to him, or to any person, firm, corporation or association for his use, and the said debtor is hereby forbidden to transfer or deliver any property until the further order of this Court, except as herein ordered.

It is further ordered, that all the creditors of said debtor be and appear before the Hon. N. D. Arnot, acting Judge of the Superior Court of the County of Inyo, in open court at the court room of said court in the town of Independence, County of Inyo, on the 18th day of November, 1895, at 10 o'clock a. m. of that day, to prove their debts and choose one or more assignees of the estates of said debtor. It is further ordered, that this order be published in the Inyo Independent, a weekly newspaper of general circulation, published in the County of Inyo, as often as the said paper is published before the day set for the meeting of creditors.

And it is further ordered, that in the meantime all proceedings against the said insolvent be stayed.

Dated November 8th, A. D. 1895.

N. D. ARNOT.
Acting Judge of the Superior Court.

[Endorsed.]

Filed November 8th, 1895.

D. J. HESSION, Clerk.

P. W. FORBES, Attorney for Petitioner.

Deed at the expense of purchaser.

H. H. HOWELL,
Administrator of the estate of James Daley deceased.

Dated October 31st A. D. 1895.

P. W. FORBES and P. W. BENNETT, Attorneys for Administrator.

Adjudication of Insolvency.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of George Collins, An Insolvent Debtor.

George Collins having filed in this Court his petition, schedule, and inventory in insolvency, from which it appears that he is an insolvent debtor, the said George Collins is hereby declared to be Insolvent. It is hereby ordered that A. M. Given, Sheriff of the County of Inyo be, and he is hereby appointed Receiver of the property of said insolvent, and that upon his giving a bond to the people of the State of California, conditioned as required by law, and in such sum as the Court may order, and qualifying he take charge and possession of all the estate, real and personal of said George Collins, Insolvent debtor, whatsoever and wheresoever situate, except such as may be by law exempt from execution, and of all his deeds, vouchers, books of account and papers, and to keep and care for and dispose of the same until the appointment of an assignee of his estate. All persons having the same or any part thereof (including the Sheriff of the County of Inyo) in his or their possession are hereby directed to deliver said property to said Receiver and all persons owing money to said insolvent are hereby directed to pay the same to said Receiver, and that said Receiver keep the said property, or the proceeds thereof, till the further order of this Court. And all persons are hereby forbidden to pay any debts to said insolvent, or to deliver any property belonging to such Insolvent to him, or to any person, firm, or corporation, or association for his use, and the said debtor is hereby forbidden to transfer or deliver any property, until the further order of this Court, except as herein ordered. It is further ordered, that all the creditors of said debtor, be and appear before the Hon. N. D. Arnot, acting Judge of the Superior Court, of the County of Inyo, in open Court, at the Court room of said Court, in the town of Independence, County of Inyo, on the 15th day of November, 1895, at 10 o'clock a. m., of that day, to prove their debts and choose one or more assignees of the estate of said debtor.

It is further ordered, that this order be published in the Inyo Independent, a weekly newspaper of general circulation published in the County of Inyo, as often as the said paper published before the said day set for the meeting of creditors.

And it is further ordered, that in the mean time, all proceedings against the said insolvent be stayed.

Dated, November 6th, 1895.

N. D. ARNOT,
Acting Judge of the Superior Court.

[Endorsed]

Filed November 6th, 1895.

D. J. Hession, Clerk.

P. W. FORBES, Attorney for Petitioner.

NOTICE BY CLERK ON APPLICATION FOR DISCHARGE.

SENSE AND NONSENSE.

An eagle always feels more or less soarness in its wings when it uses them.

Don't carry a lace, chiffon or flower-bedecked parasol anywhere except in town, and then only if you are in your carriage, if you are lucky enough to own one.

You can always trust a woman who sits with her thumbs stuck up while talking to you. She may be a bit obstinate but you can depend on it that she is as honest as daylight.

There was a conference in Paris recently on the subject of international agreement for the protection of birds. It is thought that international reuglations to this end will be established.

The biggest vessel ever floated off the stocks is the Potosi, which has just been launched in Germany. Her length is 400 feet, beam 50 feet, draft 26 feet. She is built for carrying grain around Cape Horn.

Gen. Lew Wallace, author of Ben Hur, is building a study in a grove back of his house, where he has had an artificial lake constructed. The building will have no windows, but will be lighted from the roof.

"To a young girl," says John Oliver Hobbs, "marriage means only a trousseau and a honeymoon. The trousseau she can describe to a flounce; she imagines the honeymoon a mere flirtation under the blessing of the church."

The Daughters of the American Revolution are to have a fine exhibit at Atlanta and every colonial relic which can be scraped together will be added to the collection. New York has appropriated $10,000 for their special use.

If you are a sensible, small woman, don't have your gown measure more than four and a half yards around the hem. If you are tall and sensible you may make it between five and seven, but don't go beyond that unless you are a giantess.

A Boston society woman was asked the other day why she was taking lessons of a teacher who prepares pupils for the stage. The lady denied all thought of ever shining as a star and at last confessed that it was simply to acquire a pretty, pleasant, refined peal of laughter.

Mary Walker is not the only woman of the present day who has donned masculine attire. There are Rosa Bonheur, George Sand, Madame Dieulafois, the wife of the famous geologist, and Elizabeth Gardner, who disguised herself as a boy to gain an entrance to Parisian ateliers.

If you want a new salad and the nicest sort of a one, use the crisp inside leaves of the lettuce and slice oranges into them. Pour a French dressing over it all and when you eat it with toasted crackers and cream cheese you will discover that there are still some new good things under the sun.

HOW A SNAKE EATS A FROG.

How a snake eats frogs is worth the telling. The writer distinctly remembers witnessing a dramatic meal of this kind, in which, of course, the snake came out the winner, getting his dinner in excellent style and completely vanquishing the frog.

Though a snake may seem at first sight an organism that is extraordinarily slow of comprehension, any well regulated ophidian knows, nevertheless, exactly how to satisfy the wants of nature in the most approved manner. A snake invariably grabs the frog by one of his hind legs. This preliminary struggle is one of the most impressive features of the combat. With a well-defined natural instinct the chief effort of the frog is to keep his other hind leg far away from the snake's mouth, in the hope that he may speedily exhaust his enemy's strength, and also because he feels that if his other hind leg is made captive he will have less power to fight.

Once both hind legs are within the serpent's fangs the act of swallowing begins. Inch by inch the struggling frog is drawn further and further into the yawning orifice that expands at each gulp. The channel through which the frog has to pass is gradually enlarged by slow efforts on the snake's part, accompanied by fiercer and fiercer convulsions of the wretched wiggler.

The gullet of the snake in its natural proportions is quite large enough to contain the limbs of the frog, but as by frequent gulps the body is drawn further and further into the gullet the difficulty of swallowing increases. Gradually the ophidian's throat is distended, gradually the frog is compressed and drawn out. Finally the latter is double his normal length and half his circumference. As the porcess of expansion on the one hand and contraction on the other goes on, the frog is worked down little by little, until he is finally "Jonahed," and the snake starts in on his afternoon nap.

A story is told of a certain committee meeting in which the proceedings commenced with noise and gradually became uproarious. At last one of the disputants, losing all control over his emotions, exclaimed to his opponent: "Sir, you are, I think, the biggest ass that I ever had the misfortune to set eyes upon!" "Order! order!" said the chairman, gravely; "you seem to forget that I am in the room."

It was on the 12th of December, 1891, says the Oroville Mercury, that the first carload of oranges was shipped from Oroville, and unless signs and omens are not fictions over 100 car loads will be shipped this year.

The Women's Christian Temperance Union of Los Angeles proposes to aid in reforming the penitent women of the depraved quarter, and is trying to raise funds to build a home for that purpose.

THE MAN WHO STAID.

By B. O'NEILL.

"No, no, you mustn't throw that off! There's bullion in it," he says, and leaning over he catches Jose's hand to prevent cutting the ropes that hold it.

"Los Indios son Apaches!" (the Indians are Apaches) says Jose, his face growing paler as he notes how rapidly they are approaching while the buckboard delays.

"I can't help it; but you mustn't lose my trunk," says Dunsmier. "Can't you make him understand? I can't speak Spanish," he asks, in a pleading voice, turning to Hawley. It is the first time they have spoken since before the marriage, and, eying him contemptuously, Hawley interprets into Spanish what he has said, and Jose, thinking that he, too, is asking for the preservation of the trunk, leaves it, and jumping into the wagon takes the reins once more into his hands and begins to ply the whip.

Hawley raises his rifle to fire.

Hawley looks to see that his rifle is in order, and as he does so he glances at the pale faces of the husband and wife behind him. As for himself, he is indifferent. Dunsmier has begun to throw into the road the mail bags. His wife looks at him as if to urge him to cut loose the trunk, but remains silent, as if afraid to ask it.

"He would sacrifice even her to save his gold," Hawley thinks bitterly.

How the horses jump under the lash! They, too, have scented the danger and seem to know that the race is one of life and death. The smooth, straight road stretches far ahead toward where it begins to climb the narrow pass through which it crosses the mountains. It is at that point that the Indians are trying to intercept them. How they ride! The cruel rawhide quirts with which they are cutting their horses seem to be always in the air, while the long black hair of each streams out far behind. They are slowly gaining. Hawley raises his rifle and fires at an Indian in the leading group. A little puff of dust marks where the bullet strikes the ground to the left. No use to waste cartridges firing from the buckboard. One can only wait until all hope of escape by flight is gone, and then fight until death comes. In flight is their only hope.

Jose has dropped from the seat to his knees and leans far over the dashboard that he may reach the further with his whip. How it whistles through the air as it falls on the flanks of the leaders and wheelers, leaving, wherever it falls, great welts that show plainly through the dust and sweat that cover the horses! He strives to make the lash fall where the skin is the tenderest. It cuts the thin, delicate nostrils of the wheelers, and raises on the bellies of the leaders ridges that are almost as large as the veins, while he shouts at them with fierce Spanish curses. No wonder the horses grow wild with pain and fear and dash madly on. Fast as they go, though, they can hardly hold their own with the pursuers. It is only a question of time before they are overtaken, unless something intervenes to save them.

A broken trace, a cracked spring—and then a few shots, a rush by the Indians, and all would be over; the next passer by would find their mutilated bodies lying in the road, amid the rifled trunks and mail bags. No one speaks. They are almost at the point where the narrow road begins to climb the mountain pass. Behind them, less than a mile away, come the Apaches, their horses flecked with foam. Once the buckboard begins to ascend the mountains, it will be madness to drive as they have driven on the plains. To do so might throw them into the canyon hundreds of feet below or break their vehicle against one of the many bowlders that line the roadside. Already Jose is getting his horses in hand, as if to check their speed. Here the Indians have the advantage, and their sure footed mustangs, unhampered by harness or wagon, will soon overtake the buckboard. There is a chance, though, and, facing Dunsmier and his wife, Hawley, whose face is white and stern, says:

"Dunsmier, from the top of the mountain it is hardly three miles into the next station, Camp Date Creek, and you and I, by getting out here, can stand off the Apaches until the wagon gets away. If we only hold them back for ten minutes it will be enough, for by that time the wagon can reach the top of the mountain and there will be no chance for the Indians to overtake it."

III.

When it returns she is clasping to her breast the form of the man.

As he faced Dunsmier, for the first time in months he again looks into the eyes of the woman he had loved. How blue they appear in the white, pale face. They look pleadingly into his, and his heart is filled with pity for this woman who sits there in silence with death so near. Her eyes never leave his face, as if longing for him to speak, if only to pardon the past. All the old love comes back to him, and he feels as if he would give his life to take her again in his arms. As he thinks it can never be, he puts the thought from him and in its stead comes the pain that she has brought to him.

"Can't we escape without?" asks Dunsmier, his lips ashen with fear.

"No," answers Hawley, with bitter contempt and a new hatred, born of the man's cowardice, in his heart; "it is the only chance for your wife, and we had better do it right ahead where the climbing begins and where we can get in among the bowlders."

"Couldn't one do it? I would be willing to pay anything if"— began Dunsmier, to quit abruptly as he caught the stern look in Hawley's eyes.

"You coward! Are you going to come with me or not?" asks Hawley, as he rises in his seat rifle in hand.

The horses under the close rein that Jose is drawing have slackened their speed, for they are already in the pass.

"Yes, yes, of course I will go with you," comes from the white lips of Dunsmier, as he sees Hawley preparing to spring into the road. Hawley reaches within his breast, and taking from it a purse hands it to the woman.

"Mamie, this is all I have," he says simply; "see that my mother gets it. You know her address."

Mrs. Dunsmier reaches out her hand as if to prevent him from leaving the buckboard. There are tears in her eyes as they meet his, and her voice trembles as she implores him not to throw his life away for her sake. Almost before she can frame the words he leaps from the wagon into the road. In an instant he gathers himself together and looks toward the buckboard. Dunsmier is still seated in it, holding his wife as if to prevent her jumping from it. A wave of exaltation seems to pass over Hawley as he sees this man, who was to have stood by him in facing the Apaches while his wife escaped, thus leave him to his fate. For an instant the buckboard almost stops, as if in response to some command from the woman; while Dunsmier, who seems beside himself with fear, has taken from the driver's hand the whip and is striving to lash the horses into greater speed. Hawley smiles to himself bitterly. He can yet overtake the buckboard, or, easier still, he can hide among the bowlders and brush that line the canyon from the Apaches, and after they have passed easily make his escape. No; better to let all end here than to let her know he had played the cur. She would escape and would know that it was to him she owed her life. He took off his hat and threw it into the air as a signal for Jose to drive on. He does not even look where it falls. He will never need it again he thinks as he crouches behind a bowlder.

He raises his rifle and fires at the foremost of the Indians who are galloping into the canyon. In an instant they slip from their horses and, after firing a few shots at him, begin to climb the mountain side. This is what he expected. They will climb the mountain side and probably shoot him in the back from above; but before they can do so and remount their horses the buckboard and its passengers will be beyond pursuit. He had feared that they would rush in on him, and his life would have been thrown away in vain. It was for this he wanted Dunsmier to come with him. Two might do what one could not.

Enraged at the escape of the buckboard through the delay he has caused them, the Indians fire volley after volley at him until the canyon echoes so with reports that he cannot tell from which direction the shots are coming. He looks up toward the summit to see if any of his enemies are above him, and as he does so he catches a glimpse of the buckboard, with a woman's white face looking backward. An instant and it is gone. Thank God! He knows they are on the mesa now and she is safe.

So they are. A straight, level road is before them, and at its end they can see, against the dark side of the mountain beyond, a cluster of adobe buildings, with a flag floating high in the air over the parade ground. The horses are again running as if mad, with the stingings of the whip that seems to be forever falling. The shots in the canyon die away in the distance. A mile is passed and then another. Already the wild race has been noticed at the post, and, while they are still a couple of hundred yards away, the ringing notes of the bugle are sounding above the hard breathing of the horses and the rattle of the buckboard; for to the old soldier in command such driving means that there is succor needed.

As the buckboard passes the sentinel, a few words explain all; and, while the foam covered team still stand trembling from their wild race, a troop of cavalry dashes by at a gallop to the rescue of the man who is facing such odds in the canyon.

The woman who has come in with the buckboard watches the blue coated men with staring eyes. How slowly they seem to go, though she knows that the troop has never ridden—even in its wildest charge—as it is riding today.

The husband approaches her and places his hand upon her arm, as if to lead her into one of the houses, out of the sun. She shakes his hand off without looking at him. The few women in the post gather around and urge her to compose herself, but she does not seem to heed them. She can only stand and watch the cloud of dust which marks the progress of the cavalry. They have crossed the mesa, and, as they disappear from the horizon beyond, all know that if the Indians are still there the canyon will soon be filled with the smoke and fire of the cavalry carbines.

An ambulance, in which is seated a hospital steward, approaches where she is standing, to receive orders from the commander of the post. When she hears that it with its escort is to follow the troop of cavalry to bring back the dead and wounded, despite all that can be done she takes a seat in it, and when it returns she is clasping to her breast the form of the man who had staid behind in the canyon.

As the ambulance stops a little crowd gathers around it and looks into it curiously.

The sergeant of the escort, as he salutes the colonel, says:

"Captain Dillon and the troop have gone in pursuit of the Indians."

"And the man who stood them off while the buckboard got away—how is he?" asks the colonel, nodding toward the ambulance.

"He was all shot to pieces and dead before we got there," is the sergeant's reply.—San Francisco Argonaut.

DEFENDER'S YALLER DOG.

It Belonged to the Colored Cook In a Providence Restaurant.

No animal in contemporary history has reached the proud eminence of the Defender's yaller dog. Poems have been dedicated to the canine which triumphantly offset all the ill luck which hung to America's pride before the races were sailed, pictures of the dog in all kinds of attitudes have adorned the newspaper columns, and the entire patriotic country has taken off its hat to the animal which outstarred the black goat.

It is the purpose of this little tale to furnish a few facts concerning this yaller dog. A great many newspaper reporters asked Mr. Iselin where he got the canine, but the answers were usually vague. Now, however, it can be stated that the dog was from this city, and its owner didn't know until Monday what had become of his yaller beauty. As a matter of fact, to an unprejudiced eye it wasn't a beauty. It was the homeliest dog that ever was, but the man who mourns for it doesn't see it that way.

It isn't but a few weeks ago that Mr. Iselin decided that he wanted that kind of a mascot. He was in Bristol when he made up his mind to it, and he asked a number of people who the best man was to find such a dog as he wanted. There was but one reply, and it was unanimous:

"Blondie Rawson," they all said.

So Mr. Iselin hunted up Blondie Rawson and told him what was wanted, and Blondie began his search. He hunted all over Bristol, but while there were plenty of dogs and plenty of yaller dogs in the town there wasn't the real yallerest yaller that he wanted. So he gave it up there and came to Providence.

He cruised around here for some days with an eye single to dogs. Every yaller dog was eagerly scrutinized, and many an inoffensive and humble canine came very near having fame thrust upon him by being selected as the Defender's mascot. But they weren't yaller enough.

Blondie Rawson had almost given up the search in despair when one warm day in the early part of the month he stood on the corner of Westminster and Union streets, wiping the perspiration from his brow. He turned around to look through Union street as the young women came out of the dry goods stores. As he looked a big dog lying on the sidewalk in front of a restaurant arose, and in plain sight of Blondie Rawson ambled with all the grace of a cow into the restaurant. That little stroll settled the dog's fate and lifted him out of obscurity.

Blondie Rawson went through Union street and took a look at the dog. He was the deepest dyed yaller dog that ever was or ever will be. He wasn't really pretty as Blondie looked at him, but the chrome color of him offset every other lack of beauty which he possessed. Blondie Rawson went into the restaurant and found out that the dog was the property of Paul Batiste, the colored cook.

"Want to sell your dog?" he asked.

"No, indeed," was the answer. "Don't wan' ter sell him nohow."

It wasn't any use to tell Batiste who wanted the dog, because Blondie Rawson reflected that the price would go up out of sight forthwith. And besides the owner said he wouldn't sell the dog to anybody for anything. So Blondie Rawson, who had made up his mind to get that dog anyway, decided that he must have recourse to strategy.

He hunted up another colored man and told him to buy Batiste's dog. He said he must have that dog regardless of the price.

"Ah'll fetch that dawg, boss," confidently announced the new ally. "Ah never seed no dawggone dawg ah couldn't get if ah set out to."

Blondie Rawson went away with renewed confidence. The colored man looked as if he meant business, though before going Blondie Rawson enjoined the man to purchase the dog and not get it any other way.

A few mornings after this Batiste showed up in the restaurant with a mournful face. The young women employed there asked him what the matter was.

"Somebody stole my dog," he said. "I'll bet a dollar that it was the feller who wanted to buy him."

And at that time Blondie Rawson didn't know a thing about the dog's disappearance. When the colored man showed up with the animal, Rawson did a joyful ghost dance.

"Did you buy him?"

"Of co'se ah bo't him," said the colored man. "Don't think ah'd steal him, do you?"

Blondie Rawson hastened to smooth down the ruffled plumage of his indignant assistant.

"Yes," went on the latter, "an ah never see such a man. He wouldn't sell that dawg nohow an ah had ter give him a pretty stiff price."

"Never mind," soothed Blondie Rawson. "I'll pay you back and give you a good present for the work you had." And he did so. Then he took the dog to Mr. Iselin, and the latter pronounced him just the thing. They carried him away on the Defender, far away from the Union street restaurant, to fame and glory such as he had never dreamed of.

A Journal man dropped into the restaurant Monday morning and asked Batiste if he had lost a yaller dog.

"That's what I have," was the answer, "and I'd like to find him."

"Don't you know what became of him?"

"No."

"Would you like to?"

"Indeed I would," said the cook.

"Well, he's the yaller dog of the Defender."

"Wh-a-a-at?" The eyes of Batiste almost popped out of their sockets. He dropped a piece of steak on the floor in his excitement. The young women in the place laughed merrily.

Batiste never moved a muscle, while The Journal man walked out. He was absolutely transfixed with astonishment.

And this is the true story of the origin of the Defender's mascot, that yaller, yaller dog.—Providence Journal.

Ivory for Buttons.

About 4,000 tons of the ivory nut are brought from South America to this country annually. Owing to the cheapness of the raw material there is not more than $150,000 per annum involved in the traffic. Perhaps 1,500 persons in New York are employed in the handling and manufacturing of the nut and its products.

The nuts when scraped with a knife emit a rich odor similar to what is known as the Brazil or cream nut. Lying stacked up on the pier they are interesting if only as illustrative of the great variety of extraordinary things brought to New York from various parts of the world and the ingenuity of those who have cleverly adapted them to the uses of mankind.—New York Telegram.

POTS AND STOVES.

The fires of energy are lighted very soon in life and the struggle begins, as the saying is, "to keep the pot boiling." But speaking literally, fires are still kindled with kerosene, and many a pot boils over or is overturned. Frightful burns and scalds result in spite of warning and suffering. The thing is then not to preach but to practice, and the practice is, for a sure cure, to use St. Jacobs Oil according to directions.

A VETERAN EDITOR.

R. B. AVERY WAS A NEWSPAPER MAN BEFORE THE WAR.

Health Shattered by Hardship—Suffered all that Man Could Stand, and Finally Won the Fight—What He Told a Reporter.

From the Examiner, San Francisco, Cal.

At the opening of the civil war Richard B. Avery, now residing at 345 Thirteenth Street, San Francisco, was an associate editor on the *Chicago Times*. Chicago was not then the great commercial and industrial center that she is to-day, nor had the *Times* even begun to be the great representative journal of the inland metropolis, as it has become in late years under the control and direction of the late Carter Harrison. At that time Mr. Avery was a man thirty years of age, and had come to his position as an editorial writer after twenty years of service in various branches of the newspaper business, having begun his apprenticeship as a compositor at ten years of age. When President Lincoln issued the first call for volunteers, Mr. Avery threw aside all the bright prospects which lay before him in the journalistic field and joined his fortunes with those of the North. He enlisted as a volunteer and fought with the Union army until the close of the war. He took part in some of the fiercest battles of the war, and when he received his discharge was considerably broken down in health. By continued exposure to the severe weather that prevailed during many of the campaigns, Mr. Avery contracted an acute form of neuralgia in the head. He suffered excruciating pain, and passed many sleepless nights on account of the disease. He came to California several years ago, but the change of climate did not afford him much relief, for the neuralgic attacks recurred at stated periods, and the pain was so intense at times that he was driven almost to desperation.

"It was while I was suffering from one of the most violent of these attacks," said Mr. Avery, "that I was persuaded to try Williams' Pink Pills for Pale People, after having used several other remedies without relief. I was glad to except anything that would even temporarily ease my suffering. Why, for three months during one winter I did not pass one restful night. There was not a moment during all that time in which I was free from the awful neuralgic pains. When you consider that I am sixty-four years old, you must know how rapidly my system was being undermined through the mental distress that I endured. I had not taken more than a half box of Williams' Pills before I felt a decided relief. The neuralgia was not so painful, and I was enabled to sleep during the night in comparative comfort. Having felt the initial results of the pills, I continued to take, and just as steadily did I continue experiencing a relief from the neuralgia. I did not stop until I had taken seven boxes of the pills, although the neuralgia had entirely left me long before that time. The pills certainly possess wonderful curative properties, and I feel perfectly free in recommending them to anyone who is afflicted with neuralgia. My faith in the pills is increased by the fact that my relief has been permanent. I have never felt the least indication of a return of the neuralgia to my head, so I know that the relief I have received through using the pills has been effective. I have already advised several of my friends to use the pills, and I think that a number of them have done so, with good results."

Dr. Williams' Pink Pills contain, in a condensed form, all the elements necessary to give new life and richness to the blood and restore shattered nerves. They are an unfailing specific for such diseases as locomotor ataxia, partial paralysis, St. Vitus' dance, sciatica, neuralgia, rheumatism, nervous headache, the after effects of la grippe, palpitation of the heart, pale and sallow complexions, all forms of weakness either in male or female. Pink Pills are sold by all dealers, or will be sent postpaid on receipt of price (50 cents a box, or six boxes for $2.50—they are never sold in bulk or by the 100) by addressing Dr. Williams' Medicine Co., Schenectady, N. Y.

Two men met on Main street, when the following conversation ensued:

"Well, Jim, where have ye been lately? Shure, I haven't seen ye in some time."

"Oh, I've been down to Block Island for a week. And, I say, Tom, did ye ever see the ocean? Oh, it's fine."

"Did I ever see the ocean? How do ye suppose I came across from Ireland? Do ye think I took a trolley car?"—Hartford Post.

She—If you kiss me, I scream. He—Certainly. What flavor?

HOW'S THIS!

We offer One Hundred Dollars reward for any case of catarrh that cannot be cured by Hall's Catarrh Cure.

F. J. CHENEY & CO., Toledo, O.

We, the undersigned, have known F. J. Cheney for the last 15 years, and believe him perfectly honorable in all business transactions and financially able to carry out any obligations made by their firm.

SIMULATED DEATH.

An Indian Fakir Entombed for Forty Days.

AN ENGLISHMAN SAW HIM BURIED.

Every Precaution Taken to Prevent Fraud, Yet the Man Came Out Alive—Strange Story.

Perhaps the most extraordinary case of suspended animation or simulated death on record is that related by Sir Claude M. Wade, who was the political resident at Ludranah and agent of the British Government at the court of Runjit-Singh, which occurred at Lahore in 1837. A fakir was buried alive for forty days, then disentombed and resuscitated. Sir Claude tells us that he was present at the court when this fakir was buried alive for six weeks; and, though he arrived a few hours after he was interred, yet Sir Claude had the testimony of Runjit-Singh himself and others, the most credible witnesses at the court, to the truth of the fakir having been so buried before them; and from having been present himself when the fakir was disinterred and restored to a state of perfect vitality, in a position so close to him as to render deception impossible, it was his firm belief that there was no collusion in producing the extraordinary fact that he related.

When the forty days for which the fakir was to be buried were ended, by invitation of Runjit-Singh Sir Claude accompanied the Rajah and his suite to the spot where the fakir was interred. It was a square building, styled a barra durri, in the midst of one of the gardens adjoining the palace at Lahore. An open veranda encircled the structure, of which an inclosed room occupied the center. On arriving at the barra durri Runjit-Singh, who was attended by a retinue of court officials, dismounted from his elephant and requested Sir Claude to join him in an examination of the building to satisfy himself that it was exactly as he had left it forty days before. Sir Claude acceded to this. Of the four doors, looking to the four points of the compass, three had been hermetically sealed with brick and mortar, while the fourth was furnished with a strong door, plastered with mud up to the padlock, which was sealed with the Rajah's private seal, in his own presence, at the date when the fakir was entombed. Thus the exterior of the building presented no aperture whatever by which one could possibly be admitted, any communication held, or any food conveyed to the torpid experimentalist. The walls and doors bore no mark of having been disturbed.

Rujit-Singh identified the impression of his seal as the one he had affixed and as he was personally somewhat skeptical as to the result of the fakir's experiment, he had, during the forty days, kept two companies of his personal escort stationed near the building, from which four sentinels were furnished and relieved every two hours, night and day, to protect the fakir from intrusion. One of his principal officers was also detailed to visit the spot regularly and report the result of his inspection. While he himself kept the seal that closed the hole of the padlock, the Minister of State received the reports of the officers of the guard, morning and evening, and duly communicated them to his master.

On the door of the apartment or tomb, as it may be termed, being thrown open, nothing was visible, except a dark room. Runjit-Singh and Sir Claude entered, the servant of the buried fakir accompanying them. A light was brought, and they descended into a cell about three feet below the floor of the square apartment. In this cell was a wooden box four feet in length by three in width, with a square, sloping roof. It stood upright. Its door was locked and sealed in the same manner as the door of the barra durri. The box was the coffin of the fakir, though it could not literally be said to contain his remains.

Before opening the box the body was brought to view, inclosed in a white linen bag, drawn together at the top, and securely fastened with a string. The grand salute now shook the garden air, and the hovering multitude came crowding to the door to witness the spectacle. The servant first removed the body of his master from the box and placed it against the closed door of the receptacle in a squatting posture. Runjit-Singh and Sir Claude then descended into the cell, which was so small that when they tried to sit down on the ground in front of the box their hands and knees came in contact with the person of the seeming corpse. The servant now commenced to pour warm water over the body of his master, but, as it was the purpose of Sir Claude to detect any fraudulent practice, he objected to this, and proposed to Runjit-Singh to have the bag torn open, so as to inspect the person of the fakir before the process of resuscitation was initiated. This was accordingly done, the bag being so considerably mildewed as to render it but the work of a moment.

The legs and arms of the father were shriveled and stiff, but the face was full as in life, the head reclining on the shoulder like that of a corpse. Sir Claude called the medical gentleman who was in attendance to descend into the cell and inspect the body, which he did, but could discover no pulsation in the heart, temples, or wrists. There was, however, a beat about the coronal region of the brain, which no other part of the person exhibited. This is one of the facts which establish a resemblance between the imitation death of the Hindoo fakirs and catalepsy. In this disease flushing of the face has often been noticed, while the trunk and extremities remain cold. In perhaps the majority of cases, however, the face is pale, and at least as cool as the rest of the body. The servant now commenced bathing his master in hot water, the arms and legs gradually relaxing from the rigid state in which they were contracted. Runjit-Singh assisted the servant by rubbing the legs and arms of the to-all-appearances dead man, while the latter put a hot wheaten cake on top of the fakir's head—a process which was twice or thrice repeated before any result was apparent.

The servant next removed from the nostrils and ears of his master the wax and cotton plugs with which they had been sealed, then opened the rigid jaws by inserting the point of his knife between the teeth and prying them apart. Then holding the jaws open with his left hand, he drew the tongue forward with the forefinger of his right, that usual flexible member flying back to its curved position, so that its tips closed the gullet repeatedly during the process. He now rubbed the fakir's eyelids with clarified butter (ghi) for some seconds until he succeeded in opening one of them. The eyeball was still glazed and motionless.

The next process was to renew the hot wheaten cake on the top of the head. At this instant the body heaved convulsively, the nostrils became violently inflated, respiration was resumed and the limbs began to assume their natural fullness. The servant at this stage placed some clarified butter on the tongue of the fakir, and made him swallow it. A few minutes after the eyeballs began to dilate slowly, recovered their natural color by insensible gradations and gleamed with intelligence, and recognizing Runjit-Singh, who sat facing him, the fakir commenced to articulate in scarcely audible tones, inquiring whether he was now convinced. Runjit-Singh answered in the affirmative and then began the ceremony of investing the daring experimentalist with a pearl necklace, a pair of superb gold bracelets, shawls and pieces of silk and muslin, forming a full khilet or regalia.

The period that elapsed between the opening of the box and the recovery of the voice was about half an hour; and in half an hour more the fakir was able to talk freely, though feebly, with those about him. Sir Claude Wade remarks in concluding his narrative that he now took some pains to investigate the manner in which this result was effected, and was informed that the rationale of the process rested on the view of the Hidoo physiologists that heat constitutes the self-existent principle of life, and that if the functions even be not so far interrupted as to leave this one in perfect purity, life can be continued for long periods without air, food or other means of sustenance.

So much for the resurrection of the fakir; and now for the "appliances and means to boot," as King Henry saith, by which he worked his little game. All these will be found set forth in very choice English in a work entitled "The Court and Camp of Runjit-Singh," by Hon. Captain W. G. Osborne. Captain Osborne was Secretary to the Governor-General of Lahore, and he gives a very minute description of the way the fakir prepared himself for the ordeal. Annointing the body with ghi and stopping up the nostrils and ears were a necessity, as the writer remembers the description. It is to be regretted that the words of Captain Osborne cannot be given in full, but there is not a copy of his work in the Public Library or the Athenaeum which can be consulted. Sir Claude Wade's testimony, however, given above, is sufficient to show that this feat which Tyndall proposes to perform is not a new one, and ten days is as nothing to six weeks' waking in the "Valley of the Shadow of Death." There was certainly no imposition as far as the fakir was concerned. How will it be with the Scot?—Boston Herald.

THE DISPOSAL OF DOMESTIC GARBAGE.

A new device for the complete removal of and ready disposal of domestic garbage in a simple and inexpensive manner has been highly commended by many sanitary and street-cleaning officials. The garbage is carbonized in a horizontal cylinder about one-third larger in diameter than the stove pipe, in which it is placed, according to convenience, in a joint or an elbow of the pipe making the connection between the stove and the chimney. The carbonizer may be applied to any stove or furnace and any size of pipe. Attached to a removable end of the cylinder is a basket or scoop of somewhat reduced diameter, with perforated sides and a tight bottom. Free passage for the smoke and heat from the stove is thus afforded. When the scoop is filled with garbage and placed in the clyinder the water is quickly driven off and the residuum changed to charcoal, which burns freely when placed in the fire, and forms a valuable material for kindling the fire in the morning. No odor is permitted to escape into the room, as the gases from the drying garbage are thoroughly deodorized. To obtain the maximum service from the carbonizer, all the waste should be placed in it as it is made. This will obviate the accumulation of garbage in the kitchen and the need of a garbage bucket.

A good drink for persons troubled with prickly heat is made by pouring a pint of boiling water on two teaspoonsfuls of cream of tartar and adding sugar to suit the taste. If this agrees with the system drink frequently of it. One excellent cook puts half a dozen green-grapes into her huckleberry pie to make it a trifle more tart.

A TOO COMMON TYPE.

One Who Thinks He Can Do the Impossible.

THE YOUNG MAN OF THE PERIOD.

His Endeavor to Indulge in Pleasure and Acquire Wealth at the Same Time.

A young man of the period typical of a certain class who comes before my mental vision as I write has a horror of being singular. There is generally a fugleman in his set, and he strives to conform to his example in dress, speech and action. He is easy and happy in proportion as he approaches his model; he is unhappy if natural conformation will not permit an exact resemblance. Looking at a group of such young men as they gather on yonder corner, one is forced to the conviction that San Franciscans are long on the way to the same point at which the Chinese have arrived—a dead level of uniformity in dress and character. Their faces are singularly alike, too. Sometimes a moustache may adorn the upper lip—a drooping mustache, or an assertive one, a MacMahon or a Victor Emanuel. Some may sport whiskers occasionally, but they are generally cricketer's whiskers—eleven on a side, yet the wearer's pride is in every hair of them. The difference between society now and, say, forty or fifty years ago is the difference between a field of wheat and a forest—tameness and monotony in the one, variety and distinctiveness in the other.

The number of social organizations to which my particular type of a young man of the period belongs depends upon whether his years be eighteen or twenty-five. His importance at the age first mentioned is something overpowering; and if he be a good dancer or can recite Shakespeare or the poets, he is so flattered on all hands that his own opinion of himself expands like the skull of a hydrocephalous child. He is the slave of gelatinous girlhood about this time and the pet of their match-making mammas with an eye to the future. By and by he crosses the boundary line at twenty, and then comes a slight reaction which continues to increase for about five years, when, if not married, you will find he prefers male society at the club, and he begins to speak cynically of the younger travelers in the primrose paths of dalliance he so lately traversed.

My young man of the period has a great fondness for pleasure, and, besides is in a great hurry to get rich—two conditions in life that are always incompatible. He takes care to remark that he never expects to get ahead on a salary. He goes in for a big thing; "a strike" is his favorite name for it. The gods of his idolatry are the dead and gone Jim Fiske of Boston and New York, and the living Jim Keene, late of San Francisco, but now of Manhattan Island. Fiske was, in his time, and Keene is now, his beau ideal of American smartness in making money. He scorns all kinds of honest labor; a trade is an abomination in his eyes. He seems to forget that there is no royal road to wealth in these days of gigantic monopolies outside of their organization. He loses sight of the fact that his governor's "ducats," moderate in amount, were acquired at a time when there were greater chances for individual struggle, and that he added coin to coin by long years of application, and by sound and safe investment. Forgetting the lessons of the past, my young man of the period is constantly devising financial methods of his own that are as unsubstantial as Coleridge's vision of Kulha Khan. He chafes at his desk and his salary of $100 per month, and as he sets down a fat total to a column of figures mentally speculates what a royal "time' he could have—what a pair of spanking fast horses it would buy, behind which he might give Daisy Brighteyes, the pretty little actress at the Tivoli, a spin to Sutro Heights or to Haywards on the other side of the bay, or a silver-mounted bicycle for a "wheel" at the Park in the morning before the winds begin to blow. If he be a member of the Y. M. C. A. conventional restraints may, perhaps, bid such longings down, and he will find relief in other directions; but they are too apt to return if he have a mind on wealth and pleasure bent, and remain with the same persistency that Mephisto haunted Faust, until he gradually reasons himself into a state where the difference between meum and tuum becomes so faint from his point of view as not to be easily distinguished.

During this time my young man of the period begins to affect Kearny street and the society of a set of men there who wear good clothes—the well-dressed ghosts of honesty and morality—a set of men of whom a lady once remarked, "They flit about the corridors of our best hotels like butterflies during the summer, but in many cases take up a winter residence at San Quentin." He knows all the faro banks in town and where a quiet game can be had without risk of disturbance by the police.

My young man of the period is fast assimilating, but not with the right element. Suddenly the manager of his house of business—a bank, mayhap, or some other place of financial business—kindly intimates that he had better take a summer vacation—he looks worn and anxious, and is evidently overworked. Ah, that cruelly-kind vacation! To how many is it the sentence of moral and social death. His financial affairs are looked into and his books examined as soon as he leaves. He knows this will be the case, and that all his "E.'s" and "O.s" will be discovered; therefore, my young man of the period does not come back at all; he takes an indefinite leave of absence, or, if he returns, it is in the custody of a City Hall myrmidon. Then there is a more thorough investigation, and the "'Governor" is called on. Perhaps the old man may make the shortage good; or, perhaps, if he be unwilling or unable to do so, the bank authorities, to avoid awkward notoriety and newspaper reflections on their want of discipline as well as of vigilant management, may hush up the affairs. If he escapes and has a modicum of common sense left, my young man of the period will try another field of adventure, for he has come to a full stop so far as San Francisco is concerned, if not, he will remain as a recruit to that army gradually increasing in our midst, I am sorry to say—of those who, having lost reputation and personal pride, are endeavoring to live by that unknown quantity called "their wits."—George E. Barnes, in S. F. Bulletin.

WITH THE WITS.

The Lord Mayors of London during the last twenty years have collected a little over $100,000,000 for charitable and benevolent purposes.

Customer—These trousers don't sit just right above the hips. Tailor—They're all right—what you need is something more in the pockets.—Chicago Record.

"Don't you find it rather lonely here?" asked Cholly, "with nobody to talk to?" "Yes," she replied, "and it's getting worse every minute."—Washington Star.

Old Girl—You say that you would hustle after a man? New Girl—Yes, certainly. "Why do such an unseeming thing?" "To reduce my wait."—Adams Freeman.

"Jones seemed to be awfully mad when I overtook him this morning." "What's the matter, I wonder?" "Why, you see, I had the faster horse."—Chicago Tribune.

"Nature," said Uncle Eben, doan' pebber bestow all her gifs on one indivijile. De lightnin' bug ain' got no stinger, an' de skeeter ain' got no lamp.—Washington Star.

"I am very sorry, Karl, you didn't admire my new frock. Everybody says its charming." "Your friends, my dear, pay you compliments. I pay your bills."—Lustige Blaetter.

"Green tea or black tea, miss?" inquired the shopman in a sort of medico bedside manner. "I don't think it matters" said the girl; missus is color blind."—Fort Worth Gazette.

Ginsling—It's all nonsense to say that New Years' resolutions do no good. I swore off myself last New Year's. Lounger—You did, eh? Ginsling—Yes, sir; and I stuck to it a full week.—N. Y. Weekly.

Mother—"Why do you pack up your toys so carefully, Ethel? Ethel—"To keep them for my children, mamma." "And suppose you never have children?" "Then they'll do for my grandchildren."—Boston Home Journal.

Here is an example of how easy it is to break New Years's resolutions. Twelve young ladies met on the first day of 1895 and vowed never to marry. Nine were married before seven months, and two others have breach of promise suits on hand. The other one is dead.—Exchange.

"I think Miss Smith and Mr. Jones must be engaged; they have had their portraits taken together." "Indeed? I am glad to hear it. I knew when I introduced them that she would be taken with him."—N. Y. Press.

ROBBERY AS A PROFESSION.

"Where I live, in Southern Kentucky," said the doctor, "the uncle of the famous outlaws, Frank and Jesse James, lives also on a big farm, and here, when pursuit of them became too fierce, these bandits used to come, while detectives scoured the country and State officers dreamed of the price set on their heads.

"Of course we more than guessed who the gentlemanly looking strangers were who appeared every now and then, and after—accidents—had happened to some amateur detectives who tried to arrest them we let them come and go undisturbed.

"On one of these visits Jesse James, tired of a life that had lost its charms, wornout with being hunted from place to place like a badgered animal, perhaps remorseful for his many crimes, tried to commit suicide by taking an immense dose of morphine.

"I was sent for and held a prisoner in the house for three days. When I arrived he was almost dead. I tried every antidote for morphine poisoning, but without success, and I finally said to his brother: 'Is there no way to frighten him? Rouse him any way you can.' Frank took Jesse's pistols, unloaded them, buckled the belt around the collapsed form and, rushing in the room, cried: 'Jesse, we are surrounded; caught like rats in a trap; fight for your life.' In an instant the outlaw sprang to his feet, his eyes flashed and he stood with a pistol cocked in each hand. After a while he collapsed again, but time after time, when he was practically dead, we called him back to life with that cry: 'You are caught.'

"Think what a fear such as that must be like. The horror of it was so great that he responded to it when dead to every other sensation in the world. Can you imagine what it must be to have that torturing fear of some thing dogging your footsteps, walking in your shadow, haunting your dreams and waking you up in the dead hours of the night with a cold sweat on your forehead: 'You are caught! Fight for a life red with crime and black with the shadow of the gallows!' What wonder such a fear went beyond life into death itself. And that," said the doctor, "is one of the romantic and delightful experiences of the gay life of the highwayman."

THE CRUSOE ISLE.

A Gibralter Amedst Tropical Surroundings—In Paradise.

A FIRST VIEW OF NEW CALEDONIA.

The Master of the Arkwright One of the Few Americans Who Visited Noumea Barracks.

The heroes of the tales of the "Arabian Nights" had no more wonderful experiences than Captain W. H. Moore of the bark Arkwright. One day, weary with weeks of unceasing labor, he was facing death in a sinking ship on a distant and lonely sea. The next morning he was in a veritable modern fairyland, with fifty men to do his bidding and a band of 150 pieces playing all the latest tunes for his entertainment. He was in the modern land of miracles, in the great penal station of New Caledonia, where the industries of Europe are reproduced in the midst of the luxuriant vegetation of the tropics.

"I can never forget my first view of New Caledonia," said the captain yesterday after he had left the ship Corunna, upon which he reached this port. "I had been with hardly a wink of sleep for nearly eleven days. The Arkwright was leaking all the time and there was more than eight feet of water in her hold. The donkey engine, which was doing most of the pumping, had twice broken down and I had fixed up the tubes, repaired the valves and even built a new bottom on the boiler with cement to keep it going. The men were almost in mutiny declaring they would abandon the ship. We were running before the wind because we did not dare to try to go in any other direction and because I thought it best to abandon the ship if it had to be done, in the smooth sea of the south than in the stormy part of the ocean near Norfolk.

"We were heading for Noumea, a place where no one on board had ever been and a place that few people here in America have ever heard of. I chose that as a port of safety because the wind was carrying us there and because I thought that if it was a convict station there was certainly water enough for ships.

"I cannot describe my surprise when the island loomed up before me with high mountains clothed with verdure and beneath them green fields as pretty as the fields of England, and to make it seem all the more like a vision, a forest of factory chimneys in the foreground. I had not looked for such a sight in the South seas, and could hardly believe my ears when I heard the sounds of music and found through my glasses that a great band, like the bands of Paris, was playing in the center of an esplanade in the town.

"I sailed the Arkwright through the reef into the still harbor. I found the Governor of the great French penal station, and he treated me like a prince. Fifty of the convicts were placed at my disposal and I took them on board the Arkwright to pump ship while I used the wheezy old donkey engine to get some of the cargo out before she went to pieces or sank. The warders came on the ship with the convicts and went off with them in the evening. We were not allowed to give the prisoners who were working to keep the bark floating even a bite to eat. The French Government would not allow it."

The Governor told Captain Moore that there had not been half a dozen Americans on New Caledonia since he could remember. All persons are forbidden to visit the island, and if it had not been that the Arkwright was sinking she would not have been allowed in the harbor. Once that Captain Moore and his wife were there, however, they were splendidly entertained. They were guests of the Admiral and invited to a ball given at Noumea in honor of the naval officer. They were given a privilege heretofore refused to all but French officers, that of visiting the fortifications of Noumea and looking over the quarters of the convicts.

Captain Moore says that Gibraltar is not to be compared with Noumea. The homes for the convicts have been tunneled out of the solid rock. At the top of the cliff, facing the sea, are the barracks where the prison officers live with their families. There are fortifications there upon which France has spent millions. They are bristling with guns. Beneath these barracks are tunnel under tunnel, as in the catacombs, and along these tunnels are the rooms for the convicts.

Only long term prisoners are sent by the French Government to New Caledonia. There are more than 5000 convicts there. Escape is almost hopeless, for the island is 600 miles from the nearest land, and that a South Sea island. Good prisoners are given much liberty on the island. All are drilled and drilled until the discipline is perfect.

In the band to which Captain Moore was often permitted to listen were many murderers. The first trombone player had been sent to the island for five years for spitting in the face of a French officer. When he was released he went back to France and killed the officer, being again sentenced to New Caledonia. Twenty of the best musicians in the wonderful band are wife-murderers. The leader of the band killed his pretty little wife because she did not properly get his breakfast for him one morning.

At the factories on the island the convicts manufacture everything they use and much for export. The great penal station is self-supporting. The island itself is rich. There are fine nickel and chrome mines, and other mineral deposits are too be developed. Roads, which Captain Moore declares are better made than Van Ness avenue run for more than 100 miles around the island.

"Shortly before I was there two convicts escaped, the first in years," said Captain Moore. "They get away by stowing themselves in the hold of a French man-of-war that had brought convicts to the island. The matter created great excitement, and the rules were made all the more strict. Even an English Admiral who was allowed to land there was not given permission to go about the fortifications and to see the underground cells. Wonderful as was the sight, I never want to go through that prison again, for I saw two raving maniacs there confined in cells like the refractory convicts. The imprisonment had driven them insane."

The natives who were on the island when it was seized by the French are still there, but Captain Moore found that they were virtually slaves, it being the custom to sell them as servants by the year. Outside of the convicts and officers only the natives and a few Frenchmen are permitted to live on New Caledonia. It is one spot on the globe entirely off the traveled routes, and unknown to tourists and almost unknown to sailors.

ODDS AND ENDS.

Weather forecasts in Great Britain grow more accurate every year, and the Meteorological Council announce with pride that 84 per cent. of those given last year were successful. Three years ago nearly 17 per cent. of the storm warnings were not fullfiled; but now the rate has fallen to 7 per cent.

There is a difference in the time of digestion between one meat and another, and between different conditions of the same meat. Raw beef disappears from the stomach in about two hours; the same beef boiled takes three hours; while thoroughly roasted beef is not digested until four hours have elapsed.

In the Austrian Army there have been, on the average, 131 suicides per 100,000 men during the last five years. The suicides were equal to a fifth of the total mortality of the Army during this period, and more deaths were due to this than to typhoid fever, pneumonia, or consumption.

Lion breeding is evidently a good business, according to Dr. Ball's report of the Dublin Zoological Gardens during thirty years. Forty-three litters have produced in that time one hundred and fifty-nine cubs, of which thirty died at birth, twelve in babyhood, eight are kept, and a hundred and nine have been sold. They realized about £4000, not far from £40 apiece.

A cup of coffee is thus to foretell the weather: Drop two lumps of sugar carefully in the middle of the cup; if the air bubbles remain in the centre of the cup, the weather will be fine; if they rise rapidly and go at once to the sides, it will rain all day; if they gather in the center and then go in a cluster to one side, prepare for showers.

Little alligators sent to France from Florida are very popular pets with fashionable Frenchwomen. They seldom live to a dangerous size—thanks to their confinement and constant gorging of bits of raw meat to amuse their mistresses. A grown-up alligator, even if very tame, would not be a nice thing to have about a drawing-room.

An odd discovery has been made by Dr. Koppen. Oil is so well known for its effects in calming the troubled waters that its use for this purpose has passed into one of the idioms of the day. In this peculiar property it has heretofore been without a rival. Dr. Koppen has found that a solution of common soap (one in 1000 of water), or, in other words, mere soapy water, has the same effect.

A German lady living in Manchester possesses what is supposed to be the largest Bible, in one volume, in the world. It is an heirloom, 200 years old, with pages two feet long, and but little less in width, and at the head of each page is a line in red ink, which translated means, "This is a history." Another resident of the same city has compiled, so to speak, a Bible in ninety volumes, his additions to the text consisting of pictures and photographs which he has collected to the number of nearly 10,000.

In Odessa they are much more considerate for horses than the average London horsekeeper. On the tram system there, it is the custom during the extremely hot season to have specially appointed men at the termini, and midway on the longer journeys, who bathe the horses' heads with an ice-cold solution of water and vinegar. A correspondent says that the horses are well nurtured, and, with this external refreshment, never show signs of lassitude. At a given station or terminus the attendant steps forward with his sponge and bucket, and the cooling operation is performed within a few seconds.

There are strange chambermaids at some of the Cairo hotels. A lady declares that the one who waited on her room and attended to all the duties of the calling, even to making the beds, was a Frenchman, dressed as if for a dinner party, with white waistcoat and dress-coat, and having the air of a refined and educated gentleman. It was really embarrassing to accept his services in such a capacity. One lady, on arriving at the hotel, rang for the chambermaid, and this gentleman presented himself. Supposing him to be the proprietor at the very least, she said, "I wish to see the chambermaid." "Madame," said he, politely, in his very best English, "Madame, she am I!"

MADE BY TELEPHONE.

Buda Pesth Ahead in the Way of Journalism.

LEADING THE NEWSPAPER WORLD.

Its Staff Speak the Editions and it Has Only One Editor—Diffusing Unwritten News.

Buda-Pesth is the only city in the world that can as yet boast of a telephone newspaper. The idea of diffusing unwritten news was originated by the Hungarian, Theodor Albert Puskas, and the Telephone Hirmondo (Herald) has now been working successfully for over two years.

An important improvement introduced at the Hirmondo office within the last few days determined me to pay a visit to the Hungarian capital and to study the whole subject on the spot, writes the correspondent. While I was dressing in the morning the hotel servant knocked at my door and asked if I wanted the telephone paper. He then handed me two receivers about the size of a pocket watch attached to long cords, which can be fastened to the bed or arm chair to suit one's convenience. "The newspaper will begin to speak directly," remarked the servant, "and will go on speaking until late in the evening. We don't charge our visitors anything for it, as it only costs us a penny a day." For persons confined from any cause to their rooms and for patients laid prostrate by sickness the news-transmitter is a real boon. It speaks all day, but does not give the news in a chaotic jumble, but minute by minute. They are imparted in strict accordance with the programme received by each susbcriber. In this way each person knows when the turn will come for the news interesting him. It was precisely 8:30 as I put the receivers to my ears, and the day's work commenced for the newspaper. It began by transmitting the telegrams received in the night from Europe and America in a clear, sonorous, tone, quite free from the nasal twang of the ordinary telephone. This went on till 8:45, after which followed then daily calendar, with metropolitan news and the list of strangers who had arrived at Buda-Pesth up to the previous night.

In this orderly way the program is carried out until late in the evening. Music, art and literatre play important roles in this telephonic organ. Toward evening when news is growing scarcer the subscribers are entertained with vocal and instrmental concerts, quartetts and solos—the latter given by the most talented artists of the capital. At first these concerts were held at the editorial buildings in rooms specially adapted for the purpose; but later on arrangements were made to connect the opera house and some music halls with the office, so that operas, as well as concerts, given by military and gypsy bands in different parts of the town, are transmitted to the subscribers, who are often lulled to sleep by the strains of some favorite melody. The same arrangement has been made with the principal churches for Sundays and sainsts' days, especially for the Easter festival. The Buda-Pesth concerts are sometimes listened to throughout the whole dual monarchy, and even beyond its borders. The other day the "Hirmondo" microphone was put into connection with the circuit of Trieste, Vienna, Brunn, Buda-Pesth and Berlin, and the music reached all these places alike with the same clearness and force.

The organization of the staff resembles that of any other big paper, only that here the staff is on duty from 7:30 in the morning until 9:30 in the evening, during which time twenty-eight editions are spoken into the transmitter. The most insignificant items must be edited and approved by M. Horvath. They are then copied and registered before they are allowed to be read through the telephone by the speaker. The Hirmondo is subject to the same restrictions and is held responsible by the authorities for its communications, as ordinary newspapers, though it chronicles political facts without comment. Ten men with strong voices and clear articulation act as speakers, and take their turn in shifts of two at a time. One of these speaks a series of items, but for no longer than eight or ten minutes, and every new item is introduced by the word "new." The technical organization is admirably instructive and unique. The 600 subscribers are served by one wire, measuring 168 miles in length and running along the windows of the subsribers. Each subscriber forms a "station," and a separate line is connected with each station by means of a special apparatus, so that the main line is not affected if there is a block at one of the stations.

The National Zeitung says that international negotiations with the view of bringing about a reduction in and the ultimate abolition of the export premiums on sugar paid by some countries still continue, and that it is hoped they will lead to some positive results since the countries concerned especially France, are interested, in view of the financial situation, in obtaining the abolition of those payments.

The Sons of St. George in convention at New York elected the following officers: Edward Oliver of San Francisco, supreme president; George Kingston of Bridgeport, Conn., supreme vice-president; James R. Angier of Akron, O., supreme secretary; George H. Foote of New York, supreme treasurer; J. H. Kenworthy of Pittsburg, Pa., supreme messenger.

INYO INDEPENDENT.

H. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY, NOVEMBER 22 1895

We are so used to associate the character of anarchist with the physical type of Blue Beard and a habit of spitting blood and brimstone that it comes with surprise and something of a shock when we hear the name applied to a prosperous man of mild and civil manners and a reputation for benevolence. And yet, upon sober thought, we are bound to admit that the socialistic orator who, at Chicago last week, charged Mr. John D. Rockefeller with being a "practical anarchist" was more than half right. An anarchist, according to the Rural's dictionary, is one "who promotes disorder in a State;" and who, let us ask, does this with greater effect than a man whose ways of doing business impress large numbers of his fellow-citizens with sentiments of contempt for and resentment against the law? Mr. Rockefeller, in a purely personal and social sense, is said to be a gracious and kindly man, but he belongs to a class—of which the late Jay Gould was the chief—who regard business as a fight, and who seek their gain largely in the financial destruction of others. An inevitable feature of business conducted under this principle is its conflict with the spirit, if not with the letter of the law; and, in the constant effort to destroy or evade the law, the manager and beneficiary of such business stands on common ground with the anarchist. In fact he is a far more mischievous power than the anarchist because he represents large industrial powers while the latter represents simply a vote, and, say what we may about majorities, civil order is not so much controlled by votes as by property.—[Rural Press.

It is apparent that the present game law will never be enforced. It is framed to give the nabob sportsman of the big cities a monopoly of the game. It permits them to shut out everybody but members of their exclusive clubs from broad stretches of marsh and timbered lands, and these various clubs have succeeded in leasing about all the marsh land in the State. It opens the game season a month earlier for the nabobs than it does for anyone else to shoot game that may be taken to market, there to be purchased by people who like game but do not like to kill it. The whole tendency of the law is to build up caste by putting those who like to hunt, but who do not belong to the exclusive clubs, into the category of poachers, who may be filled full of shot with impunity by the mercenary game keepers of the nabobbery of the big cities. The spirit of the law is to save the game for the rich and to trample down and put beneath contempt the poor. The law cannot be enforced, and there is more honor in breaking it than observing it. Let game on wild lands be as free for one man to shoot as another at proper seasons of the year.

Labor Commissioner Fitzgerald finds that laboring men on an average pay $30 a year to employment agents in San Francisco for information as to where they can get jobs. Does anyone wonder why there are tramps? Could a better argument be made in favor of keeping open a free employment agency at the State's expense? Let some part of the unequal poll tax that is put on laboring men with iron severity be set aside to maintain a free employment office in connection with the Labor Bureau, until the State becomes civilized enough to do away with so odious a system of raising money.

It is now stated that the Nicaragua canal is to be built by New York and English capitists. Between $70,000,000 and $85,000,000 will be required, and the amount has already been guaranteed. This is another great mistake this country has made. The canal ought to be built, owned and operated by the United States Government.

A report that the Los Angeles Grand Jury has discovered frauds committed by some of the county officials is said to be 'startling,' but no one has called it susprising.

BIG WARS CAUSED BY TRIFLES.

A Shaven Chin Cost France Three Million Lives—Modena's Bucket.

Many times it has happened that a great and costly war has been brought about by an incident trivial and even ridiculous.

Thus the war of the Spanish succession is said to have been caused through a glass of water. A lady, Mrs. Masham, was carrying a glass of water when she was obstructed by the Marquis de Torcy. A slight scuffle ensued, and the water was spilled.

The marquis thereat took offense, and bad feeling ensued between the English and French courts, with the ultimate result that a war was declared.

The campaign cost France many severe battles—viz, Blenheim, 1704; Ramillies, 1707; Audenarde, 1708, and Malplaquet, 1709.

Quite as absurd in its origin was the war that took place during the commonwealth of Modena.

A soldier stole a bucket from a public well belonging to the state of Bologna. Although the value of the article did not exceed a quarter, its annexation was the signal for a fierce and prolonged war.

Henry, the king of Sardinia, assisted the Modenese to retain the bucket, and in one of the subsequent battles he was made a prisoner. The bucket is still exhibited in the tower of the cathedral of Modena.

A third instance of a war resulting from a trifling cause was that between Louis VII of France and Henry II of England.

The archbishop of Rouen decreed that no one should wear long hair upon their heads or chins. Louis submitted to the decree, whereupon his wife, Eleanor, rallied him upon his appearance. A quarrel ensued, which resulted in the dissolution of the marriage and Eleanor's marriage with Henry.

By this marriage the broad domains in Normandy formerly belonging to Louis passed into the possession of Henry. Louis, hotly incensed, made an attack on Normandy, and henceforth, for nearly 300 years, arose those bloody and devastating wars which cost France upward of 3,000,000 of lives.—London Answers.

CARDINAL ANTONELLI.

The Great Papal Statesman as He Appeared to a Painter.

Rudolph Lehmann's visit to Rome in 1857 led to the painter's introduction to the great papal statesman, Cardinal Antonelli. He says:

Before me sat that execrated statesman, "the best hated man in Rome," in the most affable of moods. His bronzed and somewhat oriental features were certainly far from handsome, but they were full of character, energy, and, according to some, cruelty, with the large, dark, piercing eyes overshadowed by a heavy brow, the strong aquiline nose and the full sensual lips. He was in a talkative mood and spoke freely of the difficulties that beset his onerous ministry, of the position of the papacy becoming daily more threatened through the ever increasing energy of its wicked enemies, or what he called "the modern spirits." "But," he added, "history teaches us that it has always triumphed in the long run, and it will do so now." He also told me that the worldly interests of the brothers Antonelli had never been separated; that they possessed all their worldly goods in common, one brother being director of the Banca Romana; one, the Conte Gregorio, taking care of their vast possessions in the Pontine marshes, a third being syndaco of Rome and the youngest being employed in diplomatic missions by the secretary of state.

During a short rest he showed me, with evident pride, over his elegant apartment, furnished with all the latest modern comforts. But the crowning climax was the bedroom, combining with the solemnity and mystery of the abode of a prince of the church all the luxuries of the boudoir of a petite maitresse. The walls, the curtains, as well as the hangings round the spacious four poster, were of the heaviest crimson damask, looped up with enormous tassels.—Boston Herald.

The Beauties of the Alleghanies.

The Alleghanies are fertile to the very summits, and not the least of their glories are their magnificent forests of oak, hickory, chestnut, maple, pine and other noble trees, in the spring when they are budding forth, in the summer when they are in the full bloom of maturity and when the laurel is in blossom, and in the fall, when the brilliant tints of red and gold and green and purple overwhelm one with a sense of Mother Nature's æsthetic genius in always harmonizing such a profusion of colors.

After all, it is the thoroughly satisfactory sport to be had with the game sheltered in these mountains that most endears them to the man who has any taste whatever for that sort of thing. The conditions are perfect. The game ranges from quail, or, as the Virginians call it, partridge, to deer and bear, and especially this is one of the last strongholds of that noble game bird, the wild turkey.—Magazine of Travel.

The Nonprofessional Profile Head.

"I don know how many times I have seen people—I don't mean artists, but all sorts of people, including children—draw profile heads. It is common enough for anybody to draw them on a slate, a scrap of paper, anywhere," said Mr. Billtops, "but I don't remember ever to have seen any of them draw a right handed profile—I mean one facing to the right. I suppose there is some very simple reason for this, but I am acquainted only with the fact."—New York Sun.

A Bad Break.

"You brought all that beautiful china back with you?" exclaimed the caller. "Didn't you break anything?"

"Nothing but the customs laws," replied the young lady, who had just returned from Europe.—Washington Star.

DOES THIS SETTLE IT?

HAS THE SOURCE OF THE MISSISSIPPI BEEN POSITIVELY FIXED?

The Story of the Search For It During Two Centuries—Lake Itasca and the Little Stream That Nicollet Christened the "Cradled Achilles."

"I have stepped across the Mississippi river," said Dr. Coues. "It was easy, for the stream was only about 8 inches wide and 2 inches deep. I have seen the Father of Waters where he rises literally out of the ground and starts as an infant rivulet, destined to cut the United States in twain with the mighty volume of his adult flood.

"The story of the search for the source of the Mississippi reads like a romance. After the discovery of the upper river in 1673 by Joliet and Marquette, and the discovery of the falls of St. Anthony in 1680, by Hennepin, little more was known of the Father of Waters for nearly a century. In 1766 Captain Jonathan Carver ascended the stream as far as the mouth of Rum river. In 1798 the famous English astronomer and surveyor, David Thompson, in the service of the Northwest company, reached Turtle lake. This lake, which sends a tributary to the Mississippi, was for some time supposed to be the source.

"The first white man known to have visited the neighborhood of the actual source of the Mississippi was William Morrison, a fur trader, who was certainly at Lake Itasca in 1803 or 1804. He never published anything on the subject, and it is only very recently that his priority of discovery has been known. The next explorer of the sources of the river was Lieutenant Zebulon Montgomery Pike. He was the first American citizen to carry the flag of the United States into northern Minnesota. He was sent by the government to treat with the Indians and stop the sale of liquor in that region. Incidentally he purchased for $250 and some whisky a tract of land nine miles square, which included the present site of Minneapolis. Congress subsequently voted an additional payment to the Indians for this tract of $2,000.

"Lieutenant Pike proceeded by boat to the vicinity of the present Little Falls in Morrison county, Minn. He got no farther with boats, and so continued his journey through the winter of 1805-6 on snowshoes and with sledges northward. He finally reached Leech lake. This lake he mistook for the source of the Mississippi, and his report on this subject was held to be correct for some years afterward.

"In 1820 the Hon. Lewis Cass, accompanied by Henry R. Schoolcraft, the historian, went on an exploring expedition up the Mississippi as far as Cass lake, so named at the time by Schoolcraft. In 1823 an Italian traveler, J. C. Beltrami, went over David Thompson's route to Turtle lake and reported that lake to be the true source. Evidently, however, he heard from the Indians about Lake Itasca, for he mapped it with approximate accuracy, though he was never there and did not imagine that the Father of Waters sprang thence.

"Lake Itasca was rediscovered in 1832, when Schoolcraft, accompanied by Lieutenant Allen, United States army; the Rev. Mr. Boatwell and others, was guided to the lake by a Chippewa Indian, known as Yellow Head. On this occasion Lake Itasca received its present name, which was made up of parts of the words Veritas Caput, signifying the 'true head' of the river. The Latin was bad, for it ought to have been Verum Caput. The lake had previously been known by the French name of Lac a la Biches, meaning Elk Lake. This was a translation of the Chippewa Omoshkos Sogiagon.

"Schoolcraft's party made an examination of Lake Itasca, being satisfied that they had found the true source of the Mississippi. Not again until 1836 did any scientific man visit the spot. This was a Frenchman, J. N. Nicollet, who tried to ascertain the source of the feeders of Lake Itasca. Exploring southward, he reached the springs from which the infant river takes its rise. It should be understood that the Mississippi runs from its source directly northward for a distance of 50 miles before turning about in a sort of fishhook bend and starting southward. To the baby stream, before it enters Lake Itasca, Nicollet gave the poetic name of 'Cradled Achilles.' He established its course in connection with three small lakes, since named Upper, Middle and Lower Nicollet lakes—that is to say, he found that the little river ran through two of these small lakes and connected with the third. This explorer mapped the whole of the Itascan basin and determined the latitude, longitude and altitude with such accuracy that subsequent surveys have only confirmed and amplified his observations.

"The whole subject of which I have been speaking was befogged and thrown into dispute recently by a certain Captain Glazier, who, apparently for no other purpose than to advertise himself, published his alleged discovery of a new and true source of the Mississippi. By reducing the size of Lake Itasca, ignoring Nicollet's Cradled Achilles, magnifying a small side lake which he called Lake Glazier, and by stretching out one of the feeders of the latter, he produced a distorted map which actually imposed on the Royal Geographical society of Great Britain. Many of the errors thus originated have crept into the standard maps of the United States.

"It may be said that there is nothing further to be learned about the true source of the Father of Waters. As a matter of essential fact, the true Upper Mississippi is the river called the Missouri. The stream that flows from Lake Itasca is merely a tributary. I ought not to forget to mention that I walked along the bed of the stream termed by Captain Glazier the infant Mississippi for a considerable distance dry shod. The little brook was dried up. Late measurements have reduced the length of the Mississippi from 3,184 miles to 2,555 miles."

A genius has arrived at the conclusion that a gold coin passes from one to another 2,000,000,000 times before the stamp or impression upon it becomes obliterated by friction.

The battle of Barnet was one of the most decisive ever fought. It was in 1471 and closed the age of baron rule in England.

Pascagoula, the name of a Mississippi river, means the "Bread Nation."

Order of Adjudication of Insolvency.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of George A. Free, An Insolvent Debtor.

George A. Free having filed in this Court his petition, schedule and inventory in Insolvency from which it appears that he is an Insolvent Debtor the said George A. Free is hereby declared to be insolvent. It is hereby ordered that the Sheriff of Inyo County be, and he is hereby, appointed Receiver of the property of said Insolvent, and that upon his giving a bond to the People of the State of California in a conditioned as required by law, and in such sum as the Court may order, and qualifying, he take charge and possession of all of the estate, real and personal of said George A. Free Insolvent Debtor, whatsoever and wheresoever situate, except such as may be by law exempt from execution, and of all his deeds, vouchers books of account and papers, and to keep and care for and dispose of the same until the appointment of an Assignee of his estate. All persons having the same or any part thereof (including the Sheriff of the County of Inyo) to his or their possessor are hereby directed to deliver said property to said Receiver and all persons owing money to said Insolvent are hereby directed to pay the same to said Receiver, and that said Receiver keep the said property or the proceeds thereof, till the further order of this Court. And all persons are hereby forbidden to pay any debts to said Insolvent, or to deliver any property belonging to said Insolvent to him, or to any person firm, corporation or association for his use and the said debtor is hereby forbidden to transfer or deliver any property until the further order of this Court, except as herein ordered.

It is further ordered that all the creditors of said debtor do appear before the Hon. N. D. Anthony acting Judge of the Superior Court of the County of Inyo, in open court at the court room of said court in the town of Independence, County of Inyo, on the 8th day of November, 1895 at 10 o'clock a. m. of that day, to prove their debts and choose one or more assignees of the estate of said debtor. It is further ordered that this order be published in the Inyo Independent a weekly newspaper of general circulation and of the County of Inyo, as often as the said paper is published before the day set for the meeting of creditors.

And it is further ordered, that in the meantime all proceedings against the said debtor do stay.

Dated November 8th, A. D. 1895.

N. D. ANTHONY,
Acting Judge of the Superior Court.

[Endorsed.]

Filed November 8th, 1895.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY the 8th day of March, 1896, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah, deceased, has, by operation of law or otherwise, acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit: Commencing at the South-east corner of the south-east quarter of North-east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 98-100; thence North-east following the meanderings of the bed of the Creek along its North branch to Edwards street, in the town of Independence, thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hannah, deceased, at the time of his death.

Lot Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dispricada Lode."

That certain lot, piece or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the south west quarter and the North-east quarter of Section No. twelve (12), and the South-west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South sixty-eight and eleven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence Northwesterly along a small branch or swale to a point twenty four (24) rods North of the general corner of the North East quarter and the South east quarter, and the North-west quarter and the North east quarter of the North-west quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven-twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres; Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney at Independence, Cal., or delivered to said Executor personally or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court. Deed at the expense of purchaser.

WILLIAM L. HUNTER,
Executor of the Last Will and Testament of John Allen Hannah deceased.

Ice cream, Coffee and Cake.
Committee {MISS MAGGIE GORMAN. MISS LENA THOMPSON.

The Milton Lyceum.

The fourth meeting of the Milton Lyceum was called to order at seven o'clock Saturday evening. The debaters proved to the satisfaction of the jury that more pleasure is found in city than country life.

Declamations, readings and essays were interspersed with vocal and instrumental music. Mr. John Conners, of Fish Springs recited a patriotic poem entitled "Awake." Mr. J. S. Gorman drew a vivid picture of a rail-road disaster, which proved the maxim, that a dark cloud may have a silver lining; by special request the selection will be repeated on Thanksgiving evening.

The question for debate at the next meeting is: Resolved; "That the spendthrift is more benefit to society than the miser."

CARL WALTER, Sec'y.

The Storm.

Local Weather was fitful yesterday, it being the first severe storm of the season. Mr. Wilkinson reported a storm coming early in the morning and before ten o'clock it began to blow, attaining a velocity of 50 miles an hour from the north and northwest between six and seven o'clock last night. The temperature rose 23 degrees in twenty minutes in the morning but fell with equal rapidity in the evening. During the day the barometer fell over six tenths of an inch. The Forecast Office at San Francisco telegraphed that a cold wave was coming and it got here in full force last night The Sierras were treated to a fresh mantle of white.

Weather Summary, week ending Nov 21 1895.

Highest barometer	30.420 date,	15.
Lowest "	29.371 "	21
Highest temperature,	80.0 date,	18.

H. E. WILKINSON, Observer.

Arthur Shepherd, who left here some time ago to attend school, is now attending Heald's business college in San Francisco.

The first installment of State and County taxes will be delinquent next Tuesday, when the additional 15 per cent will be added.

Dave Johnson came up from Inyo on Tuesday, returning next day. He says they are shipping marble from the quarry steadily.

Will Morton arrived from Los Angeles early in the week where he had taken a band of horses. He succeeded in disposing of all of them at fair prices.

Miss Clara Eldred went to Big Pine last Tuesday morning for a few days visit, when she will return to Independence and remain for a few months.

The Reward Mining Company commenced dropping stamps in their new mill at the Hirsch mine last Tuesday. Several parties who went over from here say that the machinery is working very smoothly.

Mrs. W. T. Bunney and her daughter, Miss Maggie Bunney, leave for Los Angeles to-day, going south by way of Mojave. The little girl has been deaf for some time and is going for special medical treatment.

Wilford Watterson arrived here from the south last Monday continuing on to Bishop Tuesday morning. He had been down on the desert to examine into the condition of feed there, with a view of driving a band of sheep across there in the near future.

Mr. Jas. Quirk of San Francisco has opened a photograph gallery on the old brewery lot back of Mair's hotel, and will be in Independence a very short time. Everything new and of the very latest design, and satisfactory work or no charge.

A contract has been let for the construction of a new school house at Taboose school district to C. H. Prahm in the sum of $780. It will be located on the southwest corner of Sylvester Tapman's homestead location and near where school is being held at present.

Wm. Farrington, a brother of Archie Farrington, passed through town during the week with his family en route for Mono Lake, where he will make his future home. He had about sixteen animals and three wagons and had driven all the way from Cloverdale, Sonoma county.

Card of Thanks.

LONE PINE, Nov. 21, 1895.

To the many kind friends whose administration of comfort and sympathy were so freely given during the last illness of our father, Matias Romero, and whose sincerity was made so manifest during our hour of trouble we tender our heartfelt thanks.

THE FAMILY.

The *Index* of last Wednesday says: Charles Coughlin, a brother of Mrs. Ed. M. Clarke, died in San Francisco Monday. Mrs. Clarke leaves to-morrow for Gold Hill, Nev., the former residence of the deceased to attend the funeral.

Mr. John Black will leave for Beveridge district to-day to look after his mining interests in that section.

Letters remaining uncalled for at the Independence Post-Office; this date.

Coolgardie.

Rich new finds are being constantly reported from Coolgardie gold fields. Coolgardie, Australia, is an accessible point, reached by steamer to Fremantle, thence by rail to Southern Cross and team to destination. The trip to Australia on the fine steamers of the Oceanic Steamship Company via Honolulu, Samoa, and New Zealand is pleasure sailing the day long. This line tickets passengers to Cape Town, South Africa. Map of Coolgardie district and Pacific ports reached by the Oceanic Steamship Company is mailed free to any address by the O. S. S. Co. 114 Montgomery St San Francisco.

ALIAS SUMMONS

IN THE SUPERIOR COURT OF THE COUNTY OF KERN, STATE OF CALIFORNIA.

S. Bachman, Plaintiff, vs. Domingo Etcharren, John Iribarne, Frank Cathery, S Heineman and L. Bachman, copartners doing business under the firm name and style of S. Heineman & Co. John Doe and Richard Roe, Defendants.

THE PEOPLE OF THE STATE OF CALIFORNIA, send greeting to Domingo Etcharren, John Iribarne, Frank Carthery, S. Heineman and L. Bachman, copartners doing business under the firm name and style of S. Heineman & Co. John Doe and Richard Roe, Defendants.

You are hereby required to appear in an action brought against you by the above named plaintiff in the Superior Court of the County of Kern, State of California, and to answer the complaint filed therein within ten days (exclusive of the day of service) after the service on you of this summons, if served within this County, or if served elsewhere within thirty days.

Said action is brought to obtain a judgment of this Court for the foreclosure of a certain chattel mortgage described in said complaint, duly acknowledged, verified, executed and delivered by said defendant, Domingo Etcharren, to John Iribarne, on the 17th day of May, 1894, to secure the payment of a certain promissory note, or instrument in writing dated May 17th, 1894 for the sum of Four Thousand Dollars, U. S. Gold Coin, payable twenty four months after date with interest thereon from date at the rate of one per cent per cent per month, payable monthly, and if not so paid the whole, sum of both principal and interest thereof to become immediately due and collectable, at the option of the holder of said note, or instrument in writing, which said note or instrument in writing, after the making, execution and delivery thereof, was duly endorsed and delivered by said John Iribarne to the firm of S. Heineman & Co. and on said last mentioned day, said John Iribarne duly assigned said chattel mortgage to said firm of S. Heineman & Co. and afterwards, to wit: on the 28th day of September, 1894, said firm of S. Heinman & Co. for value received, sold, assigned and delivered said promissory note or instrument in writing and said chattel mortgage to the plaintiff. Said mortgage conveyed the following described personal property which said property was at the date of the execution of said chattel mortgage in the County of Inyo, but is now and for more than one month last past has been in the County of Kern and is described as follows: Thirty eight hundred head of sheep marked "D" and having an underbit and overbit on each ear, together with the wool thereon and the increase thereof; also four horses two mules two wagons and four sets of harness and camping outfit; that the personal property conveyed by said mortgage be sold and the proceeds applied to the payment of said sum of Four Thousand Dollars, U. S. gold coin principal with interest thereon at the rate of one per cent per month from the 17th day of May, 1894 and costs of suit, and in case said proceeds are not sufficient to pay the same then to obtain a judgment and execution against said defendants Domingo Etcharren and John Iribarne, for the balance remaining due, and also that said defendants and each of them, and all persons claiming by, through or under them, or either of them, may be barred and foreclosed of all right, title, lien, equity of redemption and interest in or to said mortgaged personal property, and every part thereof, and for such other and further relief as may be just, all of which will more fully appear by said complaint on file herein, to which you are referred for further particulars.

You are hereby notified that if you fail to appear and answer said complaint, said plaintiff will apply to the Court for the relief demanded in said complaint.

Witness my hand and the seal of said Superior Court of the County of Kern, State of California, this 13th day of June 1895.

[SEAL] F. W. CRAIG, Clerk.

T. M. MCNAMARA, Attorney for Plaintiff.

MAGIC FIRE-EATER.

The so-called fire-eating magicians have long plied their trade in defiance of all explications of chemists and physicians. A clever prestidigitator, Mr. De Vere, described recently in La Nature, how the trick, for such it is, is done. It is very simple of practice, but it necessitates an apparatus which must be very carefully and neatly constructed. The fire-eaters usually give their performances on a raised platform, which hides the source of the fire, while it seems only to lift the operator a trifle higher from the floor of the scene, and it is ordinarily covered with a hansome red carpet. It contains in the hollow space beneath it bags of rubber filled with ordinary illuminating gas and compressed by weights.

The fire-eater has beneath the sole of his foot an ingenius little apparatus ending in a tube, which fits exactly into another tube coming up through the platform from underneath, and forming a tight connection when he steps upon it; very fine rubber tubes of the same color of the magician's dress, which is usually a diabolical scarlet red, run up along his body and along the arms to the farthest end of the index finger; another tube runs around his neck and up under his chin, which is usually covered by a false beard, ending at his nether lip.

When entering upon the stage all the lights are usually turned down to heighten the effect of the performance; the operator steps lightly upon the platform, makes his connection, and after a sign that he is ready the gas is turned on from beneath. When he feels that it is beginning to escape from the tube at the end of his finger, he lights it by means of a little push-button, which is conveniently located near by, and sometimes even within his clothes on the inside of the cloak. The gas once burning, he has it entirely under his control, to light or turn out any one of the various jets he has previously arranged about his body. The jets on the fingers are controlled by pressure of the thumb upon the thin rubber tube; the gas jet on his lip is lighted by a motion of the hand, and he always turns up his face, opens his mouth wide and pretends to blow the flame from his mouth. The appearance is very deceptive, indeed, as the breath blown from the lungs give much life to the flame. As the scene is never very light while the fire-eaters are at work, their secret has never before been discovered.

ATTEMPS ON VICTORIA'S LIFE.

Since her majesty came to the throne she has been the subject of six attacks, but only three of them can be described as attempts on her life. The first attack on the Queen occurred on Constitution Hill on June 10, 1840, soon after her marriage, the assailant being a potboy named Edward Oxford. Two years later, May 30, 1842, John Francis fired at the Queen when within a few feet of her carriage. This outrage took place on Consitution Hill. In July of the same year a crack-brained lad named Bean leveled a loaded pistol at her majesty, who was driving from Buckingham Castle to the Chapel Royal, St. James', but the weapon missed fire.

In May, 1850, Robert Plate, an ex-Lieutenant in the Hussars, as the royal carriage was emerging from the Duke of Cambridge's gate, struck the Queen with a stick, leaving a mark on her cheek and crushing her bonnet. In February, 1872, a youth named Arthur O'Connor presented an old and unloaded pistol at her majesty as she was entering Buckingham Palace; and on March 2, 1882, a man named Roderick Maclean deliberately fired at the Queen as she was driving from Windsor Station to the castle, but no damage was done.—Westminster Gazette.

WHALES.

We read in an article on whales that in the winter season they are not seen in the Arctic Ocean, on account of the severity of the cold. Like the birds, they seek a more southern latitude. They are found along the southern coast of California, but as they have not appeared on the coast of Florida as yet, we judge that they have not yet learned of the incomparable advantages of that State as a winter resort.

People residing on the shores of the Arctic Ocean must miss the whales in the winter season and it is doubtful whether the companionship of the white polar bear can recompense them for his absence. For the whale is a social animal. He is the orator of the ocean being the only fish that spouts. He learned it in schools. He is very tender-hearted, and is so attached to whalers that he will give up his life to them and blubber, which serves to sperm up to the highest endeavor.

Whales seem to have the sense of right and wrong, for a right whale is always right. When a whaling crew is thrown into the air, together with their boat, by the leviathan they are seeking to harpoon, that shows that they have tackled the wrong whale.

A very simple method of inducing sleep in cases of persistent insomnia, and one that has succeeded where many drugs have failed, is simply to adminsister a moderate amount of warm liquid food before the patient goes to bed. This diverts the blood from the brain to the abdominal organs, and takes away the cerebral excitement that precludes sleep.

Can a would-be passenger secure a seat in a railway carriage by merely placing an article of lugagge upon it? This question has been agitating France. A station-master decided in favor of an intruder who removed the luggage and became seated. A decree has since been discovered showing that the station-master was wrong.

Ambitious Mrs. Willatts.

By W. E. NORRIS.

I.

The butler came in and handed her a card.

"Well, it's what I consider a very reasonable ambition," said Mrs. Underwood, pouring out a second cup of tea for herself. "More than that, it's the sort of ambition that every woman would have to own up to if she were honest. Men can rise above the rest of their species in a hundred ways. But I should like to know what triumphs are open to us, except conquering hearts and dressing exquisitely and getting the most exclusive society to acknowledge us. With your face you can conquer as many hearts as you please; with your money you can employ the best dressmakers in the world; but to persuade these English aristocrats to come to your house isn't so easy, and I say that a success of that kind is worth taking some trouble to win."

Pretty little Mrs. Willatts jerked up her shoulders. "I don't know. Seems to me there's more trouble than success about it, anyway," she remarked. "You and I have taken trouble enough over this ball, and it's going to be a failure after all, because that dowdy old dolly of a duchess won't come."

"How do you know that, my dear? Now, I have it on the best authority that she will come. Lord George has been moving heaven and earth for you, and he told me this morning that the old lady had given in."

"You don't say!" exclaimed Mrs. Willatts excitedly. "Well, Maggie, you're a real friend, and Lord George is worth what I've—he's worth more than I thought he was anyway. Why, this is perfectly splendid!"

These two transatlantic ladies were seated in the drawing room of the spacious mansion in Pont street, which the younger of them had hired for the season, and which, as she fondly hoped, was destined to be the scene of some magnificent social festivities.

London did not know much about Mrs. Willatts, except that she appeared to have plenty of money; but, on the other hand, it was fairly well acquainted with that lively widow, Mrs. Underwood, and was willing enough to accept her word for the fact that the new protege with whom she had taken her abode this year was "all right." The money, at all events, seemed to be all right, and in these latter days high society has learned to consider wealth as a sufficient passport—especially if the possessor thereof be pretty, amusing and a citizeness of the United States. The Duchess of Stratford, however, was exceptional. The duchess had remained faithful to worn out traditions; she was exclusive. She wanted to know who people were and put a good many inconvenient questions before she would consent to shed the light of her countenance upon them; and this was why Mrs. Willatts was so eager to extend her hospitality to one whom she had described truthfully as a dowdy old dolly.

"Well, I presume she won't do more than walk in and walk out again," the expectant hostess observed reflectively, "but if she'll do that it will answer the purpose. Once I've been recognized by the Duchess of Stratford, I don't see what there'll be to stop me. I should like to see Sam's face when he reads about it in the newspapers! The only trouble is that he won't know the difference between the Duchess of Stratford and other duchesses."

"He don't know anything at all," returned Mrs. Underwood contemptuously. "He don't even know enough to keep from quarreling with a wife who could have shown him how to get some value for his dollars as well as her own. Let him stay home and slave at piling up wealth, since that's his notion of enjoyment. Luckily, you're independent of him."

Mrs. Willatts sighed. "Why, it stands to reason that I am independent of him," said she; "it wasn't any fault of mine that he was too stupid and obstinate to allow what is a fact in law. I didn't want to quarrel—I only insisted upon my rights."

If there had not been an actual quarrel between Mr. and Mrs. Willatts, there had been a very good imitation of one. The young couple had married under circumstances of comparative poverty; but, shortly after their wedding, the bride's father, old Senator Kendrick, had by a happy combination of luck and astuteness acquired an immense fortune, which, on his decease, had been divided equally between her and her brother. It was on account of the perhaps unreasonable claim of Mr. Willatts to have a voice in the investigating and expending of his wife's riches that differences had arisen which had resulted in the departure of Mrs. Willatts for Europe and her subsequent partnership with the experienced Mrs. Underwood.

"I'd like him to be here, though," she remarked ingeniously, "so he might see for himself that I don't need any man to show me my way."

Her wish was fulfilled with a dramatic promptitude which may not have been entirely welcome to her; for hardly were the words out of her mouth when the butler came in and handed her a card, inscribed in bold capitals with the name of "Samuel T. Willatts."

"Mercy!" exclaimed the little lady, tossing the card over to her companion; "what is to be done now?"

"Send him away," answered Mrs. Underwood.

But Mrs. Willatts demurred to the adoption of such drastic measures. "If Samuel means seeing me, I guess he'll see me," said she. "Besides, I don't want he should think I'm afraid of him. Only he shall not come to my ball unless he gives me his solemn promise that he won't wear a white waistcoat or a diamond shirt stud."

Mrs. Underwood intimated her opinion that the very least Mr. Willatts could do would be to assent to that modest stipulation, and after her friend had left her she awaited results with some anxiety. Mrs. Underwood was clever, but she was not rich. She appreciated aristocratic society and was appreciated in it; but, unhappily, her private means were inadequate to the entertainment of dukes and duchesses. Since, therefore, she had the present prospect of free and comfortable quarters for several months to come, she could not feel any very ardent desire for the healing over of the breach which existed in the Willatts household. Her apprehensions, however, were apparently groundless, for at the expiration of twenty minutes Mrs. Willatts re-entered the room flushed and excited, and throwing herself down upon a sofa exclaimed:

"I do hate that man! I abso—lutely hate him!"

"Poor fellow," said the relieved Mrs. Underwood with a laugh. "What has he been doing now?"

"Oh, I don't know as he did much—it's his way of talking to me and looking at me that makes me so mad. 'Well, Sally,' he drawled out, 'having a good time over here?' I told him I was having a perfectly lovely time, and he said he was glad to hear it. He had found out all about the ball, but he was afraid he should have to ask me to excuse him that evening. As it was uncertain how long he might stay in London, he concluded he had better remain at the Hotel Metropole."

"Why, Sally, you surely didn't offer to take him into your house?"

"No, I didn't, and I thought he might have waited for the invitation before declining it. Then he wanted to know whether I continued to intrust my brother with the entire management of my affairs, and whether I still had full confidence in Henry's discretion. 'A great deal more than I should have in yours,' I answered, at which he grinned."

"Well," observed Mrs. Underwood philosophically, "so long as he doesn't interfere with you, you needn't trouble about what he says or thinks of your brother."

"But, my dear, I believe he will interfere with me; he wouldn't have been so cool and malicious unless he had some scheme in his head. He has prospered extraordinarily of late, he tells me, and now he has come over to see London and Paris. I know just as well as if he had said so that he won't set out before he he has done his best to spoil my fun. Oh, Maggie, do you think he could be wicked enough to go around telling all these people that father began life as a factory hand?"

"I don't see how he is to get the chance," replied Mrs. Underwood, "and it wouldn't matter a cent if he did. A few of them, such as the Duchess of Stratford, might disapprove of your living apart from your husband; but it is about as certain as anything can be that Mr. Willatts won't see the Duchess of Stratford. Don't you be uneasy; with all the will in the world he can't shake your position. There isn't time!"

II.

"How do you do, Lord George Curtis!"

She would have been less confident of that had she known a little more about the energetic and enterprising gentleman of whom she spoke. Mr. Willatts was capable of accomplishing a great deal in a very short space of time. Between then and the day fixed for his wife's ball he ought to be able to "put through" a certain nefarious design which had just suggested itself to him.

To do him justice, he did not look like a man who was in the habit of entertaining nefarious designs. His blue eyes conveyed an impression of honesty, while the set of his lips seemed to indicate a philosophical and easy-going disposition. His present situation, however, was of a nature to disturb the serenity of the calmest philosopher, and he had quite made up his mind to effect a radical change in it.

His first step was to have himself driven to a certain club, and to inquire for Lord George Curtis, who, he was informed presently, was in the cardroom, but would be with him in a few minutes. Indeed, he was not made to wait long before Lord George, a well preserved man of forty, came down the staircase.

Mr. Willatts advanced and said: "How do you do, Lord George Curtis? If convenient I should be glad to have a word or two with you upon a matter of business."

"Certainly," answered the other, leading the way into a small unoccupied room on the ground floor. "Won't you sit down? Perhaps you are related to my friend Mrs. Willatts, of Pont street."

"More or less, sir. I have the honor to be the lady's husband, although we are running separate establishments for the present. I understand you have been of great service to Mrs. Willatts, presenting her to your aristocracy."

"Only too delighted, I am sure, to have been of any little use."

"And," continued Mr. Willatts imperturbably, "it has come to my knowledge that your services have received liberal remuneration."

The smile faded from Lord George's face. "I am surprised," said he, "that a third person should have been told of what I was assured would remain a purely confidential transaction; but, since that promise seems to have been broken, I had better, perhaps, mention to you that the sums to which you allude represented a loan, not a remuneration. A short while ago I happened, unluckily for myself, to be in financial difficulties, and Mrs. Willatts very kindly offered me temporary assistance. Of course I couldn't possibly have accepted"——

"Excuse me," interupted Mr. Willatts; "this is irrelevant. In the course of business Mrs. Willatts' drafts had to pass through my hands, otherwise I should not have known that she had drawn any in your favor. I have no remarks to make upon the question of loan or payment. But I presume I may say without offense, that from what I have heard your financial difficulties are not yet entirely at an end, and"——

"You may say nothing of the sort, sir," interrupted Lord George in his turn. "I owe no account of my actions to you; nor, to my best belief, does Mrs. Willatts, whom I have always understood to be a lady of independent means. If your object in requesting this interview was to cross examine me you will gain nothing by protracting it."

Mr. Willatts remained seated. "My object," said he calmly and deliberately, "was not to be offensive—quite the reverse. I am not here to sit in judgment upon you English aristocrats. I am a simple business man, Lord George, and I have a simple business proposal to make to you. Mrs. Willatts, I believe, intends to give a ball on the twenty-sixth of this month."

Lord George stared and nodded.

"Well, I myself have it in contemplation to give a ball on the same date. That ball is going to cost more than any ball that has ever been given in this city for the last ten years, and it is going, I hope, to be graced by the presence of their royal highnesses the Prince and Princess of Wales, and all the most prominent members of your London society, and from what I have heard and read about you I believe you are the man to assist me. For your assistance I am willing to pay you a much larger sum than you have had from Mrs. Willatts, and I may add that, if you are successful, I shall consider the money well spent and well earned. Excuse my bluntness, as you know I am quite unaccustomed to civilized ways of doing things. Now, sir, what do you say?"

Lord George hardly knew what to say. He was in debt, and had before this had recourse to divers expedients for raising the wind which had been at least as discreditable as that now suggested to him. Moreover, he was so well known and so popular that he had little doubt of his ability to earn Mr. Willatts' check. At the same time he felt some natural compunction about betraying the lady whose cause he had hitherto espoused.

(TO BE CONTINUED.)

Eugenie's Flight From Paris.

Our Paris correspondent telegraphs: The Gaulois, having repeated the charge against Count Nigra of having urged the Empress Eugenie to fly from Paris on the 4th of September, is thus corrected by the count: "The part I played was simple. Knowing the government of Napoleon III was going to be overthrown, I went early on the 4th of September to the Tuileries to be at the orders of the empress. Prince Metternich was already there for the same purpose. The empress, after taking the opinions of four members of the cabinet who had come from the corps legislatif and of the prefect of police, found herself obliged to leave the Tuileries. She did me the honor to accept my arm from the gallery of the Louvre to the Place du Louvre, where, with Mme. le Breton, she got into a cab. Up to the moment she left she was surrounded by her household. She ordered General Mellinet to withdraw the palace guard, declaring that she would not have a drop of French blood shed to insure her own safety. She showed in quitting her household and in crossing the square, which was crowded, a firmness and courage worthy of her race and of her rank. She said nothing unless to express her sorrow that she was personally not of any use for the defense of Paris and the safety of France. I do not think it is yet time to give the history of that day such as events engraved it on my memory. These events are not yet far enough off. They would, if evoked, arouse too many painful recollections for the French people to judge them dispassionately."—London News.

A Fire Born Bug.

There are some bad bugs and worms in the southern forests, but there are certainly none that is quite equal in endurance and toughness to the worm that developed himself from the great forest fires of the northwest. Scarcely had the fires cooled sufficiently for the owners to make inspection of losses when they found that this new worm had got there first, and was already completing the destruction of what the flames had spared. Both standing and cut timber were attacked and the most vigorous measures have been resorted to and with only partial success. This worm seems to have evolved from the heat, and, so far, the cold and snows of the winter do not appear to have affected his health or lessened his voracity. He certainly is a new and unpleasant feature in the timber question and a nut that scientists have not yet cracked.—Chicago Chronicle.

Animal Having the Most Teeth.

The animal having the most teeth is the great armadillo of south Central and northern South America. It is a fact well known to most people that the normal or average number of teeth in mammals is 32, 16 above and the same number below. The great armadillo, however, is an exception, having from 92 to 100. He has from 24 to 26 in each side of the upper jaw and from 22 to 24 in each side of the lower jaw. Another peculiarity lies in the fact that they are all molars or grinders. They increase in size from front to back, instead of from the root, and are wholly destitute of enamel.—St. Louis Republic.

Prevaricator.

The word prevaricator is from the Latin and originally meant a straddler with distorted or misshapen legs. In the Roman courts of law the expression was applied to one who in a suit was discovered to be in collusion with his opponent to compass some dishonesty. As falsehood was the necessary part of such a performance, the word by and by came to have the significance at present attached to it.

In Doubt.

Miss Summermaid—I hardly know whether to be angry with little Cholly Tapecounter or not.

Miss Ennygirl—Why, dear?

"He said he could guess my age, and when I dared him to he said he thought too much of me to do so before others."—Cincinnati Enquirer.

In the estimated value of farm products, according to the returns of the eleventh census, Illinois is first, with $184,759,013; New York is second, with $161,593,009; Iowa is third, with $159,347,844.

NO WORK IN THE FUTURE.

Mr. Edison predicted the other day that work would be altogether abolished in the next generation, and that our only labor would be to press a button and start the machinery going, says the New Orleans Times-Democrat. Mr. Edison may be slightly wrong as to the generation—that is it may take longer, a few more generations than he imagined, but that the drift is in the direction he indicates, and that actual labor will become a very small element in all industries, is self evident. Steam did a great deal to free us from the curse of labor; but electricity is a far more potential instrument, and its uses seem almost limitless. We have made it do our lighting, our transportation and a thousand small jobs, but we have only just begun to use it.

Hitherto this mighty geni has been brought into play mainly in the field of manufactures, and man is still compelled to labor hard to grow crops; but there is a disposition to use electricity more and more in agriculture, and it seems to be even better suited for the field than for the workshop.

In Saxony they are now plowing by electricity with great success, using an ordinary dynamo, and doing away with horses and men to a large extent. In the Department of Tarn, France, a water wheel is made to give sufficient force and to develop enough electricity to cultivate the farm, so that the little brook that runs through it saves the farmer nearly all labor. In Moravia a single dynamo furnishes three adjacent farms.

Plowing by electricity is much cheaper and better in all respects than plowing by steam. With a waterfall handy—and there is one handy to nearly every farm in the country, save in the southern lowlands—and ordinary intelligence, there is no reason why all the hard work of the farm, from butter making to the thrashing of grain, should not be economically done by a well distributed electric plant. French experiments have further shown that the distribution of electricity through the soil by means of ordinary current-bearing wires stimulates the growth of the plants and increases the yield.

It is not necessary to go into further particulars. We have mentioned the work done on the farm as a sample of the electrical development going on in a field of which we hear very little—agriculture. The farm as well as the city is to be benefited by this new force, and the farmer, as well as the city merchant, will simply touch a button and have electricity do all his plowing for him. Edison is not a dreamer. No one can seriously doubt his prediction, but the only question is, when will we enjoy that laborless world which he promises us?—Cincinnati Commercial Gazette.

HAIRSPLITTING CALCULATION.

Very few ladies are aware that they carry a total length of 70 to 80 kilometres of hair on their heads; indeed, ladies of light complexion may have as much as 110 kilometres of "golden filaments" to comb out every morning.

A German "explorer" has found out that a single hair is capable of sustaining a weight of 113 grammes (4 ounces), but it will have to be dark brown, as light breaks into a strain of 70 grammes. The whole of the hair on a single head can, therefore, sustain a weight of at least 10 to 12 cwt.—Schwabische Tagwacht.

"What will you do if you find both your husbands in heaven?" "Oh, but I won't find them there."

A GIANT'S TROUBLE.

He was a giant in size, the picture of health and strength, with iron muscles, a famous athlete. He pursued his training excessively to hold his fame, and doubtless trained too much. With all his exercise the man was nervous, restless and sleepless, and then racking pains took hold upon him. He could not understand his condition, for neuralgia had set in when he thought himself in perfect health. So in all conditions it will take hold of the nerves. They had been enfeebled in his case, and they are enfeebled in a thousand cases in as many different ways. He was well advised and followed directions of experienced people. Soon his nerves began to be toned and quieted and in a short time the pains ceased altogether. He had used St. Jacobs Oil freely and a cure followed, and so will it follow in all cases and conditions.

A lost cause—the clubman's excuse to his wife for coming home at 1 a. m.

Try Germea for Breakfast.

SYRUP of FIGS

ONE ENJOYS

Both the method and results when Syrup of Figs is taken; it is pleasant and refreshing to the taste, and acts gently yet promptly on the Kidneys, Liver and Bowels, cleanses the system effectually, dispels colds, headaches and fevers and cures habitual constipation. Syrup of Figs is the only remedy of its kind ever produced, pleasing to the taste and acceptable to the stomach, prompt in its action and truly beneficial in its effects, prepared only from the most healthy and agreeable substances, its many excellent qualities commend it to all and have made it the most popular remedy known.

Syrup of Figs is for sale in 50c and $1 bottles by all leading druggists. Any reliable druggist who may not have it on hand will procure it promptly for any one who wishes to try it. Do not accept any substitute.

CALIFORNIA FIG SYRUP CO.
SAN FRANCISCO, CAL.
LOUISVILLE, KY. NEW YORK, N.Y.

PISO'S CURE FOR CURES WHERE ALL ELSE FAILS. Best Cough Syrup. Tastes Good. Use in time. Sold by druggists. CONSUMPTION

We employ 2 first-class (none better) experienced physicians. Medical treatment is FREE. We only charge for necessary medicines (50c to $1) as each case requires. Our reasons for so doing because of other physicians' non-patronage, as we pay *"no percentages."* Symptom blanks sent free on request. ROOT'S MODERN PHARMACY, Sixth and Howard streets, San Francisco, Cal.

The grammar of the French language can be acquired, by diligence in twelve months; the pronunciation requires the aid of an accomplished master.

HOW'S THIS!

We offer One Hundred Dollars reward for any case of catarrh that cannot be cured by Hall's Catarrh Cure.

F. J. CHENEY & CO., Toledo, O.

We, the undersigned, have known F. J. Cheney for the last 15 years, and believe him perfectly honorable in all business transactions and financially able to carry out any obligations made by their firm.

WEST & TRUAX, Wholesale Druggists, Toledo, O.
WALDING, KINNAN & MARVIN, Wholesale Druggists, Toledo, O.

Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system. Testimonials sent free. Price 75c per bottle. Sold by all druggists.

If he were fed regularly the shark would not be half as ravenous as he is.

A SILENT APPEAL FOR HELP.

When your kidneys and bladder are inactive they are making a silent appeal for help. Don't disregard it, but with Hostetter's Stomach Bitters safely impel them to activity. They are in immediate danger, and it is foolhardiness to shut one's eyes to the fact. Be wise in time, too, if you experience manifestations of dyspepsia, malaria, rheumatism, constipation or nerve trouble. The Bitters before a meal adds zest to it.

The plant of happiness cannot thrive without the aid of cheerfulness.

I use Piso's Cure for Consumption both in my family and practice.—DR. G. W. PATTERSON, Inkster, Mich., Nov. 5, 1894.

FERTILITY MICROBE.

A Germ From Which all Plant Life Springs.

ALL THINGS GROW ON BARREN SOIL.

Uncle Sam's Agricultural Chemist Breeding the Germs of the Benefit of American Farmers.

Science experts of the Agricultural Department in Washington have made an important discovery. They have found a species of microbe which actually makes plants grow. In it has been found the mysterious agent by whose aid all things vegetable are enabled to absorb nitrogen, which is their chief food. Without its assistance plant life would disappear entirely from the earth, and, in consequence, animal life, including mankind, would also perish. Yet this beneficient microorganism is so small that it can only be seen when magnified 800 diameters. It is a bacterium and a micrococus—that is to say, shaped like a little ball.

An experiment is now being made in the breeding of these microbes by Prof. Wiley, of the chemistry division of the Department of Agriculture. They multiply at an enormous rate when furnished with proper food, and to produce them in indefinite quantities is easy. Their business in life is to absorb nitrogen from the soil and from the air and to transform it into nitric acid. In this shape it is taken up by the tissues of the plants, which are not able to consume the nitrogen in the crude.

Recently a trial was made with a field of several acres in Florida, on which nothing would grow. Analyses proved that the soil was very rich in nitrogen, but none of the micrococci were present. So a small amount of stable manure was applied thinly to the surface of the ground, and lo! a wonderful crop was the result.

The secret of it was that the stable manure is full of these peculiar bacteria. The latter went to work at once upon the nitrogen lying idle in the hitherto barren soil and transformed it into available plant food. It has long been known that stable manure contained very little plant food, and so until now its great efficiency as a fertilizer has been a mystery. The day may yet arrive when the farmer will apply a solution of microbes instead of a fertilizer to his soil. Obviously, such a method would only be tried in cases where the bacteria were found to be lacking.

Without the help of microbes of this species plants will die in the richest soil. With their assistance certain kinds of plants are able to absorb and utilize the nitrogen in the atmopshere. This is most particularly true of the peas, beans, clover and other leguminous plants. Farmers have long known that there was no better way to enrich a field than to plant it with clover, or beans, or peas. The reason why is simply that micro-organisms of the sort described infest these plants in great numbers.

Living in the rootlets, they ply the trade of agircultural chemists on a small scale, but most efficiently. Their colonies are marked by little excresences or pimples on the roots. They are manufacturers of nitric acid. They do not live in the roots of cereals—hence the desirability of rotating corn with clover.

In furnishing nitrogen to the soil the farmer is supplying stuff for the microbes to work on. Nitrogen is the most valuable of plant foods. It is also the most expensive, costing from sixteen to eighteen cents a pound. Sometimes it is applied to the land in the shape of waste from packing establishments and abattoirs—scraps of intestines, etc., which are boiled to get out the oil and finally dried and ground. At the slaughter-houses nothing is wasted. Every drop of blood is saved, to be dried and ground. Dried blood is the best of all materials for yielding nitrogen. It may be said in a rough way that nitrogen makes the flesh of plants, while phosphoric acid makes the fat.

One important object of the Association of Official Agricultural Chemists is to teach the farmers what kinds of fertilizers to employ. Mr. Hayseed may be using nitrogen when what he really requires for his land is potash, which is comparatively cheap. All of the potash utilized in this country comes from a single mine at Stassfurt, in Germany. The deposits in that locality had their origin thousands of years ago in a sea, the waters of which gradually receded, leaving lakes that retained communication with the ocean by small channels.

Potash deposits are commonly found associated with deposits of rock salt. Of the latter vast beds exist in New York, Kansas, Michigan and other by the wanton destruction of forests. The models are ten feet square, and they represent a farm—the same farm in each case, through which runs a winding stream.

In the first model the arable lands exhibit at Atlanta a series of three models illustrating the ruin of farms parts of the United States, and stores of the valuable fertilizer may yet be discovered on this continent, geologists think.

All of the members of the Association hold official places as chemists under the Federal Government or in the States. The immediate cause of the formation of their organization was a series of disputes between makers of fertilizers and the consumers as to the quality of the merchandise. The analysis given by the manufacturers were apt to be false and there was no authority to which such questions could be referred for settlement. Now the strife has ceased, because all analyses are made under conditions prescribed by the official chemists, who are attached to agricultural experiment stations, agricultural colleges and State Boards of Agriculture. They have control over the manufacture and sale of fertilizers in many States, and the makers must have licenses. If their goods fail to come up to the mark, the dealers are excluded from the market. It is estimate that in this way $500,000,000 annually is saved to the farmers.

The Department of Agriculture will on the slopes of the hills have been denuded of soil to a great extent by floods due to the wiping away of trees from the hill-tops. The second model shows that the farmer has realized the cause of his trouble and has planted new forests on the tops of the hills. In the third model the forests have covered the hilltops again, and the denuded slopes have regained their covering of soil; the fields are laughing with a bountiful harvest and the increased prosperity of the farmer is denoted by the fact that he has built him a new house, using the old one for a barn.

Of course, the rivers are continually carrying vast quantities of soil from the land into the sea, and this can be prevented only in a small measure. But it is not wholly lost. The ocean is a great sorting ground in which all such material is winnowed and separated into its component elements. The carbonate of lime is deposited in beds, or through the medium of animal life is transformed into coral formations or into shells. Phosphoric acid is likewise sifted out into phosphate deposits or passes into the bodies of marine animals. These and other valuable substances are thus conserved and put into a shape in which they may be returned sooner or later to the use of man.

It is worth while to mention some of the ways, pointed out through the researches of agricultural chemists, in which these waste products are restored. One is disposed to look upon the sea as devoid of vegetable life, but the gardens of the ocean are no less fully stocked with economic plants than the gardens of the land.

The various species of seaweeds are constantly separating valuable materials from the waters and placing them again in available shape for employment by man. In the green state seaweed is equal to stall manure and farmers pay five cents a bushel for it.

It was used as a fertilizer as early as the fourth century, and its importance for this purpose has been recognized more and more in modern days. In 1885 $65,000 worth of seaweeds was used in Rhode Island, while the value of all other commercial fertilizers utilized in that State was only $164,000.

Many varieties of sea grass are used for filling mattresses and cushions. Other species are burned and their ashes are employed for the manufacture of soda, iodine and bromine. The gelatinous parts of seaweeds become very hard and elastic on being dried, and have been molded into all sorts of forms as substitutes for horn and shell in making handles for knives, files and other tools.

In the Techno-Chemical Receipt Book, on page 177, may be found recipes for making artificial ebony from charcoal obtained from seaweeds; also for making leather, soap and glue. Directions, too, are given for the manufacture of transparent seaweed leather, opaque seaweed leather and other interesting articles.

The fishes of the sea collect especially the two great elements of plant food—nitrogen and phosphorus. Osyters and other shell fishes gather not only large quantities of phosphorous and nitrogen, but also carbonate of lime. In fishing districts the fish waste serves as a precious fertilizing material. Some fishes are taken, as the menhaden, chiefly for their fertilizing value.

The rain-water which descends upon the earth is not pure. It brings to the soil a certain amount of valuable plant food. Not only does it absorb and hold in solution ammonia and nitric acid, which may perhaps be formed by electrical discharges in the air, but it also collects and brings with it vast quantities of meteoric dust containing fertilizing principles.

Prof. Wiley, to whom the writer is indebted for much of his information, says that, with the aid of scientific agriculture, and the help of the agricultural chemist, a thousand million people will not so crowd the United States as to make Malthus more than a pleasing theorist. The death of humanity is not to come from starvation, but from freezing, and many a geologic epoch will come and go before this planet dies of cold.

ABOUT WOMEN.

A western man has a cyclone cellar to which he retires when his wife commences house-cleaning.

I have seen the tempests of women, and I have seen the storms of the waves, and I pity more the lovers than the sailors.—Byron.

Richter said that no man could either live piously or die religiously without a wife.

The only thing that consoled Lady Blessington for being a woman was that she could never be made to marry one.

A woman set on doing anything will walk right through the moral crockery without wincing.—Emerson.

In matters of love nothing is so common to all as the desire that another shall not gain that which she herself refuses.

Young men who think their sweethearts are divine, like to make divinity students of themselves every night in the week.

In Norway a law provides that no person shall be permitted to cut down a tree unless he plants three saplings in its place.—Detroit Free Press.

PROVERBIAL JOKES.

Queer Types of People Seen in Drug Stores.

SOME ODD CHARACTER SKETCHES.

Taken at the Soda Fountain and Prescription Desk—Fiends Who Make Life Miserable.

The time honored jokes in the funny papers about people who buy stamps in a drug store and want them wrapped up and delivered may be old to the average reader, but they are new every day to the drug dispensers. Such ridiculous things are common every day occurrences.

A well known druggist tells of an instance when he was night clerk in a West End drug store. About 5 one morning a vigorous ring at the night bell roused him from peaceful slumbers. He came down wearing one shoe, such miscellaneous clothing as he could pick up in a hurry, and a decidedly cross appearance. At the door was a nicely dressed lady. Would he kindly sell her a stamp? She had an important letter which she must mail, and as she also desired to catch the 6:30 train she feared she would forget it. The stamp was sold to her, and then very sweetly and innocently she inquired if he would not, since she was in such a hurry, walk to the corner and mail the letter for her. As he had worn only one shoe down, he regretfully declined the honor.

The soda dispenser in the drug store usually sees and enjoys more peculiarities than any of the drug clerks from the fact that he is not bothered with any of their responsibilities. His greatest trouble is in deciding whose money he shall take in the case of young ladies who drink soda together. If it were men each would be anxious to pay for the beverages. In the case of young ladies, however, each is apparently anxious to not pay for the drink. Then they argue with each other on about this line: "No, let me pay." "I will not. I think I should." "Oh, I'll be awful angry if you do." And all the while, says the soda dispenser, they are hanging on to their dimes with a death-like grip. The soda man finally solves the problem by taking the money of each and returning the change to each, making it a "Cincinnati treat."

"The use of face powder," said a prominent druggist, "is not nearly so general as in former years, though we still have numerous calls for it. Our principal customers for face powder are ladies of uncertain age, who try to hide their increasing wrinkles, by its liberal use. A peculiar fact is that colored poeple are great users of cosmetic powders. It is very amusing sometimes to be asked by a coal black colored woman for a 'box ob dat flesh color face powdab.' I frequently hesitate whether I shall give them black or pink.'

The proverbial joke about the man who winks his eye at the apothecary when he wants a "stick" in his soda is not a fiction. Various excuses are made to get liquor, but the standard and most usual is a terrible pain in the stomach, or eles a threatened chill. The druggist always suggests Jamaica ginger. This suggestion is never satisfactory, as it is whisky they want. A favorite trick is to ask for a dose of Calisaya, which to be thoroughly effective must be mixed with whisky.

The "fiends" who make life miserable to the druggist are legion. They are fiends who are addicted to phenacatin, to bromo seltzer, to quinine, to arsenic, to strychnine, and to morphine. There are also people who are addicted to the use of wine of coca. The drink contains a quantity of cocaine in solution and has a reviving effect on the system. There are quinine fiends who take as much as 150 grains a day. Not long since a St. Louis physician prescribed this drug to a patient, ordering it to be put in six powders of sixty grains each. The patient, a lady, took it all in twenty-four hours and, strange to say, got well. There are several people in St. Louis who are addicted to the use of aromatic spirits of ammonia and vichy. They drink it with great gusto.

The morphine fiend is a shrewd and discriminating buyer. One of the usual excuses when the fiend is a woman is that the drug is "for mamma." Poor mamma! She has many sins to answer for of which she is guiltless. Some of the fiends can tell the brand of morphine by the taste and will have none but their favorite. One hopeless case has become so expert on the quantity that he usually takes—three grains—that with a dash of the bottle he can throw the exact quantity into the palm of his hand. The druggist with whom he usually deals has verified the weight of the dose thus prepared many times and invariably finds it correct to a fraction of a grain.

Perfume cranks are numerous. Violet is the favorite odor at the present and the ladies are extremely particular as to the brand. They discover a difference between brands that the drug man cannot recognize. There are ladies who dote on strong perfumes and some consider musk the acme of odoriferous excellence. Colored people like this class of perfume and the drug clerks have learned that to invariably make a sale to a colored belle they have only to let her smell "Wild honey." Its distinct pungent odor catches them every time.

A West End druggist met an elderly lady last week whose nervous system was certainly highly organized. She came in at 10:30 o'clock in the evening, bought 5 cents' worth of chewing gum and two stamps and then insisted on the druggist escorting her to the car. He didn't go.

A lady from the rural districts entered a down-town drug store Wednesday accompanied by her four children. She politely requested the clerk to lend her his comb and brush until Thursday morning, when she would promptly return it. He was so staggered by the easy assurance of the lady that instead of refusing he gave her the colored porter's comb.

The drug store is a favorite place for leaving bundles, valises, etc. Many of the packages left are never called for. A lady left a bundle in an Olive street establishment a year ago that contained two dozen suits of underwear and has never returned for them. At the same drug store a well-dressed man left his valise containing clothing, papers, a shaving set and many miscellaneous articles, and never came back. The strangest case of the kind was a man who left his wife at a down-town store about nine o'clock promising to return in ten minutes. At 10 o'clock, closing time, he had not returned, so the druggist sat down to wait for him, not caring to turn the lady out on the street. At 12:15 a. m. he dropped in much the worse for wear, and then there was a scene that repaid the druggist for his long vigil.

The peculiar names and Latin designations of drugs and druggists' sundries lead to many laughable mistakes. One instance was shown the reporter. Some one sent a little girl with a note asking for "Deoderizer Higeia powder." After some time it was discovered that "Hygienique Deoderizing powder" was the article wanted.

Charity patients and beggars are frequent visitors in all drug stores. In the winter there is a boy who works the drug trade regularly. He goes barefooted no matter how deep the snow or how cold the weather, and the patrons of the drug stores treat him liberally. He gets hot drinks to worm him up, orders for shoes and considerable money. He acknowledged to a druggist that he frequently gathered up from $3 to $5 per day.

It is not an infrequent thing for beggars to ask for a piece of soap and many deserving cases of people who are either sick or have sick families are assisted. The colored beggar is not plentiful, but when he does come, he is always afflicted with a "mis'ry" in his chest or his foot, as the case may be, or else "dey sho' is c'ruption" in his aching hand or limb.

People who get hurt on the streets in any manner always go to the drug stores to be patched up. They claim treatment of this kind apparently as a right and part of the duty of the druggist to the public, and in nine cases out of ten do not even express their thanks for the services rendered them.

Hotel guests and actors are great kickers on prices. They are accustomed to cut prices and hang on for half an hour to save a nickel on a bottle of patent medicine. Another peculiarity of the average hotel guest is that he always has a prescription to fill just as he is on the eve of leaving town. He rushes to the druggist with it fifteen minues before train time and expects to have a twenty-minute prescription filled in five minutes.

It is not an unusual thing for people to come into drug stores in search of something with which to paint a black eye. About two weeks ago a well-muscled lady came into a West Olive street drug store for something to remove the suffused blood from under her eye. The discoloration, she explained, had been caused by an apple thrown by her little 3-year-old. Soon after she had been fixed up her husband dropped in with scratches all over his face and a cut on his head that had been caused, so he said, by a severe fall. The druggist patched him up, but drew his own conclusions about the apple and the fall.

The general idea of the druggist's breadth of knowledge is illustrated by the people who come in every day and ask for "some of those little black pills about so big, and they hold up their thumb and finger to show the size. As the well-stocked drug stores carry from 1000 to 1500 kinds of "little black pills" such orders are seldom correctly filled.

Physicians' prescriptions would often tell the sick person something they did not know if they could understand them. Chalk and distilled water for nervousness, sugar pills for headaches and pink water for dyspepsia are frequent prescriptions.

There is an old gentleman who patronizes a South St. Louis drug store who thinks he is a confirmed morphine fiend. He began the use of morphia for insomnia. The first prescription called for chalk, but it put him to sleep and he has had it refilled every day since. He sleeps like a babe at night, except when he misses his usual dose, and then he walks the floor until he gets it.

The last and possibly the best instance that space permits happened down town. A gentleman had just seated himself at the soda fountain when a callow country youth wandered in and began to look around. "Gimme somethin' good to drink," he murmured.

"What will it be" said the clerk.

About that time the city man asked for Hunyadi water. "Gimme that," said the countryman. He swallowed the glassful in two gulps and without a word walked out. His facial expression, however, plainly showed his injured feelings and misplaced confidence.

It may, indeed, be said that sympathy exists in all minds, as Faraday has discovered that magnetism exists in all metals; but a certain temperature is required to develop the hidden property, whether in the metal or the mind.—Bulwer.

To kill a martin in all folklore is considered unlucky.

INCREASE IN TRADE.

Electricity Against Cheap Oil for Steam Power.

BREAKING THE RECORD OF THE PORT

Seattle Ambitious to Rival San Francisco in the Building of Ships—Our Navigable Water Ways.

The bids being in for the construction of new war vessels, much interest will attach to the proceedings of the Navy Department at Washington in the matter of awarding the contracts. Senator Squire has been notified by Secretary Herbert that the Government has awarded the Moran Bros. Company the contract for building a torpedo boat, to cost $160,000, at Seattle. Chief Engineer Wilson has been instructed to go to Seattle to examine the plant and ascertain the capacity, etc. The Seattle outfit will be enlarged. Senator Squire has this of interest to say: "There is no telling how much good Seattle and Puget Sound will receive from the building of this torpedo boat. It will demonstrate the value of the native fir; it will prove the ability of Seattle as a shipbuilding center, and will, in fact, open up a new era of industry and enterprise." While on the subject of ships, it may be of passing interest to notice the claim set up for Los Angeles recently that the number of British ships landing cargoes at one or the other of the seaports connected with that city is annually increasing. It is not yet a very large showing. The figures are furnished by the resident British Consul. Los Angeles has within the last year or two unloaded domestic cargoes from New York, following the lead of San Francisco in this matter, in competition with overland carriers.

A gentleman whose business leads him customarily into a study of the statistics of exportation from the port of San Francisco to foreign and domestic ports, calls to the attention of the writer the fact that within the last few weeks and previous export records have twice been broken. This means, of course, that more goods and of greater value have gone forward from the port of San Francisco on two different occasions than at any other time during the history of this place. "It makes me angry," said this careful observer, "to hear the people say that the port of San Francisco is falling into disuse; that after awhile nobody will live here. People who talk that way don't study the statistics which embody the real facts."

An item which appears in the Los Angeles Times corroborates the statements made in this letter last week. The drift of these statements was that no matter how cheap oil can be produced in the Los Angeles field or any other fields, the geographical location of which implies costly transportation to a distant market, competition with energy electrically transmitted by wire can be set up in the long run. The Standard Oil Company possibly may succeed in securing a monopoly handling the Los Angeles product, and if the holding goes under the control of that great monopoly, the discriminations between customers and places and the rates which they can make will practically interfere with expectations based upon cheap oil fuel; but it is difficult to see, while river courses tend oceanward, while the mountain streams supply an inexhaustible power capable of being used over and over many times, how any monopoly can control electrical plants to be established in connection with such water courses and mountain streams. The discovery of oil and the discovery of coal, either for heating or lighting, or for fuel for motive use, is of less significance than it was a few years ago. Los Angeles, which just now appears to be gifted with more, deeper and more fruitful oil wells than any other section on the Pacific Coast or the United States, realizes this fact, and even now prominent men are figuring upon the introduction of electric power from Kern river. An estimated cost of the construction of a line over mountains and through the desert country of $1 per foot does not deter the projectors from going ahead with the scheme for which, as the Times says, at least $2,000,000 worth of bonds must be floated. Of course it can be said with truth that the Standard Oil Company will have less control over transportation, especially between tide water and points not far distant from tide water than it had before an electric freight railway became known as a possibility.

In the meantime it is somewhat interesting to glance at a few suggestive paragraphs describing operations in the Los Angeles fields, which sound very much as if they might have been taken from old files of papers at the time when Pennsylvania was in the throes of its petroleum excitement. Here they are:

"The American Crude Oil Company is building a tank adjoining the new well on Belmont avenue, which will be ready for pumping about Thursday.

"Oil sand was struck in the Martin well on Patton street at a depth of 640 feet. The drill is now thirty-five feet in the sand, with the hole nearly full of oil.

"Warring & McKee began drilling in their well at Park place and Temple streets yesterday evening.

"James Powell commenced work on his lot on Victor street, opposite his sponter, yesterday afternoon. He expects to strike another bonanza in the new location.

"The most noticeable feature in the wells recently drilled is the increased output they yield.

"This is due to the fact that operators have been going deeper, where they find more abundant deposits of oil. The increase in the flow of new wells is not confined to any one section of the oil belt, but is general, some of the best producers yet discovered being located at opposite extremities in the field."

Cheap fuel, cheap transportation—these still, of course, are the principal factors in upbuilding California, as a source of supply for manufactured goods with the Pacific States and Territories adjoining. But this statement must be modified by substituting power for fuel to a large extent. The big sugar-beet plant, which it is rumored will be established at the upper end of the San Joaquin Valley directly as the result of the construction of the San Francisco and San Joaquin Valley Road, the inducement being a certainty of cheap transportation rates, will, according to competent judges, be in a way to compete with advantage with the big plant at Chino, notwithstanding that the Chino establishment has cheap fuel, which transports itself by gravitation through pipe line, avoiding any outlay in that direction.

Notices have been sent out among local retail dealers in hardware of the advance of rates soon to go into effect on the Panama railroad route, by way of steamer and the isthmus. This ought not to be much of a surprise, for it has long been understood that the Panama road was maneuvering to become a differential line, to operate at a rate less than the overland carriers, but with a distinct and undisguised purpose of raising rates to what is described as a profitable basis. It has heretofore been stated, and practical experiment determined this to be the fact, that the clipper ships can always regulate the rate by isthmus if they are operated independently, so that the isthmus and the transcontinental carriers alike do not have it in their power to inflict upon this city higher rates than the equity of the situation warrants. The inside of the deal on the Pacific Coast in connection with the trade of Central America and Mexico, as derived from private communications from New York, is about as follows: The injunction in New York against the Panama road from engaging in business between Pacific Coast Central American ports, which was sold out to the Pacific Mail Steamship Company some years ago, is the only barrier to prevent San Francisco from doing a profitable business at low rates. The new carriers who appear on the scene, practically operating with the Panama road, will simply sell space rental to the Panama road for the transportation of a certain amount of freight to cover the through business in both directions, of the Panama people. Otherwise the new line will be entirely independent and can engage in a coast trade with perfect freedom, making such rates as tend to encourage business. No one in San Francisco, excepting those directly interested in the Pacific Mail, will probably object to this arrangement.

The navigable water ways of California (or those which can be made navigable by dredging) seem to receive more attention just now than at any time during a long series of years. While experience in the East has taught that freights go by rail in very large quantities along the banks of great rivers like Ohio, Mississippi and Hudson, nevertheless the open water ways keep the rail carriers down to a reasonable basis. Points not remote from San Francisco and not far from the bay may be looked to, as at Alviso and elsewhere, to use short roads to connect with the bay, making a tnasportation line to and from San Francisco.

SMILES BETWEEN SERMONS.

Teacher—Are there any exceptions to the rule that heat expands and cold contracts? Tommy—Yes'm. The ice man leaves a lot bigger twenty-pound chunk since it got colder.

The Philanthropist—In giving you that quarter, sir, I'm afraid I've befriended a hard drinker. The Beneficiary—Your'e mistaken this time, sir; drinking is one of the easiest things I do.—Puck.

"What was the most confusing case you ever had?" asked the doctor of the lawyer. "Case o' champagne," returned the lawyer. "I hadn't got half through it before I was all muddled up."—Harper's Bazar.

A maiden writes: "Can you tell me how to change the color of my hair, which all the young men tell me is red?" Certainly we can. Get rich; they will then call it golden or auburn.—Erie Messenger.

"Doctor, how much flesh can one lose in a day under your treatment' "That depends—I have one patient who lost thirty-five pounds yesterday." "Graious!" "Fact—I cut his leg off!"—Chicago Record.

"Did your wife say anything when you got home so late??" "Not when I got home," said the other man sadly. "She waited till I got asleep and then got up about 5 o'clock to practice on the piano."—Indianapolis Journal.

Two forgers, E. C. and Thomas Ehstromer, brothers, said to be members of a noble family at Stockholm Sweden, have been arrested at Chicago. They had been posing as the agents of the Illinois Humane Society, and it is said they secured more than $60,000 by bogus checks bearing the forged signature of the president of the Illinois Humane Society.

Says the Mexican Herald: During the past three months drafts for over two and a half million dollars gold have passed through Wells-Fargo Express Company with which to purchase Mexican dollars for the Japanese government.

QUEER SECT OF WOMEN

Sanctified Sisters, Life Like Monks—Guided by Dreams.

CELIBACY AN IMPORTANT TENET.

Strange Habits and Aims of Women Who Left Happy Homes to Live Hard, Isolated Lives.

Located in the thriving town of Belton, Tex., in the central part of that State, is a curious colony of religionists, known as "Sanctified Sisters," or "Sanctificationists." The representative women of this order are at present visitors in New York City. They are Mrs. Martha McWhirter, founder of the sect; Mrs. Gertrude Scheeble, Secretary of the co-operative institution owned and controlled by these peculiar people, and the Treasurer, Miss Lizzie Holtzclaw.

This strange community of earnest women is the outgrowth of a religious movement that has cut off its members from all intercourse with the world, and has even divided happy households. The doctrine professed by the women is of a very simple character, and embodies three essential principles—a life of celibacy, a common property interest and an isolated existence.

Among the members are those who previously were social leaders in their respective towns, universally respected, and some of them were very wealthy. The original leader of these Sanctificationists, and their present head, Mrs. Martha McWhirter, is a woman of indomitable will. She was the mother of twelve children when first she conceived the idea of this new belief. Her husband naturally opposed her extraordinary views, and endeavored to prevent her from asssisting in spreading them. But his objections were in vain.

Nineteen years ago the society assumed tangible form, and since that period a steady growth, financially and otherwise, has been made. History records no instance where stubbornness, folly and fanaticism have been so strangely intermingled. Stern devotion to principle, heroic fortitude and self-sacrifice have been and are the controlling influences. In the early days of the society the women determined to raise money in order that the society might be self-supporting. Each employed a method of her own for accomplishing this result.

It is strikingly indicative of their earnestness to know that one woman, who had previously lived in affluence, bought wood as it stood in the forest, and with the aid of another sister cut the timber and hauled the fuel into market. Others accepted positions as domestics in households in adjoining towns, their earnings being pooled for mutual benefit. Others sold country produce, and a few took in laundry work to add a mite to the assets.

No uniform is worn by the Sanctificationists, nor have they ever adopted one. They dress plainly, and at one time wore bonnets similar to those worn by orthodox Quaker women. A little more latitude in the matter of dress has been allowed recently, and modern hats have been received with favor.

The community consists of thirty-two members, all of whom live at the Central Hotel, in Belton. This building is their own property. The Central Hotel Company is a corporation well and favorably known in financial circles, and represents the united interests of the colonists. The estimated wealth of the sect is $100,000. The hotel building and furnishings cost $50,000. The rest of their capital is distributed in smaller enterprises.

It is the aim of the sisters to make their community as complete within itself as it is possible to make it. With that end in view the entire work is done by the members, who have a systematic method of dividing the labor. One of them will teach the children. One of the sisters is an expert dentist, and has an office fully equipped for working at her profession. The income from the hotel is the principal source of revenue, but every investment seems to have been a profitable one, rendering the organization self-supporting and entirely independent. They are leaders in making public improvements, and all are among the most active and progressive citizens, always ready to advance the interests of the town. Mrs. McWhirter is a member of the Board of Trade and a director of the Opera-House syndicate of Belton.

There is no formal worship of any kind practiced by the sisters, but daily devotional exercises are part of their creed, and they are also largely guided by "dreams." A recital of religious experience by members forms a basis for all their important actions. They also claim to be possessed of a delicate sense, which is their greatest help, and by it they detect mistakes made, and through it correct them.

They try to improve themselves intellectually, and are regular subscribers to the leading papers of the great cities. In their library are all the standard works, but the works of Tolstoi, Ballamy and other would-be reformers are most liked.

Woman suffrage is a hobby of the Sanctificationists, and they consider themselves an instructive illustration of what women can accomplish in unusual walks of life.

The story of the phœnix is a common superstition in several countries. According to the ancient and best accepted legend the world has but one phœnix. This animal, at the end of 900 years, burns itself to death in a funeral pyre of its own erection, and as soon as it expires another phœnix with wings outstretched rises from the flames.

INYO INDEPENDENT.

Irv. H. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY.

INDEPENDENCE, CAL.

FRIDAY, NOVEMBER 29 1895

Turkey is on the verge of revolution and seems to be too weak to suppress it. It is the beginning of the end of a country that has no right to exist in Europe, and the civilized world will applaud her last kicks.

There are said to to be 200,000 Americans travelling in Europe at present, each of whom spends at least $1000 abroad. Is it wonderful under these circumstances that we are sending millions of dollars abroad annually.

We have received, with the compliments of L. H. Brown, secretary of state, a copy of the "California Blue Book, or State Roster" for 1895. We have been able to give it, asy et, only a cursory examination, but have seen enough to know that it is a valuable work and we expect to have frequent use for it. Mr. Brown has our thanks.

It is an ill wind that blows no one any good." Here is an item from the market report of a New York paper that will be interesting to Californians; "The public should make up its mind to pay high prices for oranges the coming winter, for practically none are expected to come north from Florida, an almost unprecedented condition of affairs since this fruit began to come on the market. The entire crop in Florida this season, it is estimated, will not exceed 100,000 boxes, hardly enough for the hotels Florida, while last year's crop, if it hadn't been for the disastrous freeze, would have been 5,000,000 boxes. Florida oranges blossom in March, show color late in October, and thereafter shipments north begin. Usually at this season there are more or less Florida oranges in this market. The only Florida oranges that may reach here this season are the delicate, thin-skinned fruit from the southern part of the State. To lay them down here, it is estimated this year, will cost $3.50 to $4 a box, which will make the retail cost something like $6 a box. In the absence of Florida oranges California and Mediterranean fauit will have to be depended upon."

The great cattle firm of Miller & Lux own and have under lease land equal to about one-eighth of the area of California. That is a larger area than is within the limits of several Atlantic states. All land under the control of this firm is set down at 14,5000,000 acres. Miller himself enumerated the land holdings of this firm to this extent: "The ranches in Santa Clara county have an extent of eight square miles; in Monterey county an extent of twenty four miles north and south and seven or eight miles east and west; the Mariano ranch extends eighteen miles east and west and sixteen miles north and south; in Merced county there is an area of thirty-six by twenty-two miles; in Kern county one fifty by forty-eight miles; in Fresno one forty by thirty-six miles; in Nevada one sixty by 100 miles, and other numerous ranches in other localities." Nearly the whole of this land is uncultivated. The owners have barred out settlement and cultivation, to the great injury of the state. As much land has been and is now in possession of this cattle firm as would support half a million of population. The aggregate area of land in California thus represented is greater than the entire state of Connecticut. Probably less than 700 persons derive their subsistence from these tracts. They are principally cattle herders, drovers on the roads, including the usual assortment of cowboys. There are no hamlets and no improvements going on to make prosderous communities on these great rancher. It is stated that the firm is immensely rich, the assets going up to 40 or 50 millions, perhaps more. This wealth consists of land kept out of cultivation, with a value greatly increased by land cultiuated elsewhere. Suppose this form of pastoral agriculture had been exclusively pursued in California. The state would have been one of the poorest in the union. It is probable that under such a system there would not have been a population of 250 in all California. But this vast area controlled by two men, one of whom is dead and is now controlling it from the other world, representing all told an area equal to one-eighth of the second largest state in the union, or as much as one half of the area of New York! In what way has this vast territory been used for the good of California? Barbarous and half-civilized tribes maintain about the same industrial system. The cattle roam over a thousand hills at the cost of civilization and domestic improvements. Do any fair-minded citizens believe such a system has been good for this state.

FEEDING A SICK HORSE.

What Are the Best Articles of Diet to Give Him?

F. T. McMahon, veterinary surgeon to the Chicago fire department, communicates an interesting article on the treatment of sick horses. After specifying the principal substances from which to select articles of diet for the sick horse, such as bran, carrots, oatmeal, linseed, etc., the writer continues:

"Bran stands decidedly foremost as the food most generally in use for the invalid horse. It acts as a laxative, is frequently tempting to the appetite and easy of digestion. There is no part of the general treatment more universal than offering this substance as a change of food. Is the horse very weary and his powers weakened in consequence? We induce him to take a warm bran mash, which comfortably distends the stomach and satisfies any craving for food, thereby enabling him to lie down and rest his enfeebled system until repose restores its wonted vigor. Does he show slight symptoms of cold or fever? A warm bran mash is a convenient plan of steaming and consequently of soothing the irritable mucous membranes of the air passages. It is a substitute for the more stimulating diet he is accustomed to and gently promotes the activity of the digestive apparatus; it is also a convenient medium for the partaking of certain simple remedies. A lower diet than that with which he is indulged when in full work is judicious and bran is selected.

"Is it necessary to administer purgative medicine? A bran mash renders the bowels more susceptible of its action, and a smaller portion of the drug is therefore required to produce the desired effect, and there is, at the same time, less risk of painful spasms accompanying its operation. Bran mashes may be given hot or cold—cold are perhaps quite as grateful to the horse—but the nibbling of the hot mash in catarrhal affections is particularly beneficial, from the necessary inhalation of the steam.

"Of all the roots with which horses are tempted, the carrot, as a rule, is the favorite and perhaps the most beneficial. It is said to be somewhat diuretic in its effects and to exercise a salubrious influence on the skin. Certain it is that a sick horse may be coaxed into eating carrots when disinclined to partake of other nourishment, with the greatest beneficial results. For the ailing horse, then, carrots are most valuable as an article of diet, and a few may be given with advantage to a horse in a healthy condition.

"Oatmeal is extremely nutritious, and as a food for the convalescent horse is most valuable. The bruising process the grain has undergone breaks the husk and renders it more easily acted upon by the digestive organs. It is usually given in the form of gruel, and in that form it is one of the most essential articles of diet for the infirmary. It is also a ready mode of supplying the tired, thirsty horse with nourishment after exertion, when he returns to the stable.

"Linseed is decidedly to be included in the sick diet roll. It is nutritious, and from its oleaginous nature soothing to the frequently irritable mucous membrane of the alimentary canal, and hence is particularly to be recommended in the treatment of sore throats. Nor is its bland effect local only. Its more general influence is particularly observable in affections of the kidneys. It may either be boiled, so as to form when cool a gelatinous mass, and then mixed with bran, or the liquid, after boiling, may be offered as a drink.

"Grass, hay tea, etc., are also very useful in the treatment of disease and should be used in connection with other remedies."

Live Stock Points.

A calf is a calf till it is a year old. Then it becomes a yearling.

All horses should be broken to drive in either single or double harness before they are offered for sale.

Put female animals near the time of parturition away by themselves. The event throws the other animals into a state of nervous excitement.

A horse dealer says that a carriage animal broken so that he is entirely safe for a lady to drive brings from 25 to 50 per cent more money than one that cannot thus be warranted.

The livest and most paying branch of stock raising at present is the hog business. The high prices of a year ago still prevail to some extent.

When you are educating a colt, lead him up to baby wagons and make him smell them. Haul them about where he can see them. Do the same with umbrellas. Let him see one closed. Then open it and let him see it and smell it. Then wave it open before his eyes. Then open and shut it in his face, gently at first, then suddesly. Walk around him with it open. That colt will never afterward scare at an umbrella. A horse can also be made familiar with a train of cars so that he will not mind it at all

When you give ground feed, mix always a little chopped hay, straw or corn fodder with it. This gives the fine food the proper bulk and roughness and keeps it from packing in the animal's stomach.

Do not feed sows very heavily immediately after farrowing. It stimulates the flow of milk so that this sometimes becomes congested in the glands and dries up partially. Begin light and gradually increase the quantity.

The number of hackney horses in America is rapidly increasing, and the collection at the New York horse show was the finest ever seen in this country. It is said to be one of the best ever displayed in the world. The famous old Matchless of Londesboro was the hackney that attracted most interest. Matchless is now 10 years old. Like most stallions, his temper does not improve with age. He is still, however, the best known hackney sire in America. Some of his own colts are pushing him hard in this respect, though, one of them being Enthorpe Performer, who won the blue ribbon at the New York horse show.

LIVE STOCK

BOSS HOGS OF BOSS BREEDS.

The Animals In the Illustrations Are Hard to Beat.

The west and northwest beat the world on pigs anyhow. Here are two specimens of the bluest swine blood in America or the world. Both are owned in the west. The first picture shows a noted Berkshire sire 2 years old. He

PRIZE BERKSHIRE BOAR.

has the perfect Berskhire form and the Berkshire color—black, with white feet. The standard of color for the perfect hog of this breed gives also a white face, white on tip of tail, with "an occasional splash of white on the arm."

The pure bred Berkshires have long, black, silky hair. While the four white feet are usually attendant, one black foot would not indicate faulty breeding, neither would a few white or brownish hairs in any part of the body. With good care these hogs can be made to weigh 300 pounds at 9 months old. The original Berkshire hog in its native England was of a buff or reddish brown color, spotted with black, and it had big flop ears. It was a coarse brute, too, and weighed when full grown sometimes 1,000 pounds. The dainty streak of fat and streak of lean flesh upon its bones has been bred into it, and its big bones and flop ears have been bred out of it.

The Poland-China here shown belongs to the famous Wilkes family and is not quite 2 years old. He was the champion of his breed at one of the state fairs. While the Berkshire was originally an English breed, the Poland-China is as nearly American as any live stock in this country can be. Evidently the two are cousins—not very

PRIZE POLAND-CHINA BOAR.

distant ones at that. In crossing breeds the principle holds good that, other things being equal, the product of the breeds that more nearly resemble one another give the best results. This being the case, it is not surprising to have Colonel Coburn say in his work on swine husbandry that improved Berkshires and Poland-Chinas crossed make the best feeding hogs in the world.

Appetizers.

Pickled olives are a tonic for the nerves, as is celery. While the latter is an excellent digester and should be supplied in crisp, tender pieces to those whose digestion is faulty, yet everywhere it is an excellent appetizer. Among other healthful appetizers water cresses are in the very front rank. All greens are antiscorbutic, but water cresses are especially valuable for this reason.—New York Dispatch.

ALIAS SUMMONS

IN THE SUPERIOR COURT OF THE COUNTY OF KERN, STATE OF CALIFORNIA.

S. Bachman, Plaintiff, vs. Domingo Etcharren, John Iribarne, Frank Cathery, S. Heineman and L. Bachman, copartners doing business under the firm name and style of S. Heineman & Co. John Doe and Richard Roe, Defendants.

THE PEOPLE OF THE STATE OF CALIFORNIA, send greeting to Domingo Etcharren, John Iribarne, Frank Carthery, S. Heineman and L. Bachman, copartners doing business under the firm name and style of S. Heineman & Co. John Doe and Richard Roe, Defendants.

You are hereby required to appear in an action brought against you by the above named plaintiff in the Superior Court of the County of Kern, State of California, and to answer the complaint filed therein within ten days (exclusive of the day of service) after the service on you of this summons, if served within this County, or if served elsewhere within thirty days.

Said action is brought to obtain a judgment of this Court for the foreclosure of a certain chattel mortgage described in said complaint, duly acknowledged, verified, executed and delivered by said defendant, Domingo Etcharren to John Iribarne, on the 17th day of May, 1894, to secure the payment of a certain promissory note, or instrument in writing dated May 17th, 1894 for the sum of Four Thousand Dollars, U. S. Gold Coin, payable twenty four months after date with interest thereon from date at the rate of one per cent per cent per month, payable monthly, and if not so paid the whole, sum of both principal and interest thereof to become immediately due and collectable, at the option of the holder of said note, or instrument in writing, which said note or instrument in writing, after the making, execution and delivery thereof, was duly endorsed and delivered by said John Iribarne to the firm of S. Heineman & Co. and on said last mentioned day, said John Iribarne duly assigned said chattel mortgage to said firm of S. Heineman & Co. and afterwards, to wit: on the 28th day of September, 1894, said firm of S. Heinman & Co. for value received, sold, assigned and delivered said promissory note or instrument in writing and said chattel mortgage to the plaintiff. Said mortgage conveyed the following described personal property which said property was at the date of the execution of said chattel mortgage in the County of Inyo, but is now and for more than one month last past has been in the County of Kern and is described as follows: Thirty eight hundred head of sheep marked "D" and having an underbit and overbit on each ear, together with the wool thereon and the increase thereof; also four horses two mules, two wagons and four sets of harness and camping outfit; that the persona property conveyed by said mortgage be sold and the proceeds applied to the payment of said sum of Four Thousand Dollars, U. S. gold coin principal with interest thereon at the rate of one per cent per month from the 17th day of May, 1894 and costs of suit, and in case said proceeds are not sufficient to pay the same then to obtain a judgment and execution against said defendants Domingo Etcharren and John Iribarne, for the balance remaining due, and also that said defendants and each of them, and all persons claiming by, through or under them, or either of them, may be barred and foreclosed of all right, title, lien, equity of redemption and interest in or to said mortgaged personal property, and every part thereof, and for such other and further relief as may be just, all of which will more fully appear by said complaint on file herein, to which you are referred for further particulars.

You are hereby notified that if you fail to appear and answer said complaint, said plaintiff will apply to the Court for the relief demanded in said complaint.

Witness my hand and the seal of said Superior Court of the County of Kern, State of California, this 13th day of June 1895.

[SEAL.] F. W. CRAIG, Clerk.

T. M. McNamara, Attorney for Plaintiff.

Order of Adjudication of Insolvency.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of George A. Free, An Insolvent Debtor.

George A. Free having filed in this Court his petition, schedule and inventory in insolvency, from which it appears that he is an Insolvent Debtor the said George A. Free is hereby declared to be insolvent. It is hereby ordered that the Sheriff of Inyo County be, and he is hereby, appointed Receiver of the property of said Insolvent, and that upon his giving a bond to the People of the State of California, conditioned as required by law, and in such sum as the Court may order, and qualifying, he take charge and possession of all of the estate, real and personal of said George A. Free Insolvent Debtor, whatsoever and wheresoever situate, except such as may be by law exempt from execution, and of all his deeds, voucher-books of account and papers, and to keep and care for and dispose of the same until the appointment of an Assignee of his estate. All persons having the same or any part thereof (including the Sheriff of the County of Inyo) to his or their possession are hereby directed to deliver said property to said Receiver, and all persons owing money to said Insolvent are hereby directed to pay the same to said Receiver and that said Receiver keep the said property or the proceeds thereof, till the further order of this Court. And all persons are hereby forbidden to pay any debts to said Insolvent, or to deliver any property belonging to such Insolvent to him, or to any person, firm, corporation or association for his use, and the said debtor is hereby forbidden to transfer or deliver any property until the further order of this Court, except as herein ordered.

It is further ordered, that all the creditors of said debtor be and appear before the Hon. N. D. Arnot, acting Judge of the Superior Court of the County of Inyo, in open court at the court-room of said court in the town of Independence, County of Inyo, on the 18th day of November, 1895, at 10 o'clock a. m. of that day, to prove their debts and choose one or more assignees of the estate of said debtor. It is further ordered, that this order be published in the Inyo Independent, a weekly newspaper of general circulation, published in the County of Inyo, as often as the said paper is published before the day set for the meeting of creditors.

And it is further ordered, that in the meantime all proceedings against the said insolvent be stayed.

Dated November 8th, A. D. 1895.

N. D. ARNOT,
Acting Judge of the Superior Court.

[Endorsed.]

Filed November 8th, 1895.

D. J. HESSION, Clerk.

P. W. Forbes, Attorney for Petitioner.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY, the 8th day of March 1892, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit Commencing at the South-east corner of the south-east quarter of North east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 98-100; thence North-east following the meanderings of the bed of the Creek along its North branch to Edwards street, in the town of Independence, thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the county Recorder of said Inyo county, having been the residence of said John A. Hallnah, deceased, at the time of his death.

Lots Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dispricada Lode."

That certain lot, piece, or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the North west quarter and the North-east quarter of Section No. twelve (12), and the South-west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South sixty-eight and eleven-twentieth (68 11-20) rods; trence West twenty-three (23) rods; thence North-westerl along a small branch or swale to a point twenty four (24) rods North of the general corner of the North East quarter and the South east quarter, and the North-west quarter and the North east quarter of the North-west quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres: Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney, at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court Deed at the expense of purchaser

Order of services until further notice will be as follows:

Independence—Every Sunday evening at 7 o'clock.

Lone Pine—Every Sunday morning at 11 o'clock, except the second Sunday in the month, and the Thursday evening before the second Sunday of each month at 7:30 o'clock.

Fort School House—The second Sunday in the month at 11 o'clock a. m.

Liberty School House—The second Sunday of the month at 3 o'clock p. m.

Georges Creek—The first and third Sunday of each month at 2:30 o'clock p m

All are cordially invited to be present at these services.

Thos. H. NICHOLAS,
Pastor.

BORN.

ROEPER—At Independence, November 27, 1895, to Mr. and Mrs. J. C. Roeper, a son.

DIED.

HALL—At Big Pine November 23, 1895, Joseph Hall, aged 75 years.

Mr. Hall was the father of George, Daniel and Michael Hall, Mrs. J. H. Smith and Mrs. Alex McNett, all at Big Pine. He was buried last Tuesday.

SCOVIL—At Georges Creek, November 24, 1895, Thomas B. Scovil, a native of Inyo County, aged 4 years.

Letters remaining uncalled for at the Independence Post-Office, this date.

J. W. Hanby. W. L. Hodgin.
Inyo Land Co. A. S. Seeley.
Titus J. Dadley.

G. Sanger of Alvord was in town last Saturday.

J. C. Crocker came down from Big Pine last Sunday.

Charley Collins came down from Bishop last Monday.

Turkeys have been plentiful in the market here the past week.

Quirk's gallery is now in full running order and doing A. 1. work.

Another party of emigrants passed through town last Friday going north.

Holbert, Gibson and a number of other cattlemen were in town last Saturday to attend the sale.

Jas. Wright and Ed. Lark went out to Mazourka last Tuesday to try some placer claims there.

Mrs. Baker and son of Big Pine have been visiting friends at Camp Independence the past week.

Ira Smith of Camp Independence expects to start for Stockton to-morrow morning to attend a business college there.

On and after December 1st meals will be reduced at the Independence Hotel to 25 cents. There will be no change in the table service.

In the trial of J. Henry Cole, charged with the murder of J. Sullivan, the jury at Brigeport last week returned a verdict of 'not guilty.'

Dave Pitman brought a load of lumber down from Big Pine last Sunday for L. W. Barnaby, the lumber will be used by the County for repairing roads in this district.

If you want something for a Christmas present, go and get some of those photoes in carbon finish. Quirk is the only one doing that grade of work in this part of the world.

The Heney case on trial at Carson was given to the jury on Tuesday. They failed to agree, standing eight for conviction and four for acquittal. A new trial has been set for next Monday.

Hans Meyer, of Georges Creek, has sold his band of cattle to J. F. Gibson, the cattle man. The price paid is said to be twelve dollars and fifty cents a head. The sale constituted 200 head, buyers keeping all the calves.

The C. & C. time card has been changed between Hawthorne and Mound House so that the north bound train now leaves Hawthorne thirty minutes later and the south-bound train arrives twenty minutes earlier. The change also affects the V. & T., but makes no change in time on this end.

Stray Items From Various Sources.

Mrs. L. F. J. Wrinkle and two sons returned from San Francisco Monday evening after a two months visit with friends and relatives.

Miss Alice Rose of Independence is visiting friends in Keeler.

R. F. Boland has quit work at the Defiance mine where he had a lease and has gone to Lone Pine for a while.

R. Barry, an old timer from Darwin, who has worked at times off and on for J. A. McKenzie, left for Arizona on the last Mojave stage. 'Bob,' as he is called says he couldn't stand the lead mines any longer.

Miss Dona Cruz, of Lone Pine came down from Lone Pine Tuesday and is visiting with Mrs. Wrinkle.

Aaron Reynolds and family of Georges Creek, have moved to Keeler for the winter and rented a house from O. P. Dearborn.

A very pleasant little impromptu dance was gotton up at Keeler last Wednesday evening. The ladies were unfortunately in the majority and the young men were conspicious by their absence. What is the matter, has dancing become a lost art, or are the young fellows afraid of the new girl or new woman? Wake up boys.

D. C. Lane is expected from Pomona on the next stage. Whether he will continue shipping ore during the winter months or not is unknown. Sinking is in progress and no ore is being extracted at present. The ore team owned by Wm. Arcularius will probably haul one more load and then he will turn his team out on pasture.

Arthur Smith is laid up with another attack of rheumatism and says Cerro Gordo is no good for old people, the altitude is too high.

Thanksgiving passed off very quietly in this end of the county. The hotels had the regulation turkey and side dishes and everybody had a rest together with a little "shindig" Thursday evening.

Quite a number of Keelerites went to Lone Pine to attend the Musicale and entertainment given by Miss M. Stevens Thursday evening. It was a success socially even if not financially and every one was well pleased.

The Custer mine will ship a car of ore next week as a trial or sample test The company have expended considerable money in Darwin and are deserving of good luck and success.

Yours hastily.
VERONICA.

The Entertainment.

The entertainment given by the committee on Thursday evening at the M E Church for the benefit of the Milton Sunday School, was very well attended, the evening being agreeable, a number were in from the country. The first of the evening was taken up with vocal and instrumental music, all of which pleased the audience, as the selections were excellent and all were in good voice and practice. There were also recitations, all the participants receiving a goodly quota of applause. The room was decorated with chrysanthemum, ivy and other evergreens, presenting a fresh and cozy appearance. After the exercises were over, all were invited to patronise the tables which the committee had loaded with various kinds of cakes, coffee and ice-cream, and a good business was done as long as stray 'quarters' lasted. The committee extend their thanks to the audience who financially assisted them, and also to those who so ably assisted in presenting the program. The receipts were of the entertainment were something over $40.

'Twould be a Foot Higher.

Two men were sitting in front of a store discussing the financial situation. One was an out-and-out free silver man, the other a monometallist. The silver man was demanding free and unlimited coinage, while the gold man insisted that all this silver talk would amount to nothing. A third man drew up a chair, and, after listening quietly for a while, spoke up, saying, "Maybe you're right 'bout all this silver talk 'mounting to nothing, but I'm a silver man and I'm of the opinion it's going to tell. It's just like this:" The two disputants settled themselves comfortably, and the third man continued. "There was a certain farmer in the Kansas cyclone district who was building a stone wall. He was putting it there to stay, building it five feet 'cross the base and four feet high. A stranger came riding by and seeing the care the farmer was taking, said to him, "You seem to be mighty careful about that wall." "'Yep,' replied the farmer, 'I'm er building her to stay.' "'T'aint no use,' replied the stranger; it'll blow over just the same.' "'Well, let her blow over, she'll be a foot higher if she does,' replied the farmer continuing his work." The gold man lighted his pipe.

Discontinued.

The local sleeper service between Reno and Oakland Pier has been discontinued. This has been a great convenience to travelers, especially to those coming down on the V. & T., and proceeding west. The delay of trains did not seriously inconvenience them, for they could step into the sleeper, which always stood on a sidetrack, and retire for the night. With the discontinuance of the service, however, through passengers will be obliged to lounge about the depot during the winter nights, and wait for their trains. What caused the change is hard to say, for the travel has certainly been brisk enough to warrant it continuance.—*Reno Gazette.*

An Aunt's Legacy

A. D. Jaqua, formerly mail clerk on the C. & C., has quit the service of Uncle Sam. His reasons were not because of any special dislike to Uncle Sam as a boss, but because his aunt in San Francisco left him a nice little legacy of $50,000 and he has gone down to the Bay to lay his large right hand on the deposit.—*Lyon County Times.*

Dragged To His Death.

The pioneers of California and Nevada, especially those of the Comstock, will be shocked and pained at the sudden, lonely death of Davidson M. Geiger. The sad affair occurred between one o'clock Friday afternoon and 8 a. m. Saturday. The deceased, who was an aged man, left the Canning place, where he was temporarily stopping, to get his horse pasturing at Leidy's ranch nearly half a mile away. He got the animal and rode away about noon for the hills where he had been mining. In the neighborhood of 3 p. m. the horse returned with nothing missing save the saddle blankets. Mr. Leidy suspecting something wrong, knowing where Mr. Geiger had been prospecting, mounted and started for that locality. Continuing his investigation until darkness terminated his labors he could find no sign of the missing man. At dawn he resumed his search going directly to the Canning place. Thence following the main highway about half a mile he found traces where the horse had evidently shied at another dead one lying near by, and the traces of a heavy body dragged some sixty yards besides the footprints of running hoofs. Following the trail he soon came upon the old man lying cold and stiff beside the road. The body was lying on its left side with the head resting on the extended arm. The right leg was broken above the knee, and a severe contusion on the temple. The latter, no doubt, was the approximate cause of death. The whole attitude of the body was one of peaceful repose. The preceeding night had been extremely severe, inclining some to believe that he had in his helpless state perished from cold, rather than injuries received, but the whole attitude of the remains showed that death must have ensued almost instantly and painlessly.—*Index.*

Silver Peak.

A correspondent at Silver Peak writes to the *Bulletin* as follows:

It is being copied from your paper that this place is a fizzle, that the bullion has been attached and that it was the end of all for Silver Peak, and that as there had been no pay day those in the employ of the company would have to fulfill the scriptural injunction: "Take up thy bed and walk." Now the truth of the matter is, Mr. Hanchett has many bitter enemies who are anxious to see him make a failure, regardless of who it may injure in the general flood.

Mr. Hanchett has one of the best mines in the world—a mine that if properly handled would pay millions of dollars, but if it is allowed to be robbed as has been done, in a few years the rich ore will be culled out and only the low grade ore will remain. Mr. Hanchett made a pay-day last week, when he paid one half and promised the balance soon. The cyanide has arrived and the leaching is going on. There has been considerable ore taken out recently that will mill $30 per ton. The teams have been ordered back and it is understood that they will begin hauling on Friday next. The tunnel, which is being run to open the largest ledge and to tap the mine generally is now more than half completed, and it is expected that two months more will finish it.

Card of Thanks.

We desire to extend our thanks for the kind assistance rendered in making the Thanksgiving entertainment so successful. To the children who participated, we especially extend our congratulations.

MISS LENA THOMPSON,
MISS MAGGIE GORMAN,
Camp Independence, Nov. 29, 1885.

At the Commissioners sale last Saturday, a fair crowd was in attandence, but the prices obtained were rather small. Sixteen head of mules sold for ten dollars a head, the highes bid for a single horse was eighteen dollars, the lowest fifty cents, a number going for that price. The total amount received for the bunch of about 130 head was $320.

SIGN POSTS IN THE DESERT.

The great Mojave Desert is no longer to be a trackless waste. The loss of hapless prospectors who have perished from year to year has finally moved the Board of Supervisors of San Bernardino County, which includes within it 20,000 square miles of the desert, to take some action to make it possible for prospectors to travel that arid region in comparative safety.

Recently a number of mining men petitioned that a complete map of the desert be made, showing the roads, trails and sources of water supply, and a committee was appointed to investigate and report. The result of their investigations has just been made public and they recommend all that was asked and more. There are trails and roads leading all over the desert to the various mining camps which dot that waste of sand, and it is proposed to have maps made, with blue print copies, which will be supplied to desert travelers, with all the landmarks designated, thus enabling them to follow the trails with much less danger of losing their way. But in addition it is proposed to establish a system of signboards and guide posts at intervals along the trails, giving information as to direction and distances, and, more important than all, the nearest point at which water may be found.

Nine-tenths of the people lost on the desert die of thirst. Not infrequently their bleached bones have been found within a short distance of the spring they sought. But by the new system which is planned the unlucky prospector will know how far he is from water, and will lay his plans accordingly.

These indices are to be put at such short intervals along the trails that it will be almost impossible for travelers to miss them. But, not to stop at pointing out the trails and the sources of water, new sources are to be developed and the old ones better cared for. Rewards are to be offered to any person discovering new springs or developing any water at points where none is known to exist. Springs already known will be cleaned out and the water protected from pollution by wild animals or by careless handling.

The mining men are intensely interested in the proposed innovation. It is estimated that in the thirty years in which mining has been followed on the desert not less than $20,000,000 have been taken out, while in that time scores of men have been lost whose lives might have been saved had such a system been in vogue as is now proposed. The desert is now fairly swarming with prospectors, and more will go out as soon as the weather becomes more tolerable.—San Francisco Examiner.

ODDS AND ENDS.

Lord Acton's library, which contains 30,000 volumes, is the largest in England.

A down east preacher says that every woman who rides a bicycle is following the advice of the devil. How about the men, parson?

One of the exhibits in the negro building of the Atlanta exposition will be a bust of Charles Sumner, made by Elmondia Lewis, a colored woman sculptor.

After the crusades had inflamed Europe the queer fashion was instituted of having wedding rings made from what was supposed to be a fragment of Christ's cross.

John Wanamaker has increased his life insurance to the remarkable aggregate of $2,000,000. He is the most heavily insured man in America and probably in the world.

For marrying a Christian in violation of the terms of his father's will, Baron Konigsunter of Vienna has paid a forfeit of 1,000,000 florins which goes to specified charities.

Aluminum heel tips are coming into vogue for women's shoes. The leather is better protected than in the old style and they will not slip on any sort of a pavement, icy or otherwise.

A well-known banker of Wisconsin is lying very ill in a Milwaukee hospital, with blood poisoning. It was contracted through his habit of wetting his fingers on his lips while counting bank bills.

Japan has hitherto been a horseless country, but the war is beginning to acquaint the natives with the use of this animal and now the Japanese army have put in horses to drag the field guns as well as appointed a cavalry.

Another one found guilty of punning, Mrs. Mary Barker Eddy, founder of Christian Science in declaring that Westminster chimes would no longer disturb Backbay wrote of the old Bay State—"May it rest pacific on the shores of the Atlantic."

A CHEEKY LITTLE LAMB.

The Rev. Dr. Meredith a well-known clergyman, tries to cultivate friendly relations with the younger members of his flock. In a recent talk to his Sunday school he urged the children to speak to him whenever they met.

The next day a dirty-faced urchin, smoking a cigarette and having a generally disreputable appearance, accosted him with:

"Hullo, Doctor!"

The clergyman stopped and cordially inquried:

"And who are you, sir?"

"I'm one of your little lambs," replied the boy, affably. "Fine day."

And tilting his hat on his head, he swaggered off, leaving the worthy divine speechless with amazement.—Pearson's Weekly.

Philanthropist—In giving you that quarter, sir, I'm afraid I've befriended a hard drinker.

Beneficiary—You're mistaken this time, sir; drinking is one of the easiest things I do.—Puck.

Ambitious Mrs. Willatts.

By W. E. NORRIS.

"It is very short notice," he said at length. "There is an empty house in Grosvenor place, and, assuming money to be no object, I dare say I could manage to secure everybody for you except the royalties, who are out of the question. But couldn't you fix a rather later date?"

Mr. Willatts made a gesture of dissent. "Money is no object," he replied, "and as my wife hasn't contrived to get the royalties I can do without them, though I should be glad if you could engage some sort of a serenity for me. But I need not point out to you that there would be no sense in my giving a ball unless I gave it on the same night as hers."

After some further discussion Lord George agreed to accept the part assigned to him. He knew, if his interlocutor did not, that in London the clashing of two entertainments does not necessarily imply the fiasco of one of them. Besides, he had really done all that he possibly could do for Mrs. Willatts. People who accepted the wife's hospitality would assuredly wish to compare it with that of her husband; and although the latter would probably have to forego the patronage of the Duchess of Stratford, he would scarcely grieve over an abstention the significance of which he would be protected from realizing by his ignorance.

Mr. Willatts, it may be, did not realize the social importance of the Duchess of Stratford, except in so far as he conceived all duchesses to be socially important; still she was one of the ladies whom he hoped to see at his ball.

The duke, who had recently visited the United States and had purchased large tracts of land in the far west, was extremely desirous of acquiring a certain property which was now in the possession of his would be entertainer, so that the latter, in the event of his consenting to part with that Naboth's vineyard at a price slightly below its market value, would be fairly entitled to request some small recognition of his generosity. Two days later, therefore, Mr. Willatts betook himself to Stratford house, where, on giving his name, he was at once admitted. In the meantime, he had not allowed the grass to grow under his feet. The house in Grosvenor place had been secured, while not a few ladies of rank had intimated their intention of looking in on the evening of the twenty-sixth to see what the American millionaire could do in the way of eclipsing indigenous plutocrats. Thus Mr. Willatts was fully prepared to transact business with the amiable looking personage into whose presence he was shown.

"How do you do, Duke of Stratford?" said he; "I am obliged to you for according me the favor of a personal interview."

The duke said: "Not at all. Very glad to see you."

In the course of some subsequent remarks he allowed it to be inferred that he usually left the transaction of business matters to his agent, but that he had been happy to depart from his general rule in this particular instance.

"Well," observed Mr. Willatts, "there is a saving of time in most instances when principals meet."

In less than five minutes he had explained that he was ready to deal with his noble friend in a truly liberal spirit, and the duke, while gladly closing with the proposal, could not help wondering where this apparently keen witted American's profit was to come in.

"Now, I think you'll allow, duke," said Mr. Willatts, "that this bargain is a pretty advantageous one, and if I ask a small favor of you I conclude you wouldn't wish to hurt my feelings by a refusal."

"If it is in my power to do anything for you, Mr. Willatts," replied the duke, "pray command me."

"Well, I want you to come to my ball on the twenty-sixth and bring the duchess along," Mr. Willatts returned. "I believe you'll enjoy yourself, and Lord George Curtis has undertaken that most of your highest toned people shall be present at it. It's a sort of caprice of mine to say that I have entertained the pick of British society."

"Yes, yes; I see," answered the duke. "Very natural on your part. So George Curtis is managing it for you, is he? George Curtis is—however, he is fully competent. I will make a point of availing myself of your kind hospitality, Mr. Willatts. As for the duchess, I hardly know what her engagements are, but"——

"I should be glad if you could go a step further and make a point of it that the duchess should kindly lend me her support," said Mr. Willatts, and there was a look in his face which seemed to indicate that the transfer had not yet been formally ratified. The duke perceived this and reflected that he was after all master in his own house. He therefore boldly committed himself to a promise that the duchess should accompany him on the evening of the twenty-sixth, and his visitor, after gravely thanking him, withdrew.

During the interval between that day and the twenty-sixth of the month Mrs. Willatts saw no more of her husband, but of course she heard what everybody very soon began to talk about.

"Didn't I tell you that that man had come over here on purpose to take his revenge upon me?" she exclaimed to her confidante. "He would rather spend his last cent than fail to wreck my ball. I'm as certain of that as I am that London isn't big enough to hold him and me."

Mrs. Underwood assured her that London, and even London society, afforded space enough to accommodate two rivals; and in this view she was warmly backed up by Lord George Curtis, whose treachery had not transpired. That enterprising individual was in high spirits, for he saw his way to pocketing a comfortable sum of money. All the ladies to whom he had spoken had been struck by the piquancy of the idea that husband and wife were bidding against each other. Not one of them had hesitated to accept the invitation of the former, and Lord George felt that he had done his duty impartially to both sides.

III.

"I hope you're satisfied, anyway."

But no human being can predict with confidence the result of any game in which the forces on either side appear to be pretty equally balanced. A trifle turns the scale, and very likely it was a comparative trifle, or two comparative trifles, which turned it in favor of Mr. Willatts. First, almost all of those who intended to put in an appearance at both houses had chanced to decide that they would go from Grosvenor place to Pont street, and they found Grosvenor place too attractive to be left in a hurry. Secondly, the Duchess of Stratford was pleased to remain for an hour and a half in the temporary abode of Mr. Willatts, after which she drove straight home, notwithstanding the half promise which she had caused to be conveyed to that gentleman's wife. The duchess, on hearing what her husband wished her to do, kicked a little, but had finally yielded to his entreaties. The duchess, however, was a strait laced old lady. It appeared to her that Mr. and Mrs. Willatts could not both of them be respectable, inasmuch as they lived apart, and that, if she must needs show civility to the one, she could not choose but turn the cold shoulder upon the other.

The duchess, like everybody else, was amazed by the splendor of Mr. Willatts' hospitality. The hall and staircase of the house in Grosvenor place was simply a magnificent orchid show. The floral decorations of the ballroom must have cost a small fortune; the music was the very best that money could procure; and in view of all this ungrudging outlay how could an appreciative guest help remaining to see whether the supper would prove to be in keeping with its surroundings? The Duchess of Stratford staid to supper, and although neither eating nor drinking had much fascination for her personally, she was fain to confess that never in her experience had anything been better done.

Had it suited her convenience to wait for the cotillon, she must have admitted that in this also the openhanded American scored an undeniable success. Perhaps it may not be the best of taste to offer presents of costly jewelry to ladies with whom one is barely acquainted; but we live in an age not distinguished for good taste. Mr. Willatts retained his guests so long that a very considerable number of them never found their way to Pont street at all. It was broad daylight when he lighted a cigar and remarked placidly:

"Well, if this don't make Sally gnash her teeth and tear her hair, nothing will."

Poor Mrs. Willatts did not display her chagrin in so violent a manner; but between two and three o'clock in the morning she did sit down and cry. Her ball had been a dead failure. At no moment had her rooms been full; the ladies who had come had remained but a short time; worst of all, the most influential, including the Duchess of Stratford, had pointedly absented themselves.

"Maggie," said she to Mrs. Underwood, "I have been squarely beaten. I shall give up London and go to Paris. Sam don't know a word of French, and besides there can't be another nation on earth so brutal and insolent as this. I tell you, Maggie, I wouldn't have anything more to say to these English people if they went down on their knees to me."

Mrs. Underwood advised half a bottle of champagne and bed.

Mrs. Willatts was convinced that, so far as London society was concerned, she had shot her bolt and missed her mark. When she went down stairs in the morning she was neither surprised nor angered at being informed that her husband was waiting to see her. She had felt sure that he would come to glory over her.

"I hope you're satisfied, anyway," was the greeting with which she accosted him. "You have made me ridiculous and you have driven me out of England. Perhaps you'll leave me in peace now."

"Well, I've shown you that the British aristocracy don't amount to much," said Mr. Willatts. "As for peace, I'm not sure whether you'll consent to that, though it's what I wish for. Seen the newspapers this morning? You may have noticed an announcement of the bankruptcy of Henry R. Kendrick, of New York."

Mrs. Willatts' heart stood still and the floor seemed to rise and fall before her. "You don't tell me!" she exclaimed involuntarily. "Then I am ruined!"

"Why, no," answered her husband, "you are not ruined, although some folks might say that you deserved to be for having given a free hand to Henry R. Kendrick. I bought that gentleman up awhile ago, and the consequence is that you are my creditor today instead of being his, which is fortunate for you. I shouldn't want to be one of Henry R. Kendrick's creditors."

There was an interval of silence, after which Mrs. Willatts said: "Samuel, I believe I've acted like a fool. I ought to have listened to you."

"Well," replied Mr. Willatts, "it can't be denied that trouble and expense would have been spared if you had."

"And, of course, you aren't speaking seriously when you talk about my being your creditor. You must know as well as I do that I couldn't legally claim a cent from you."

"Oh, yes, you could. I should have to see the lawyers before I could say positively; but you have a moral claim which I don't dispute. Your money is safe enough and I'll hand the amount over to your bankers, only it seems to me that you might do worse than to consult me before you invest it a second time."

"I presume you have had losses over this affair, Samuel," said Mrs. Willatts.

"Nothing to hurt me, Sally; nothing but what I should esteem as clear gains if they enabled you and me to make a fresh start."

"How a fresh start? We fell out because you wanted to boss the whole show, and for all your generosity I'm not going to admit that I hadn't a right to do as I pleased with my own."

"Well," answered Mr. Willatts, "I've concluded to waive my pretensions. All I wanted to prove to you was that a woman who elects to play her own game wants to be a strong minded sort of woman, like your friend Mrs. Underwood; and I'm free to confess that if you were another Mrs. Underwood I shouldn't be here for the purpose of begging you to let bygones be bygones and sail for New York with me next week."

Mrs. Underwood was distressed when her friend informed her somewhat shamefacedly half an hour later that the above proposition had been acceded to. She could not resist saying: "All along you have been just crazy to get your husband back, and now it is he who has forced you to go back to him. I only hope you won't be sorry before you are much older, that's all."

Mrs. Underwood, however, was not left entirely without consolation, for Mr. Willatts not only granted her the free use of the house in Pont street for the remainder of the London season, but handed her over a substantial check in defrayal of necessary expenses, and she has made such good use of her opportunities that she is upon the point of contracting a matrimonial alliance with an Irish viscount.—Longman's Magazine.

THE ELECTRIC LAMP.

Stories of Hotel Men Who Manage to Have Lots of Fun Out of It.

Several hotel men were standing in a group in an up town hotel recently chatting. The conversation turned upon the eccentricities of guests. The many odd ways in which different people handle electric lights came up, and one hotel man said:

"Nearly every one now knows how the incandescent lamp is operated, but still we meet with some funny instances of ignorance. Last week we nearly had our hotel set on fire on account of a piece of stupidity on the part of a guest. The building being fireproof alone prevented a conflagration. A woman came to the house who was in the habit of sleeping with a dim light in her room, and the electric lamp bothered her. She either had to let it burn brightly or else turn it off altogether. Finally she hit upon the idea of wrapping a towel around it. Then she began to question whether the towel would catch fire. Then she adopted the happy expedient of wetting the towel. That was the worst thing that she could do. She soon dropped asleep, and of course the towel soon began to burn. A blazing piece dropped on the curtains, and soon the whole room was afire. She was badly scared and, of course, the contents of the room were ruined."

"That was odd," said another one of the party, "but the strangest thing I have heard of was the case of a farmer who came into St. Louis. He went to a hotel where electric lamps were used. He tried for an hour to put it out, and then sent for a caliboy. The guest explained his dilemma, and the boy promptly stepped up to the lamp and turned the button. There was a moment of silence, and then from the place where the farmer stood there came a flash and report and a bullet buried itself in the wall, narrowly missing the boy. Again and again the pistol was heard until every chamber was empty. Fortunately the boy escaped, and the police entered the room and placed the farmer under arrest. The old fellow was talking incoherently and seemed mad clear through. When he was finally quieted down, he gave his reason for shooting. He said that he had been trying to put out a new fangled sort of light and had not been able to do it. Then he called a boy, who blew it out. Just after the light went out he heard a click and knew that some one had cocked a revolver. He at once thought he was about to be murdered and robbed and did not wait, but began shooting at once. When told of his mistake, he was much chagrined and apologized most humbly."

This story brought forth another one from a member of the party who had not yet spoken. He said:

"When we put electric lights in our hotel, we placed them so that they could be moved to any part of the room, plenty of wire being allowed for that purpose. One night a man came to the house who was unfamiliar with the light and could not find the way to put it out. Evidently he did not wish to show his ignorance, and as he could not sleep with the light burning he cast about for some way to get rid of it. Finally he drew the bureau up alongside the lamp. Then he took the globe and placed it in one of the bureau drawers and closed the drawer tightly. The result was the light was practically put out. The chambermaid found it there in the morning, and it was still burning brightly. He admitted his ignorance then, and we showed him how the machine worked."—New York Tribune.

Four Precious Ink Bottles.

Four ink bottles, from which some of the greatest literary works of the century issued, are to be on view, says our Paris correspondent, at an approaching exhibition of relics. They were used severally by Victor Hugo, Lamartine, the elder Dumas and George Sand. Mme. Victor Hugo collected them to sell at a charity bazaar in Guernsey. To this end she had them set in a frame of oak that could be used as a table. With each is a letter attesting its authenticity. Victor Hugo said: "I did not buy or choose this ink bottle, but fell on it by chance and used it for months. It was asked of me for a work of charity, and here it is.—Hauteville House, June, 1860." Lamartine wrote: "Presented by Lamartine to a master of the pen." Dumas the elder thus certified: "I certify that this is the ink bottle I used in writing my last 15 works.—A. Dumas, 10 April, 1860." George Sand, in a letter of three pages, begs Mme. Hugo to excuse the ugliness of her box ink bottle, which shuts with a spring. She used it in all her tours and wanderings and could only part with it for the sake of Mme. Hugo's charity.—London News.

Explained.

She—Why do they always refer to music as a woman?

He—Well, you couldn't conceive of music as existing in silence, could you?—Life.

THE EARLY BIRDS.

It's the early birds that catch the worm, saith the proverb, but what a foolish worm it is to get up so early and be caught. Some of our farmers are the early birds. They go forth at dawn to catch up, as they call it, and they catch something else. Tramping through wet grass and stubble on cold, damp, frosty mornings like these, and going thus all day thereafter, brings to scores of them what they were not looking for. They come home in the evening to suffer all night with rheumatism. Now, while men must work, they need not suffer. Why should they when a bottle of St. Jacobs Oil will keep them all right? A good rub at night with it will so strengthen and heal the muscles they will resist the influence of the cold and dampness, and a man will be cured before he knows it. Let this be tried for a while, and if the man is not cured it is only because he hasn't the patience to rub the pain out.

LOSS OF BLOOD AND DROPSY.

From the Nugget, Chehalis, Wash.

The neighbors called her a walking corpse. For fifteen years she had suffered from loss of blood and dropsy. She had not the strength to stand alone. She had spent thousands of dollars with the doctors and had been unable to find relief. Her case was considered hopeless.

That is the experience of Mrs. C. Reed, a well known lady of Chehalis, Wash.

A *Nugget* reporter called upon her at her home last Tuesday. She was willing to be interviewed, she said, if she could be the means of pointing out to other unfortunates the way to recovery and good health.

"It has been over fifteen years since the malady asserted itself," said Mrs. Reed. "Since then, until within the last few months, I never knew what it was to be well for a single day. I could not sleep. My appetite went away and I began to lose flesh. This continued for years. I became so weak I could not wait upon myself. I had to have the help of others to dress and undress, even to walk from one room to another. I lost all my strength. In addition, I had dropsy of the blood. My limbs were swollen, and nothing I could do seemed to afford me relief. The doctors said I must take iron to strengthen and invigorate my blood. I took iron—took it by the bottle and by the box; took it morning, noon and night. But it did no good, and I had finally lost all hope.

"At last I saw an account of Dr. Williams' Pink Pills for Pale People. I thought this fitted my case exactly and I tried to get some of the pills. They were not kept at the drug stores here, and I had to send to Olympia. They came finally, however. I began to take them and experienced relief immediately. I sent for two more boxes to the Dr. Williams Company at Schenectady, N. Y., and by the time I had taken them I felt like a new woman. I have been taking them occasionally since then.

"It was two years ago that I began to use Dr. Williams' Pink Pills. I was sixty years of age then, and had rot been able to do my housework for many years. Now I am able to care for myself, to do my own work, and I can walk long distances without being especially fatigued.

"I think my cure is a marvellous one and is due entirely to the Pink Pills for Pale People. Without them I fear I should have been dead before now.

"Since my cure has become known the druggists here have always kept the pills, and I do not have to send away for them any more. I have recommended them to several of my neighbors, and I know that they have done much good in more than one case similar to my own."

In order to confirm this statement beyond all doubt Mrs. Reed offered to make affidavit to its truth, and the affidavit is here presented:

Subscribed and sworn to before me this 14th day of May, 1895.

J. M. KEPNER, Notary Public.

Dr. Williams' Pink Pills contain all the elements necessary to give new life and richness to the blood and restore shattered nerves. They are for sale by all druggists, or may be had by mail from Dr. Williams' Medicine Company, Schenectady, N. Y., for 50c. per box, or six boxes for $2.50.

REASONING POWER OF ROBINS.

A robin's nest and a kingbird's nest were situated in adjoining trees, each containing young birds. When the kingbirds saw the robin bringing a worm to feed its young they would attack it and make it give up the food intended for the young robins. After being robbed a few times the robin appeared with a worm, accompanied by two other robins, and when the kingbird made his appearance the two extra robins pitched in and gave him a sound thrashing, while the one with the worm fed its young and seemed to be laughing all the while. The game was played until the kingbird gave it up, and now the robin feeds its young without help.

THE CASES SIMILAR.

Prompted by the feeling that it was his duty, the Bishop remonstrated with one of his clergy for attending a local hunt. "Well, your lordship," replied the offender, "I really do not see that there is any more harm in hunting than in going to a ball." "I presume," answered his lordship, "that you refer to having seen my name down amont those who attended Lady Somerville's ball, but I assure you throughout the whole evening I was never once in the same room as the dancers." "That, my Lord, is exactly how I stand—I was never in the same field as the hounds."—Then the Bishop sat down and silence reigned.

LIKE A VENOMOUS SERPENT

Hidden in the grass, malaria but waits our approach, to spring at and fasten its fangs upon us. There is, however, a certain antidote to its venom which renders it powerless for evil. Hostetter's Stomach Bitters is this acknowledged and world famed specific, and it is, besides this, a thorough curative for rheumatism, dyspepsia, liver complaint, constipation, la grippe and nervousness. In convalescence and age it is very serviceable.

A Boston authoress has published a book which she calls, "My First Loaf." We'll bet it's heavy.

OUR PROGRESS.

Coast Capitalists Putting Money in Large Enterprises.

THAT IS THE PRESENT TENDENCY.

Beet-Sugar, Oil and a Competing Overland Railroad Into San Francisco. Various Important Matters.

The investment of money in stock of large corporations continues. The Southern California Mountain Water Company has been incorporated at San Diego with a capital stock of $3,500,000. The Pacific Transmission Company, the purposes of which have been alluded to previously, has been incorporated to generate electricity and electric power and to transmit the same to Alameda county, Stockton, San Jose and other cities, the capital stock being $3,000,000. New banking institutions are being established in various points. There appears to be little difficulty in placing California bonds in the East. Confidence in the situation is thereby indicated.

What is possible in the way of fuel is figured out in Los Angeles. The estimate is that fuel oil being sold at 50 cents a barrel or less is an equivalent of less than $2 a ton for coal, and it is said that should the price of oil be increased to 80 cents per barrel, which is possible, it would then represent coal at less than $3 per ton. This cheap fuel is leading to an extension of manufacturing establishments in the South, to which San Francisco must pay some attention. There are now two projects under way for the erection of beet-sugar factories in Southern California, one at Anaheim and the other near Long Beach, in Los Angeles county. The beet-sugar factory at Chino will this year disburse about $400,000 among the people of that place, which indicates the prosperity which the extension of manufacturing may bring this section, where sugar-beets are easily grown and where power and fuel are sure to be very cheap. A financial paper, published in Los Angeles, says that there is a large profit to be made in the manufacture of beet-sugar, even without a bounty and that in those sections of Southern California which are especially adapted to the growth of beet, results have been obtained that have excited astonishment among the leading beet-growers of Europe. Eighteen months ago the chief fuel used in Southern California was coal, which cost something like $9 to $10 per ton. Oil from Puente and Ventura county was used to some extent, but the supply was limited and the cost per barrel was then from $2 to $2.50.

Discussion concerning the Butte, Boise and San Francisco competing road proposition flags a little. The expectation that San Francisco will subsidize the land to the extent of $2,500,000 does not contain any decided assurance of help. The San Francisco and San Joaquin Valley Railway, after the bginning of the season for subscriptions, when money came in with a rush, gradually found a slackening up of moneyed enthusiasm. There is this much to say—that if the railroad thought there was profit in building five lines to Portland there is not much question but that San Francisco could stand another line or two.

The Sacramento Industrial Improvement Association seems finally to have succeeded in obtaining the Ostrander gun factory, Mr. Swift having returned from the East with the information that the plant will be located in Stockton upon certain terms, which include the use of electricity from Folsom at a very low rate. It is sometimes interesting to see what is going on outside of California on the coast. News comes from the North of the reorganization at Port Madison, Wash., of the Port Madison Mill Company. This is one of the largest mills on the Sound and has been idle four years. The capital stock is $300,000. The northwest is doing a large business in turning out cedar blocks for paving for the Indianapolis streets. Forty carloads of these blocks were sent away recently from Seattle and a contract has been let with an Everett, Wash., firm. The Stetson & Post Mill at Seattle is also engaged in a big contract, getting out car material for a large Eastern car factory.

The northwest is also building up a large lumber business with Africa. The new freight steamship Straits of Sunda recently arrived at Tacoma to load 2,000,000 or more feet of lumber for Delagoa bay. The steamer Strathney is also engaged in the same trade. Four steamers have loaded in Tacoma during the past seven months, since the establishment of the Lingham line from Puget Sound to South Africa. One steamer was loaded at Vancouver and three at Port Blakeley. None of these vessels carry less than 2,000,000 feet of lumber, and some as high as 2,500,000 feet. Eureka is extending its lumber business with Australia. Three Australian cargoes have been shipped this year, making a total of 1,011,426 feet.

The following extract from the Tacoma Ledger in reference to the movements of Washington wheat will be of interest:

"Shipments of Washington wheat to San Francisco have already commenced. The West Coast Grain Company and Reed & Co., both local grain firms, ship about fifty car-loads to San Francisco by the next Pacific Coast Steamship Co.'s vessel. While rates here have gone up the San Francisco rates have gone still higher, and farmers have found it to their advantage to sell to exporters in the Golden Gate city. Some time ago the Ledger published an interview with a local grain merchant in which it was pointed out that local exporters were keeping prices down here in order that they might not suffer loss through having purchased charters early in the season at a much higher rate than now exists in San Francisco, where competition is sharper. This, it is alleged, has been the cause of Washington farmers finding a market for their wheat in San Francisco. The same condition of affairs exist at Portland as here."

Movements in country lands are not as brisk as they should be probably, but the tendency still is for the subdivision of large tracts into small holdings. The San Diego Union has the following on this point:

"Another vast tract of land in California, which has long been held by an individual owner, is to be divided up into small farms and sold. This is the famous Santa Margarita ranch of 25,000 acres, in San Luis Obispo county. Several other large properties adjoining it, aggregating some 35,000 acres more, will also be cut up into small holdings and disposed of. It is understood that English colonists will settle on the tract. This division of large holdings into small farms is one of the most encouraging signs in California. It means a great increase in the population and wealth of the State."

The undercurrent of dissatisfaction among the transcontinental lines concerning the handling of business between the Pacific seaboard of California and inland points of Nevada, Utah and Colorado, which has been previously alluded to in this connection, does not seem to be allayed with time. The Sunset route is bringing all the freight it can secure, and having the advantage of not being compelled to divide with anybody on this business from New York to San Francisco, it is easy to see that there may be a profit in making Eastbound rates to encourage the movement of some commodities from San Francisco to near by States and Territories.

The past week has been somewhat dull but various matters of considerable importance are said to be in the ripening stage, and publicity would not materially assist in their development. In fact it is preferred that they should be kept quiet for the present.

MULTUM IN PARVO.

In solitude, where we are least alone.—Byron.

How fast we learn in a day of sorrow.—H. Bonar.

A beggar's rags may cover as much pride as an Alderman's gown.—Spurgeon.

The quarter of an hour before dinner is the worst suitors can choose.—Zimmerman.

The highest problem of any kind is to cause by appearance the allusion of a higher reality.—Goethe.

We enjoy ourselves only in our work—in our doing; and our best doing is our best enjoyment.—Jacobi.

There is nothing that man can less afford to leave at home than his conscience or his good habits.—Packe.

To be innocent is to be not guilty; but to be virtuous is to overcome our evil feelings and intentions.—Penn.

How often events, by chance and unexpectedly, come to pass, which you had not ever dared hope for.—Terence.

The problem of restoring to the world original and eternal beauty is solved by the redemption of the soul.—Emerson.

General abstract truth is the most precious of all blessings; without it a man is blind—it is the eye of reason.—Rousseau.

Every occasion will catch the senses of the vain man, and with that bridle and saddle you may ride him.—Sir P. Sidney.

A good disposition is more valuable than gold; for the latter is the gift of fortune. but the former is the dower of nature.—Addison.

True bravery is shown by performing without witnesses what one might be capable of doing before all the world.—Rochefoucauld.

Modesty is bred in self-reverence. Fine manners are the mantle of fair minds. None are truly great without this ornament.—A. B. Alcott.

A few drops of oil will set the political machine at work, when a ton of vinegar would only corrode the wheels and canker the movements.—Colton.

All deception in the course of life is indeed nothing else but a lie reduced to practice, and falsehood passing from words into things.—South.

It is the privilege of posterity to set matters right between those antagonists who, by their rivalry for greatness, divided a whole age.—Addison.

I never listen to calumnies, because, if they are untrue, I run the risk of being deceived, and if they are true, of hating persons not worth thinking about.—Montesquieu.

Hail! social life! Into thy pleasing bounds I come to pay the common stock, my share of serivce, and, in glad return, to taste thy comforts, thy protected joys.—Thompson.

He is a great simpleton who imagines that the chief power of wealth is to supply wants. In ninety-nine cases out of a hundred it creates more wants than it supplies.—Anon.

Think about yourself, about what you want, what you like, what respect people ought to pay you, what people think of you, and then to you nothing will be pure.—C. Kingsley.

What is strength without a double share of wisdom? Vast, unwieldly, burthensome, proudly secure, yet liable to fall by weakest subtle ties; strength's not made to rule, but to subserve, where wisdom bears command.—Milton.

OLD LONDON.

What One Sees Who Goes Away From Home.

LONDON IS FAR BEHIND THE TIMES.

The Mushroom Towns of Western America are Ahead of the Great City on Earth in Modern Inventions.

A London journal, in a recent comment upon English caution and conservatism, said that no other European city of consequence had taken so little advantage of the end-of-the-century inventions. The traveler is amazed to learn that Naples uses more electric light than London does.

In this world's metropolis, with its magnificent distances between centers and suburbs, the telephone has not yet come into general use. Neither has the phonograph been adopted as an aid to the quick transaction of office business. A considerable percentage of Britons still use the quill pen, and regard the typewriting machine with doubt and suspicion. In the adoption of labor-saving and time-saving inventions the mushroom towns of western America are ahead of the greatest city on earth. They have electric lights, electric-motor cars, hydraulic elevators, steamheated buildings, pneumatic tubes in their department stores and hot-water pipes in their houses. Consequently when the pilgrim from the far west arrives in London and finds gas lamps, omnibuses and fireplaces instead of arc lights, whizzing trolley cars and sizzling radiators he tells his English friends that they ought to visit Metropolisville, Ore., and see how things are done. His preference for all that is modern and noisy amuses the Englishman, whose stubborn preference for the old-fashioned way of doing things amuses the westerner, and each thinks the other wanting in balance.

An American concern which manufactures steam-heating apparatus has a branch house in London. The goods are manfactured in the United States and sent to London to be sold in competition with goods of English and German manufacture. Strange as it may seem, London still regards steam-heating as an experiment, and it is only within the last year or two that the American concern has succeeded in placing its pipes and radiators in many of the club houses and large mansions. The manager of the London office said that in making contracts with Englishmen he had to pursue a new line of tactics.

"Now, at home," said he, "if a man wanted a building heated with steam he simply inquired the cost and the quality of material and then told us to go ahead. Over here the first question asked is: 'How long have these heaters been in use?' The English always prefer something that has been tried for years, and they always want to know who are using such heaters. They have a prejudice against anything that is new and are slow to make changes, but once having come to a conclusion they may be relied upon, for they are faithful in their contracts."

The inborn desire of Englishmen to do things as their fathers did is nowhere better demonstrated than in the adherence to the old street names and the old house numbers. How long would Chicago people permit a comparatively straightway street, two miles long, to have five or six different names? To illustrate, suppose State street, between the river and Madison street, were called State street, from Madison to 12th Green street, from 12th to 20th Black street, from 20th to 36th Gray street, from 36th to 52d White street, etc. That arrangement would not last more than two council meetings.

In London a pedestrian in upper East Smithfield suddenly enters St. George street, which in turn changes to High street and afterward becomes in turn Shadwell street, Broad street and Queen street. Each subdivision of the thoroughfare has its own set of numbers.

If there were ever a proposition to rob any ancient street of its original name or any house of its familiar number there would be a protest from all London. A street which has figured in the history of several centuries is not to be sacrificed for a mere whim. With the average Londoner, however, the historical fragrance would not be the main consideration. He would see in the effect to change the street name a direct blow at the established order of things as he had learned it. Fleet street is merely a continuation of the Strand, but to abolish Fleet street would be like confiscating property. It is the same with the varied systems or lack of any system in the numbering of houses. Some streets number from north to south and others from south to north, some from east to west and others from west to east, but as the vast majoirty are at angles with the compass lines and are full of crooks, bends and angles the failure to agree upon any rule in starting points is not surprising. The streets have that delightful variance which is found in the stitched lines of a crazy quilt.

The Strand starts from Trafalgar square, and the houses at the right hand are numbered in order 1, 2, 3, etc., while the houses immediately opposite have large numbers, such as 479, 478, 477, etc., decreasing as one passes eastward in the street. The houses are numbered in regular order on the south side of the street until the Strand ends abruptly and Fleet street begins, when the count begins on the other side of the street and goes back. In Craven street, however, which opens from the Strand at right angles, the odd numbered houses are on one side of the street and the even-numbered on the other, and this same system applies to Ludgate Hill, which is a continuation of Fleet street.

One must be thoroughly acquainted with the streets and the vagaries in numbering before he can judge from the number of a house its approximate place in a certain street.

An English postoffice address is usually formidable. "James Thorndyke, Esq., Marmion house, Compton street, Uxbridge road, Hoxton, London, N. W.," loads the entire front of an envelope and gives an unquestioned amount of dignity to Mr. Thorndyke, Esq. What does it all mean? In the first place Mr. Thorndyke, instead of permitting his home to exist under the dull appellation of a street number, has called it "Marmion house" and had the name painted on the front wall. Marmion house is in Compton street, which is, let us suppose, one of many small thoroughfares branching off from Uxbridge road, a main thoroughfare.

As an instance, Craven street, of which mention is made above, is usually written "Craven street, Strand." If the rule were applied to Chicago any one of the short and exclusive north side streets reaching from State street to the lake might be called for example, "Bellevue place, State street." This method is valuable when street names are duplicated.

Hoxton is the name of the town, for it is always to be remembered that what is commonly known as London is an aggregation of towns banded together into a county, and the real "city of London" is but a small and central part of the metropolis. "Hoxton, London," has the same significance as "Ravenswood, Chicago," or "Englewood, Chicago." The final "N. W." refers to a postoffice division, and is added merely for the convenience of postal clerks.

It may not be necessary to explain that the names of London homes are often misleading. Take such a title as "The Elms, Primrose lane, Walham Green, Surrey." What does that suggest to the imaginative mind that has been fed upon modern English fiction? A gray manor house half overgrown with ivy, blinking gables, green turf, stately rows of trees and the Lady Some One on a rustic bench.

English names are great. We who live in a nation of "villes" and "burgs," "Main streets" and "Occidental hotels," with a sprinkling of titles gathered from the classics and the American Indians, must admit that English names are great. There is many an American would give $100,000 if he could have a postoffice address such as "The Elms, Primrose lane, Walham Green, Surrey," instead of "742 East 85th." What is more charmingly English than the bits of conversation overheard in London and uncommonly frequent in English plays:

"Well, good-by, old chap. I hope to see you at the Birches soon."

"Ah, thank you; awfully good of you, but I shan't leave Brierly house for several days."

One day a 'bus carries you far into the mazes of the Surrey side of London, and you alight at Walham Green town hall. By chance you stray into Primrose lane and come upon "The Elms." The small, modern cottage is crowded, or rather interred, within a rectangular brick wall, with broken bottles along the top of it. There are house plants in the windows, and two slender trees, with a pin-feathery growth of leaves, are in the front yard, one at either side of the short path leading from the gate to the front door. These are the elms. The place is scrupulously clean and cheerful, with a little area of garden in the back yard and some rose bushes growing in the shade of the wall, but, at the same time, it is difficult to realize that this is "The Elms, Primrose lane, Walham Green, Surrey."

There are thousands of these pretty little homes of high-sounding names. One is called "Fern Bank," although there isn'nt a fern in sight, and another "Rose Lawn," even though there is no space for lawn. The "Oaks" may boast only currant bushes, and "Arlington Hall" may have no appartments large enough to accommodate more than eignt people. Yet one can forgive any man who exaggerates the charms and advantages of his home. The English love home, domestic animals, flower beds, gardens and orchards. Give every Englishman a garden and there would be no more discontent on the island.

A WOMAN'S GOOD SENSE.

In an alley off Grand River avenue a laundry wagon was being turned a trifle too sharply when over it tumbled against a fence and down went the horse. Three men in an instant were upon the animal, one sitting on his head. Passers-by rushed up the alley and the usual avalanche of suggestions were showered forth.

"Put something under his knees."

"Look out for his hoofs."

"Loosen the traces."

"Tilt the wagon right."

"Give him room and he'll get up himself."

Finally the wagon was dragged away, the gentleman sitting on the horse's head maintaining his position. "Butter fingers" fooled with the harness until everything was reported clear.

"Stand back!" the man on the head shouted, "or he'll kick the daylights out of you!"

The crowd drew back but the horse did not move.

"Loosen the belly band!" floated over the heads of the horse-raisers. It came from a woman looking out of a near-by window. The order was silently obeyed and the horse jumped to his feet.—Detroit Free Press.

A fire, caused by the explosion of a gasoline stove on the Midway at the Atlanta Exposition did $600 damage.

MOCKING BIRDS.

Two Boundaries of Their Territorial Rights Defined.

WHERE SWEET SONGSTERS ABOUND.

Their Chosen Food the Fruit of the Cactus, Mistletoe, Mesquite and Poison Ivy—Strange Birds.

The most remarkable thing about a mocking bird is its way of laying out a range. In the autumn it goes south and establishes itself for the winter on a patch of ground that will yield berries and other food enough to last until the following spring. The tract is determined respecting boundaries with as much accuracy as a mining prospector would use in staking out a claim, says the New Orleans Times-Democrat. Perhaps it may be only fifty yards square, or it may have a length and breadth as much as 100 yards. The space depends mainly upon the food supply in sight; but the mocking bird is a great glutten and wants ten times the quantity that would be necessary to keep him alive. Having laid out his range, the owner will defend it with his life, and no other fruit-eating bird is allowed to enter it.

In this manner vast areas in southwest Texas are thickly occupied by mocking birds, each of them holding his range against intrusion by neighbors whose tracts immediately adjoin his. Perhaps a boundary line will run through the middle of a bush, and if it is disputed, you will see the pugnacious proprietors trying to settle the question after the style of the duello. When very young, after leaving the nest, the mocking birds keep together in bunches, feeding along the river courses. At that stage of their career they have speckled breast feathers which they shed after a while. When they are old enough to look out for themselves they are driven off the home range. After shedding they separate and each one attends exclusively to his own affairs. Their most important business is to locate claims of their own. The tramps are usually young birds looking for homesteads. During most of the year the males and females have nothing to do with each other. The latter seek the woods, while the former browse on the cactus-covered plains. In the breeding season the hen birds come to the ranges of the males, but after the young are reared the cock parts with his mate. He will not have her on his range, because he would have to divide the food.

In winter the mocking bird doesn't do anything but eat and look out for tramps. Once in a while an interloper will steal into the range unobserved and feed under the cactus, keeping as still as death. The chosen food of the species consists chiefly of the fruit of the cactus, mistletoe, mesquite and poison ivy. The mistletoe is a parasitic plant that grows on trees, and it is propagated by the birds, which eat the little white berries and drop the seeds upon the branches of the trees. Thus they may be said to plant their own farms. The country I describe is very dry and you will find mocking birds fifty miles or more from any water; but what they need in the way of moisture is obtained from the cactus and other juicy fruits.

Mocking birds are very fond of water. After a rain one may see them pecking the drops from twigs with a avidity. But if far away from as stream—say more than half a mile or so—they will never go to it, because they are afraid to leave their claims even for a few moments lest they be occupied by intruders. If the stream is not far off the mocking bird will risk the trip occasionally. He does so with every precaution, first rising perpendicularly to a great height in the air. As he passes over the ranges that lie between his own and the stream every bird is eager to attack him, but in no case will any bird pursue him beyond the limits of his farm. Having obtained the coveted drink, the mocking bird returns in the same manner.

Naturally, inasmuch as the available territory is crowded, each mocking bird holds his own against continual pressure on every side. His business is to retain as much ground as he is able to defend. They are like human beings in many respects, and some of them are much more intelligent than others. Certain individuals I have known year after year, and I make no attempt to trap them, because I know that it is useless. They know too much. Season after season they occupy the same ranges, and I can point out the very twig upon which each of these slick fellows finds his natural perch. Try to catch them with bird lime? Not much! It is a performance unworthy of a skilled trapper; and, besides, it would ruin the feathers.

The biggest and best-marked mocking birds are found within a belt fifty miles north and fifty miles south of San Antonia. These birds seem to be migrating further north and further south every year. They are very prolific, and are steadily increasing in numbers, apparently. If this is true, it follows that they would be obliged to go further for food. They have their summer ranges in the north and their winter ranges in the south. I am not sure that my theory is correct, but I have a notion that along a certain narrow line of latitude the mocking birds stay on the same ranges all the year round and do not migrate at all. Those a little outside of this belt fly over the heads of those which are stationary, having thus a very short migration. This goes on until you find the mocking brids that are furthest to the north in summer going furthest south in winter. This they are obliged to do in order to avoid contesting claims of territory with the intermediate birds.

Some mocking birds are taken from the nests, but ordinarily they are captured by means of traps and decoys. For a decoy I use either a male or a female mocking bird, confined in a cage. The cage has a trap attachment. I put the cage anywhere in the range of a mocking bird. He regards the decoy bird as an intruder and marches around the cage until he finds an entrance. He walks in for the purpose of attacking the captive bird, and the trap closes behind him. I come along at my leisure, take out one of the birds and set the cage in the next range. It is very easy. The birds I catch are males; a female mocking bird is of no use, inasmuch as it does not sing.

HE PREFERRED POVERTY.

Binghampton is probably the only city in the United States that has the distinguished honor of having her electric lamps trimmed by one having the royal blood of Spain flowing in his veins and who at one time, not many years ago, rolled in luxury.

Maurice Gondalfo is a name well known throughout Central America and among clubs of New York. Many years ago his father, who was, it is said, "a prince of the blood," emigrated from Spain to Central America, where he rejuvenated the depleted fortune of his family. It was here he met and married a young and charming native, one of the flowers of the ancient Latin aristocracy.

The General was in the habit of strolling about his plantation supervising the work of his men armed with a short, heavy sword. One afternoon, as he was passing through a heavily wooded portion of his estate he was attracted by a peculiar, powerful oder issuing from a ravine which branched off from the regular pathway. Forcing his way through a tangle of vine and undergrowth, a terrible sight met his gaze. In a cleft or cave in the face of the cliff stood one of his native employes armed with a short stick, fighting for his life a score of venomous reptiles, which were hissing and circling about him.

The brave old soldier, without thought as to the consequences drew his sword and started to the rescue. It was a terrible battle amid the poisonous vipers, but finally the last of the reptiles was dispatched and the General turned to his companion, who was already deathly sick. He had been struck in two places and it was evident could not survive. Before he died, however, he told the General that the cave was the entrance to a rich vein of gold, and though discovered many years ago, by natives, it had never been worked, being guarded by the venomous reptiles.

A gang of men under the General's direction cleared the cave. It proved to be a gold mine, and made Gondalfo wealthy. When the General died Maurice, his heir, came to New York, where he formed many acquaintances among the clubmen of the metropolis. Unfortunate speculations caused his fortune to gradually disappear, until he decided to come to this city. Slowly but surely his sustenance melted away, and at last he was obliged to seek employment. Through the influence of a friend he obtained a position with the General Electric Company trimming the arc lights about the city at a salary of $60 a month. He declares that today he is fully as happy on his income with his family as he was when rolling in riches, the favored son of two continents.—Binghamton Letter to New York Press.

THE WHIPPING POST.

The recommendation of the retiring grand jury favoring the establishment here of a whipping post for the punishment of wife beaters and petty thieves, seems to have met with almost general approval. The establishment of such punishment here would not, as many imagine, be one new to this jurisdiction. Indeed, it would be nothing less than the re-establishment of such a punishment, certainly, at least, in the case of thieves.

For the records show that when the District of Columbia was established the inheritance of the laws then in force in Maryland authorized not only the last, but also the pillory, as a punishment for thieves.

And more than that, the still harsher punishment of branding was also inherited from Maryland, such a punishment, the branding of the letter "T" on "the brown of the thumb" of thieves, being in force as late as the year 1801.

During that year, so the records show, a defendant convicted of larceny was sentenced "to be pilloried for one-quarter of an hour, and to have ten stripes and to pay 360 pounds of tobacco." That the sentence was carried into effect there is no reason to doubt.

Of course such punishments have long since ceased to be enforced here, the only punishment being imprisonment in jail.—Washington Star.

A rose geranium leaf dropped in each tumbler of apple jelly is said by a good housekeeper to impart a peculiarly delicious flavor. It is true that Westerners have by no means achieved the art of using flower life in their sweetmeats. As prepared in the Orient these concoctions are most delicious. The Armenian women and their neighbors, but not friends, the Turkish wives, excel in the compounding of such confections.

Let's take the instant by the forward top; for we are old, and on our quickest decrees the inaudible and noiseless foot of time steals ere we can effect them.—Shakespeare.

UNDER LION'S PAW.

Peculiarities of the King of Wild Beasts.

DR. LIVINGSTON'S EXPLORATION.

One of the Most Famous Encounters With a Lion—When One is Killed the Remainder Leave the Country.

One of the most famous encounters with a lion, from which the chief actor escaped and was able to relate full particulars is that recorded in the life of Dr. Livingstone. "I meant," he says, "to have kept it to tell to my children in my dotage," but friendship considered it so marvelous that he was persuaded to relate it in his first book. The testimony of such a man is far more valuable than accounts of the average sportsman and traveler, and the story in Dr. Livingstone's own words has become one of the classics of the English language. It is as follows:

"The Bakatia of the village of Mabosta were troubled by lions which leaped into the cattle pens by night and destroyed their cows. They even attacked the herds in open day. This was so unusual an occurrence that the people believed themselves to be bewitched, 'given, as they said, 'into the power of the lions by a neighboring tribe.' They went at once to attack the animals, but being rather cowardly in comparison with the Bechunas in general they returned without slaying any.

"It is well known that if one in a troop of lions is killed the remainder leave that part of the country. The next time, therefore, herds were attacked I went with the people to encourage them to rid themselves of the annoyance by destroying one of the marauders. We found the animals on a small hill covered with trees. The men formed round it in a circle and gradually closed up as they advanced. Being below on the plain with a native schoolmaster named Mabalwe, I saw one of the lions sitting on a piece of rock within the ring. Mabalwe fired at him and the ball hit the rock on which the animal was sitting. He bit at the spot struck, as a dog does at a stick or stone thrown at him; and then, leaping away, broke through the circle and escaped unhurt. If the Bakatia had acted according to the custom of the country they would have speared him in his attempt to get out, but they were afraid to attack him. When the circle was reformed we saw two other lions in it, but dared not fire lest we should shoot some of the people. The beasts burst through the line and, as it was evident the men could not be prevailed upon to face their foes, we bent our footsteps toward the village. In going round the end of the hill I saw a lion sitting on a piece of rock, about thirty yards off, with a little bush in front of him. I took a good aim at him through the bush and fired both barrels into it. The men called out, 'He is shot, he is shot!' Others cried, 'He has been shot by another man, too; let us go to him!' I saw the lion's tail erected in anger, and, turning to the people, said: 'Stop a little till I load again.' While in the act of ramming down the bullets I heard a shout and, looking half around, I saw a lion in the act of springing upon me. He caught me by the shoulder and we both came to the ground together. Growling horribly, he shook me as a terrier dog does a rat. The shock produced a stupor similar to that which seems to be felt by a mouse after the first grip of the cat. It caused a sort of dreaminess, in which there was no sense of pain or feeling of terror, though I was quite consious of all that was happening. It was like what patients partially under the influence of chloroform describe—they see the operation, but do not feel the knife. This placidity is probably produced in all animals killed by the carnivora; and, if so, is a merciful provision of the creator for lessening the pain of death. As he had one paw on the back of my head, I turned round to relieve myself of the weight, and saw his eyes directed at Mabalwe, who was aiming at him from a distance of ten or fifteen yards. His gun, which was a flint one, missed fire in both barrels. The animal immediately left me to attack him and bit his thigh. Another man, whose life I had saved after he had been tossed by a buffalo, attempted to spear the lion, upon which he turned from Mabalwe and seized this fresh foe by the shoulder. At that moment the bullets the beast had recieved took effect and he fell down dead. The whole was the work of a few moments, and must have been his paroxysm of dying rage. In order to take out the charm from him the Bakatia on the following day made a huge bonfire over the carcass, which was declared to be the largest ever seen. Besides crunching the bone into splinters, eleven of his teeth had penetrated the upper part of my arm. The bite of a lion resembles a gunshot wound. It is generally followed by a great deal of sloughing and discharge, and ever afterward pains are felt periodically in the part. I had on a tartan jacket, which I believe wiped off the virus from the teeth that pierced the flesh, for my two companions in the affray have both suffered from the usual pains, while I have escaped with only the inconvenience of a false joint in my limb. The wound of the man who was bit in the shoulder actually burst forth afresh on the same month of the following year. This curious point deserves the attention of the inquirers."

The insurance agents of San Jose have effected a permanent organization. The rate war is now a thing of the past.

INYO INDEPENDENT.

Irv. H. Mulholland,
EDITO & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

IBA DECEMBER 6..... 1895

In a book recently published by G. F. Bastable some startling statistics bring to light the formidable increase of the military expenses in the principal countries of Europe. From 1823 to 1890 England has increased her army expenditures from $71 000,000 to $163,000,000; France from 1830 to 1891 increased hers from $64,000,000 to $188,000,000; Germany from $97-000,000 in 1873 augmented them in 1891 to $177,000,000, and Italy, whose expenditure amounted in 1862 $52,000,000, spends today a little more than $100,000,000. Altogether the six great powers of Europe have increased in the course of comparatively few years, their military expenditures to nearly $1,100,000,000. What an immense capital subtracted from productive industry; from the real greatness of nations! And what of the immense numbers of vigorous hands subtracted from useful labor, and the enormous wealth wasted on the sterile and dangerous management of arms? France and Russia united, dispose in time of peace of 1,400,000 men, and in time of war 9,700,000. The powers of the triple alliance put in line 1,192,000 men in time of peace and 7,700,000 in time of war. Truly, as the Rivista remarks, it is difficult to imagine that future generations can believe that we have lived in a civilized epoch. Many of the protests against the military system, but only the socialists are sincere in their demands for the abolishment of standing armies. Conservatives, to whatever party they belong, see in it the best means for upholding the capitalistic system.

The pardoning authorities in Ohio have adopted the system of pardoning no criminals from prison who do not pledge themselves to total abstinence from liquors after being released, and ex-Governor Campbell adopted a policy of making his pardons merely probationary and conditioned so that when a paroled convict was found intoxicated he should be at once re-incarcerated. If this policy were generally followed and supplemented with discipline in prison that should teach convicts to get along without whiskey or other intoxicants it would help along considerably in the reformation of bad men.

The South African fields have gone ahead of this country in gold production The yield in Africa this year will reach $50,000,000 and much higher in 1896. One peculiarity about the African gold is that it is taken from sedimentary rocks, and the processes have been so much improved that only ten per cent of the metal is lost. In the African mines 42,000 natives and 6,000 European workmen are employed. But 50 per cent of the gold was saved by process used nine years ago. This is an instance of what science and ingenuity are doing to increase the gold supply.

We frequently hear talk of the abundance of money and its cheapness. The fact is that real money—money of ultimate redemption—is scarce. Gold is now the only real money, and the amount is wholly inadequate for the transaction of the business of the world on a healthy basis. All nations are fighting for gold. In all the great cities of the world there is a constant anxiety about gold We hear of the movements of gold every day, and almost every day dispatches have something about the "condition of the reserve."

If those European powers were more intent upon reforming Turkey and less intent upon watching each other they would be a great deal more likely to accomplish some practical good.

The debt of Mexico was $10.92 per capita in 1880. In 1890 it was $6.89. With bimetalism the debt of this country decreased also, but with monometallism it is rising.

An Arizona Judge got indignant because a prisoner offered him only $2.75 as a bribe to let him go. Arizona Judges are reaching the civilization limit.

A PEACHBLOW VASE.

A MYSTERY OF SEVERAL YEARS SEEMS TO BE CLEARED UP.

A Matter That Has Long Been of Unusual Interest to Art Collectors—Brayton Ives Tells Queer Facts About the Vase and Conditions of His Purchase.

The Peachblow vase is in this city. That is the verdict of an amateur Sherlock Holmes, who set about the elucidation of the profound mystery surrounding this celebrated piece of porcelain for which $18,000 was paid when it was sold at auction in this city some eight years ago. Moreover, it seems apparent from what this amateur detective has discovered that, while the famous Peachblow vase belongs to Mr. Brayton Ives and is now in his house on Thirty-fourth street, even Mr. Ives himself is still mystified about some things concerning it.

Mr. Ives did not pay $18,000 for the Peachblow vase, and yet Mr. Moss, brother-in-law of Mrs. Mary Jane Morgan and the executor of her estate, affirms that that enormous sum was paid into the estate for the vase after the auction sale.

Nobody can tell who it is that is out of pocket because of the mystery surrounding the Peachblow, but it is certain that somebody for a reason best known to himself paid out several thousand dollars and has concealed his identity up to this date. Mr. Brayton Ives appears to be as much mystified as everybody else.

But now that Mr. William T. Walters of Baltimore is dead and a promise of secrecy made by Mr. Ives at the time the vase came into his possession has been fullfilled, he has consented to disclose some facts not hitherto known in connection with the mystery.

"The vase which is now in my possession," said Mr. Ives, "was bought by me from the American Art association, which had conducted the sale of the Morgan collection. From the outset there was something very mysterious about it. I was given to understand that I was to see something very rare and precious, but that I would have to promise to keep it quiet and not tell anybody about it for a certain length of time. Then when my curiosity and interest had been fully aroused I was conducted alone into a shaded apartment. After the doors had been locked and my companion had looked under the table to be sure there was no one concealed there, a safe was opened cautiously, and this vase was taken out from under its coverings. It looked to me like the Peachblow, which had vanished so mysteriously."

"One moment, please," said the amateur Sherlock Holmes, "how long after the Peachblow was sold for $18,000 to Mr. Walters, as Mr. Sutton alleged, did this occur?"

"From nine months to a year afterward," said Mr. Ives. "I bought the vase which was exhibited to me, but I said nothing about it for a long time. I kept it locked in my house. Before I got it I had to promise not to speak about it for a specified time, but that time has elapsed."

"How much did you pay for the vase?"

"That I am not at liberty to state," said Mr. Ives. "When I bought it, I made two promises, one that I should not say anything about it for a specified time, the other that I should never disclose the purchase price."

"What is at the bottom of all this mystery?"

"I am unable to guess," answered Mr. Brayton Ives. "Whether or not the vase I bought was the Peachblow vase, there was no reason that I am aware of why the facts should be concealed."

Mr. Ives admitted that the price he paid for the vase was considerably less than $18,000, and as an example of oriental porcelain he considered it worth what he had paid for it. He said that during the years the vase had been in his possession many things had come to his knowledge about the Peachblow, and that at times he doubted whether the vase in his possession was in reality that famous little mug. It seems that when the vase was sold to him under the mysterious circumstances described there was no guarantee that it was the Peachblow vase, and that the comparatively small price at which it was offered tended to prove that they were not identical.

On the other hand, there are those who assert that Mr. Ives believed he was buying the Peachblow vase, and was at any rate willing to take a "flier" on that assumption. The facts which he has subsequently learned seem to prove beyond any question that he did in reality buy the famous vase, and that his investment was a judicious one.

"Here is one fact," said Mr. Ives when discussing the pros and cons. "There is a lady in this city who is a friend of Mrs. Moir, who was the sister of Mrs. Morgan. This lady frequently visited the house of Mrs. Morgan, and there she saw and handled the Peachblow vase many times, examining it carefully. Upon one occasion when visiting my house she saw the vase now in my possession and exclaimed: 'I have handled that vase many times. It is the Peachblow!' A careful examination made by her only confirmed this opinion."

"The death of Mr. Walters, together with the examination of his collections, have cleared up some of the mystery which surrounds this subject," said Mr. Ives. "It is now pretty well established that he never had the Peachblow vase."—New York World.

Huntingdon.

Few persons know that Huntingdon, Pa., was named in honor of the Countess of Huntingdon, an eighteenth century great lady who did much for the University of Pennsylvania. Provost William Smith of the university founded the little city in 1777 and gratefully honored the university's patron in naming the new settlement.—Philadelphia Inquirer.

HELD UP BY SNAKES.

AN ARMY ENGINEER'S EXCITING NIGHT IN THE NORTHWEST.

A Walking Stick That Had Nineteen Rattles—Roosting on a Bowlder and Surrounded by Wolves—A Buzzing Noise That Is Far From Musical.

"We reached the Wolf mountain, in the Big Horn country, one day in September," said H. P. Tuttle, formerly an army engineer, "while to the south were dimly visible the outlines of the Rattlesnake mountains. These names were given to these mountains by both the Crow and Sioux Indians, who regarded them with horror. Late on the afternoon of our first day in these mountains I sent all of my party to camp, about two miles to the southwest. Going forward with my transit to where I had sent my head flagman, I placed it in position and told him he could return to camp, as I had to remain in order to make an astronomical observation early in the evening.

"Taking off his belt, which held a huge revolver and a sheath knife about a foot in length, he handed it to me, saying that I might need it after dark, as he had just seen a small pack of wolves ahead. After he had gone I looked over the ground about me and saw that I was on a flat topped hill covered with large bowlders and small stones, but entirely destitute of vegetation. Seating myself beside a big bowlder, I took out my notebook and began writing up my notes for the day, when darkness suddenly reminded me that it was about time to make my astronomical observations. This was soon over, and I started off at a brisk walk toward our camp.

"I had not gone over a hundred yards when I saw, a few feet ahead of me, a long, black object lying directly in my path. I wanted a walking stick badly, and was stooping down to pick it up when I noticed the end of it farthest from me was white. Taking a match from my pocket and tearing a leaf from the back of my notebook, I soon had the desired light, and what was my horror to see that the supposed stick was nothing but one of the deadly green rattlesnakes, completely paralyzed by the chilly night air.

"Another light showed that the white object was the snake's rattles. So old was he that his rattles had turned white. Holding my revolver within a foot of his head, I fired and blew it entirely off. But now came another surprise, which for a moment made me tremble. The report of my revolver had awakened dozens of rattlers who had sought shelter under the loose rocks before sunset. The sounds came from all directions, and some seemed close to my feet.

"To one who has been in the forest and heard the noise made by hundreds of locusts he can readily realize my situation, for the buzz of a rattlesnake is exactly like the buzz of a locust. The only thing now for me to do was to stand in my tracks all night or make my way back to the bowlder from which I started, but there was a difficulty, for in the excitement I had forgotten the direction. But 'where there is a will there is a way,' and by stooping low down and scanning the horizon I soon detected the outline of my transit against the sky, and cutting off the rattles I was soon beside the bowlder and filled with excitement enough for one night.

"Sitting down by the bowlder, I made up my mind to pass the night at that spot and was soon sleeping as soundly as one can in the open air, with only a canvas coat and the mercury below freezing. About midnight I was suddenly aroused by something trying to pull off the shoe from my left foot. In an instant I caught the glaring eyes and outline of a wolf. He had given up his grip as he saw me move, and mechanically I seized my revolver, which I had left lying in my lap, and fired as best I could with my half frozen hand.

"A loud yell showed that he had been struck, and immediately a dozen or more wolves who had been close by set up a howling, which in the still night air could have been heard for miles around. For an hour or two all was quiet, when a solitary howl a few yards from me was answered by a dozen others not 100 yards away. It was too dark to see an animal of the size of a wolf more than 20 feet away; but, trusting to luck, I took the direction of the pack as near as possible and sent three shots at them as rapidly as I could fire.

"A couple of yells showed two had been hit, most probably by glancing bullets. Soon after this the howling of the wolves ceased, and for awhile all was quiet again.

"As soon as it was light enough I picked up the string of rattles which I had secured the night before and found there were 19, and as the 'button' was missing he may have had several more. A few rods from my transit lay the cleanly picked bones of a wolf which one of my random shots had killed during the night, and on which the coyotes had made a sushtantial meal, but, not satisfied with this, they had devoured the big rattler I had killed, head and all.

"Returning to camp, I ordered one of my men to cut ten small poles, not less than eight feet in length, and to wake me up at 10 o'clock. At that hour we all started for the place where I had passed the night. Here we found, as I had expected, the warm rays of the sun had brought out the snakes from their hiding places to bask in the sunhsine.

"We were greeted with a defiance not unlike that of a thousand July locusts, and the work of destruction began in real earnest. In one hour and ten minutes our bag contained 213 rattlers, varying from one foot to over three feet in length, and of a dark green color. Only two were found whose rattles had turned gray. We could have destroyed hundreds more had our time not been too valuable to waste in such sport. We saw but few rattlers after leaving this point, but the wolves made night hideous until we reached the Little Missouri river, a month later."—Kansas City Journal.

The Everyday Man.

"And so you are not married yet?"
"No."
"Engaged?"
"No."
"Expect to be?"
"No."
"What's the matter?"
"Well, papa says that my husband must be a keen and experienced man, of good health and good habits. Mamma says he must be frugal, industrious, attentive and moral, and I say that he must be handsome, dashing, talented and rich. We are still looking for him."

THE JAM TRADE.

Gladstone's Wisdom In Advising the Farmers to Cultivate Fruit.

A few years ago, when Mr. Gladstone, in one of his charming bucolic orations at Hawarden, recommended the British farmer to turn his attention to fruit cultivation and the making of jam, his advice was received with a good deal of cheap and ignorant ridicule. As usual, the ex-premier has proved a good deal wiser than his critics, and those who gave ear to his counsel in this instance have had no reason to regret their confidence. In an interview a famous provider says:

"The motive that induced me to take up the jam trade was my knowledge of the fact that within late years the demand for preserves had been steadily increasing, while that for butter has, no doubt in consequence, shown a tendency rather to decline than otherwise. Catering as I do for some 300,000 daily customers, I have naturally good opportunity of knowing what the public want in the matter of provisions.

"Jam has a great future before it. The people are using it more and more largely every year, and, in my opinion, they are doing wisely, for what could be cheaper and at the same time healthier than a good jam made from sound English fruit?

"I attribute the superiority of English fruit to the nature of the soil and to the fact that the fruit ripens more gradually in our climate than in countries where there is more continuous and powerful sunshine. The slower the ripening process the better is the flavor of the fruit.

"You may not perhaps be aware that strawberries grown in the northern parts of Scotland are vastly superior in all respects to those grown in southern England, without doubt because they take longer to mature. Australian jams are being pushed largely in India and elsewhere and may very probably come over here before long to compete with our home produce.

"In Ireland there is a magnificent future for the fruit growing industry if only its opportunities were turned to account. Even now most of the blackberries that come to the English markets are grown in Ireland. But there are enormous possibilities there of which no one has yet taken advantage. Properly worked, its fruit trade might yet do much to insure Ireland's commercial prosperity."—Westminster Gazette.

SUN AND MOON.

A Couple of Interesting Folklore Stories Concerning Those Luminaries.

The most touching of all folklore stories may be found in Charles F. Lummis' "Pueblo Folklore." It is one of the many myths of the moon and beautifully conceived. The sun is the Allfather, the moon the Allmother, and both shine with equal light in the heavens. But the Trues, the superior divinities, find that man, the animals, the flowers, weary of a constant day. They agree to put out the Allfather's, or sun's, eyes. The Allmother—the moon—offers herself as a sacrifice. "Blind me," she says, "and leave my husband's eyes." The Trues say, "It is good, woman."

They accept the sacrifice and take away one of the Allmother's eyes. Hence the moon is less brilliant than the sun. The man finds rest at night, and the flowers sleep.

In Mrs. Leiber Cohen's translation of Sacher Masoch's "Jewish Tales" there is a variant of the sun and moon story derived from the Talmud. Briefly told, the sun and moon are equally luminous. It is the moon who wants to be more brilliant than the sun. Deity is angered at her demands. Her light is lessened. "The moon grew pale. Then God pitied her and gave her the stars for companions."

Equal to the Occasion.

A Yorkshire farmer, having a horse to sell at a fair, sold it to an army contractor. Meeting him at the same fair the following year, the army buyer walked up to the farmer and said indignantly: "The horse I bought of you was a thorough fraud. It was no use for the army." The dealer was nowise abashed, but replied, "Well, try 'im for t' navy!"—Philadelphia Record.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY, the 8th day of March 1892, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise, acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit Commencing at the South-east corner of the south-east quarter of North east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 98-100; thence North-east following the meanderings of the bed of the Creek along its North branch to Edwards street, in the town of Independence thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hallnah, deceased, at the time of his death

Lot Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate, lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dispriscada Lode."

That certain lot, piece or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the north west quarter and the North-east quarter of Section No. twelve (12), and the South-west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No twenty-one (21) West, San Bernardine Base and Meridian, running thence South sixty-eight and eleven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence Northwesterl along a small branch or swale to a point twenty four (24) rods North of the general corner of the North East quarter and the South east quarter, and the North-west quarter and the North east quarter of the North-west quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres: Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice and before the making of sale.

The Executor reserves the right to reject any and alls bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court Deed at the expense of purchaser.

WILLIAM L. HUNTER.
Executor of the Last Will and Testament John Allen Hannah deceased.

Liberty School House—The second Sunday of the month at 3 o'clock p. m.

Georges Creek—The first and third Sunday of each month at 2:30 o'clock p m

The Rev. E. W. Van Deventer D. D. Supt. of the Nevada Mission, will hold the First quarterly conference of the Independence charge on Monday Dec. 23, at 2 o'clock p. m. at Independence.

Dr. Van Deventer will preach at Lone Pine on Friday evening Dec. 20th; service to commence at 7:30 o'clock, and on Sunday morning to commence at 11 o'clock. Dr. Van Deventer will preach at Independence on Sunday, service to commence at 7 o'clock p. m.. A collection will be taken at the close of each service.

All are cordially invited to be present at these services.

Thos. H. NICHOLAS,
Pastor.

BORN.

HAINES—At Citrus, December 2, 1895, to Mr. and Mrs. C. D. Haines, a son.

BULPITT—At Round Valley, December 1, 1895, to Mr. and Mrs. Wm. Bulpitt a son.

MARRIED.

JENKINS—ASBACH—At Independence, December 4, 1895, by A. V. Davidson, J. P., William J. Jenkins and Miss Ella Asbach.

Letters remaining uncalled for at the Independence Post-Office, this date.

S. W. Barnes. S. A. Badger.
O. A. Kramer. Frank Patrick.
M. N. Panoyson. Rev. J. W. Morris
Ben T. Williams.

Judge Arnot arrived last Friday.

Richard Boland of Keeler was a visitor here last Saturday and Sunday.

W. L. Zimmerman went to Bishap last Saturday, returning Monday.

Mr. and Mrs. J. A. McKenzie of Lone Pine were visitors in town last Sunday.

Chas. Anthony came in from Darwin and spent several days in town this weuk.

Mr. and Mrs. Julian and Miss Blanche Meysan came up from Lone Pine last Monday.

H. Bellows, of Olancha, was in town a few days last week on business in the Superior Court.

Mrs. M. E. Curtis of Big Pine has been very ill the past two weeks. She is now steadily improving.

John Meroney went to Bishop last Thursday to spend Thanksgiving at home. He returned Monday.

A. K. Eugley has erected a substantial tructure at Big Pine to be used as a tore house in connection with his store.

E. A. Crocker of Big Pine is building handsome residence at that place, and ill have it ready for use by next spring.

L. W. Barnaby has hauled the last ad of lumber out from the sawmill, at g Pine. He reports the entire output 280,000 feet.

Miss Emma Yandell, who has been iting relatives here the past month, urned to her home at Bishop last urday morning.

Miss Clara Eldred arrived last Monevening from her home at Big Pine has been reporting in the Superior urt the past week.

. H. Uhlmeyer has completed a fine nda sixty feet in length at his dwellin Big Pine. The work was done by . and John Showalter.

rs. Brockman, a sister of the late Hannah, accompanied by her son, rd at Independence last Monday Grant's Pass, Oregon.

. M. Richards and Thos. Boland up from Keeler last Saturdar. Mr. l returned home Sunday. Mr. ds remaining over until Monday ng.

Mining Items.

Pat Keys completed another run of ore last week from his mine at Beveridge and as a result he brought in one hundred and thirteen ounces of bullion, worth about fifteen hundred dollars. Only ten tons of ore were worked to produce this result. He has upwards of thirty tons of ore on the dump which cannot be worked till spring There is no question but that Pat has a valuable property, and with proper mill facilties could be made to yield large returns.

Pat Clinton came up from Cerro Gordo on Tuesday, returning Monday. He says that the future of that camp is brighter than at any time for years past. He is taking out ore steadily from the Newtown mine, and it is quite likely that the owners will drive a new tunnel soon which will greatly facilitate working. Ore is being taken out of the Dunphy mine right along, and the owner is expected home to-day. Boland is working a large force of men on the old dumps, using the jigger process.

Louis De Tourneil came in from Snow's Canyon yesterday, where he has been attending to the assessment work on the group of mines owned by parties at Cleveland, Ohio. Steps will be taken at once to obtain patents for the entire group. Considerable development work work will be done and the mines opened up thoroughly. It is expected that everything will be in good working order by Spring. The success of the Snow's Canyon mines will increase the value of other properties in the same locality.

George Lewis was down from Fish Springs early in the week. He is still working at Poverty Hill sinking on the ledge.

Arlie Mairs and Jack Welch left town last Monday Ubaheba, where they will do some assessment work on a group of copper mines.

Gold continues to be taken out of Mazourka canyon in paying quantities, Laberge & Pobst have the best claim over there and are making good wages.

The Milton Lyceum.

The Lyceum was called to order at seven o'clock by the President, Mr. F. Moore. The literary exercises opened with music by the society. After the usual number of recitations, readings, solos, and duets, the Milton Star was read by Miss Lena Thompson.

An animated discussion on the spendthrift vs. miser followed, resulting in a victory for the affirmative. The question for December 14th is: Resolved; "That high license has done more than prohibition for temperance."

The large audience filled the limited space. May the near future afford more ample accommodation.

CARL WALTER, Sec'y.

$450 Reward.

The County Commissioner have offered a reward of $250 for the capture of J. B. Boone, the slayer of Antone Bacoch. John Chiatovich has also offered $200 reward. and the State will probably offer $500 more. It is supposed that Boone has made his way to the Armagosa region where he is said to have friends. He is said to be a man about 45 years old, six feet tall, raw-boned and straight, sandy complexioned, and wears a leather coat, lined with corduroy.—*Walker Lake Bulletin.*

The Daley estate was sold by Administrator Howell last Saturday morning in front of the Court House door. The mine sold for $525. Tim Madden making the first bid of $75, then Upton Tracy and Ed. Rose ran the price up to $525, Ed. Rose getting the mine at that figure. The balance of the property consisting of a mill-site of five acres, some of the land being under improvement, went to Tracey for $10.

George Meads and Rudolph Schober arrived in town with their big teams last Thursday evening, from Mojave, and left for Bishop this morning; each had two large wagons and the total cargo amounted to twenty-one tons, for the various towns in the valley.

P. E. Weston, accompanied by his father-in-law Mr. Wood, were at Independence a couple of days this week. Mr. Wood has just arrived from Modoc county and will make his home in Owens Valley.

Rita, the little daughter of Engineer Church was slightly burned at Hawthorne Thanksgiving day, by the explosion of a can of gun powder, held in the hand of Charley Wagner, a playmate.

Adjudication Of Insolvency.

IN THE SUPERIOR COURT OF THE COUNTY OF INYO, STATE OF CALIFORNIA.

In the matter of the Salt Wells Borax Company, a corporation, An Insolvent Debtor.

I. J. Woodin having filed in this Court a petition, schedule and inventory in Insolvency, for and on behalf of the Salt Wells Borax Company, a corporation, by which it appears that said corporation is an Insolvent Debtor, the said Salt Wells Borax Company a corporation, is hereby declared to be an Insolvent Debtor. The Sheriff of the County of Inyo is hereby directed to take possession of all the estate, real and personal of the said Salt Wells Borax Company, a corporation, debtor, and of all its deeds, vouchers, books of account and papers, and to keep the same safely until the appointment of an Assignee of its estate. All persons are forbidden to pay any debts to said Insolvent Corporation, or to deliver any property belonging to it, or to any person, firm, or corporation, or association for its use. The said debtor is hereby forbidden to transfer or deliver any property until the further order of this Court, except as herein ordered. It is further ordered, that all the creditors of said debtor be and appear before the Hon N. D. Arnot Acting Judge of the Superior Court in and for the County of Inyo, State of California, in open Court, at the Court room of said Court in the town of Independence, on Monday, the 9th day of December, 1895, at 10 o'clock a. m of that day, to prove their debts and choose an assignee of the estate of said debtor.

It is further ordered, that this order be published in the Inyo Independent, a newspaper of general circulation, published in the County of Inyo, as often as the said paper is published before the said day set for the meeting of Creditors.

And it is further ordered, that in the meantime; all proceedings against the said Insolvent be stayed,

N. D. ARNOT,
Acting Juege of the Superior Court.

Dated November 30, 1895.

[Endorsed]
Filed November 30, 1895.

D. J. HESSION, Clerk.

P. W. BENNETT, Attorney for Petitioner.

WHAT'S IN A POT OF GLUE?

There are three kinds of glue. One is made of the hides or sinews of cattle. The pieces cut off by the butchers and tanner, and which are of no use in making leather, are soaked in lime water. The lime eats away the fatty decayed matter and leaves the glue portion. This is carefully washed and put into large kettles, where the glue liquor is boiled out and the insoluble fiber sinks to the bottom. The liquor is poured into pans and allowed to cool and harden. It looks then like calves' foot jelly. When cold, this glue jelly is turned out of the pans and sliced, the sheets being laid out to dry. Simple as the process seems, technical skill and ripe experience are required in manufacturing glue. Many people have tried to make glue at home. Anybody can do it, the manufacturers of glue say, but only the exceedingly skillful ever made glue successfully or economically, because only they understand how to get the full strength and quality out of the stock. It doesn't take much of a defect to spoil the best stock—that is why so many amateur glue makers fail ignominously and repeatedly. The second kind of glue is made from the larger bones of cattle, and only differs from the other method in that acid instead of lime is used in softening the stock. The third kind of glue is made from the feet of cattle and hogs. Glue from this stock is easily made, because the hoofs have simply to be washed, boiled out, cooled, sliced and dried. Authorities differ as to which kind of glue is the best. The acid-made glue is used largely in stiffening straw goods, especially wide brim straw hats, for finishing silk, and for fine-grained and hard wood work. While we could get along without bone glue, it is intimated that our houses and all that is in them would fall apart if we had no glue made from hide stock.

Manufacturers are continually asked, it seems:

"What is glue used for anyway?"

The tone of the inquiry suggests usually some confusion in the questioner's mind between glue and mucilage. Wood work of all kinds, chairs, tables, bedsteads, railway cars, desks and carriages are held together by it—we are rocked in a glued cradle and buried in a glued coffin. Calcimine is a mixture of paris white and glue, and all paper hangings are only white paper calcimined. Writing paper gets its surface from glue. So do cards and glazed paper. If the cover falls off one of the books in your library you may be sure that "hide" glue was not used in the binding, but that an inferior quality was submitted.

Besides binding books, glue holds paper boxes together. It goes to make up emery wheels and the sizing of petroleum and turpentine barrels. These are, of course, only a few of its uses, but they are the important industries that require nearly four-fifths of the 60,000,000 pounds of glue used every year in the United States. Of this quantity 10,000,000 pounds are imported.—N. Y. Press.

FRUGAL IN THEIR HABITS.

There is no one in the English peerage who has the reputation of driving a closer bargain and for possessing a keener eye to the main chance than the Duke of Westminster. The young Duke of Bedford, who runs his grace of Westminster very close in the point of wealth, distinguished himself the other day in the London police court by the animosity which he displayed in prosecuting the poor itinerant venders of fruits and vegetables who had attempted to dispose of their wares in the neighborhood of Covent Garden market, which belongs to him and is one of his principal sources of revenue. He claimed that by hawking their wares on the border line of the market they interfered with those who rented stalls therein from him.

And now we have Lord Robarts the richest peer in the west of England and possessed of tin mines in Cornwall which alone yield him over $250,000 a year, getting the best of a brother peer, the popular Earl of Hardwicke, by foreclosing a mortgage which had hitherto been considered a friendly agreement. Of course Lord Robarts is within his strict legal rights, but by his altogether unexpected foreclosure he has managed to acquire Wimpole Hall, the ancestral mansion and country seat of the Earl of Hardwicke, as well as the large estate in connection therewith, for one-third of the value at which it was officially appraised three or four years ago.—Brooklyn Citizen.

WHITEST CITY IN THE WORLD.

There cannot possibly be a whiter city than Cadiz, unless it be built of snow. The best way to approach the port is to take a trip on one of the small steamers which ply between the ports of Morocco and Spain. As you near the cost you see in front of you a white mass which appears to be floating upon the water, just as you are. The first thought of a foreigner is that he is in sight of an iceberg. The white mass, glittering in the sun and rendered more dazzling by the blue sea and sky, looks exactly like a monster ice mountain partly melted, so that outlines of castles and hills appear upon it; but only for a second does the illusion last, for you know there are no icebergs in that part and you are quickly informed that you are looking at Cadiz. No other town in the world presents such a magic appearance.—Philadelphia Record.

A lively power of intuition is evidently a great help in the book selling business. While in a Boston book store the other day a certain Cambridge scientist heard a man ask for "some two-cent literature—something about a colored man." And the bookseller understood at once what was wanted and brought out a work on Toussount L'Overture.

THE IRISH SCHOOLMASTER.

Many Stories Told of Him In Regions Where He Prevailed.

In the days when teachers were few and far between an old fashioned Irish schoolmaster went the rounds from district to district. Of him many stories are still told in the regions through which he traveled. He did an excellent work on the whole and trained in the "three R's" many men who afterward became prominent in public life, but this broad Irish accent was the occasion of many laughable scenes between him and his pupils.

On one occasion the master examined his school from the spelling book before the committeemen. He always called the boys by their last names, pronouncing their Christian names last, as in a roll call.

"Brown, Payter!" the master shouted.

Peter Brown stepped forth tremblingly.

"Phat is the pleyrul of the wurrud 'fut?'"

Peter had no knowledge of any such word as "fut," but he answered at random:

"Futs!"

"Wrong ye aire!" thundered the master. "The plyural of 'fut' is 'fate.' Sit down. Bill, Jeems, shtand opp!"

James Bell rose.

"Diffoine the wurrud 'lake.'"

"A lake is a large body of water."

"Blockheads ye all aire the day!" shouted the master angrily. "Shure, then, wudden't yer own sinse till ye that a 'lake' is a hole in a booket o' wather? Nixt by—Dooly, Molchael!"

Michael Dooley stepped up with a confident and somewhat roguish gleam in his gray eyes. He was the son of a recent settler of the schoolmaster's nationality.

The master quickly perceived the knowing look in the boy's eye.

"An whoy do ye luk at me wud the carner o' yer oi, Dooly, Molchael?" he exclaimed. "Is it that ye think I'd be puttin ye a wurrud in the Oirish language? It's a brogue ye suspect me af, is it?"

Michael's freckled features betrayed a grin, though he tried to suppress it by keeping his lips shut together very tightly indeed.

"Falx, ye shall have it!" said the schoolmaster. "Spill and defoine me bhfeitcamhnuibh."

This real word from the Irish language, which means "trangressions," was too much even for the special knowledge of the bright Irish-American boy, and "Dooly, Molchael" went down with the rest.

The committeemen were convinced that they had a schoolmaster of wonderful erudition and capacity.—Scottish American.

Queer Facts About Heat and Light.

The rays of heat and light are quite independent of each other in their ability to penetrate different substances. For illustration, glass allows the sun's heat to pass through as readily as it does the rays of light, and that without heating the glass too. If the glass be coated with lampblack, however, the rays of light are arrested, but the heat passes through as before, not a single degree's difference in the latter phenomenon being noticeable. Then, again, both heat and light pass through water, providing it is clear. One of the oddities in this connection is this: Although the heat and light pass through water in its normal state, the addition of a little powdered alum, which readily dissolves without leaving the least murkiness, will arrest the rays of heat to such an extent as to almost immediately raise the temperature of the water to a perceptible degree, yet the light continues to pass through as before.

Ice, like glass, also transmits both heat and light. Dr. Sutherland, in "Observations Upon the Icebergs of Baffin's Bay," says: "Several pieces of granite were found deeply imbedded in ice without any communications with outside air. These were all surrounded with what might be termed an atmosphere of water." The explanation of such an oddity is this: The heat passing through the ice had been absorbed by the stones until their temperature had been raised to a degree sufficient to melt the ice around them.—St. Louis Republic.

Love Will Find a Way.

A friend of mine out in Omaha has a daughter, and that daughter has among other girlish trinkets a sweetheart who is rendered doubly dear to her by the fact that her parents have forbidden her to see him. He is, to be sure, a very commonplace person, but no girl can resist a man her parents have forbidden her to see, you know. This particular girl is in Washington now, for safe keeping, in a private school, where incoming and outgoing letters are read by a stern faced teacher. I went to see her the other day just after the mail was in. She had received a letter from a schoolgirl friend in Omaha, and there wasn't a noun or pronoun of the masculine gender in the whole of it. The girl read it demurely and showed it to me. Then we went to her room. The door was no sooner closed than she flew to her curling tongs, heated them, held them close to the written sheet and read with delight the yellow letters in a masculine hand which appeared between the lines and faded again as the paper cooled. The moral of this is that love will find a way, and so long as chloride of copper in solution is to be had I advise every keeper of a girls' school to toast all letters well before she delivers them.—Washington Post.

Very Tired Indeed.

It has remained for a little girl in Brooklyn to nearly if not quite equal a famous witticism of Leigh Hunt. Of course she spoke in childish innocence, where the English essayist and wit used his ripened intellect.

Hunt, in describing an exceedingly warm day, it will be remembered, spoke of it as one which tempted him "to strip off his flesh and sit in his bones."

The dear little Brooklyn miss had been romping and running all day. Toward nightfall her father met her. "Are you not very tired, little one?" he asked.

"Oh, not so very tired, papa," she replied. Then in a burst of confidence she whispered, "Only I do feel as though I'd like to take my legs off and carry them awhile."—New York Herald.

Not In His Way.

"Is my hat in your way?" inquired the sweet girl in the parquet seat as she turned and spoke to the man behind.

"Not all," said the man behind grumpily as he surveyed her big hat and grabbed up his overcoat. "My way lies toward the box office to get my seat changed."—Chicago Record.

Walter Savage Landor married a girl for her beauty, and after the charm wore off he found her a shrew. He endured her tongue for a time, then turned over his property to her and left her.

Minnehaha means "Laughing Water." The Indian word is Minnerara, the Frenchman, Hennepin, having mistaken the sound.

HOW TO FRY OYSTERS.

They May Be Prepared at Home as Successfully as In Restaurants.

If you were to ask any dozen good Americans what their favorite lunch consisted of, at least ten of them would answer promptly and unhesitatingly, "Hot fried oysters." To the feminine palate especially is this preparation of the succulent bivalve so dear that a box of them, steaming hot, is popularly believed to be the only thing that will appease the just wrath of an irate wife when her erring spouse has been out late with the boys.

But all this applies strictly and only to the restaurant oyster. Even as this is a thing to delight the human palate, so is the ordinary home fried oyster tough, hard and greasy, a thing to be shunned and fled from. Mind, I say the "ordinary" home fried oyster, for there are housewives, though their name is not legion, who have learned the secret of successfully handling this delicate morsel. From such a one did I receive the following directions, which will, if carefully followed, reward the efforts of the most inexperienced of amateur cooks:

In the first place, avoid cracker crumbs. They are pasty and will make a hard outer shell around the oyster that will in the beginning remove any possibility of success. Instead put some stale bread in the oven to dry, and after it is thoroughly hard and dry grate it finely and keep the crumbs in a glass jar, so that if any are left they can be kept for future use.

Then beat together an egg and a cup of sweet milk, seasoning with salt, pepper and, if liked, a little Worcester sauce. Be sure not to beat the egg separately. Dip the oysters first in their own liquid, then in the crumbs, then in the egg and milk and lastly in the crumbs again. Then comes the actual frying, which is the crucial point. The secret of success is to have plenty of fat and have it boiling hot.

The oysters should only be immersed a minute or so—just long enough to brown them delicately on both sides. A wire egg whip makes a good turner. After frying lay them on brown paper to absorb the grease that may be in them. Remember that too much cooking will make the finest oyster tough and generally unpleasant. If these directions are carefully followed, the oysters will be plump and delicious. Large oysters are not especially desirable, except for looks. The small ones taste quite as good. Cooks in restaurants have a trick of putting two small ones together in "dipping" before frying.—New York Advertiser.

Proverbs Rough on Women.

A proverb is defined by the learned Dr. Ray as "an instructive sentence or comment and pithy saying in which more is generally designed than expressed, famous for its peculiarity and elegance and therefore adopted by the learned as well as the vulgar, by which 'tis distinguished authority." A large majority of proverbs are of a satirical character and are leveled against women. We find, curiously enough, that the severest reflections upon the feminine sex emanate from those nations which have the reputation of being particularly gallant, notably the Spanish, Portuguese and Italian. Widows are invariably made the butt of ridicule, wives are dismissed with scant courtesy, and maidens are treated by proverb makers as though they were worthy of constant suspicion only.

A spaniel, a woman and a walnut tree—
The more they're beaten the better still they'll be.

"He that marries a widow and three children marries four thieves."

"He that loseth his wife and a farthing hath a great loss of his farthing."

"A dead wife is the best goods in a man's house."

"Wedding and wintering lame both man and beast."

"It is good to marry late or never."—Philadelphia Press.

America a Nation of Whistlers.

The right of a person to whistle, to the paralysis of other persons' nerves, is becoming almost as burning a question as the right of persons to smoke to the mental and bodily detriment of others. We Americans are probably, next to our own colored people in the southern towns, whom we have educated in the art, the whistlingest people in the world. There are apparently two reasons for this. One is that we are the most nervous of people—we have got to be doing something, we can't go down stolidly at our work like Europeans or sit silent and contemplative, so we work off our fidgets with whistling. The other reason is that we are really a cheerful and expressive people, in spite of all that has ever been said to the contrary. The national whistling habit has resulted in the production of a great number of really skillful and musical whistlers. With one consideration and another, there is a tremendous amount of whistling. It seems cheerful, and sometimes, to the whistler, it is really cheerful. Now, undoubtedly this would be very nice if every one's whistling was heard only by himself. It would be a blessed way of working off one's nervousness too. What about that? An ordinary whistler's performance gives absolutely no pleasure to any one but himself.—Boston Transcript.

The Conductor's Keen Senses.

"Railroad conductors train themselves up to a fine point," said a traveling man. "The other night I was on Conductor Stovall's train, on the Southern, going up to Washington. We were somewhere in the neighborhood of Charlotte, N. C., I knew, but to be exact I asked Captain Stovall, who was sitting just behind me, where we were. He waited about half a minute and replied: 'We are about 19 miles from Charlotte.' 'How can you tell?' I asked him. 'Easy enough,' he replied. 'Just feel the motion of the train, and I can tell. I can tell every curve on the road nearly, and I never have to look out to find where we are.' Just at that moment there was a blast from the locomotive. 'That's Stanley's Crossing,' said the conductor. And that was from a man who has a run of about 300 miles."—Atlanta Constitution.

Lads In Society.

It was a New York clubman who made the remark that the season at Bar Harbor, one of the most fashionable resorts, closed about Sept. 1 "because all the men had to go back to school then." Certainly the prominence of "goslings" at the resorts is one of the curious anomalies of the season, and it is hard to tell what the final result is going to be of putting the boys so far forward and keeping back the girls. You may see maidens of 18 in short skirts, with their nurses, playing jackstraws, while their brothers, not so old, smoke cigarettes, give champagne suppers and escort young married women to balls.—Philadelphia Times.

Should Stop to Consider.

Josh Billings once remarked, "When a feller gets a-going down hill, it duz seem as though everything had been greased for the okashun." How true that seems, and yet if a man would consider the causes which make his descent so easy he might stop long enough to get his second wind and try to get back.

Failure, disappointment and defeat constitute a considerable part of human life, and much of our welfare depends upon the way in which we accept them and the results which we wrest from them.

The familiar expression, "Hub of the Universe," as applied to Boston, was originated by the late Dr. Oliver Wendell Holmes.

CIVILIZATION.

An Argument That it May Ruin the World.

UNIQUE CONCLUSION ARRIVED AT.

Remarkable Address of Prof. Petrie Before the British Convention—The Natural Growth of the Mind.

The following is the text of Professor Flinders Petrie's remarks on the effects of modern civilization in his address before the British association:

"The foremost principle which should be always in view is that the civilization of any race is not a system which can be changed at will. Every civilization is the growing product of a very complex set of conditions, depending on race and character, on climate, on trade, and every minutia of the circumstances. The attempt to alter such a system apart from its conditions is impossible. No change is legitimate or beneficial to the real character of a people except what flows from conviction and the natural growth of the mind. And if the imposition of a foreign system is injurious, how miserable is the forcing of a system such as ours, which is the most complex, unnatural and artificial that has been known; a system developed in a cold country, amid one of the hardest, least sympathetic and most self-denying and calculating of all peoples of the world. The result is death; we make a dead house and call it civilization. Scarcely a single race can bear the contact and the burden. And then we talk complacently about the mysterious decay of savages before white men.

"Let us turn now to our attempts on a higher race; the degenerated and Arabized descendants of a great people, the Egpytians. Here there is much ability to work on, and also a good standard of comfort and morality, conformable to our notions. Yet the planting of another civilization is scarcely to be borne by them. The Europeanized Egpytian is in most cases the mere blotting-paper of civilization, absorbing what is most superficial and undesirable. Yet some say, why not plant all we can? What can the harm be of raising the intellect in some cases if we cannot do it in all? The harm is that you manufacture idiots. Some of the peasantry are taught to read and write, and the result of this burden, which their fathers bore not, is that they become fools. I cannot say this too plainly. An Egyptian who has had reading and writing thrust on him is, in every case that I have met with, half-witted, silly, or incapable of taking care of himself. His intellect and his health have been undermined and crippled by the forcing of education. With the Copt this is entirely different; his fathers have been scribes for thousands of years, and his capacity is far greater, so that he can receive much more without deterioration. Observation of these people leads to the view that the average man can not receive much more knowledge than his immediate ancestors. What, then, it may be asked can be done to elevate other races? How can we benefit them? Most certainly not by Europeanizing them. By real education, leading out the mind to a natural and solid growth, much can be done, but not by enforcing a mass of accomplishments and artificialities of life.

"Our bigoted belief in reading and writing is not the least justified when we look at the mass of mankind. The exquisite art and noble architecture at Mykenae, the undying song of Homer, the extensive trade of the bronze age, all belonged to people who never read or wrote. The great essentials of a valuable character—moderation, justice, quick observation, shrewdness, ability, sympathy, politeness, and consideration, to plan and prearrange, a keen sense of the uses and proprieties of things—all these are qualities for which I value my Egpytian friends, and such qualities are what should be evolved by any education worth the name. The greatest educational influence, however, is example. This is obvious when we see how rapidly the curses of our civilization spread among those unhappily subjected to it. The contact of European with lower races is almost always a detriment, and it is the severest reflection on ourselves that such should be the case. It is a subject which has given much room for thought in my own dealings with the Egyptian peasant, to consider how this deleterious effect is produced, and how it is to be avoided. First, it is due to carelessness in leaving temptations open to natives, which may be no temptations to ourselves. To be careless about six pence is as demoralizing to them as a man who tossed sovereigns about the street would be to us. If a man or a government defrauds, it is but natural to the sufferer to try and recompense himself by any means available, and thus an interminable system of reprisals is set up. Such is the chronic state of the East at present among the more civilized races. The Egyptians are notorious for their avarice, and are usually credited with being inveterate money-grabbers; yet, no sooner do they find that this system of reprisals is abandoned and strict justice maintained than they at once respond to it; and when confidence has once been gained it is almost as common to find a man dispute an account against his own interest as for himself, and scarcely ever is any attempt made at false statements or impositions. Such is the healthy response to straightforward dealing with them.

"It is the business of anthropology to step in, and make a knowledge of other civilizations a part of all decent education. The origin and utility of the various customs and habits needs to be pointed out, and in what way they are reasonable and needful to the well-being of the community. And, above all, we ought to impress on every boy that this civilization in which he grows is only one of the innumerable experiments in life that have been tried; that it is by no means the only successful one, or, perhaps, not the most successful, that there has been, that there are many other solutions of the problems of community and culture which are as good as our own, and that no one solution will fit a different race, climate or act of conditions. The highest form of this perception of other existence is reached in the best history-writing or fiction, which enables the reader to strip himself for the time of his prejudices and views of life, and reclothe the naked soul with an entirely different personality and environment. Here we run against the special bigotry of the purely classical scholar, who looks on ancient literature as a peculiar preserve solely belonging to those who will labor to read it in its original dress. No one limits an acquaintance with Hebrew, Egyptian or Arabic authors to those who can deal with those tongues; and Greek and Latin authors ought to be as familiar to the English reader as Milton or Macauley. What seems to be the most practical course would be the recognition of civilization or social life as a branch of general reading to be stimulated in schools, and encouraged by subsequent inquiry as to the extent to which it is followed and understood, without making it an additional fang of the examination demon. The books required for such reading should cover the life of Greece, Rome, Babylon, Egypt and Mexico in ancient times; and China, India, Persia, Russia, Spain, and one or two low civilizations, such as the Adamans and the Zulus in modern times. Neither histories nor travels are wanted for this purpose; but a selection of the literature which shall most illustrate the social life and fame of the community, with full explanation and illustrations. We need not to excite wonder, astonishment or disgust, but rather to enable the reader to realize the daily life and to live in the very minds of the people. Where no literature is obtainable, a vivid study of the natural and practical workings of their civilization should take its place."

Two hundred and twenty-eight divorces were granted in Montana during the year 1894, and of that number 167 were on the complaint of the wife, while only sixty-one were granted where it was found that the wife was to blame. Against the total number of divorces, 228, are the records of 1598 marriage licenses being issued. The percentage of divorces to marriages in the entire State was 14.26.

SOUND SLEEPER 68.

Some very hardy, warm-blooded people forget that summer is gone, and sleep soundly under light covering, even while Jack Frost is painting weird pictures on the panes. But we all learn by experience, and they find themselves in the morning suffering with stiffness, soreness, lame back, stiff neck or muscular cramps. Still, experience teaches. Like everybody else, they get a bottle of St. Jacobs Oil, rub well with it and are cured. Warmer clothing, and the frost shut out, they snore again happily, while from the towers of winter's storm clouds the sentry cries, "All's well."

In a game of ball among deaf mutes the profanity of fingers is perfectly awful to observe.

A BIG REGULAR ARMY.

The mightiest host of this sort is the army of invalids whose bowels, livers and stomachs have been regulated by Hostetter's Stomach Bitters. A regular habit of body is brought about through using the Bitters, not by violently agitating and griping the intestines, but by reinforcing their energy and causing a flow of the bile into its proper channel. Malaria, la grippe, dyspepsia, and a tendency to inactivity of the kidneys, are conquered by the Bitters.

English tenors keep all their humor locked up in their breasts. Hence their chest-notes.

DEAFNESS CANNOT BE CURED

by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or imperfect hearing, and, when it is entirely closed, deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by catarrh, which is nothing but an inflamed condition of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars, free.

F. J. CHENEY & CO., Toledo, O.

Sold by Druggists, 75c.

South America sends us alligator pears, but they are not pairs of alligator boots.

After physicians had given me up, I was saved by Piso's Cure.—RALPH ERIEG, Williamsport, Pa., Nov. 22, 1893.

Best Cough Syrup. Tastes Good. Use in time. Sold by druggists.
CONSUMPTION

KNOWLEDGE

Brings comfort and improvement and tends to personal enjoyment when rightly used. The many, who live better than others and enjoy life more, with less expenditure, by more promptly adapting the world's best products to the needs of physical being, will attest the value to health of the pure liquid laxative principles embraced in the remedy, Syrup of Figs.

Its excellence is due to its presenting in the form most acceptable and pleasant to the taste, the refreshing and truly beneficial properties of a perfect laxative; effectually cleansing the system, dispelling colds, headaches and fevers and permanently curing constipation. It has given satisfaction to millions and met with the approval of the medical profession, because it acts on the Kidneys, Liver and Bowels without weakening them and it is perfectly free from every objectionable substance.

Syrup of Figs is for sale by all druggists in 50c and $1 bottles, but it is manufactured by the California Fig Syrup Co. only, whose name is printed on every package, also the name, Syrup of Figs, and being well informed, you will not accept any substitute if offered.

Since 1861 I have been a great sufferer from catarrh. I tried Ely's Cream Balm and to all appearances am cured. Terrible headaches from which I had long suffered are gone.—W. J. Hitchcock, late Major U. S. Vol. & A. A. Gen., Buffalo, N. Y.

CATARRH

ELY'S CREAM BALM Opens and cleanses the Nasal Passages, Allays Pain and Inflammation, Heals the Sores, Protects the Membrane from Colds, Restores the Senses of Taste and Smell. The Balm is quickly absorbed and gives relief at once.

A particle is applied into each nostril and is agreeable. Price 50 cents, at Druggists, or by mail. ELY BROTHERS, 56 Warren street, New York.

EDWIN FORREST

Filled an Engagement of Twelve Months as a Tumbler.

HIS GREAT LOVE OF TANBARK.

Once He Took a Flying Leap Through a Barrel of Red Fire, Singeing His Hair Badly.

The tragedian Forrest had ever an ungovernable attachment for the circus arena, not merely as a spectator, but as a participant in the athletics of the place. To him the ring and its associations was a "charmed circle." A few of his admiring friends, still living, probably know the fact of his great love for the fascinations of the circus, but the great majority never heard of it, and will, perhaps, deny the assertion as an implied stigma upon the fame of the king of the stage to intimate that he ever, by experience of circus life and actual contact with the ring and the acrobatic performances therein, imbibed such an affection for such associations as to have caused him regrets that he ever chose his profession on the mimic stage before the footlights and orchestra of the theatre, so writes a correspondent of the Washington Post.

James Rees (Choiley Cibber), the biographer of Forrest says: "He had a decided inclination for comedy; indeed, for a time he actually hesitated between tragedy and comedy, as he did seriously on one occasion between sawdust and the stage."

An authentic narrative of a passage of Forrest's public life, told by Rees, shows evidence of the truth of the little-known fact that he was an accomplished tumbler, and on several occasions during his professional career he gave striking proof of his penchant for the sawdust arena and its sports.

James H. Caldwell was a great Southern theatrical manager. He was known as the "Great Napoleon of the Southern stage," had theatres in the principal Southern cities, the best, he boasted, in New Orleans, and the best company in the country. Forrest wrote to Caldwell for an engagement, and the result of the correspondence was he was engaged at the enormous salary of $18 per week. This was at an early period in the dramatic career of Forrest. His engagement to enter the service of Caldwell was several months off. In the mean time Sol Smith, a rival manager, was getting up a company in Cincinnati. To him Forrest applied for a situation, but was refused, when Smith learned that he had previously signed with Caldwell. He was told that his future prospects in the South depended on strict adherence to first contracts with the great Southern managers. But Forrest insisted upon an engagement with Sol Smith, observing: "I'd rather remain with you for $10 per week than with a stranger for $18." Another reason for his preference to play in Sol Smith's company, besides his acquaintance with and friendship for the manager was that the company embraced a fine collection of players; its associations were talented and attractive, particularly the Riddle family, for one of the lady members of which, young and beautiful, it appears, Forrest entertained warmer regards than were dictated by a sentiment of mere respect.

Provoked with Smith and determined to break his engagement with Caldwell, Forrest sought and effected an engagement with the management of a circus company as a tumbler and a rider for twevle months.

Smith, who had changed his mind and concluded he had made a mistake in rejecting Forrest's application started out to find him, and after considerable inquiry found him in a circus ring surrounded by riders, acrobats, vaulters, grooms, and numerous auxiliaries. Forrest threw several flip-flaps, and running toward the astonished spectator, he shouted, "What do you think of that?"

Smith remained during the performance an admiring and fascinated spectator, and was compelled to admit that had Forrest remained in the ring he would have become one of the most daring riders and vaulters that ever appeared in the ring. After much difficulty Forrest was induced to give up his engagement with the circus company. It was the most momentous period of his life. Even after a lengthy engagement with a theatrical manager, says Rees, "this desire for the ring did not die out." It still had its attractions, and the youthful athlete often imagined that he was better adapted to the performances of a circus than he was to the more intellectual acquirements of the stage.

As has been said, the circus feats in Cincinnati did not put an end to Forrest's desire of becoming a vaulter and rider. On one occasion, in another city, he appeared in the ring for a wager in a still vaulting act, it being for the benefit of "Bill Gates," a well-known attache of the circus. He was disguised so as not to be recognized by his theatrical friends. He had on an enormous pair of Turkish trousers, breastplate and fly; on his feet a pair of sheepskin pumps, like those worn by a numerous train of auxiliaries. Very few of his theatrical friends knew him. On another occasion he appeared in the benefit of Charley Young, a favorite actor. It was the last time that he exhibited his acrobatic agility. The principal and concluding feat was a flying leap through a barrel of red fire, in which his hair and eyebrows were terribly singed.

Forrest had all the true instincts of an athlete. "To the last moment of his life," says Rees, "he exercised with dumb-bells, dead-weights and Indian clubs, etc.; the spirit of the boy of eighteen only died out with the man of sixty-six."

A writer of reminiscences says that Forrest admitted, in reply to his question, that he had been a circus performer, and related an incident of his early dramatic life which occurred in 1826 or 1827 in Lexington, Ky. How did Forrest acquire his ability to appear in the ring as an acrobat and equestrian, where, as he laughingly remembered, he "leaped and tumbled with the best of them?" is a question that may have occurred to many readers. I am able to throw a ray of light on that point, and will give the substance of a story I have heard my father tell at various times in my life, founded on his experience in Boston in the winter of 1824.

My father, Otis Fernald, who died in 1889, in Harrison Me., aged 87 years, was, in the year 1824, working at his trade as a carpenter in Boston. He was employed either by the proprietor of a circus establishment or by the owner of the large building occupied by said circus company, to make sundry repairs and changes in the building as the requirements of the circus business demand. Being all over the premises, he was frqeuently and almost constantly a witness of the gymnastic performances of the circus people, and was often present during the hours of practice and training of young aspirants to the honors of the ring.

Among the more youthful of the athletes was a slender lad of sixteen or seventeen years, who, although gentle and apparently anxious to excel in the difficult feats for which he was training, sometimes incurred the ire of his trainer, who, possessing an irascible temper, easily resented the mistakes or blunders of the youth with oaths and blows of his long whip. The young man bore it with much patience, seemingly determined to conquer all difficulties, and deserve the praise rather than the censure of his teacher. But all his manly efforts and struggles to gain the better will of the unreasonable master of the ring proving without avail, he resolved to escape from the scene of his maltreatment, and one day, young Ned, the favorite of the company was missing, and all efforts to recover him or find his whereabouts were futile.

"That boy," said my father, was "Edwin Forrest, afterwards the greatest actor his country ever produced. It was only a few years after I knew him so well in that Boston circus company that I read of his rising fame as an actor on the dramatic stage. I have watched his career with sincere interest for the last forty years, and often recall the experience of his early life before his advent to the tragic stage, where he acquired such conquests of fame as no American had ever won before. No wonder the Nation revered his wondrous genius when one sentence or, perhaps, a word, pronounced by him from the text of Shakespeare or some other author with the tone, inflection and rendering of its essential meaning such as only Forrest could give, would thrill the soul, the conscience, and the memory of his rapt auditors through all the years of their after lives." That is the substance of my father's narrative, and his comments on the life and work of the great Forrest.

The writer was in Washington at various times during the war and here saw Mr. Forrest for the first time in his life. It was his rare privilege to have the first view of the actor while taking a quiet breakfast in the dining room of the National Hotel. He sat at a table near the eastern side of the large dining hall with a lady companion. My friend and I were at a table in the same section of the hall. There were very few guests in the room, and I had a good opportunity for a study of his majestic head and countenance while in perfect repose. His presence was somewhat mysteriously impressive had I not been conscious of his identity. This was during the season of 1865, when he was playing with the company of Laura Keene at Ford's Theatre, and I had the pleasure of attending two performances of "Richelieu" and "Spartacus.' As a lover of the legitimate drama and an admirer of fine acting and elocution, I think that hardly an utterance or motion of the great actor was unobserved, or failed to duly impress itself on my mind and memory.

THE FOREST PEST.

Miss Eleanor Ormerod, in a letter to the Veterinary Record, gives some interesting details of Indian forest flies, which, after all, are not so very unlike the horrible pests of the same name which frequent the woods of southern England, and most distinctly make life "not worth living" to the poor horses whom they select as victims. Miss Ormerod says that "some horses are driven mad by the presence of a single fly, and in driving along not unfrequently start kicking most violently frequently running away with the carriage," etc.

This has reference to the Indian specimen, but we read that the English winged demon has a "large curved claw with a saw-like edge beneath it, with grooves down the lower part of the side of the claw, so that each groove runs to the notch between each tooth, the claws, when laid side by side, forming a most powerful grasping instrument." Realizing, however faintly, what suffering such creatures can inflict on their prey, surely no one will hesitate to get down at once to search for, and if found, pull off, the forest fly when a horse becomes suddenly irritable and fractious while being driven through country lanes or woods.

The emperor of Germany, so it is said, has decided to honor Bismarck by having his head stamped on an issue of German coins.

CUPID BARRED OUT.

No Kissing or Embracing at the Wedding Feast.

THE QUEER SOCIAL LAWS OF JAPAN.

Etiquette Governing the Relations of Young Men and Women Before Marriage—Disgraceful to Live Single.

When a young man wants to get married in Japan he does not offer his heart and hand to the girl he loves, but, if an arrangement has not already been made for him by his parents with the daughter of a neighbor, he goes to a discreet and trusted friend who is already married, and asks that he and his wife act as "nakodos," or go-betweens, for him in this important matter. It is the most delicate duty one friend can perform for another; it is the highest of compliments to ask it, as it is naturally an evidence of complete confidence, and the gentleman and lady who undertake it assume responsibilities that few people in America would care to accept. They not only agree to find a suitable partner for the aspirant for matrimonial honors, but remain through life in the relation of godfather and godmother to the young couple. They are expected to assist them if they get into difficulty or suffer misfortune, to promote their prosperity and happiness in all ways possible and serve as a board of arbitration to settle disputes that may arise in the family.

But this responsibility is not dreaded in Japan as much as would be supposed. People are used to it, and nearly every gentleman and lady of acknowledged distinction have at least one and sometimes several couples under their care.

As a rule in the upper circles of society marriages between the sons and daughters of friendly families are arranged by the parents when the children are very young and a boy or girl often know who they are going to marry long before they are old enough to understand the nature of that relasion. But they are not allowed to associate with each other. From infancy girls are taught that they are inferior to their brothers, and must treat them with respect accordingly. A boy can call his sister by a pet name, but she cannot show the same familiarity toward him. He is "Ani-san," which literally means "Mr. Brother," and his authority cannot be disputed in their play. Usually the boys of the family take their meals with their father, and their mother and sisters wait upon them, accepting what food is left by the superior beings without a murmur. In this way the spirit of obedience to mankind is instilled into the mind of womanhood. Confucius taught that children of 7 years should be separated, but the Japanese are a little more liberal than the Chinese in this respect, and boys and girls play together until they are 10 or 12 years of age. After that their association is forbidden.

Nor is there any opportunity for a boy to become acquainted with the girls of his father's set. Therefore courting is impossible, and the children of families whose houses may adjoin grow up as strangers to each other. This rule applies equally to the nearest relations. There can be no friendship between young men and women. It is disreputable for a Japanese young man to marry for love. There is no such thing as love between the sexes before marriage, and there is no word to define such affection in the Japanese language. When a young man and a young woman love each other public sentiment places them very low in the scale of morals.

The social laws of Japan require that a man shall marry at the age of 18 or 19, and it is a disgrace for a man or a woman to remain single after they are 20 or 21. As a consequence there are very few old bachelors or old maids in the empire.

But a young man usually has an opportunity to inspect the girl that is selected by his parents or his nakodos before an engagement is decided upon, and if either is dissatisfied with the appearance of the other the arrangement may be declared off. This meeting is called a "mi-yai," which means literally "mutual seeing."

According to etiquette the interview may take place at the residence of the nakodos or at the house of the young lady's father; but among the lower classes a picnic or a theater party, a boat ride or an excursion of some sort serves the purpose. If the visit takes place at the house of the young lady's father, the young man and his nakodo are received by the host and salute each other with great politeness. A servant brings a pot of tea and materials for smoking, over which the three gentlemen discuss politics, business matters, the condition of the rice market, the news from China, or any other indifferent subject for awhile. Then the host will clap his hands and the young lady in interset herself appears, dressed in her prettiest kimino and obi and bearing a tray containing three cups and a pot of tea. These she places upon the mat in front of the guests and proceeds to serve the beverage and sweetmeats which her mother or a servant brings after her. Girls are trained to perform this duty with the greatest degree of grace, for tea pouring is regarded as the highest accomplishment a Japanese woman can acquire, and this occasion is naturally of the greatest importance. She is not to speak unless she is spoken to, and the responsibility of beginning a conversation with her rests upon the nakodo. If he is a gentleman of tact he introduces some subject or asks some question that is calculated to bring out whatever conversational powers the young lady may possess, and in the meantime she sits upon her heels and endeavors to be as charming as possible. The young man may engage in the conversation, but it is not good form for him to address his remarks to her. He may speak to her father or her mother, but he usually remains entirely silent during the ordeal. If the "miyai" happens to be an excursion or a theater party the same rule is observed. He may look as much as he likes, but it is bad manners for him to show the young lady any particular attention.

After the miyai is over the young man and his nakodo retire for consultation. He thinks the matter over, and if he decides that the candidate is acceptable his parents send her a handsome box of gifts. Sometimes it contains silks and other fabrics, ornaments or jewelry, decorative works of art, and among the common people, fish, seaweed and other forms of food. Then the bride's parents send presents in return, which is equivalent to an engagement, and an early day is selected for the wedding. If the young lady should happen to object, which is not often the case, as she is guided entirely by the wishes of her parents in this and all other matters, the nakodo is notified before an opportunity to send presents is given.

When the day for the wedding is selected the trosseau of the bride and several articles of household furniture are sent to her husband's home, and they are usaully exhibited to the friends of the family beforehand. The wedding gown is always pure white, and the bridegroom is dressed in "kmishimo"—a peculir dress made of various kinds of silk in colors according to his rank.

The wedding ceremony takes place at the house of the bridegroom's parents and friends of both families are invited to be present. The bride is escorted there at nightfall by her parents and other members of her family and the nakodos, followed by servants bearing gifts to the family of the bridegroom. It was formerly the custom to light a bonfire in front of the gate of her parental home and lift her over it. This ceremony meant purification. The house of the bridegroom is usually decorated with lanterns and other evidences of festivity, which draw all the people in that part of town to witness the bride's arrival. She is met outside the entrance by the members of the groom's family. But he is seated on a cushion in front of the tokonom, a shallow recess or alcove that is found in all Japanese houses and is used for the display of ornaments. When she enters the room she is escorted to a seat beside him. The nakiodos sit at his right and at her left are usually two married ladies or two little girls dressed in white, who serve as bridesmaids.

When the party is all placed a chorus of voices in the adjoining room sings a Japanese song called "Utai." A low table of white wood, that has never been used, is then brought in, and a tray is placed upon it containing three cups, which one of the bridesmaids fills with sake. The latter hands the smallest cup to the bride, who takes three dainty sips of wine and then passes it to the groom who follows her example. The second and third cups are filled in a similar manner and the ceremony is repeated. As the groom returns the third cup to the bridesmaid all clap their hands, which is a salute of approbation announcing that the ceremony is over.

There is no kissing or embracing, but a great many congratulations are offered to the young couple and guests of literary attainments are expected to hand them poems of their own composition, which are afterward bound in a little book as a memento of the occasion. The couple then retire to put off the wedding robes and resume their ordinary garments, and afterward join the guests at a feast, which is served with great ceremony. The congratulations are there renewed and include the parents and relatives of the couple, and everybody drinks to the health of the bride and groom. Sometimes the feasting continues very late and often ends in a carousal, but before the guests retire they repeat their congratulations, as is customary in other countries.

Among the common people the marriage ceremony is considerably modified. Bridesmaids are omitted and the nakodos, the gentleman sitting at the right of the groom and his wife at the left of the bride, fill and pass the cups of sake; but there is always a supper of some kind and plenty to drink, if the food is only rice and salted fish and the liquids only tea.

When the guests have left the house the nakodos take the couple to their bedroom, assist them in removing their garments and put them to bed. After they are well covered up another cup of sake is passed around and the final goodnight are repeated.

In the morning the father of the groom, or the nakodo, goes to police headquarters and registers the fact of the marriage, giving the names, ages and occupations and residence of the couple. It is customary for the bride and groom shortly after their marriage to make a present to the gentleman and lady who have served them.

On the third day after the wedding the bride returns to her father's house to stay three or seven days, as the case may be, during which time her father invites the friends of both families—usually those who have been guests at the wedding—to a big feast. If the first three days of married life are not satisfactory to the bride she notifies the nakodos of that fact and does not return to her husband's home, which is equivalent to a divorce. If the husband is dissatisfied he notifies the nakodos, and they are expected to communicate with the brides' parents. If a divorce is insisted upon by either party it must be accepted by the other, but such a proceeding is seldom resorted to except where misrepresentations have been made as to the temper and physical condition of either party. If the bride or groom proves to be deformed, impotent, or diseased, in any manner a divorce is considered honorable and legitimate and it is only necessary to register the fact at police headquarters.

After the ceremonies are concluded the bride separates herself entirely from her own family and becomes as much identified with the family of her husband as if she were born into it. She is not expected to inherit any of her father's property, although he may leave her a legacy if he desires to do so. Nor is it necessary for a father to give his daughter a dot upon her marriage, although it is often done. It is usually a part of the original arrangement and the amount is settled between her parents and the nakodos.

I asked one of the most progressive and modernized Japanese I have ever met whether it were not possible for a young man to select his own bride and propose marriage to her or to her father, according to the American plan.

"Of course it is possible," he replied, "but it is extremely improbable. Our people are not educated up to that point. We may come to it in time, but marriage and the affairs of the home are the last to be affected by foreign innovations. If a young man of the very highest reputation and social position should attempt to offer himself to a young lady, or ask her hand in marriage from her father, as you do in America, he would undoubtedly be kicked out of the house. It would be absolutely fatal to his prospects of marriage, for neither that girl nor any other girl with any self-respect would accept him. The result would be the same as if some young man in America were to try the Japanese plan. He would be considered as trifling with the most sacred relation in life and his friends would be advised to shut him up in a lunatic asylum. While our young people are not allowed to associate upon terms of intimacy with each other or even form friendships with unmarried persons of the opposite sex they see each other frequently, so it is always possible, and often easy, for a young man to select his bride from among the families with which his parents are friendly. It is only necessary for him to notify his father or a nakodo of his wishes and if the young lady is not otherwise provided for they can arrange matters to his satisfaction without the slightest difficulty."—William E. Curtis, in Chicago Record.

CHARACTERISTICS.

When Julian Ralph went to China he carefully prepared himself in pigeon English. At a hotel in Shanghai, seeing a Chinaman in his room, he said:

"Hello! What ting? What fashion man you belong? What side you come?"

To which the Chinaman replied:

"This is Mr. Ralph, I presume. We have mutual friends who suggested my calling on you. Oh, that's all right. I spent eight years at school at Norwich, Conn.'"

"Ah!" said Mr. Ralph, partially recovering, "vely well, vely well."

The late Robert Louis Stevenson was noted for his frankness. Once while visiting John Addington Symonds he listened for some time to the latter's constant complaints of the injustice of fate, and then gave him a lesson. Symonds asked Stevenson what was the dizziest height he had climbed in the Alps.

"The dizziest height to which I have climbed," said the novelist, "is Mount Ego. I reached the top and looked all over it. I never got over that dismal view. I wouldn't advise anybody to give himself up to looking at it. Some day one would overreach one's self and topple in.'

Frederick the Great enjoyed a joke, even when the fearful uncertainties of a great battle were pressing upon him. At the crisis of the Seven Years' War one of his soldiers deserted. He was captured and brought before the Emperor.

"Why did you leave me?" inquired Frederick.

"Sire," replied the trembling man, "your affairs are growing so badly that I gave them up."

"Very well; just remain until tomorrow,' said the Emperor (it was the eve of battle) "and if they do not improve let us desert together.'"

Lord Russell, the Lord Chief Justice of England, is quick at repartee. While he was visiting on this side the Atlantic he chanced to be walking beside a river with Mr. Evarts. Stopping suddenly Mr. Evarts said that Washington had thrown a dollar across the stream at that particular point. The river was wide, and Russell looked doubtful.

"You know, a dollar went further in those days than it does now,' said the American lawyer.

With a quiet smile Russell replied:

"Yes; and it must have been easy, after all, to Washington, who threw a sovereign across the Atlantic.'"

The professor was lecturing on some of the habits and customs of the ancients Greeks to his class. "The ancient Greeks built no roofs over their theaters," said the professor.

"What did the ancient Greeks do when it rained?" asked Johnny.

The professor took off his spectacles, polished them with his handkerchief and replied calmly. "They got wet, I suppose."—Tit-Bits.

Talk about the evils of taxation without representation"—a man out west has been paying taxes on a farm for five years and the other day a dam broke away and his farm was washed into the river.

THREE STATES MEET.

Harper's Ferry, the Scene of John Brown's Raid.

A LITTLE OLD POTOMAC HOME.

Historic Battlefields Are in Sight and War Relics Lie All About—Herds of Wild Goats.

The towns of Harper's Ferry, Bolivar and Camp Hill have a combined population of about 2200. Harper's Ferry has a Methodist, Catholic, Presbyterian, colored Baptist and colored Methodist church while Bolivar has a Lutheran and Methodist church. The Catholic church is built of stone and is the oldest in the former town, having been erected in 1833. It is situated on the hill overlooking Shenanhoah street, and its rough walls are marked by many bullets, like a veteran of the war.

The Episcopal church stands close by and is also built of stone, and, like the Catholic church, bears the marks of bullets on its walls. The larger portion of the men residing in Harper's Ferry are employed in the pulp mills and on the railroads. There are a number of stores in Harper's Ferry and Bolivar which appear to carry on a lively trade, writes a Harper's Ferry correspondent of the Washington Star.

On Loudoun and Maryland Heights which girt Harper's Ferry are several large peach farms, which raise a delicious fruit. The peach farm on Loudon Heights is one of the largest in this part of the country. The peaches produced in this neighborhood are packed and sent by freight to the commission houses of Baltimore, Washington and other large cities.

There is some talk of establishing a system of water works for the town of Harper's Ferry, as the water power where the Potomac and Shenandoah rivers meet can be used to good advantage in making a reservoir to supply the town. It is said that the river here has about thirty-five hundred horse power.

There is quite an extensive cave between Harper's Ferry and Rattling Springs, which is supposed to have been occupied by John Brown and his men before the celebrated raid on Harper's Ferry, but the truth is, neither Brown nor his men ever saw or heard of the place.

No true lover of nature can fail to be impressed with the beautiful scenery surrounding Harper's Ferry. Maryland Heights rises 1300 feet above the level of the Potomac, and throws its shadow on the picturesque rocks of the river below. Loudoun Heights, which overlook the Shenandoah, presents almost as fine an appearance as its sister mountain on the Potomac. The three States of Maryland, Virginia and West Virginia nearly meet at this point, and are only separated by the two rivers, Loudoun and Maryland Heights are reached from Harper's Ferry by two bridges, which have been recently built. The toll over these bridges is quite high, both for pedestrians and vehicles, and there has been considerable kicking over the charge.

The bridges would be made free if it were not for the interstate complication involved in chartering the company that built them. The valley between the three States, where the Potomac and Shenandoah rivers meet, is so beautiful that Thomas Jefferson, in his "Notes on Virginia," said that it was worth a voyage across the Atlantic to see. Chimney Rock on Loudoun Heights, which overlooks the Shenandoah from a distance of about 250 feet, derives its name from its remarkable resemblance to a chimney. This spot is often visited on account of its novel appearance, as well as the fine view which it commands.

A handsome club house nestles on the side of the mountain facing the Potomac. This is owned by several wealthy Washington men, who find it a convenient place to stop when they come here on fishing and hunting expeditions. Rattling Springs, on the Potomac, about two miles above Harper's Ferry, is reached by a road which skirts the edge of the mountain, above which runs the Baltimore and Ohio Railroad in a westerly course. The water of this spring courses down the mountain between a narrow cleft in the rock, rattling on its way, and this is why the name of Rattling Springs was given to the place.

The Potomac is quite deep here, owing to a large dam a short distance below. There is a graceful bend in the river beyond the springs and the waters are so placid that they are scarcely disturbed by a ripple. The verdant hills of Maryland and West Virginia look down upon them from either side and the scenery here is worthy of the pen of a poet or the brush of an artist.

The Chesapeake and Ohio Canal runs along the base of the mountains on the Maryland side, and boats are often seen going up and down the canal during the day. It is a pretty sight to watch them gliding on their course while the hills re-echo the sound of the horn which announces their approach. During one of the large floods a canal boat was washed to the foot of Maryland Heights near the road leading up the mountain, and it has been converted into quite a novel dwelling. A family have occupied this place for some time, and seem to be perfectly contented with their home.

There are hundreds of wild goats in the mountains around Harper's Ferry. Their progenitors were undoubtedly tame ones that run away from man's jurisdiction. As there are lodges of Masons, Jonadabs, Knights of Pythias, Odd Fellows and the Junior Order of Mechanics in Harper's Ferry and vicinity, it may be possible that these bearded freebooters of the rocks and dump heaps have escaped from some of these lodges. They climb the most difficult places on the mountains with perfect ease and annoy the canal men very much by rolling rocks down upon them.

The view of the Shenandoah Valley from Bolivar Heights is magnificent. Charlestown and Martinsburg are visible from this point. The Blue Ridge Mountains can be seen, and also the pinnacle of North Mountain, which is sixty miles distant. The Alleghanies in Maryland and the old battle ground of Antietam greet the sight when we look toward that State. Bullets, canteens and other war relics can be picked up almost everywhere on these heights.

A castle built of stone procured from a neighboring quarry stands upon these heights. This castle is of Queen Anne architecture, has three stories and a basement, all the modern improvements, and is 76x54 feet. It is handsomely finished inside. The center rooms are all octagon shaped, and every room in the house has an old-fashioned fire place. It was purchased by Judge Vale from Mr. Whitman, of Washington, who built it about four years ago. There is a very fine view of the surrounding country from the porticos of this castle. The Judge is an old newspaper man, having been connected with the Washington Chronicle and other papers. He has many war relics in his castle, among which are a handsome sword, found on a field near his place; a number of bullets, canteens and pieces of shell. He also has one of the spears which John Brown and his men used when they invaded Harper's Ferry.

ENGLISH AS IT IS WRITTEN.

All editors are astonished at the poor English written by many of their would-be contributors, whose spelling and penmanship indicate that they have had a fair degree of education, says a writer in the Outlook. Usually this stupidity in the use and choice of words seems to arise from a lack in the sense of humor. Even a university course, as everyone knows, cannot make up for this essential quality, which is absolutely necessary to literary success. A writer need not be humorous, but he must have a quick perception of what is ridiculous in order to avoid making himself so.

Thus only a person deficient in this vital respect could have written of her heroine that she had "deep dark hair;" that she had "that rareness of expression which baffles the most learned to understand;" that "Maud had grown weary of sitting in the porch;" that her lips were "wreathed in a smile that strangely reminded me of an angel;" and that "her strange nature enchained my fancy." Also, only such a one, or a person phenomenally ignorant, could conclude a stanza of poetry as did one young woman, with the line:

"May gladness and joy be your doom."

This individual may have been related to him who chanted:

"Oh, put me in no sepulcher,
Or dim vault, sad and gloomy;
But let my narrow bed be lain
Within some meadow roomy."

When even native Americans make such havoc with their language it is not singular that foreigners have severe struggles to master it. Translators who consider themselves competent to express in English the literature of their own lands sometimes prove themselves amusingly unequal to the task. This was the case with the courageous gentleman who sent to an editor a story containing the following passages:

"He said with an air of a most despising disdain."

"His whole attire gave him a most distinguished and gentlemanly appearance."

"Oh! bursted Marguerite, terrified."

"To solicit, in the name of the Germaine republic, the annexation of his native city to France."

"He wore velvet trousers, all spotted with ink."

"He was beginning to resume himself."

"It seemed as though his heart would bound from its envelop."

"She gave him by look a most eloquent thank."

"The rain, pushed by the wind, beated his handsome face."

A distinguished foreigner, whose works had been successfully introduced into America by a well-known publisher, wrote him a grateful letter, in which occurred these sentences: "You built up fame for me whole the world over . . . me, who did not proceed the study of English further than 'yes' and 'no'. Yet this is a strange world and I marvel at the fame I have been bestowed upon. . . Well," he adds, modestly, "the American have plenty money, and they part with it when best humbugged. (P. T. Barnum.) My regards to all friends whose names I have managed to forget. My special requests to the old gentleman who heard loud, and the school teacher miss."

Another wrote under similar circumstances: "Accept my the best thanks for your venerable help in my troubles. As long as I live I will think how I can revenge your kindness."

Here are two of the favorite superstitions of the modern maid. If you meet a load of hay you must wish on it, only if you look back at it after you have wished once you won't get what you want. If you give somebody you love, either a man or woman, anything with a sharp edge, a knife or scissors, it will cut your friendship, unless they give up a dime for it.

There is no time in the long year round when you can get furs cheaper than at present. The new sealskin sacque is a moderately short, waist-length affair with sleeves of no such prodigious proportions as those of last year.

INDEPENDENCE, CAL.

FRIDAY DECEMBER 13.....1895

Congressman Grove L. Johnson of California has taken a great problem by "the horns" and projected a question into the form of Congressional debate that has been discussed outside of Congress with a great deal of interest for a number of years. He has introduced a bill for the exclusion of foreign laborers, which provides that after August 1, 1896, it shall be unlawful for any foreign laborer to enter the United States; the words "foreign-born laborer" to mean skilled and unskilled laborers and laborers employed in mining. All captains and masters of vessels entering ports of the United States are made responsible for the character of their passengers. Foreign born laborers coming into the United States after August 1, 1896, under the provisions of the bill, shall be subject to immediate deportation and also subject to punishment. An appropriation of $60,000 is provided to carry out the provisions of the bill. There has long been made a demand by the press of the country that there should be further restriction upon immigration. While this has largely related to the American belief that anarchists, those not in sympathy with the American system, the criminal and the dangerous classes generally should be more effectively excluded than is done under the present law, it has also reflected the sentiment of a great body of American citizens that the time is at hand when the inponring of alien laborers, to the exclusion of native-born and adopted citizens from the fields of home labor, must cease. The Huns, who have invaded and made conquest of the Pennsylvania coal regions and proved a menace to good order and a disgrace to civilization, represent the lowest and element of the unskilled alien labor. It is this non assimilable element that recently, in Illinois, frequently in Ohio, repeatedly in Pennsylvania, and often in other States, has by lawless disposition, ignorance, intolerence and want of sympathy with the American system, rendered resort to arms necessary in order to keep them within the bounds of peace. But there has long been growing and strengthening a sentiment in the United States that not less inimical to the best interests of the people is the class of more skilled laborers who come into the country for the express purpose of undercutting the American skilled workers, of never becoming American citizens, but immigrate for the purpose of acquiring means and presently returning with their gains to their foreign homes. Still another class is that represented by the Mafia of the South, the Polish malcontents of the West, and the alien denizens of "Little Italy," the Hungarian quarter of Essex street, and the other similar foreign colonies of the east side in New York. Against the further unrestricted influx of these classes who, if not aided and not notoriously criminals and paupers, are free to come in and displace the American worker, there has, we say, been a rapidly growing sentiment. This sentiment will now be crystallized about Congressman Johnson's bill. It is sweeping and purposely so, doubtless, that the entire subject matter may be brought squarely before the people. It will have that effect, and from now on will be a topic of free debate.

The federal government has taken a hand in the fight before the United States court relative to the reduction in rates made by the California railroad commission. This latest move will complicate matters considerably, but it will all be good argument for those who believe in government ownership of railroads. Mr. Huntington will yet use enough rope to hang himself, and the sooner the better.

The ownership of the mineral under a given surface, with the right to enter thereon, mine and remove them. It may be seperated from the surface ownership but if not so seperated by distinct conveyance, the latter includes it. The most reliable information on all the phases of the Mining Industry is published in the Engineering and Mining Journal, issued weekly, $5 per year. Send for sample copy.

THE SUNSET LEDGE.

ITS STORY AS TOLD BY THE OLD CALIFORNIA MINER.

The Two Contractors Who Refused to Heed a Timely Warning—Fifteen Years After a Blast Released a Pair of Grinning Skeletons.

In Butte county there is a quartz mine which has been abandoned for many years. Only the oldest residents of the vicinity remember the names of the locators, and scarcely a trace of the shaft and buildings remains. The ledge was discovered away back in the early days, when quartz first attracted the notice of prospectors; when many worthless ledges were worked because the miners had not yet learned how to read the value of such ore by the minerals in it, its location, dip and contact with other formations. The Sunset ledge was small, flinty and absolutely worthless, but the men who discovered it thought it worth development. They put down a shaft 100 feet in depth in wet and treacherous ground, and they used no timbers. Then they let a contract to two men—a Cornish man and an Irish man—to construct a tunnel 100 feet in length from the bottom.

Sometimes untimbered ground will stand apparently firm and safe for a time, and then, with no perceptible cause, suddenly get shaky and fall or close in. This was just what occurred at the Sunset mine. The two men in the tunnel had almost finished their contract and were "squaring up the face" of the tunnel when one of the men employed on the surface was lowered rapidly, ran to them and told them to leave the mine instantly because the shaft was closing in.

Why the men refused, in the face of a certain horrible death, to heed the warning is a mystery. The messenger begged and threatened, but they were obdurate. They laughed at him, told him to sit down and smoke a pipe with them and said they would leave the tunnel only when they had "finished her up in shape." Perhaps they imagined the man was playing a joke upon them or that it was a scheme to get them to leave the mine before their contract was fulfilled. At any rate, they refused to leave the mine, and the man who warned them returned to the surface only just in time to escape the fate of the men below. The shaft, with a roar, closed in, and they were entombed.

No effort was made to rescue the buried men. It was impossible to save them if they were not killed by the cave, and it was supposed that the tunnel had also collapsed. To sink a shaft 100 feet through treacherous ground would take a long time even in these days, when all the "modern appliances" for such work were at our disposal.

The mine was abandoned. Fifteen years went by. The story of the mine and the buried men became an old one. Their names were forgotten. They were like men who go down to the sea in ships and perish in sight of their homes. Their friends know that somewhere in the sea their bones are bleaching, somewhere in a great sepulcher upon which they may look, but into which they cannot see.

Fifteen years after the caving in of the mine some prospectors overran the locality. They were told the story of the Sunset ledge, and they went to its croppings and to the dump where the shaft had been and tested the ore they found there. Whether they found any gold is not known, but they found something which encouraged them. Perhaps they were not well versed in quartz and believed that any ledge would pay if developed. They resolved to reopen the mine. It was their opinion, they said, that the Sunset company had not put their shaft down in the right place nor sunk it deep enough. They (the new company) would choose a better spot, sink their shaft much deeper and tap the ledge on the pay shoot.

Old men who heard of it shook their heads and prophesied failure. They said no luck could come from disturbing dead men's bones, but the new company began and finished their shaft. Then they excavated a tunnel and raised an inclined shaft, hoping and expecting to strike the ledge where their judgment had led them to believe the pay shoot was.

One day, when they fired a blast, there was a rush of water down the incline, and the miners were driven out. After much trouble and expense a larger pump was put in and the mine cleared, and the cause of the sudden flow was explained. The upraise of the new company had entered the old tunnel of the Sunset company about 20 feet from its face. And there on a heap of rock, leaning against the walls, were two grinning skeletons. The bones of the dead contractors who had sat there grinning at their fate and for 15 years patiently waiting to be found were removed from the mine and given decent burial. The mine was again abandoned and will probably never be again opened.—San Francisco Chronicle.

Queer Ways of the Toad.

Paternal affection is not perhaps the precise emotion that we should be disposed to look for in the cold blooded frog. But the Surinam toad appears to exhibit this praiseworthy attitude of mind toward his numerous progeny. When his mate lays her eggs, the solicitous father places them carefully upon her back, where in due time their presence causes an irritation that produces numerous small holes, into which the eggs forthwith drop. In these cells, which, from mutual pressure, get to be hexagonal, like honeycomb, the young frogs are finally hatched, and for a bit scramble about their mother's back, hiding in their nurseries when danger threatens.—London News.

Newbern, N. C., was named after Bern in Switzerland by Baron de Graafewidt, a Swiss, who founded the town in 1720.

MONEY MAKING.

The Quickest Way to Pile Up Wealth In This Business Era.

The reason of the modern differences in favor of business as an instrument of money making is not far to seek. It is the enormous growth in the scale of everything in which business can be done. The enterprise of a merchant, of a contractor, of a mine dealer, even of a shopkeeper, may now cover the whole world and may be carried on, moreover, mainly upon credit. It may be doubted whether, except in those transactions which are called "financial," and which really mean the taking of heavy bribes for pecuniary support, any one transaction ever yields quite as much as the same transactions would have yielded 60 years ago; whether, for example, any cargo ever produces ton for ton an equal margin of profit, or whether any customer in a shop pays quite so heavy a percentage on the goods he buys.

It is the magnitude and multiplication of cargoes which yield fortunes, the thousands instead of hundreds of customers whom clever dealers may induce to spend money. The new system of rapid turnover is, of course, precisely the same thing—the dealer selling four times what he did and using only the same capital. This advantage of scale is almost entirely wanting to the professional man, for the obvious reason that he is hampered by limitations of time.

There are only 600 minutes in a hard worked day, and the seeker after income, be he as able as he may or as decided or as rapid, must give some of those minutes to each client or patient or contractor with a difficulty to meet. If he does not, he loses custom, and with custom income rapidly slips away. There are no doubt favorite lawyers, doctors and even engineers whose advice is sought at great expense, when equally good advice is procurable much cheaper, but still the favorites must give their advice and lose their days in doing it, or they will speedily be deserted.

Nothing can alter this first law, while the exaggeration of professional fees is kept down in the case of solicitors by positive statute, in that of doctors by an etiquette difficult to define or explain—there seems to be no reason why a great physician should not charge according to skill—and in that of barristers and engineers, by a competition, which, though never acknowledged, is none the less real and effective. We can not see what is to alter this condition of affairs, and do not believe that, however civilization may develop itself, professional skill will ever again be the quickest road to large accumulations.—London Spectator.

DELINQUENT SALE NOTICE.

INYO MARBLE COMPANY OF CALIFORNIA.

Location of principal place of business: San Francisco, California. Location of works, Inyo, Inyo County, California.

NOTICE—There are delinquent upon the the following described stock, on account of assessment No. 27, levied on the 5th day of July, 1895, the several amounts set opposite the names of the respective shareholders, as follows:

Office, Room 12, Rotunda Mills Building San Francisco, California

NOTICE BY CLERK ON APPLICATION FOR DISCHARGE.

IN THE SUPERIOR COURT OF THE COUNTY OF INYO, STATE OF CALIFORNIA.

In the matter of Bertrand Rhine An Insolvent Debtor.

NOTICE IS HEREBY GIVEN to all the creditors of Bertrand Rhine, the above named insolvent, who have proved their debts, that said insolvent has this day applied to this Court for a discharge from his debts, and that Saturday, the 23rd day of November, A. D. 1895, at 10 o'clock, a. m., at the Court-Room of said Court, at the Court-House in Independence, County of Inyo, has been fixed as the time and place for said creditors to appear and show cause, if any they have, why said insolvent's application should not be granted, and he be discharged from all his debts, in accordance with the Statutes in such cases made and provided.

Witness my hand and the Seal of said Superior Court, this 25th day of October, A. D., 1895.

[SEAL] D. J. HESSION, Clerk.

Dated October 25, 1895.

P. H. MACK, Attorney for Insolvent.

NEW ADVERTISEMENTS.

NOTICE OF COMMISSIONER'S SALE ON FORECLOSURE OF MORTGAGE.

SARAH C. F. WRINKLE, Plaintiff, vs. O. I. MAIRS, as Assignee of the Estates of Ambrose W. H. Smith and J. White Smith, Insolvent Debtors, Lucy C. Smith and Henrietta D. Smith, Defendants.

Under and by virtue of an order of Sale and decree of foreclosure issued out of the Superior Court of the County of Inyo, State of California, on the 7th day of December, 1895, in the above-entitled action, wherein, Sarah C. F. Wrinkle, the above-named plaintiff, obtained a judgment and decree of foreclosure and sale against O. I. Mairs, as Assignee etc. et als., the above-named defendants, for the sum of $1,082.61, in United States gold coin, which said decree was on the 10th day of December 1895, recorded in Judgment Book No. 1 of said Court, at page 540, I was appointed a commissioner to sell and I am commanded to sell:

All those certain lots, pieces and parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit: The West half of the South-west quarter of Section 27, North-west quarter of the North-west quarter of Section 34, North-east quarter of the North east quarter of section 33, all in township 8 South, Range 33 East, M. D. M., containing 160 acres. Also an undivided one-eightieth interest in and to that certain ditch and water right situate in said Inyo County, known as the "Rawson, Ford and Connelly Ditch." Together with all and singular the tenements, hereditaments and appurtenances thereunto belonging, or in anywise appertaining.

Notice is hereby given that on Saturday, the 4th day of January, 1896, at twelve o'clock, noon, of that day, in front of the Court House, in the town of Independence, in said Inyo County, I will, in obedience to said order of sale and decree of foreclosure, sell the above described property, or so much thereof as may be necessary to satisfy plaintiff's judgment, with interest thereon and costs, to the highest and best bidder for cash in gold coin of the United States.

Dated at Independence, Cal., Dec. 13, 1895.

J. R. MOFFETT,
Commissioner.

P. H. MACK, Attorney for Plaintiff.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY the 8th day of March, 1892, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit: Commencing at the South-east corner of the south-east quarter of North-east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 98-100; thence North-east following the meanderings of the bed of the Creek along its North branch to Edwards street, in the town of Independence thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hallhah, deceased, at the time of his death.

Lots Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate, lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Inspiranda Lode."

That certain lot, piece or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the North west quarter and the North-east quarter of Section No. twelve (12), and the South-west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South sixty-eight and eleven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence North-westerly along a small branch or swale to a point twenty-four (24) rods North of the general corner of the North East quarter and the South-east quarter, and the North-west quarter and the North-east quarter of the North-west quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven-twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres: Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney, at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court Deed at the expense of purchaser.

WILLIAM L. HUNTER.
Executor of the Last Will and Testament John Allen Hannah deceased.

BORN.

DUNCAN—At Camp Independence, Dec. 6, 1895, to Mr. and Mrs. George R. Duncan, a daughter.

J. R. Moffett went to Bishop to-day.

Geo. H. Lewis visited Bishop the first of the week.

Sam C. Yandell visited Bishop last week, returning Monday.

A telegram yesterday announced the death of Senator Thurman of Ohio.

R. S. Miner Esq. arrived from Bodie on Wednesday evening, coming by way Benton.

Lowell Eugley and Ed. Ober came down from Big Pine yesterday, returning to-day.

I. H. Coe has commenced boring an artesian well on the McNett place near Big Pine.

Paul Pfeffrle came in from Darwin early in the week and spent several days in town.

L. F. J. Wrinkle was up from Keeler early in the week on business in the Superior Court.

Three carloads of hogs were shipped from Bishop to San Francisco last Tuesday morning.

W. T. Grant and J. W. Murphy left town yesterday on a prospecting trip in Southern Inyo.

The case of Christy & Wise vs. J. L. Collins was finished yesterday and argued to-day at two o'clock.

Mr. and Mrs. John Shepherd and Arthur Robinson returned from the Coso Hot Springs last Saturday.

Homes, the Philadelphia murderer and Durrant of San Francisco have both been sentenced to be hung.

James Rambo came down from Bishop last Monday, on business in the Land Office, and returned the next day.

The next Republican National Convention will be held at St. Louis. San Francisco came in for the chicken act.

A grand ball is to be given at Independence on New Years Eve. Full particulars will be given next week. See ad.

There will be two weeks vacation of the Independence school during the holidays, commencing after next Friday.

There will be a Christmas tree at Camp Independence Christmas eve, also an entetainment in town on the same evening.

There is some talk of having races at Big Pine on New Years. Nothing definite can be learned about the matter, however.

Mrs. Wm. Walker and Miss Teresa Walker came up from Olancha yesterday for a few days visit with friends at Independence.

Wants A Pardon.

Scott Broder and Upton Tracey came down from Fish Springs yesterday. The former is in receipt of a letter from W. A. Ellis, who killed a man on the Westervelt ranch about 15 years ago and was sentenced to life imprisonment, requesting that an effort be made to procure his pardon. Who knows anything of the merits of the case? We would like to hear from some old timer in regard to the matter. Ellis states that he has learned surveying and carpentering, and it is evident from his letter that he ha immproved his time and obtained a goo education. It is said that at the time o hii incarceration he could barely rea and write.

Weather Summary, week ending Dec 12, 1895.

MISS M. M. GREGORY,
Teacher.

Coolgardie.

Rich new finds are being constantly reported from Coolgardie gold fields. Coolgardie, Australia, is an accessible point, reached by steamer to Fremantle, thence by rail to Southern Cross and team to destination. The trip to Australia on the fine steamersof the Oceanic Steamship Company via Honolulu, Samoa, and New Zealand is pleasure sailing the day long This line tickets passengers to Cape Town, South Africa. Map of Coolgardie district and Pacific ports reached by the Oceanic Steamship Company is mailed free to any address by the O. S S. Co. 114 Montgomery St. San Francisco.

When the mail wagon started for the stable after unloading, last Friday night a dog ran at the team, frightening it, causing a runaway. After running for about a hundred yards the team came in contact with the trees near the sidewalk, throwing out the driver and detaching themselves from the wagon, which was left hanging in a tree. No damage was done except to the wagon, and that not very badly.

The school children in this district, last Monday selected a reporter to write up the happenings of this place about Christmas time, as a request from one of the big San Francisco dailies, which will published by the school children of that city and the State. Arthur Robinson was chosen to represent this place.

In response to a letter from F. Fitzgerald McLain and McSweeny were busy for several days this week fitting up their big team and getting ready to go to Modock to haul ore. Mr. Fitzgerald writes that he is doing very well and expects to take out sufficient ore to keep a team running steadily. The teams left to-day.

L. C. Grey, who has been residing about three miles west of town for a number of years left for San Francisco last Tuesday morning. He claims to have some valuable mining claims in that vicinity, and has gone for the purpose of seeing capilists in that city.

Messrs Mills and Hayes, cattle buyers from Kings county, who were here during the past week, have succeeded in purchasing about 500 head of beef cattle from our stockmen and ranchers. They started from here with the drive on Sunday last.—*Iodex.*

Will Collins arrived at Independence yesterday morning, coming by way of Keeler. He is a witness in the suit of Christy & Wise vs. John L. Collins, involving title to a certain band of sheep bought by B. Rhine about two years ago.

What about a Christmas tree? Are we going to have one for the children, or have we become too much enlightened for such things—or too poor. It is getting along about that time.

Pat Clinton has purchased half a block in the north end of town and is having it cleared of brush and improved and will soon build a residence. It is a beautiful location.

Any person interested in the sale of mines should communicate with C. W. & C. M. Cross, Room 8, Chronicle building, San Francisco.

There will be a grand display of holiday goods at Rhines' to-morrow evening. Everybody is cordially invited to call and see it.

Lou Guild, who has been a resident of Citrus for the past two years, left for his former home at Dayton, Nevada last week, where he will remain.

Mrs. W. L. Hunter arrived home last from Los Angeles, where she had spent a couple of months visiting with relativer.

Under-Sheriff Ed. Clarke started for Bishop to-day, to meet his wife, who will arive on to-day's train from the north.

The Independence Market has a complete stock of bolorgna, beef and pork sausages. Try them; they're great.

Fred Holbert came down from Alvord yesterday, returning to-day.

P. A. Chalfant came down from Bishop last Wednesday.

ORIGIN OF THE BELL.

The origin of the religious significance of the bell is not far to seek. Primeval man discovered that noise would frighten off troublesome or dangerous animals. There are plenty of stories how bears, for example, were put to flight by unearthly yells. I have often seen cattle stampeded in that way in the West. When the noise is unusual few animals can resist its terrifying power, especially if they are taken unawares. Primeval man, governed by his imagination, thus came to regard certain noise as having a supernatural character, and so introduced them into worship. As he advanced in knowledge he improved his means of making them until he developed the bell. He discovered also that noise is a source of enthusiasm, and for that reason he employed it in his worship. Many a time at a revival or camp-meeting I have heard the preacher exhort those at the mourner's bench to play louder and sing louder, himself giving the example, all for the sake of enthusiasm. The bell in worship, Pagan as well as Jewish and Christian, is traceable to the effect which noise has on the mind of man and animal, if the animal has any mind.—Pittsburg Times.

A QUICK RETORT.

An illustration of the power of repartee possessed by an American girl was told at a Washington dinner by a man recently returned from England.

An extremely pretty and young New Yorker, backed by many golden charms, went over for the last London season. One day at a smart garden party, where several royalties were present, she attracted the notice of the Prince of Wales, who asked to have her presented. During the conversation which followed, the attention of H. R. H. was attracted by seeing Miss —— glance at her left arm, where she wore a very handsome bracelet containing a tiny jewel-studded watch. A little annoyed when he intercepted the second downward glance, he said:

"Pretty bracelet, but I don't like watches on wrists."

"No," said Miss ——, with a demure little smile, and arching her pretty eyebrows, "I believe your royal highness prefers clocks upon stockings."

And for the remainder of that season Miss —— carried all before her.—Washington Star.

THE TEXAS PECCARY.

Of the few American quadrupeds for which an intelligent hunter entertains a certain amount of respect the collared peccary is one. Although he is only a little flat-sided, high-shouldered hog, wild and uneducated, yet he is a plucky fighter when angry—and like a true child of the wild West, he gets mad quite easily. It always annoys him very much that any one should dare to go a-gunning for him, and A. B. Baker, of the Washington Zoo, points to a long slit in the side of his leather leggings as an illustration of what a Texas peccary can do when he is very angry. This species has a very wide range, being found from the Red river of Arkansas as far south as Patagonia. In Texas he is no longer abundant, save in the low jungly bottom lands along the Rio Grande. It does not go in great droves, like the white-lipped peccary, and it is seldom that more than eight or ten individuals are seen together. The time was when they were much more ready to fight than they are now, but like all other dangerous animals, they have learned to fear man and his deadly firearms.—St. Nicholas.

BAGDAD EVER THE SAME.

When the Lady of Bagdad hired a porter, in the tale of "The Thousand and One Nights," and visited many shops in succession, they were the same shops as now. The tinworker still sits in his niche in the wall and hammers contentedly from dawn to sunset; the cloth vender still sells the wares among which he is enshrined in his boxlike shop, in the close and dark bazaar, like a Buddha in a case; the grocer still treasures his spicy stock and the measuring of every commodity is still a matter of grave importance. There are the same odors of rancid samman in the cooking shops, and the same wondrous pistachio cakes at the confectioners', floating in their oily syrup. In the long bazaars, through which pass cammels with enormous sideloads, horses, carriages and mules, there are the same bustling and the same cries of warning. The great, primitive, unchanging East is seen here in all its coloring.—The Fortnightly Review.

BRICK OUTLASTS STONE.

Many persons think that bricks are not so durable as other building materials. This impression is the very reverse of the truth. No material is so durable as well-made bricks.

Bricks in the museum in London and Babylon, show no sign of decay or disintegration, although the ancients did not burn or bake them, but dried them in the sun.

The baths of Caracalla, the baths of Titus and the thermae of Diocletian have withstood the injuries of time far better than the stone of the Coliseum or the marble of the Forum.

The bricks of the bath of Caracalla did not very favorably impress the mind of an heiress from the great West, who exclaimed when she beheld them: "Good gracious; old bricks, and all falling down too! Why I thought it would be as fine as any marble building in Chicago. If this is the baths of Caracalla, I don't care to see it. Let's go look at something else!"

Ismail Pasha, the late khedive of Egypt, left three widows and they all live together now near Naples.

"FIRE EATERS'" MYSTERY.

Explanation of an Ingenious American Trick That Puzzled Paris Theater Goers.

Recent exhibitions in Paris theaters by two young Americans said to excel in their line anything of the kind that had been seen attracted the attention of the French press. Standing on the open stage without any apparatus in sight, they caused long and brilliant flames to dart from the tips of their fingers and also apparently from their mouths for a considerable length of time—certainly half a minute. The method of producing these startling appearances was kept secret by the conjurers and had so far defied all attempts at explanation. A solution, however, purporting to be furnished by a well known expert in legerdemain, appears in a recent issue of La Nature. It shows conclusively that the whole business depended upon a simple but very nicely adapted mechanical arrangement.

During their performances the "fire eaters" stood upon a large, gayly carpeted box, seemingly designed to lift them into plainer view, but really concealing two rubber bags filled with illuminating gas and compressed by weights. To the heel of each man's right shoe was affixed an ingenious contrivance, terminating in a spout. This was the point of entrance for the gas. It was attached to a very slender tube of vulcanized rubber, which, being of the same color as the conjurer's diabolical costume, was invisible to the spectators.

The tube was carried up the leg and the back, and inside both sleeves next to the skin. On reaching the wrist it was connected with a still smaller flexible tube, flesh colored and running along the palm to the tip of the forefinger, where it ended in an opening hidden under the nail. A similar branch passed up the neck and under the chin as far as the lips.

By placing his heel and bearing down accurately over a tube which projected slightly at a certain spot in the carpet, the performer could bring his body tube into communication with the corresponding reservoir within the box and send the gas circulating upward until it reached the finger tip, where it was instantly lighted by an electric spark from a machine concealed under his short cloak, producing a stream of fire. Just so it was led to escape beneath his lips, the flame then appearing to issue from the mouth, an effect which was aided by the performer's opening the latter very wide and throwing his head back.

The stage was always dimly lighted, and but slightly inclined, making it still more difficult to distinguish the tubes. Thus is another of these clever feats removed from the domain of wonders.—New York Herald.

An English Cook Asserts Himself.

The ignorance in regard to the higher branches of cookery, which certainly prevailed at this period in England, is to be accounted for, I think. Throughout the eighteenth century there seems to have been a deeply rooted prejudice among those who wrote on the subject against anything French. This undoubtedly increased as the two countries became involved in war. In 1730 one Charles Carter, who at various times was cook to the Duke of Argyll, the Earl of Pontefract, Lord Cornwallis and other notabilities, brought out his "Compleat Practical Cook; or, a New System of the Whole Art and Mystery of Cookery."

As was the fashion of the time, he led off with a ponderous and absurdly consequential preface, in which the following paragraph occurs: "A good English cook is often slighted, and some of our most hospitable noblemen and ladies cannot think themselves well served till they have sent to a neighboring kingdom for a cook, who indeed by the poverty of his country—compared to ours—and the variousness or humor of its flippant inhabitants, whose gousts (sic) are perpetually changing, is pushed so much upon his invention that he may sometimes be allowed to surpass—on English materials especially—with his mimicking vivacity the sounder taught native, especially when nature is to be disguised and lost in art and the palate to be puzzled rather than pleased."—National Review.

Beef Eating In Japan.

A Japanese contributor in The Popular Science Monthly says: "When I was a young boy, the custom of eating beef began to spread. As blood was regarded as unclean, and also as Japan had been a strong agricultural country, there was a deep rooted disinclination to eat beef. In this, of course, one has also to recognize the influence of the vegetarian principle of Buddhism, but to anybody who had ever tasted beef it was so delicious that he could hardly control his natural appetite by his religious scruple. My father was one of those who knew its taste, and so now and then we used to treat ourselves to beef. But where did we eat it? We did not eat it inside of the house. We cooked it and ate it in the open air, and in cooking and in eating we did not use the ordinary utensils, but used the special ones kept for the purpose. Why all these things? Because beef was unclean, and we did not like to spread its uncleanliness into our house wherein the 'god's shelf' is kept, and into our ordinary utensils, which might be used in making offerings to the gods. The day when we ate beef my father did not offer lights to the gods nor say evening prayers to them, as he did usually, for he knew he was unclean and could not approach the gods."

A Baby Exchange.

The inexhaustible energy of Editor Stead of the London Review of Reviews appears to have found a new outlet. He has discovered that one of the wants of the modern world is a convenient baby exchange. There are families of too many children, and there are couples who have none. There are homes desolated by bereavement, and others that are rendered almost as unbearable by the influx of a superabundance of little ones. There are infants that have been deprived of their parents by death, and there are families of young ones that have succumbed to the grim destroyer. At present no medium of exchange exists that would tend to equalize the supply and demand or to establish the balance between those who have too many babies and those who have none. Mr. Stead is convinced that an exchange of this kind and the extension of the practice of adoption would have the effect of alleviating much misery.

Not Spending Money For Nothing.

"John," whispered Mrs. Billus at the play, "somebody behind me is making ill natured remarks about my high bonnet. Shall I take it off?"

"Not on your life, Maria" answered Mr. Billus, with a ferocious grin. "That bonnet cost me $28.50, and I want you to get the full worth of the money."—Chicago Tribune.

ARE WE UNJUST TO OUR OWN?

Maurice Thompson Complains of American Injustice to American Writers.

How can we have poets if we stone them? But maybe we do not care to have poets. That alters the case. In other days it mattered little what Bryant or Longfellow or Holmes wrote, we welcomed it, and our journals gave space for generous appreciation of it. Our children read it; our boys hopped up to the top of the nearest rock and spouted it. What now? Something alien.

Glance at the book advertisements of our leading publishers. It is Doyle or Harraden or Barrie or Stevenson or Crockett or Kipling or Watson or Dobson or Hardy or who not, so that he or she is a foreigner. Even if an American born lives east of the Atlantic it helps him mightily, as everybody knows.

It is not that I love aliens less or compatriots more that I wince and wonder at this state of things. We do not have to disparage the good authors who dwell in foreign lands in order to appreciate those who live next block to us. But why all this insistent, vehement preference for the aliens? Why not, if novelists and poets and essayists must be "boomed" and advertised and rubbed under the nose of the public, do the good turn for our own struggling countrymen and countrywomen?

If it were really true; if critics and publishers did not know that it is not true that American genius is far below European genius and that foreign prose and poetry are incomparably better than what we make at home, there would be solid ground for the present state of things, but we all know better. America is not so far behind in literary genius and achievement. She is not behind at all save in the spirit of independence and self appreciation. We grovel—really a strange freak this in a people absolute masters of the world—at the feet of every clever alien who sends us his book. It is a spectacle our literary reviews dotted with portraits of famous young Englishmen scarcely known in our own country who have come over to lecture to us upon how to write novels or poetry or history. It is a pretty good hint that an American is dead or at least stricken with paralysis, or mayhap the copyright has expired on his books, or he has expatriated himself, when you see his portrait displayed and there are flaring advertisements of his works in the journals of his country.

The Count's Ruse.

Once when the empress of Germany and her children migrated from Berlin to their summer quarters at the Neues Palais at Potsdam they traveled by special train to the Wildpark station. Etiquette, which is nowhere so inflexible as at the Prussian court, demanded that the empress should be received at the palace by the grand master of the court, Count Augustus Eulenburg, who accordingly started by the regular train, which was timed to reach the Wildpark station a full quarter of an hour before the imperial special was due there. But this train was ordered to be side tracked at a station just this side of Wildpark, in compliance with an order from Berlin. The count was at his wits' end, and so, too, were the station officials, who did not dare disobey their instructions.

Just as the special hove in sight a bright thought struck the count, who caused a danger signal to be set, and when the train slowed down he jumped on the locomotive, which started immediately, the danger signal being withdrawn. When the train reached its destination, the count hurried to his carriage, was driven to the palace and stood, gracious and smiling, at the entrance, to receive the empress, who arrived two minutes later. Her imperial highness gazed in wonder at the count, and her greeting was marked by something of an air of constraint, which broke into a peal of laughter when she entered. The count had in his hurry overlooked the fact that he had been traveling on a locomotive, and when he got a chance to look at himself in a mirror the cause of the empress' look of surprise manifested itself to him. He was so grimy from the soot that had covered his face that he would have had difficulty in recognizing himself.—Chicago Post.

Endurance of the Reindeer.

Mr. F. G. Jackson has marvelous tales to tell of the reindeer, their speed and endurance as animals of draft—so marvelous, indeed, that he must forgive us for suggesting that he has made a mistake in his figures. "I have myself," he writes, "driven three reindeer a distance of 120 versts within 12 hours without feeding them, and I heard of a case where a Zirian drove three deer from Ishma, on the Pechoar river, to Obdorsk, on the Obi, a distance of 300 versts, within 24 hours. A reindeer or Samoyed verst, by the way, is equal to four Russian versts." In other words, Mr. Jackson says that he has driven three deer for 12 hours at the rate of 40 Russian versts, or 27 English miles, an hour. And the Zirian, with a similar team, covered 710 miles in 24 hours. The latter, by the way, must have crossed the Ural mountains and one or two rivers into the bargain. Surely there must be some mistake.

There exists, it is true, a well known tradition of a reindeer which once—about 1700, we believe—carried important dispatches for the king of Sweden 800 miles in 48 hours, and, dying in the service of its king, is still preserved, in skeleton form, in a northern museum. But that, after all, is only a tradition. Better authenticated records do not give a higher rate of speed than 150 miles to 19 hours, which is considerably higher than what is attained by any other animal.—London Spectator.

Artificial Silk.

It appears that the Lehner process for producing silk by artificial means has been introduced in Bradford, England, and has been worked up in quite a variety of fabrics. In the dyeing, weaving and finishing processes involved no special treatment is mentioned, and unlike most vegetable fibers this artificial silk can be dyed in all colors, the shades obtained excelling in brilliancy and delicacy those of the finest natural silk, and for softness and beauty of appearance the material is thought to equal the best Chinese and Italian silks. By its use, therefore, in combination with cotton, wool or natural silk, it is pointed out that brocaded and other ornamental and decorative results can be obtained which have hitherto been unattainable except by the employment of the finest trams, the expensiveness of these necessarily limiting their use for such purpose. Wood pulp, cotton or jute waste, etc., are in this new process chemically digested, and the liquid product spun by a mechanical "silkworm" to a thread of even diameter throughout, in one uninterrupted and continuous process, with an unbroken and unlimited length. The same machine which draws the threads from the liquid also twists them in any desired number into the requisite "count" or thickness of yarn, and, contrary to the natural article, the production of the artificial substance is entirely independent of climate, temperature, special soil, etc.—New York Sun.

In the Dime Museum.

"And you are the 'Living Skeleton?'"

"Yes, sir."

"Poor fellow! And how did you manage to get so thin—you're nothing but skin and bones!"

"Sir," replied the living skeleton, "I was once an author, but I wrote for the magazines that pay on publication!"

A QUIET RETREAT.

The Hiding Place of a Supposed Dead Man.

BETRAYED BY A WOULD-BE FRIEND.

A Comfortable Cabin Away from Civilization—How He Spent His Time While in Exile.

There is a lonely grave on Death Island, in Rice Lake, a dismal body of water overrun with heavy wild rice, lying 150 miles north of Duluth, Minn., at the head waters of the Big Fork River. This grave was not selected from choice by the man who fills it. It is the grave of an outlaw, the last of the murderous band which infested the northern portion of this State until a short time ago, when the officers of the law ran the members down. Two of the gang are in the State prison, two more are awaiting trial, four fled the country with the officers in pursuit and the ninth and last man, Ike Heron, sleeps under the pine trees on the island, his broken rifle, the barrel twisted and bent, for a tombstone.

A more uncanny place cannot be imagined. Situated almost in the center of the lake, which is more of a huge swamp than lake, the island is as safely hidden as though it were in the bowels of the earth. Dense grows the wild rice all over the lake, reaching its roots deep down into the water. At the bottom, resting on a foundation of quicksand, which would drag a man down to death with incredible swiftness, is a network of weeds and roots, where slimy lizards and slippery eels make their home. To push a raft through the morass is an impossibility, and the only way which the island, known as Death Island, can be reached is in a light canoe, which has to be poled along.

Such a place, says the Chicago Chronicle, was the hiding place of the remnant of the band of outlaws when driven from Itasca county and hounded from pillar to post by the officers. Here their last stand was made, and here the last man sleeps safe from intrusion, until the last call shall be sounded, when the wicked and the just shall be summoned to that court on high, there to be judged by a magistrate not of human selecting. The grave is not an old one; so new is it that the rust has hardly begun to eat the useless rifle barrel.

The fight upon the band of outlaws was begun less than two months ago, but it was a determined fight, for the people of the northern part of Minnesota had been patient long and borne much from the hands of the bandits, whose depredations had become so bold that no one, man, woman or child, was safe. Their camp was upon the lower Big Fork, and when the party was overtaken by the officers there was a hot fight, in which two of the outlaws were wounded and four captured.

After the captured men had been taken back where they could be cared for the pursuit after the five remaining men was begun. Death Island was selected as their hiding place by the outlaws, and here they would have been safe had not an Indian betrayed them. Silently the officers approached the island, their guides propelling the canoes, and the officers watching with cocked rifles.

The hunted men opened fire, which was returned by the officers, who knew it was their lives or the lives of the men holding the island. Toward evening there was a stampede from the island, and the outlaws left behind two of their number, one of them shot through the shoulder, and the other through the chest. The one shot through the shoulder was taken, but the closest search for the other man failed to reveal the slightest trace of him, and finally the hunt was abandoned, as it was believed he had been taken away by his comrades.

The prisoner was carried to the mainland and from there taken to the camp of Dr. Harrison, of New York, who was fishing and hunting on the banks of the Big Fork with his wife. They had but recently come from the East, and when the officers appeared with the wounded man, Mrs. Harrison was alarmed. The doctor attended the wounded man and the latter is today serving a long term in the State prison at Stillwater.

While making an exploration of Death Island, some days later, Dr. Harrison came upon the dead body of Ike Heron, who had crawled from his place of concealment and approached the edge of the island, possibly in the hope that he might be found before life was extent. That the poor fellow had suffered the torments of the damned through starvation and pain, physical and mental, was plain, as his face was distorted and his hands were clutching at his breast, as though to tear from him the terrible wound through which his life blood was rushing.

But no help came, and, alone in the wilderness, with only the lizards, flies and pine trees to keep him company, Heron's life went out. His gun was found beside him, all broken and wrecked, and no one knows how this was done. After consulting with the authorities, who would have nothing to do with the body, Dr. Harrison gave it a white man's burial, and when the mangled from was hidden from sight and logs placed over the grave, so that no stray wolf might make a meal of the body, the broken Winchester was placed upright in the ground, the stock alone showing.

Some one has rudely carved the name Heron on the stock, and there it stands, in the midst of the wilderness, where but a few white men, except guides, have ever stepped, a monument to the man who was the last of the bandits of Northern Minnesota.

HERE BELOW.

"Man wants but little here below, and wants that little long," and just as long as he can get it. The words of the old hymn have a meaning, which, interpreted that as the absence of all pain is supreme happiness, it is very little to ask to be freed from it. A short cut to the attainment of this is to use St. Jacobs Oil. It is a little thing to get, but the amount of good it does in the cure of pains is something enormous.

A PROMINENT RANCHMAN.

From the Colorado Farmer, Denver, Col.

David S. Green, who is past middle life, a man of fine physique, strong, vigorous and buoyant, went to Colorado in 1860 and now resides at 2127 Grant avenue, Denver. He is well known in Colorado and Indian Territory as a cattle man, and is also known in Colorado mining circles by "old timers." He is a member of Trinity M. E. Church of this city and well known in Methodist circles, and a familiar figure on the streets of Denver. He is a gentleman of intelligence and culture, communicative and affable.

On the first day of February, 1893, Mr. Green received a serious injury to the spine, occasioned by slipping while supporting a heavy weight. The injury was very painful, and in a few days he was helpless. Through the long months of suffering that followed he was reduced in strength and flesh until his nervous system was well nigh exhausted; he was brought to the borderland of paralysis. His entire right side was threatened with this malady. The spinal column and base of the brain were a battery of pain and torture, and naught was left him but to suffer on and wait for the end.

While in this condition and utterly hopeless of help (as his physician and the best medical counsel proved powerless), his attention was providentially called to Dr. Williams' Pink Pills. As a drowning man clutches at a straw so he caught at Pink Pills, and immediately began to improve. He commenced their use about the middle of March last and today his pains are nearly gone, all the alarming symptoms of paralysis have disappeared, and the original injury is rapidly improving. His general health and flesh are returning, his usual elasticity of spirit and vivacity are restored, and an hour's conversation is sufficient to convince one that to Pink Pills is due a change almost miraculous.

In conversation with a representative of the *Farmer*, Mr. Green said: "I have not been on the street for seventeen months till two or three days ago, but I am so much better. It is a surprise to me and to my friends—yes, and to my doctor, too. The fact is, I have been at death's door. No one thought there was any help for me; even my doctor thought I never would be any better! But here I am walking about as you see, and to me it is wonderful! And perhaps you will hardly believe me when I tell you what did it—it was Dr. Williams' Pink Pills for Pale People."

It is due to suffering humanity that the story of Mr. Green be told. His kindness of heart and generous impulses would rejoice in spreading the fame of a remedy that has brought him from the valley of death to enjoy the pleasures of a loving home.

His physician is a gentleman well known in Denver; has lived here many years and built up a good practice. He is broad minded and in good standing in the best medical circles in the city. Any one wishing to do so can readily satisfy himself as to the facts herein related.

Dr. Williams' Pink Pills contain all the elements necessary to give new life and richness to the blood and restore shattered nerves. They are sold in boxes (never in loose form, by the dozen or hundred), at 50 cents a box, or six boxes for $2.50, and may be had of all druggists or directly by mail from Dr. Williams' Medicine Co., Schenectady, N. Y.

A German actor of note while taking the part of a sane man confined in an asylum was suddenly taken insane recently, and the doctors hold out no hopes of his recovering his reason.

DEAFNESS CANNOT BE CURED

by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or imperfect hearing, and, when it is entirely closed deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by catarrh, which is nothing but an inflamed condition of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars, free.

F. J. CHENEY & CO., Toledo, O.

Sold by Druggists, 75c.

From Infancy

My daughter was troubled with scrofula. A swelling formed in one of her ears and broke open. It discharged freely and the whole side of her head became affected. The trouble continued ten years and she lost the hearing in that ear. After an attack of typhoid fever she was left very weak. She coughed and raised a great deal. We resorted to Hood's Sarsaparilla and after taking six bottles she was greatly improved. Now the sores are perfectly healed and she has good hearing in that ear."—Mrs. M. Wilkinson, Parham, Tenn.

Hood's Sarsaparilla
Is the Only True Blood Purifier prominently in the public eye. $1; six for $5. Prepared only by C. I. Hood & Co., Apothecaries, Lowell, Mass., U. S. A.

Hood's Pills act harmoniously with Hood's Sarsaparilla.

SCROFULA
Miss Della Stevens, of Boston, Mass., writes: I have always suffered from hereditary Scrofula, for which I tried various remedies, and many reliable physicians, but none relieved me. After taking 6 bottles of S.S.S. I am now well. I am very grateful to you, as I feel that it saved me from a life of untold agony, and shall take pleasure in speaking only words of praise for the wonderful medicine, and in recommending it to all.

Message of The President to Congress.

Grover Cleveland's Recommendations to The Nation's Lawmakers.

Exhaustive Review of Financial Questions.

FOREIGN AFFAIRS DELICATELY HANDLED.

American Citizens Advised Not to Give Active Assistance to Cuban Rebels.

Washington, Dec. 8. — President Cleveland's annual message was sent to Congress today. It is as follows:

The Congress of the United States: The present assemblage of the legislative branch of our government occurs at a time when the interests of our people and the needs of the country give especial prominence to the condition of our foreign relations and the exigencies of our national finances.

The reports of the Government fully and plainly exhibit what has been accomplished within the scope of their respective duties and present such recommendations for the betterment of our country's condition as patriotic and intelligent labor and observation suggest.

I therefore deem my executive duty adequately performed at this time by presenting to Congress the important phases of our situation as related to our intercourse with foreign nations and a statement of the financial problems which confront us, emitting such as are related to topics referring to departmental operations.

I earnestly invite, however, not only the careful consideration, but the severely critical scrutiny of the Congress and my fellow countrymen to the reports concerning those departmental operations. If justly and fairly examined they will furnish proof of assiduous and painstaking care for the public welfare.

I press the recommendations they contain upon the respectful attention of those charged with the duty of legislation, because I believe their adoption would promote the poeples' good.

My mandatory tariff legislation in January last the Argentine Republic, recognizing the value of the large market opened to the free importation of its wools under our last tariff act, has admitted certain products of the United States to entry at reduced dutes. It is pleasing to note that the efforts we have made to enlarge the exchanges of trade on sound basis of mutual benefit are in this instance appreciate d by the country from which our woole n factories drew their needful supply of raw material.

BOUNDARY DISPUTE SETTLED.

The missions boundary dispute between the Argentine Republic and Brazil, referred to the President of the United States as arbitrator during the term of my predecessor and which was submitted to me for determination, resulted in an award in favor of Brazil upon the historical and documentary evidence presented, thus ending a long protracted controversy and again demonstrating the wisdom and desirability of settling international boundary disputes by recourse to friendly arbitration.

Negotiations are progressing for a revival of the United States and Chilean claims commission, whose work was abruptly terminated last year by the expiration of the stipulated time within which ends could be made.

The resumption of specie payment by Chile is a step of great interest and importance, both in its direct consequence upon her own welfare and as evincing the ascendancy of sound financial principles in one of the most influential of the South American republics.

CHINESE OUTRAGES.

The close of the momentous struggle between China and Japan, while relieving the diplomatic agents of this Government from the delicate duty they undertook at the request of both countries of rendering such service to the subjects of either beligerent within the territorial limits of the other as our neutral position permitted, developed a domestic condition in the Chinese empire which has caused much anxiety and called for prompt and careful attention. Either as a result of a weak control by the central Government over the provincial administrations, following a diminution of traditional governmental authority under the stress of an overwhelming national disaster, or as a manifestation upon good opportunity of the aversion of the Chinese population to all foreign ways and undertakings, there have occurred in widely separated provinces of China serious outbreaks of the old fanatical spirit against foreigners, which it unchecked by the local authorities, if not actually connived at by them, have culminated in mob attacks on foreign missionary stations, causing much destruction of property and attended with personal injuries as well as loss of life.

Although but one American citizen was reported to have been actually wounded, and although the destruction of property may have fallen more heavily upon the missionaries of other nationalities than our own, it plainly behooves this Government to take the most prompt and decided action to guard against similar or perhaps more dreadful calamities befalling the hundreds of American mission stations which have grown up throughout the interior of China under temperate rule of toleration, custom and imperial edict.

The demands of the United States and other powers for the degradation and punishment of the responsible officials of the respective cities and provinces who by neglect, or otherwise, had permitted uprisings, and for the adoption of stern measures by the Emperor's Government for the protection of the life and property of foreigners were followed by the disgrace and dismissal of certain provincial officials found derelict in duty and the punishment by death of a number of those adjudged guilty of participating in the outrages.

This Government insisted that a special American commission should visit the Province where the first disturbances occurred for the purpose of investigation. This latter commission, formed after much opposition, has gone overland from Tien Tsin, accompanied by a suitable Chinese escort, and by its demonstration of the readiness and ability of our Government to protect its citizens will act, it is believed, as a most influential deterrent of any similar outbreaks. The energetic steps we have thus taken are all the more likely to result in future safety to our citizens in China because the Imperial Government, is I am persuaded, entirely convinced that we desire only the liberty and protection of our own citizens and redress for any wrongs they may have suffered, and that we have no ulterior designs or objects, political or otherwise.

BERING SEA TROUBLES.

Our relations with Great Britain, always intimate and important, have demanded during the past year even a greater share of consideration than is usual.

Several vexatious questions were left undetermined by the decision of the Bering Sea arbitration tribunal. The application of the principles laid down by that august body has not been followed by the results they were intended to accomplish, either because the principles themselves lacked in breadth and definiteness, or because their execution has been more or less imperfect. Much correspondence has been exchanged between the two governments on the subject of preventing the exterminating slaughter of seals.

The insufficiency of the British patrol of Behring Sea, under the regulations agreed on by the two Governments has been pointed out and yet only two British ships have been on police duty during this season in these waters. The need of a more effective enforcement of existing regulations, as well as the adoption of such additional regulations as experience has shown to be absolutely necessary to carry out the intent of the awards, have been earnestly urged upon the British Government, but thus far without effective results.

In the meantime, the depletion of the seal herds by means of pelagic hunting has so alarmingly progressed that unless their slaughter is at once effectively checked their extinction within a few years seems to be a matter of absolute certainty.

The understanding by which the United States was to pay and Great Britain to receive a lump sum of $425,000 in full settlement of all British claims for damages arising from our seizure of British sealing vessels, unauthorized under the award of the Paris tribunal of arbitration, was not confirmed by the last Congress, which declined to make the necessary appropriation. I am still of the opinion that this arrangement was a judicous and advantageous one for the Government and I earnestly recommend that it be again considered and sanctioned. If, however, this does not meet with the favor of Congress, it certanly will hardly dissent from the proposition that the Government is bound by every consideraton of honor and good faith to provide for the speedy adjustment of these claims by arbitration as the only other alternative. A treaty of arbitration has therefore been agreed upon, and will be immediately laid before the Senate, so that in one of the modes suggested a final settlement may be reached..

THE ALASKAN BOUNDARY.

The completion of the preliminary survey of that Alaskan boundary which follows the contour of the coast from the southernmost point of Prince of Wales Island until it strikes the one hundred and forty-first meridian at or near the summit of Mt. St. Elias awaits further necessary appropriations, which are urgently recommended. This survey was undertaken under the provisions of the convention entered into by this country and Great Britain July 22, 1892, and the supplementary convention of February 8, 1894.

As to the remaining section of the Alaskan boundary, which follows the one hundred and forty-first meridian northwardly from Mount St. Elias to the frozen ocean, the settlement of which involves the physical location of the meridian mentioned, no conventional agreement has yet been made. The ascertainment of a given meridian at a particular point is a work requiring much time and careful observatons and surveys. Such observatons and surveys were undertaken by the United States Coast and Geodetic Survey in 1890 and 1891, while similar work in the same quarters under British auspices are believed to give nearly coincident results; but these surveys have been independently conducted, and no international agreement to mark these or any other parts of the one hundred and forty-first meridian by permanent monuments has yet been made.

In the meantime the valley of the Yukon is becoming a highway through the hitherto unexplored wilds of Alaska, and abundant mineral wealth has been dicovered in that region, especially at or near the junction of the boundary meridian with the Yukon and its tributaries. In these circumstances it is expedient, indeed imperative, that the jurisdictional limits of the respective Governments in this new region be speedily determined. Her Britannic Majesty's Government has proposed a joint delimitation of the one hundred and forty-first meridian by an international commission of experts, which, if Congress will authorize it and make due provision threefor, can be accomplished with no reasonable delay. It is impossible to overlook the vital importance of continuing the work already entered upon and supplementing it by further effective measures looking to the exact location of this entire boundary line.

(Reproduced from San Francisco Call.)

VENEZUELA--GREAT BRITAIN.

It being apparent that the boundary dispute between Great Britain and the republic of Venezuela concerning the limits of British Guiana was approaching an acute stage, a definite statement of the interest and policy of the United States as regards the controversy seemed to be required both on its own account and in view of its relations with the friendly powers directly concerned.

In July last, therefore, a dispatch was addressed to our Embassador at London for communication to the British Governmnet, in which the attitude of the United States was fully and distinctly set forth. The general conclusions therein reached and formulated are in substance that the traditional and established policy of this Government is firmly opposed to a forcible increase by any European power of its terrritorial possessions to this continent; that this policy is as well founded in principle as it is strongly supported by numerous precedents; that as a consequence the United States is bound to protest against the enlargement of the area of British Guiana in derogation of the rights and against the will of Venezuela; that considering the disparity in strength of Great Britain and Venezuela the territorial dispute between them can be reasonably settled only by friendly, imparitial arbitration and the resort to such arbitration should include the whole controversy and is not satisfied if one of the powers concerned is permitted to draw an arbitrary line through the territory in debate and to declare that it will submit to arbitration only the portion lying on one side of it.

In view of these conclusions the dispatch in question called upon the British Government for a definite answer to the question whether it would not submit the territorial controversy between itself and Venezuela in its entirety to impartial arbitration.

The answer of the British Government has not yet been received, but is expected shortly, when further communication on the subject will probably be made to Congress.

HAWAIIAN ISLANDS.

Early in January last an uprising against the Government of Hawaii was promptly suppressed. Martial law was forthwith proclaimed and numerous arrests were made of persons suspected of being in sympathy with the royalist party. Among these were several citizens of the United States, who were either convicted by a military court and sentenced to death, imprionment or fine, or were deported without trial.

The United States, while denying protection to such as had taken the Hawaiian oath of allegiance, insisted that martial law, though altering the forms of justice, could not supersede justice itself, and demanded a stay of execution until the proceedings had been submitted to this Government and the knowledge obtained therefrom that our citizens had received a fair trial. The death sentences were subsequently commuted or were remitted on condition of leaving the Islands. The cases of certain Americans arrested and expelled by arbitrary order, without formal charge or trial, have had attention, and in some instances have been found to justify remonstrance and a claim for indemnity, which Hawaii has not thus far conceded.

Mr. Thurston, the Hawaiian Minister, having furnished this Government abundant reason for asking that he be recalled, that course was pursued, and his successor has lately been received.

THE CORINTO AFFAIR.

After this extension of uniform Nicaraguan administration to the Mosquito strip, the case of the British Vice-Consul, Hatch, and of several of his countrymen who had been summarily expelled from Nicaragua and treated with considerable indignity, provoked a claim by Great Britain upon Nicaragua for pecuniary indemnity, which, upon Nicaragua's refusal to admit liability, was enforced by Great Britain. While the sovereignty and jurisdiction of Nicaragua was in no way questioned by Great Britain, the former's arbitrary conduct in regard to British subjects furnished the ground for this proceeding. A British naval force occupied without resistance the Pacific seaport of Corinto, but it was soon after withdrawn upon the promise that the sum demanded would be paid. Throughout this incident the kindly offices of the United States were invoked and were employed in favor of a peaceful settlement and as such consideration and indulgence toward Nicaragua as were consistent with the nature of the case.

SEALING CLAIMS.

The pending claims of sealing vessels of the United States seized in Russian waters remain unadjusted. Our recent convention with Russia establishing a modus vivendi as to imperial jurisdiction in such cases has prevented further difficulty of this nature.

CUBAN REBELLION.

Cuba is again gravely disturbed. An insurrection, in one respect more active than the last preceding revolt, which continued from 1868 to 1878, now exists in a large part of the eastern interior of the island, menacing even some populations on the coast. Besides deranging the commercial exchanges of the island, of which our country takes the predominant share, this flagrant condition of hostility, by arousing sentimental sympathy and inciting adventurous support among our people, has entailed earnest effort on the part of this Government to enforce obedience to our neutrality laws and to prevent the territory of the United States from being used as a vantage ground from which to aid those in arms against Spanish sovereignty. Whatever may be the traditional sympathy of our countrymen as individuals with a people who seem to be struggling for larger autonomy and greater freedom, yet the plain duty of the Government is to observe in good faith the recognized obligations of international relationship. The performance of this duty should not be made more difficult by a disregard on the part of our citizens of the obligations growing out of their allegiance to their country, which should restrain them from violating as individuals the neutrality which the nation of which they are members is bound to observe in its relations to friendly soveriegn States.

OUTRAGES IN TURKEY.

Occurrences in Turkey have continued to excite concern. The reported massacres of Christians in Armenia and the development there and in other districts of frantic hostility to Christian influences naturally excited apprehension for the safety of devoted men and women who, as dependents of the foreign missionary societies in the United States, reside in Turkey under the guarantee of law and usage and in the legitimate performance of their educational and religious missions. No efforts have been spared in their behalf, and their protection in person and property has been earnestly and vigorously enforced by every means within our power. I regret, however, that an attempt on our part to obtain better information concerning the true condition of affairs in the disturbed quarters of the Ottoman Empire by sending thither the United States Consul at Sives to make investgation and report was thwarted by the objections of the Turkish Government. This movement on our part was in no sense meant as a gratutious entanglement of the United States in the so-called Eastern question, nor as an officious interference with the right and duty, which belong by treaty to certain great European powers, calling for their interventon in political matters affecting the good Government and religious freedom of the non-Mussulman subjects of the Sultan, but it arose solely from our desire to have an accurate knowledge of the conditons in our efforts to care for those entitled to our protection.

THE FINANCIAL SITUATION.

As we turn from a review of our foreign relations to the contemplation of our national financial situation we are immediately aware that we approach a subject of domestic concern more important than any other that can engage our attention and one at present in such a perplexing and delicate predicament as to require prompt and wise treatment. We may be well encouraged to earnest effort in this direction when we recall the steps already taken toward improving our economic and financial situation and when we appreciate how well the way has been prepared for further progress by an aroused and intelligent popular interest in these subjects.

The compulsory purchase and coinage of silver by the Government unchecked and unregulated by business conditions, and heedless of our currency needs, which for more than fifteen years diluted our circulating medium, undermined confidence abroad in our financial ability and at last culminated in distress and panic at home, has been recently stopped by the repeal of the laws which forced this reckless scheme upon the country. The things thus accomplished, notwithstanding their extreme importance and beneficent effects, fall far short of curing the monetary evils from which we suffer as a result of long indulgene in ill-advised financial expedients. The currency denomination of the United States, and known as greenbacks, was issued in large volumes during the late civil war, and was intended orignally to meet the exigencies of that period. It will be seen by a reference to the debates in Congress at the time the laws were passed authorizing the issue of these notes that their advocates declared they were intended for only temporary use and to meet the emergency of war. In almost if not all the laws relating to them provision was made contemplating their voluntary or compulsory retirement. A large quantity of them, however, were kept on foot and mingled with the currency of the country, so that at the close of the year 1874 they amounted to $381,999,073. Immediately after that date, and in January, 1875, a law was passed providing for the resumption of specie payments, by which the Secretary of the Treasury was required, whenever additional circulation was issued to national banks, to retire United States notes equal in amount to 80 per cent of such additional national bank circulation until such notes were reduced to $300,000,000. This law further provided that on and after the first day of January, 1879, the United States notes then outstanding should be redeemed in coin, and in order to provide and prepare for such redemption Secretary of the Treasury was authorized not only to use any surplus revenues of the Government but to issue bonds of the United States and dispose of them for coin, and to use the proceeds for the purposes contemplated by the statute.

FURTHER CANCELLATION FORBIDDEN.

In May, 1873, and before the date thus appointed for the redemption and retirement of these notes another statute was passed forbidding their further cancellation and retirement. Some of them had, however, been previously redeemed and canceled upon the issue of additional national bank circulation as permitted by the law of 1875, so that the amount outstanding at the time of the passage of the act forbiding their further retirement was $346,681,016. The law of 1878 did not stop at distinct prohibition, but contained in addition the following express provision, "and when any of said notes may be redeemed or be received into the Treasury under any law, from any source whatever and shall belong to the United States they shall not be retired, canceled or destroyed, but they shall be issued and paid out again and kept in circulation."

This was the condition of affairs on the 1st day of January, 1879, which had been fixed upon four years before as the date for entering upon the redemption and retirement of all these notes, and for which such abundant means had been provided,. The Government was put in the situation of owing to the holders of its notes debts payable in gold on demand, which could neither be retired by receiving such notes in discharge of obligations due the Government nor canceled by actual payment in gold. It was forced to redeem without redemption and to pay without acquittance.

OUR GOLD RESERVE.

There had been issued and sold $95,500,000 of the bonds authorized by the resumptioon act of 1875, the proceeds of which, together with other gold in the Treasury, created a gold fund deemed sufficient to meet the demands which might be made upon it for the redemption of the outstanding United States notes. This fund together with such other gold as might be from time to time in the Treasury available for the same purpose, has been since called our gold reserve and $100,000,000 has been regarded as an adequate amount to accomplish its object. This fund amounted on the 1st day of January, 1879, to $114,192,360 and though thereafter constantly fluctuating, it did not fall below that sum until July 1892. In April, 1893, for the first time since its establishment, this reserve amounted to less than $100,000,000, containing at that date only $97,011,330. In the meantime, in July, 1890, an act had been passed directing larger Governmental monthly purchases of silver than had been required under previous laws, and providing that in payment for such silver treasury notes of the United States should be issued, payable on demand in gold or silver coin at the discretion of the Secretary of the Treasury. It was, however, declared in the act to be "the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be provided by law." In view of this declaration it was not deemed permissible for the Secretary of the Treasury to exercise the discretion in terms conferred on him by refusing to pay gold on these notes when demanded, because by such discrimination in favor of the gold dollar the so-called parity of the two metals would be destroyed and grave and dangerous consequences would be precipitated by affirming or accentuating the constantly widening disparity between their actual values under the existing ratio.

It thus resulted that Treasury notes issued in payment of silver purchases under the law of 1890 were necessarily treated as gold obligations, at the option of the holders. These notes on the 1st day of November, 1893, when the law compelling the monthly purchase of silver was repealed, amounted to more than $155,000,000. The notes of this description now outstanding added to the United States notes still undiminished by redemption or cancellation, constitute a volume of gold obligations, amounting to nearly $300,000,000. These obligations are the instruments which, ever since we have had a gold reserve, have been used to deplete this reserve, which, as has been stated, had fallen in April, 1895 to $97,011,330. It has from that time to the present with very few and unimportant upward movements, steadily decreased, except it has been temporarily replenished by the sale of bonds.

The consequent hoarding of gold at home and the stoppage of investments of foreign capital, as well as the return of our securities already sold abroad, and the high rate of foreign exchange which induced the shipment of our gold to be drawn against, is a matter of speculation. In consequence of these conditions the gold reserve on the 1st day of February, 1894, was reduced to $65,438,377, having lost more than $31,000,000 during the preceding nine months, or since April, 1893. Its replenishment being necessary, and no other manner of accomplishing it being possible, resort was had to the issue and sale of bonds provided for by the resumption act of 1875.

Fifty millions of these bonds were sold, yielding $68,633,295.71, which was added to the reserve fund of gold then on hand. As a result of this operation this reserve which had suffered constant and large withdrawals in the meantime stood on the 6th day of March, 1894, at the sum of $107,446,-

802. Its depletion was, however, immediately thereaftre so accelerated that on the 30th day of June, 1894, it had fallen to $64,873,025, thus losing by withdrawals more than $42,000,000 in five months, and dropping slightly below its situation when the sale of $50,000,000 in bonds was effected by its replenishment. This depressed condition grew worse, and on the 24th day of November, 1894, our gold reserve being reduced to $57,669,701, it became necessary to again strengthen it. This was done by another sale of bonds amounting to $50,000,000, from which there was realized $58,538,600, with which the fund was increased to $111,142,021 on the 4th day of December, 1894.

Again disappointment awaited the anxious hope for relief. There was not even a lull in the exasperating withdrawals of gold. On the contrary, they grew larger and more persistent than ever. Between the 4th day of December, 1894, and early in February, 1895, a period of scarcely more than two months after the second reinforcement of our gold reserve by the sale of bonds, it had lost by such withdrawals more than $69,000,000, and had fallen to $41,340,161.

AN APPEAL TO CONGRESS.

Nearly $45,000,000 had been withdrawn within the month immediately preceding this situation. In anticipation of impending trouble I had on the 28th day of January, 1895, addressed a communication to Congress fully setting forth our difficulties and dangerous position and earnestly recommending that authority be given the Secretary of the Treasury to issue bonds bearing a low rate of interest payable by their terms in gold for the purpose maintaining a sufficient gold reserve and also for the redemption and cancellation of outstanding United States notes and the Treasury notes issued for the purchase of silver under the law of 1890. This recommendation did not, however, meet with legilsative approval.

AN AGREEMENT WITH FINANCIERS.

In this emergency and in view of its surrounding perplexities, it became entirely apparent to those upon whom the struggle for safety was devolved, not only that our gold reserve must for the third time in less than thirteen months be restored by another issue and sale of bonds bearing a high rate of interest and badly suited to the purpose, but that a plan must be adopted for their disposition promising better results than those realized on previous sales. An agreement was therefore made with a number of financiers and bankers, whereby it was stipulated that bonds described in the resumption act of 1875, payable in coin thirty years after their date, bearing interest at the rate of 4 per cent per annum, and amounting to about $62,000,000, should be exchanged for gold receivable by weight amounting to a little more than $65,000,000. This gold was to be delivered in such installments as would complete its delivery within about six months from the date of the contract, and at least one-half of the amount was to be furnished from abroad. It was also agreed by those supplying this gold that during the continuance of the contract they would by every means in their power protect the Government against gold withdrawals.

The contract also provided that if Congress would authorizze their issue, bonds payable by their terms in gold and bearing interest at the rate of 3 per cent per annum, might within ten years, be substituted at par for the 4 per cent bonds described in the agreement. On the day this contract was made ts terms were communicated to Congress by a special executive message, in which it was stated that more than sixteen millions of dollars would be saved to the Government if gold bonds bearing 3 per cent interest were authorized to be substituted for those mentioned in the contract.

CONGRESS FAILED TO ACT.

The Congress having declined to grant the necessary authority to secure this saving, the contract, unmodified, was carried out, resulting in a gold reserve amounting to $107,671,330 on the 8th day of July, 1895.

Recent withdrawals have reduced the reserve from $107,571,320 on the 8th day of July, 1895, to $79,333,960. How long it will remain large enough to render its increase unnecessary is only matter of conjecture, though quite large withdrawals for shipment in the immediate future are predicted in all well informed quarters. About $1,600,000 has been withdrawn during the month of November.

The foregoing statement of events and conditions develops the fact that after increasing our interest bearing bonded indebtedness more than $162,000,000 to save our gold reserve we are nearly where we started, having now in such reserve $79,333,966, as against $65,438,377 in February, 1894, when the first bonds were issued. Though the amount of gold drawn from the Treasury appears to be very large, as gathered from the facts and figures here presented, it actually was much larger.

INCREASED DEMAND FOR GOLD.

On the 28th of January, 1895, it was reported by the Secretary of the Treasury that more than $172,000, of gold had been withdrawn for hoarding or shipment during the year preceding. He now reports that from January 1, 1879, to July 14, 1890, a period of more than eleven years, only a little over $23,000,000 was withdrawn, and that between July 14, 1890, the date of the passage of the law for an increased purchase of silver, and the 1st day of December, 1895, or within less than five and a half years, there was withdrawn nearly $375,000,000, making a total of more than $407,000,000 drawn from the Treasury in gold since January 1, 1879, the date fixed in 1875 for the retirement of the United States notes.

Nearly $327,000,000 of the gold thus withdrawn has been paid out on these United States notes, and yet every one of the $346,000,000 is still uncanceled and ready to do service in future gold depletions. More than $75,000,000 in gold has since their creation in 1890 been paid out from the Treasury upon notes given on the purchase of silver by the Government, and yet the whole, amounting to $153,000,000, except a little more than $16,000,000 which have been retired by exchanges for silver at the request of the holders, remains outstanding and prepared to join their older and more experienced allies in future raids upon the Treasury's gold reserve.

In other words, the Government has paid in gold more than nine-tenths of its United States notes and still owes them all. It has paid in gold about one-half of its notes given for silver purchases without extinguishing by such payment one dollar of these notes. When added to all this we are reminded that to carry on this astounding financial scheme the Govermnsent has incurred a bonded indebtedness of $95,500,000 in establisihng a gold reserve and of $162,315,400 in efforts to maintain it, that the annual interest charge on such bonded indebtedness is more than $11,000,000, that a continuance in our resent course may result in further bond issues and that we suffered or are threatened with all this for the sake of supplying gold for foreign shipments or facilitating its hoarding at home, a situation is exhibited which certainly ought to arrest attention and provoke immediate legislative relief.

A REMEDY SUGGESTED.

I am convinced the only thorough and practical remedy for our troubles is found in the retirement and cancellation of our United States notes, commonly called greenbacks, and the outstanding Treasury notes issued by the Government in payment of silver purchases under the act of 1890. I believe this could be quite readily accomplished by the exchange of these notes for United States bonds of small as well as large denominations bearing a low rate of interest. They should be long term bonds, thus increasing their desirability as investments and because their payment could be well postponed to a period far removed from present financial burdens and perplexities, when, with increased prosperity and resources, they could be more easily met. To insure the cancellation of these notes and also provide a way by which gold may be added to our currency in lieu of them a feature in the plan should be, an authority given to the Secretary of the Treasury to dispose of the bonds abroad for gold if necessary to complete the contemplated redemption and cancellation, permitting him to use the proceeds of such bonds to take up and cancel any of the notes that may be in the Treasury or that may be recieved by the Government on any account. The increase of our bonded debt involved in this plan would be amply compensated by renewed activity and enterprise in all business circles. The restored confidence at home, the reinstatement of faith in our monetary strength abroad and the stimulation of every interest and industry would follow the cancellation of the gold demand obligations now afflicting us. In any event the bonds proposed would stand for the extinguishment of a troublesome indebtedness, while in the path we now follow there lurks the menace of unending bonds with indebtedness still undischarged and aggravated in every feature. The obligations necessary to fund this indebtedness would not equal in amount those from which we have been relieved since 1894 by anticipation and payment, but the requirements of the sinking fund out of our surplus revenues. The currency withdrawn by the retirement of the United States notes and Treasury notes, amounting to probably less than $486,000,000, might be supplied by such gold as would be used on their retirement or by an increase in the circulation of our national banks.

NATIONAL BANK CIRCULATION.

Though the aggregate capital of those now in existence amounts to more than $664,000,000 their outstanding circulation, based on bond security, amounts to only about $190,000,000. They are authorized to issue notes amounting to 90 per cent of the bonds deposited to secure their circulation, but in no event beyond the amount of their capital stock, and they are obliged to pay 1 per cent tax on the circulation they issue. I think they should be allowed to issue circulation equal to the par value of the bonds they deposit to secure it and that the tax on their circulation should be reduced to one-fourth of 1 per cent, which would undoubtedly meet all the expense the Government issues on their account. In addition they should be allowed to substitute or deposit in lieu of the bonds now required as security for their circulation those which would be issued for the purpose of retiring the United States notes and Treasury notes. The banks already existing, if they desired to avail themselves of the provisions of the law thus modified, could issue circulation in addition to that already outstanding, amounting to $478,000,000, which would nearly or quite equal the currency proposed to be canceled. At any event I should confidently expect to see the existing National banks or others to be organized avail themselves of the purposed encouragements to issue circulation and promptly fill any vacuum and supply every currency needed.

Any inconvenience or embarrassment arising from these restrictions on the location of National banks might well be remedied by better adapting the present system to the creation of banks in smaller communities or by premitting banks of large capital to establish branches in such locations as would serve the people, so regulated and restrained to secure their safe and conservative control and management, but there might not be the necessity for such an addition to the currency by new issues of bank circulation as at first glance is indicated.

I do not overlook the fact that the cancellation of Treasury notes issued under the silver purchasing act of 1890 would leave the Treasury in the actual ownership of sufficient silver, including seigniorage, to coin nearly $178,000,000 in standard dollars. It is worthy of consideration whether this might not from time to time be converted into dollars or fractional coin and slowly put into circulaiton as in the judgment of the Secretary of the Treasury the necessity of the country should require.

EFFECT OF REVENUE RECEIPTS.

In the present stage of our difficulty it is not easy to understand how the amount of our revenue receipts directly affects it. The important question is not the quantity of money received in revenue payments but the kind of money we maintain and our ability to continue in sound financial condition. We are considering the Government's holdings of gold as related to the soundness of our money and as affecting our national credit and monetary strength. If our gold reserve had never been impaired, or if no bonds had ever been issued to replenish it, if there had been no fear and timidity concerning our ability to continue gold payment, if any part of our revenues were not paid in gold, and if we could look to our gold receipts as a means of maintaining a safe reserve, the amount of our revenues would be an influential factor in the problem, but unfortunately all the circumstances that might lend weight to this consideration are entirely lacking in our present predicament. No gold is received by the Government in payment of revenue charges. Nor would there be if the revenues were increased. The receipts of the Treasury, when not in silver certificates, consist of United States notes and Treasury notes issued for silver purchases. These forms of money are only useful to the Government in paying its current ordinary expenses and its quantity in Government possession does not in the least contribute toward giving us tokens of safe financial standing or condition which is built on gold alone. If it is said that these notes, if held by the Government, can be used to obtain gold for our reserve, the answer is easy. The people drew gold from the treasury on demand upon United States and Treasury notes, but the proposition that the Treasury could draw gold from the people upon them would be regarded in these days with wonder, and even if this could be done there is nothing to prevent those thus parting with their gold from regaining it the next day or the next hour by the presentation of notes they received in exchange for it.

GOLD MIGHT BE BOUGHT.

The Secretary of the Treasury might use such notes taken from a surplus revenue to buy gold in the market. Of course he could not do this without paying a premium. Private holders of gold, unlike the Government have no parity to maintain and would not be restrained from making the best bargain possible when they furnished gold to the Treasury, but the moment the Secretary of the Treasury bought gold on any terms above par he would establish a general and universal premium upon it, thus breaking down the parity between gold and silver, which the Government is pledged to maintain, and opening the way to new and serious complications.

In the meantime the premium would not remain stationary, and the absurd spectacle might be presented of a dealer selling gold to the Government, and with United States notes and Treasury notes in his hand immediately clamoring for its return and a resale at a higher premium. It may be claimed that a large revenue and redundant receipts might favorably affect the situation under discussion by affording an opportunity of reclaiming these notes in the Treasury when received, and thus preventing their presentation for gold. Such retention to be useful ought to be at least measureably permanent, and this is precisely what is prohibited, so far as United States notes are concerned, by the law of 1878 forbidding their further retirement. That statute in so many words provides that these notes, when received into the Treasury and belonging to the United States, shall "be paid out again and kept in circulation."

On July 1, 1893, more than a year and a half before the first bonds were issued to replenish the gold reserve, there was a net balance in the Treasury exclusive of such reserve of less than $13,000,000; but the gold reserve amounted to more than $114,000,000, which was the quieting feature of the situation. It was when the stock of gold began rapidly to fall that fright supervened and our securities held abroad returned for sale, and debts owed abroad were pressed for payment. In the meantime extensive shipments of gold and other unfavorable indications caused restlessness and fright among our people at home.

Thereupon the state of our funds exclusive of gold became also immaterial to them, and they, too, drew gold from the Treasury for hoarding against all contingencies. This is plainly shown by the large increase in the proportion of gold withdrawn which was retained by our own people as time and threatening incidents progressed. During the fiscal year ending June 30, 1894, nearly $85,000,000 in gold was withdrawn from the Treasury and about $77,000,000 was sent abroad, while during the fiscal year ending June 30, 1895, over about $86,000,000 was shipped leaving the large balance of such withdrawals to be accounted for by domestic hoarding.

CONDITIONS TO BE MET.

Inasmuch as the withdrawal of our gold has resulted largely from fright, there is nothing apparent that will prevent its continuance or recurrence, with its natural consequence, except such a change in our financial methods as will reassure the frightened and make the desire for gold less intense. It is not clear how an increase in revenue, unless it be in gold, can satisfy those whose only anxiety is to gain gold from the Government's store. It cannot therefore be safe to rely upon increased revenues as a cure for our present troubles.

Nothing can be further from the truth. Bonds were issued to obtain gold for the maintenance of our National credit. As has been shown, the gold thus obtained has been drawn again from the Treasury upon United States notes and Treasury notes. This operation would have been promptly prevented if possible; but these notes having thus been passed to the Treasury, they became the money of the Government, like any other ordinary Government funds, and there was nothing to do but to use them in paying Government expenses when needed.

SURPLUS IN THE TREASURY.

At no time when bonds have been issued has there been any consideration of the question of paying the expenses of Government with their proceeds. There was no necessity to consider that question. At the time of each bond issue we had a safe surplus in the Treasury for ordinary operations, exclusive of the gold in our reserve. In February, 1894, when the first issue of bonds was made such surplus amounted to over $18,000,000; in November, when the second issue was made, it amounted to more than $42,000,000; in February, 1885, when bonds for the third time were issued, such surplus amounted to more than $100,000,000; it now amounts to $96,072,430.30.

Besides all this the Secretary of the Treasury has no authority whatever to issue bonds to increase the ordinary revenues or pay current expenses. I cannot but think there has been some confusion of ideas regarding the effects of the issue of bonds and the results of the withdrawal of gold. It was the latter process and not the former, that by substituting in the Treasury United States notes and Treasury notes for gold, increased the amount of the money which was in the first instance subject to ordinary government expenditures. Although the law compelling an increased purchase of silver by the Government was passed on the 14th day of July, 1890, withdrawals of gold from the Treasury, the notes given in payment for such purchases did not begin until October, 1891. Immediately following that date the withdrawal upon both these notes and United States notes increased very largely and have continued to such an extent that since the passage of that law there has been more than thirteen times as much gold taken out of the Treasury upon United States and Treasury notes issued for silver purchases as was thus withdrawn during the eleven and a half years immediately prior thereto, and after the 1st day of January, 1879, when specie payments were resumed.

FREE COINAGE OF SILVER.

It is neither unfair nor unjust to charge a large share of our present financial perplexities and dangers to the operation of the laws of 1878 and 1890, compelling the purchase of silver by the Government, which not only furnished a new Treasury obligation upon which its gold could be withdrawn, but so increased the fear of an overwhelming flood of silver and a forced descent to silver payments that even the repeal of these laws did not entirely cure the evils of their existnece.

While I have endeavored to make a plain statement of the disordered condition of our currency and the present dangers menacing our prosperity and to suggest a way which leads to a safer financial system, I have constantly had in mind the fact that many of my countrymen, whose sincerity I do not doubt, insist that the cure for the ills now threatening us may be found in the single and simple remedy of the free coinage of silver. They contend that our mints shall be at once thrown open to the free, unlimited and independent coinage of both gold and silver dollars of full legal tender quality, regardless of the action of any other Government and in full view of the fact that the ratio between the metals which they suggest calls for one hundred cents' worth of gold in the gold dollar at the present standard and only fifty cents in intrinsic worth of silver in the silver dollar. Were there infinitely stronger reasons than can be adduced for hoping that such action would secure for us a bi-metallic currency moving on lines of parity, an experiment so novel and hazardous as that proposed might well stagger those who believe that stability is an imperative condition of sound money.

No Government, human contrivance or act of legislation has ever been able to hold the two metals together in free coinage at a ratio appreciably different from that which is established in the markets of the world. Those who believe that our independent free coinage of silver at an artificial ratio of 16 to 1 would restore the parity between the metals, and consequently between the coins, oppose an unsupported and improbable theory to the general belief and practice of other nations and to the teaching of the wisest statesmen and economists of the world, both in the past and present, and what is more conclusive, they run counter to our own actual experiences.

FAILURES OF THE PAST.

Twice in our earlier history our lawmakers in attempting to establish a bi-metallic currency undertook free coinage upon a ratio which accidentally varied from the actual values of the two metals more than 3 per cent. In both cases, notwithstanding greater difficulties and cost of transportation than now exist, the coins whose intrinsic worth was undervalued in the ratio, gradually and surely disappeared from our circulation and went to other countries, where their real value was better recognized. Acts of Congress were impotent to create equality where natural causes decreed even a slight inequality. Twice in our recent history we have signally failed to raise by legislation the value of silver. Under an act of Congress passed in 1878 the Government was required for more than twelve years to expend annually at least $24,000,000 in the purchase of silver bullion for coinage.

The act of July 14, 1894, in a still bolder effort increased the amount of silver the Government was compelled to purchase and forced it to become the buyer annually of 54,000,000 ounces, or practically the entire product of our mines. Under both laws silver rapidly and steadily declined in value. The prophecy and the expressed hope and expectation of those in Congress who led in the passage of the last mentioned act that it would re-establish and maintain the former parity between the two metals is still fresh in our memory. In the light of those experiences which accord with the experiences of other nations, there is certainly no secure ground for the belief that an act of Congress could now bridge an inequality of 50 per cent between gold and silver at our present ratio, nor is there the least possibility that our country, which has less than one-seventh of the silver money in the world, could by its action alone raise not only our own but all silver to its lost ratio with gold.

CHANGE MEANS DISASTER.

Our country's indebtedness, whether owing by the Government or existing between individuals, has been contracted with reference to our present standard. To decree by act of Congress that these debts shall be payable in less valuable dollars than those within the contemplation and intention of the parties when contracted would operate to transfer by the fiat of law and without compensation an amount of property and a volume of rights and interests almost incalculable. Those who advocate a blind and headlong plunge in free coinage in the name of bimetallism and professing a belief contrary to all experience that we could thus establish a double standard and a concurrent circulation of both metals in our coinage, are certainly reckoning from a cloudy standpoint.

Our present standard of value is the standard of the civilized world and permits the only bimetallism now possible, or at least that is within the independent reach of any single nation, however powerful that nation may be, and while the value of gold as a standard is steadier by almost universal commercial and business use, it does not despise silver nor seek its banishment. Wherever this standard is maintained there is at its side in free and unquestioned circulation a volume of silver currency sometimes equaling and sometimes exceeding it in amount, both maintained at a parity, notwithstanding a depreciation or fluctuation in the intrinsic value of silver.

There is a vast difference between a standard of value and a currency for monetary use. The standard must necessarily be fixed and certain. The currency may be in diverse forms and of various kinds. No silver standard country has a gold currency in circulation, but an enlightened and wise system of finance secures the benefits of both gold and silver as our currency and circulating medium, by keeping the standard stable and all other currency at par with it. Such a system and such a standard also gives free scope for the use and expansion of the safe and conservative credit so indispensable to broad and growing commercial transactions and so well substituted for the actual use of money. If a fixed and stable standard is maintained, such as the magnitude and safety of our commercial transactions and buiness require, the use of money itself is conveniently minimized. Every dollar of fixed and stable value has through the agency of confident credit and astonishing capacity of multiplying itself in financial work. Every unstable and fluctuating dollar fails as a basis of credit, and in its use begets gambling speculation and undermines the foundations of honest enterprise.

I cannot rid myself of the belief that there lurks in the proposition for the free coinage of silver so strongly approved and so enthsiastically advocated by a multitude of my countrymen, a serious menace to our prosperity and an insidious temptation of our people to wander from the allegiance they owe to public and private integrity. It is because I do not distrust the good faith and sincerity of those who press this scheme that I have imperfectly, with zeal, submitted my thoughts upon this momentous subject.

In conclusion, I especially entreat the poeple's representatives in the Congress who are charged with the responsibility of inaugurating measures for the safety and prosperity of our common country to promptly and effectively consider the ills of our critical financial plight. I have suggested a remedy, which my judgment approves. I desire, howoever, to assure the Congress that I am prepared to co-operate with them in perfecting any other measure promising thorough and practical relief, and that I will gladly labor with them in every patriotic endeavor to further the interests and guard the welfare of our countrymen whom in our respective places of duty we have undertaken to serve.

GROVER CLEVELAND.

Washington, D. C., Executive Mansion, Dec. 3, 1895.

COMMENT ON THE MESSAGE

CONGRESSMAN MAGUIRE SAYS IT IS STRONG.

Few Californians Remain to Hear It Read.

SENATOR WHITE DECLINES TO TALK

The Senate Confirms the Appointments Made by President Cleveland.

Washington, Dec. 3.—Very few of the California delegation were in their seats when the President's message was read. Indeed, after the first few pages had been turned by the reader, the members began to leave the House in numbers, and the audience was a thin one when the last words were uttered

Your correspondent saw Congressman Maguire after the reading, and asked his opinion of the message.

"It is a strong message," he said; "a capital state document. Of course, it will not saitsfy everyone. It does not satisfy me, or rather I do not agree with the President on one or two points."

"What are they, Congressman Maguire?"

"Well, I, of course, do not agree with his financial policy. My views on finances have been often expressed, and everyone knows them well. This is true of the Hawaiian policy of the Government. I have held that a grevious mistake was made there.

"However, with these exceptions, I am in accord with the sentiments expressed in the message."

I saw Senator Perkins a few moments ago, and asked him what he thought of the letter.

"Well, I'm not an editor, and I will have to read the document before I express an opinion on it," said he. "I have not had time to read it, yet."

Senator White said there were many subjects discussed that were worthy of considerable stdy, but declined to say anything for publication until he had read the message carefully.

The opinion is general that the message is as good a one as could be written under the circumstances. Addressed to a Republican Congress, it was a defence of a policy which the Republican party had declared to be inimical to the best interests of the country.

It was remarkable that there was no applause while the clerk was reading the message. It might have been a warning from a master to unruly school boys for all the enthusiasm that was aroused. A. W.

When the House met at noon today Rev. H. N. Coudon, the new Chaplain, the blind Universalist preacher from Port Huron, Mich., delivered the invocation.

Mr. Payne, Republican of New York, Chairman of the committee appointed to wait upon the President, reported that Mr. Cleveland sent his respectful salutations to Congress and would communicate in writing.

Immediately thereafter Mr. Pruden, the President's executive clerk, appeared with the message, which the clerk read. The members listened, some intently, but all respectfully, to the words of the Chief Executive.

Not during the entire reading of the message was there a single manifestation of approval or disapproval, but at the conclusion of the reading, which occupied an hour and a half, there was a slight scattering of applause.

Five thousand copies of the message were ordered printed. At 1:50 the House adjourned until Friday.

THE SENATE.

The Senate galleries were again well filled, but there was not the struggle for places incident to the opening.

After formal proceedings Senators Vilas and Allison, the committee appointed to wait on the President, stepped into the middle isle and Mr. Vilas said: "The President desires us to convey his respectful salutations to the houses of Congress and to say that he will immediately communicate his views in writing to Congress."

Then Mr. Pruden, the executive clerk, made the formal transfer of the message to the Senate.

There was a thinning out of the attendance on the floor after the first half hour of the reading, as the Senators had printed copies.

At 1:40 o'clock the reading of the message was completed, and on motion of Mr. Gorman it was laid on the table and ordered printed.

Mr. Cullom presented a communication from Evanston, Ill., asking for Government action concerning the deplorable condition of affairs in Turkey. Mr. Gallinger offered a similar communication from the citizens of New Hampshire.

A resolution of the Idaho Legislature, urging the election of United States Senators by popular vote was presented by Mr. Dubois.

Mr Lodge was the first to secure recognition for the introduction of bills and resolutions. He sent to the desk a joint resolution forcibly approving the principles of the Monroe doctrine.

OUR PROGRESS.

Speculation as to the Extent of Oil Fields.

WORK IN BUILDING RAILROADS.

Little Prospecting Has Been Done as Yet Outside of the Development Belt—Horseless Carriages.

Already a syndicate of prominent British Columbia business men have adopted the idea of running horseless carriages, and an application has been made to the provincial legislature to incorporate a company with a capital of $500,000, and also to empower them to operate traction enignes and carriages on the old Cariboo wagon-road. This is interesting because the main part of the line extends over 200 miles of mountainous road. Cheap fuel, like Los Angeles oil, for instance, capable of developing high power, applied to motors of this sort, holds out, perhaps a little distant, but with certainty, other facilities for moving freights and passengers than are afforded by the rail routes, which are expensive to maintain. Of course this applies only to the moving of products and merchandise to and from ranches which are some distance from regular railroads. Electricity derived from the application of water power holds out the same sort of promise.

The opinion of J. S. Wilbur concerning the route of the San Joaquin Valley railroad will be received with respect, for Wilbur has been engaged several years trying to pick out some line which would command the investment of money by European or other capitalists in a competing road between the tide-water at Stockton and the head of the San Joaquin valley. He considers the route so far selected excellent, and he says he thinks that the Valley road has as fine a road-bed as any that has ever been constructed. There is no doubt that the rights of way will be cleared up very soon.

The project of building an electric road to Saratoga from San Jose seems to be pushing on. The Electric road company has elected a President. At the same time a road from Palo Alto to the bay is rumored. Any community that builds to the bay, furnishes itself with sufficient wharf facilities to market its own products and receive its own supplies direct, without being tributary to any center outside of San Francisco. The main purpose of the Valley road being to furnish lines for the distribution of merchandise from San Francisco, and the centering in San Francisco of California products from the interior to be forwarded to market at low rates, it likely follows that if that idea is sound and embodies a good business principle, it is equally sound. For San Francisco to encourage the construction of electric lines from tide-water to all easily accesible communities on the bay, which furnish sufficient business to make the lines self-sustaining, or which promise to be so in the near future, is good policy. By controlling the rate business is controlled.

Beyond the fact that Warren English has been appointed Collector of the Port of Oakland, little has been said in the San Francisco papers to indicate what the true meaning of that move may be if the Oakland people take hold in earnest. In the first place it means that Oakland will receive cargoes direct. Merchants in Oakland will not be compelled to forsake their business to come to San Francisco to get goods out of bond. It means, also, that bonded warehouses will, after a time, be erected in Oakland at some convenient place. More than that, it is a recognition of the importance of the great city across the bay, the future of which can be guessed at only; and it is a well-known fact that facilities for trade bring other facilities. Oakland from this time on will be considered less and less by the outside world a dependency of San Francisco. It will appear in the Eastern dispatches in Treasury Department circulars and in all forms of official and miscellaneous publications finding their way to the hands of business men in the East, as an independent port of entrance. No one doubts that Los Angeles has reached its present prominence by skillful advertising. Nineteen men out of twenty who come to the Pacific Coast never had heard very much about Oakland until after they arrived here, having only the impression that it is a pleasant suburb, characterized principally by large shade trees, and that it is the residence only (or mainly) of wealthy merchants of San Francisco, who go across the bay to seek quiet. The handling of cargoes direct at Oakland from foreign ports, and the exportation of products from Oakland direct, will bring some ready money into use. But more important than the present revenue is the outlook for making Oakland recognized in different parts of the world. Collector English truly says that land is cheaper in Oakland for warehouse purposes.

Considerable work is progressing in the San Joaquin Valley for the purpose of irrigating lands which will be exceedingly fruitful as soon as water can be placed on them. The dispatches have indicated something concerning these facts, but more particulars are learned from exchanges from interior points. The Oakdale Irrigation Company is entertaining a proposition to transfer stock of the company to a party who will agree to build a flume across the Stanislaus river and to supply Oakdale ranchers with water for irrigation purposes from the San Joaquin canal, the water to be available from the 1st of March. A corps of sruveyors is at work near Hanford running a line for the proposed canal and the Sunset Irrigation District. The survey commences at the mouth of Kings river and runs thence to McKenna's well. The work of digging the canal will commence as soon as the stakes of the surveyors are driven. The contracts for the work have been let to Messrs. Read and Baker.

Claus Spreckels has started for New York. Concerning that, more can be said a little later on. If anybody can secure the money to set on foot a large system of railways in California it is Claus Spreckels. He may be seconded by the efforts of W. A. Whittier. It never should be lost to sight that one of the moving spirits in the San Joaquin Valley enterprise is J. B. Stetson. Mr. Stetson, in season and out of season, at all times and in divers places, wherever he could secure the ears of the reporters of the daily press of San Francisco, has urged that not only the San Joaquin Valley but also the Sacramento Valley should have the advantage of competition to bring about a greater development, and insure the position of San Francisco as a distributing center against all possible competitors. The gentlemen connected with this competing railway enterprise are not going around advertising their business with brass bands. All the indications are that what Mr. Spreckels is doing means much for California.

According to the seventeenth annual report of the Bank Commissioners, which is now being distributed, the gain in bank resources of this State from July 1, 1894, to June 17, 1895, was $11,826,658.47. The amount of money due depositors is $200,114,820.86, and the assets of the banks, including the national banks, amount to $309,179,575.41.

How far east and west does the Los Angeles oil belt extend? Are there other petroleum veins in the foothills farther north? The California oil discovered so far in that section is not an illuminating oil, containing only a small percentage of kerosene, and this does not come in direct competition with the Eastern oil, but there is a possibility that oil containing a larger percentage of illuminating qualities may be struck. Such oil in fact was found several years ago in the western portion of Fresno county, but the find has never been developed. Experts agree that the present belt at Los Angeles runs clear through to Puente. There is no doubt that a large amount of natural gas is also stored beneath the city of Los Angeles. Some of this goes to waste daily in the local oil belt, and one of the well-borers has utilized a portion of this flow from his well for motive power in boring. "So far," says the Los Angeles Inventor "this important feature of the local oil deposit appears to have been almost entirely overlooked."

What will California real estate be worth some time? An Eastern journal says concerning real estate in New York City the lot on which the Trinity building, at the corner of Broadway and Thames streets, cost $150,000 a few years ago, and now it is worth $1,500,000, and the present building will soon be demolished and replaced by a sky-scraper. Two years ago Jefferson Levy sold a plot in Cedar street (west of Broadway to the Fidelity and Casualty Company at the rate of $50 the square foot. Some considered this very high "but the same lot would now bring an advance of 50 per cent. The above mentioned sale of $344 the square foot is at the rate of $9,760,000 the acre, and as this was the residence of Aaron Burr (before he bought Richmond Hill) how astonishing would such a price have appeared to him, for in his day all New York could have been bought for the cost of an acre at the present time. This, however, is not the extreme of land value here, for the corner of Wall and Broad streets, now occupied by J. Pierpont Morgan, costs its present owners at the rate of $14,000,000 an acre. And this was once farm land.

HE FELT LIKE A BOY AGAIN.

Magistrate Harrison is laughing heartily over a case that was adjusted before him the other day. A wagon loaded with mineral water-jugs backed up to the curbstone in front of a bottling establishment last week, and the driver proceeded to unload his wagon by tossing the jugs, one at a time, to a colored youth who stood on the opposite side of the curbstone, ready to catch all that came his way.

When things were moving nicely an old man who occupies a house next door stepped out of his own door, threw a brick as straight as a bullet and broke one of the jugs while it was in transit from the driver to the colored boy. He darted back into his own domicile before the driver could recover himself enough to make a protest. A few minutes later another jug was smashed and again the old man disappeared with a merry laugh. This was kept up until about a dozen jugs had been smashed, when the angry proprietor stopped the fun by causing the old fellow's arrest on the charge of malicious mischief.

When Judge Harrison read the charge to him the old man laughed until the tears rolled down his cheeks, and then admitted his guilt. In making an explanation he told the astonished magistrate that he was able and willing to pay for all the damage he had done, and said: "I saw those jugs flying, and I knew in my own heart that I would have thrown bricks at them when I was a boy sixty years ago. I just wanted to see how it would feel again, and I couldn't help myself." The explanation was satisfactory, and after settling the old fellow went way still laughing heartily. —Philadelphia Record.

The secret societies of Central China are reported to be perparing to join issue with the Mohammedans.

SCIENCE, INDUSTRY.

An Improved Washer is Among Recent Patents.

BICYCLE'S INDISPENSABLE PART.

Influences of City Life On the Nervous System—Bicycle Lawn Mower—Illumination of Opaque Objects.

From the memory of civilized man the washing machine has been one of the favorite objects on which the ingenuity of the building inventor of domestic appliances has sought to expend itself. The consequence is that all sorts of fantastic and useless forms of the washer have had their short day on the market, and the faith of the housewife in a washing machine that will wash has almost vanished. Among recent patents is an improved washer that seems to justify its title. It is simple both in construction and operation. The clothes are placed in a skeleton cylinder resembling a magnified mousetrap. This cylinder is dropped into a block-tin air-tight case, in the bottom of which there is a receptacle for water and soap. The lid is then shut down and the washer is placed on a furnace, gas or gasoline stove or an electric heater. The water is quickly heated and the steam is driven through the clothes. There is neither rubbing nor boiling. The impurities which are forced out by the strong steam current fall to the bottom of the machine, and are thus removed from further contact with the linen. The great advantage of this machine is that it does the work itself, and its inventor claims that in two hours it will dispose of laundry work that usually occupies a whole day. Its cleansing and disinfecting qualities are said to have been so conclusively demonstrated that it is proposed to make a large size for factory and hospital use. In a test made at a paint factory a quantity of the cotton waste which is tied over the nose and mouth of the men engaged in mixing and powdering the paint, and which usually becomes so filled with the poisonous powder as to be rendered useless, was placed in the washer. In four minutes it was absolutely clean and as good as new, and the paris green had dropped to the false bottom of the washer, perfectly available for future use. Thick canvas bags, incrusted with dry paint a quarter of an inch thick, were also experimented upon. In six minutes they were clean. The paint was saved and the bags were ready, when dried, to be used again.

Military authorities have come to the conclusion that the bicycle will play an indispensable part in the wars of the future. Its sphere, at least in its early military stages, will be that of the Uhlan of the war of 1870. The cyclist, in preliminary operations, will act as an impenetrable advance cloud or screen for the army, pushing far ahead into the enemy's theater of operations, making his power felt long before the armies have a chance to come together. He will always be able to obtain information for headquarters better than can be secured by any other form of scouting, feeling the enemy retiring before him when outnumbered, but contesting the ground wherever there is a chance for contest. He will, in fact, pursue exactly the course followed by the Prussian cavalry in the early days of the Franco-Prussian war; always acting in company with light horse artillery, with the gunners mounted on bicycles, and not, according to the present out-of-date system, on caissons. With these and the flying cyclists it is believed the modern army has an offensive combination such as has never been equaled. The cyclist will be a crack shot with the rifle, and that will be his only weapon. He has one decided advantage over the cavalryman in that he is not bothered by the question of forage. On bad roads and in poor weather the cavalryman has everything in his favor, and this will make the conservative soldier view the bicycle with suspicion. Against this radical disadvantage is placed the fact that under moderately fair conditions the cyclist can outmarch cavalrymen two to one, and under almost the worst conditions he can do the same with infantry. Another important duty the cyclist may have to perform in the next war is to act as the anvil for the main army to hammer the enemy against, to reach the enemy's rear, to get on his communications, take up a defensive position and wait for his attack. This could only be practicable with a heavy force of artillery. The value of the cyclist as a messenger or in guarding trains and supplies is obvious.

Dr. Burt J. Maycock, in a paper on "Some of the Influences of City Life on the Nervous System," lays great stress on the well-known fact that the average American treats himself outrageously. The best proof of this is the immense sale in every large city of so-called nerve tonics. The trade done in the wines of coca and kola and the preparations of phosphorus is almost incredible. This is all wrong. A tired and nervous man does not want hypnotics, but fresh air and exercise according to his strength. In this respect the English are wiser than we are. They keep up their habit of physical exercise until far into old age, and paresis is comparatively little known in England. Dr. Maycock says that American men will have to turn over a new leaf, and draw a sensible balance between work and play. Women, too, are entirely on the wrong track. They belong to various literary societies, frequent afternoon musicals and social functions, usually driving in their carriages, seldom walking or getting the exercise in the open air which is so beneficial and which they so greatly need. They are overdoing themselves in the matter of entertaining and being entertained, and are exhausting their nervous energy like their husbands. These people should go away from business and household cares at frequent intervals. If possible they should take a trip into the country at least once a week. They should get on their bicycles and ride moderately, but not exhaustingly, all summer long, and in the winter they should join some good athletic club and take a regular course of exercises, such as dumb-bells and calisthenics, according to their strength and constitution.

It is not an extravagant assumption that if he who makes two blades of grass grow where one grew before deserves well of humanity, the man who cuts three blades of grass in the time that one blade has heretofore been cut should come in for some of the thanks that the philianthropist is supposed to be entitled to. A patent has been applied for in the matter of a bicycle lawn-mower. The rear wheel is like that of the ordinary bicycle, but in place of the front wheel is a twenty-inch lawn-mower, fitted with pneumatic tires. The mower is attached to the front post by long steel prongs, and may be adjusted to cut high or low. Two rods extend from the rear frame to the mower, and thus relieve the head of the machine from strain. The pedals are placed directly on the large wheel shaft, and the power required to operate the machine is equivalent to that used in the ordinary tricycle. It is guided by handles; it can be turned in a six-foot circle, and will mow a lawn in one-third of the time required with the present style of mower.

Martyrs to hay fever will learn with interest the experience of Dr. Fuber of Hamburg, who suffered a great deal from hay fever during several summers. He noticed that in winter a coryza was accompanied with hot ears, which regained their normal temperature when the discharge from the nose was established. He tried a reverse order of things on the hay fever and rubbed his ears until they became red hot. He can now lead an endurable existence. As soon as there is the least amount of fullness in the nose the ears are noticeably pale. A thorough rubbing of the ears has always succeeded in freeing the nasal mucous membrane from congestion. The rubbing must be thorough and repeated.

The illumination of opaque objects, for the microscope has, with high powers, been hitherto almost impossible. M. Fremont has described an extremely ingenious method of carrying out the desired end. Inside the body of the microscope is fixed a concave mirror which reflects the bundle of rays of light received through an aperture in the side, and rendered parallel by an interposed prism through the object glass on to the object under examination. It is difficult without seeing the contrivances, to understand how the eye, and at the eye-piece end, can see the object. This is cleverly provided for by the simple expedient of boring a hole through both mirror and prism in the track of the rays passing from the objective. From this device great service is anticiated in the chromo-photograhic study of the movement of microscopic beings.

Reports from the North Dakota experiment station give remarkable confirmation to the well-known fact that wind plays an important part in the distribution of seeds. In two square feet of a three-weeks-old and three-inch-deep snowdrift, upon an ice pond ten yards from any weeds, nineteen weed seeds were found, and another drift similarly situated, yielded thirty-two seeds representing nine varieties. While the wind was blowing twenty miles an hour a peck of mixed seed was poured on the snow crust, and ten minutes later 194 wheat grains, fifty-three flax seeds, forty-three buckwheat and ninety-one ragweed seeds were found in a trench thirty rods from where they had been poured upon the crust.

One of the halls at Cornell university having become badly infested with fleas, one of the professors devised an ingenious plan of getting rid of them. The negro janitor was furnished with a pair of rubber boots, on which were tied sheets of fly-paper, with the sticky side outward, right up the leg. The janitor was then made to patrol the floor of the hall for several hours a day. The result pleased everybody, and especially the professor. The sheets of fly-paper soon became black with fleas and had to be changed at intervals, and the building was almost completely rid of the pest.

Oil stoves and gas stoves should never be kept burning in a sleeping-room, for having no connection with a chimney flue they throw poisonous carbonic oxide into the air of the apartment and make it unfit for respiration. An oil lamp left burning all night is bad enough, but an oil stove is worse.

A week or so ago, during a thunderstorm, lightning in the shape of a ball—a well-known, but rare phenomenon—descended in the yard behind a house at Themenau, Austria. The ball, about one foot in diameter, was of a brilliant blue. On reaching the ground it rolled along a short distance, and then burst, flooding the whole neighborhood with a dazzling white light. No damage was immediately apparent, but several hours later flames burst from a building situated at some distance from where the lightning had struck.

Before the Academie de Medicine of Paris a paper was read not long ago which pointed out that the tortures of the corset are to a large extent responsible for the much-lamented scarcity of children in France. The writer urged that a tax on corsets would be just as the tax on tobacco and alcohol.

THE CANAIGRE ROOT.

The Cast of Production and Its Preparation.

SOME POPULAR VIEWS CORRECTED.

Chance of Fair Profit for California Farmers Who Are Favorably Located. The Tannin.

Considerable attention is being paid by the press to canaigre as a plant, the cultivation of which may become profitable in this State, and it seems probable that it may become one of the valuable minor industries. The facts, however, do not justify such statements as the following, which are taken almost at random from the country exchanges of one day:

"The wild plant produces ten to twenty tons per acre, which can be increased by cultivation to twenty to sixty tons." The fact is that its yield in the wild state is unknown, and it has not yet been cultivated on a commercial scale, but the root is smaller than the sugar beet and the yield will be less, probably in good, fresh soil ten or twelve tons per acre.

"The market for the root is practically unlimited." As a matter of fact it has no market to speak of, is not quoted in any price current, and has yet to fight its way into use in the face of other tanning material now holding the trade. Nor is there any "practically unlimited" market for any agricultural product.

Millions of acres will soon be devoted to canaigre." The annual product of even 1,000,000 acres would be 10,000,000 tons, which would make over 900,000 tons, or 77,000 carloads, of the dried extract, a quantity which could not even be given away.

Any farmer can raise it and be independent of any near-by factory." This is entirely untrue, as will be shown later. The root must be cultivated, like sugar beets, in connection with a factory.

False or foolish statements like the foregoing can only injure any proposed industry. The culture of canaigre may prove profitable to those favorably situated, and the matter is of sufficient interest to justify the publication of the facts. There are three points to be considered—cost, market and competition. This article will be devoted to cost, and the facts upon which it is based have been obtained from Professor E. W. Hilgard of the University of California and Dr. Julius Koebig, consulting chemist of San Francisco, who was among the first to call attention to the value of the plant, and who has followed with interest the efforts to utilize it. Dr. Koebig has revised this article.

Canaigre is a winter-growing dock, indigenous to arid America. Like other docks, it is a vigorous fighter for food, which it rapidly exhausts, and its continued cultivation, would involve early fertilization, which, however, its own refuse would largely supply. Its winter-growing habit shows its preference for a cool climate, with moderate moisture, and renders its success in the hot summer growing time of our Eastern States very doubtful. It is, however, being tried there, and we shall soon know. It thrives at Berkeley, and an analysis of the root grown there shows a higher percentage of tannin than that produced in Arizona. Professor Hilgard can account for this by the cooler climate. One or two experiments, however, do not settle such things, and further analyses will be required. This is very important, as within a few years more canaigre will probably be produced than can be readily sold, and the price will be fixed by its cost of production in the districts showing the greatest yield.

The extract, when properly prepared, contains, if liquid, about 65 per cent of tannic acid, and if dried about 75 per cent, and in that form contains no susbtances deleterious to the tanning process, and makes excellent leather. Canaigre can be used for tanning only in the form of an extract because of the presence of starch in the dried root, which makes a paste on the hides and prevents the tannin from reaching the pores. The extract must be made either at the place of production or place of consumption.

There has as yet been no cultivation of the plant on a commercial scale. The people of Arizona have been digging the wild root, slicing, drying and making some market for it, mostly in Glasgow, where there are appliances for making the extract. There is an extract factory at Deming which is finding a market for its product in Eastern cities, with, doubtless, some exports of experimental lots. The officials of the Southern Pacific Company state that there has been quite a movement of the product, but no such amount as the papers report. The freight from Eastern Arizona is $8 per ton to Eastern cities and $15 to Glasgow, and must always be lower from there than from California. The supply of the wild root within gathering distance of the railroad is becoming exhausted, and the problem of its profitable production now presents itself.

Presumably the green root can be raised in suitable soils, which would be the light, but good land suitable for other root tops, for about $4 per ton. This is about the average price of sugar beets, and this is probably what the farmer may expect, delivered. As the beet raiser is paid more or less for his beets according to their sugar test, so in this case the grower would be paid more or less according to the tannin contained. If at the beginning the price were high, increased acreage would rapidly bring it down. The cost to the producer would be similar to the cost of other root crops, and would depend on the character of the soil and the cost of delivery to the factory. As compared with sugar beets, the cost might be less, as there is no thining, although the hand planting of the canaigre roots would be more expensive than the machine sowing of the beets.

To begin with canaigre never should be dried, and it never will be when the business asssumes commerial proportions. It is true that wild canaigre roots have been sliced, dried and sold in limited quantities, but that practice will disappear whenever its culture is seriously entered upon. Nobody wants the stuff except for experimental purposes, since it has no reliable percentage of tannin. If dried by the producer it would have to be soaked at the point of consumption in order to extract the tannin. The dried article would never stand the cost of transportation. It has been claimed that the dried root is worth $40 per ton at Glasgow. Perhaps it is. Assume it any way, and suppose the freight to be the same as upon dried fruit, which is $24 to New York, and probably about $28 to Glasgow, leaving $12 to the grower if no middleman intervened, which is a practically impossible condition.

It takes three tons of green roots to make one of dried, so that $40 per dry ton at Glasgow would yield $4 per green ton to the grower, but to slice 100 tons of green root and dry out there from sixty-six tons of water and sack the dried product will certainly cost more than to take from 100 tons of fresh prunes sixty tons of water without slicing and sack the dried product. The latter we know cannot be done for less than $4 per ton, so that with dried canaigre at $40 per ton in Glasgow the California producer, with no middleman, might get paid for his sacks and labor in drying, but would get nothing for the roots. As the traffic evidently would not bear this rate of transportation, doubtless a lower rate would be forthcoming, but if divided in half the net result would be but about $4 per green ton to the grower, less middlemen's charges, which could not be less than 5 per cent, and might be more.

We now reach a proposition involving a reasonable expectation of fair profits to those favorably situated, and perhaps an important source of wealth to the State, but nothing justifying extravagant prophecies. The process of extracting the tannin from canaigre is the same as that of extracting the sugar from beets, minus the expensive and delicate chemical processes for refining. This process includes:

First—Slicing the roots by machinery.

Second—Placing them, usually by gravity, in wooden tanks called "diffusling batteries," through which water is passed at a temperature not exceeding 100 degrees Fahrenheit, until the tannin is extracted, while the starch remains.

Third—Boiling the tannin-charged water in a copper vacuum pan to the consistency of a syrup containing about 66 per cent of tannic acid, with a residue not injurious to the tanning process.

In this condition transportation has to be paid on only one ton of useless matter for every two tons of tannin. So far as we now know, this is cheaper than to extract the pure tannin, but the weight may be still further decreased by exposing the thick syrup in a dryer at a moderate temperature and making the extract solid, in which state it would contain about 75 per cent tannin and the transportaion of waste matter would be only about one ton in four.

Throughout the process comparatively low temperature must be preserved, as heat tends to decompose the tannin, especially when exposed to the air. This necessitates the use of the vacuum pan, in which evaporation takes place at low temperature. This fact also indicates the probability of the most successful results in the equable and not to wet climates of our central and southern coasts.

The cost of a plant for extracting the tannin from canaigre is reduced by the fact that there is no special harvest time for the root, which keeps perfectly in the ground for years, and can be gathered at any time after fall growth, so that the harvest can go on throughout the year. The cost of a plant to take care of the product of, say 4000 acres, to be run, say, 250 days in the year, at the rate of 160 tons of roots per day, would be about as follows:

Slicing machine, say	$300
Diffusing battery of four tanks, with piping and fillings	2,500
Copper vacuum pan, with air pump and fittings	2,500
Carrier and appliances for conveying sliced roots to tanks	250
Piping and recipients for liquid before boiling	250
Dryer	1,000
Total special plant	$6,800

The above are not estimates, but merely intelligent guesses not far enough out of the way to make any difference for the purposes of the article. To the above must be added a fifty horse-power boiler and a twenty horse-power enigne, with the necessary land, buildings and minor appliances, and a reasonable sum for working capital, making a total investment of from $20,000 to $25,000.

To operate the establishment there would be necessary a superintendent, who must be a fair chemist, an engineer, and a working force sufficient by the aid of machinery to handle and treat 160 tons of roots per day and pack the finished product, in all probably a force of fifteen to twenty men.

The larger the establishment the more economically it could be managed.

In the absence of data, we can compare the process with the cost of treating sugar beets which we know, in large establishments is not to exceed $1.25 per ton. With the chemical processes necessary to refining sugar omitted, and a factory running all the year round, the cost of treating the canaigre root should not exceed $1 per ton, even in the comparatively small establishment proposed, which, at $4 per ton for the green root, and an average content of 7 per cent tannin would give a cost of $25 per ton for the dried extract, 75 per cent pure. To such an estimate as this, certainly 25 per cent should be added for contingencies, or say, in round numbers $30 per ton at the factory, which price will be assumed as the cost in discussing the question of markets and competition hereafter.

REGULATING HIS OWN FUNERAL.

A Topeka man of a practical turn of mind has made a will regulating his own funeral. A friend who is a parson is to come from a distance and say a prayer. Another friend, who is not a parson, not even a church member, is to make a short talk. Another friend, who is a woman and a sweet singer, is to request three musical friends—another woman and two men—to join with her in singing appropriate hymns, while another friend, a young fellow who learned the keyboard while "on the road" for a music house, is to preside at the organ. The undertaker is not to wear a plug hat, or a big diamond stud, or a dressy Prince Albert coat, or in any manner to appear as if he had snatched a moment from a banquet to bury the dead. He is to be modest and humble, giving the corpse a chance for public attention—its last chance. The pallbearers are not to be labeled. They will be distinguished from the corpse by the fact that they will be alive, and their duties will be understood without wearing a printed sign. They must be good fellows, too, bright fellows, and they are requested to beguile the way to the grave with cheerful anecdotes of their dead friend.

None of them may wear gloves—undertakers' gloves are so starchy and stuffy—and a man whose hands sweat is barred, it tarnishes the handles of the coffin. Grips and signs, swords, feathers and bands are prohibited. The parson who shall say the first prayer shall say the last, and "sprigs of myrtle" or "acacia" are forbidden. The pallbearers are to line up and witness the final closing of the grave. All the funeral arrangements are to be in charge of another friend, a woman, who shall comfort the family and see that chumps keep away from the house that brownies be not permitted to "sit up with the corpse." She shall receive flowers, if any, friends may bring in, return thanks for them in writing, and request the newspapers not to call them "floral offerings." She shall also detach cards from these pretty remembrances and preserve them for the family; the coffin—it shall not be called a "casket"—must not wear the appearance of a floral bargain counter. That moss-grown title head, "The Last Sad Rites," must not appear over the newspaper accounts of the funeral, and having done this last kind service in fairly good English and short sentences, city editors are requested to turn again their attention to life and the beautiful world, leaving the dead man to make his own way across the dark river.—Kansas City Star.

GOOD TO KNOW.

We are never to old to learn new and better ways of doing things, and if each of us would pass along good things we have learned in our many years of house-keeping it might at least be a great help to new beginners.

"Shall I disturb you if I sit here and watch you?" said my city visitor to me one morning as I was busy making pies in the kitchen.

"Not at all," I answered, "I am glad to have you with me," and before I had finished my pies that blessed little woman had let me into the secret of the nice, flaky, golden-brown crust of the bakers' pie, that I had always admired, but never been able to attain.

This is the way it is done: When you roll out the top crust put little dabs of lard over it, then sprinkle lightly with flour and a few drops of sweet milk, and beat lightly with the finger tips until it is smooth and pasty. Try it, you will be delighted, and do not forget to always add a little baking powder to the paste if you like it light and flaky.

When baking cookies turn the tins over and bake the cookies upon the bottom of the tins. You will find them much nicer, as they will rise better and will not scorch on the bottom, as they are likely to do otherwise, and here is the very best recipe for cookies that I ever used: Two cups of sugar, two eggs well beaten, one cup of butter, two-thirds cup of sour milk, one teaspoonful soda. Mix very soft and bake in a quick oven, flavor with vanilla, lemon or sprinkle with cocoanut.

If you wish your turnips to cook quickly, cut them around instead of from top to bottom.

A little sprinkle of sugar improves nearly all vegetables, especially turnips, cabbage and squash.—Lizzie Clark Hardy, in Farm, Field and Fireside.

A SAGE CONCLUSION.

"John," said the explorer's wife, "don't you think you had better be making preparations to find the North Pole?"

"No," he replied, "I'm willing to do my duty, but I'm not going to overdo it. I didn't lose the North Pole, in the first place."

"But the public expects you to go on in your efforts."

"No, it doesn't. If anybody'll come and convince me that he needs the North Pole in his business or that the North Pole would in any way contribute to his domestic happiness, I'll go out and find it for him. And that's as fair as any man could say."—Washington Star.

"Why, Mr. Councilor, you are trying to open the front door with your cigar." "Really now! I wonder if I've been smoking the latch key?"—Schone Blaue Donau.

INYO INDEPENDENT.

J. H. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY DE EMBER 20 1895

There seems to be a conflict of opinion between President Cleveland and Senator John Sherman in regard to the disposition of the public funds. The President states in his message that the receipts of revenue for the past year have been sufficient to pay the ordenary expenses of the government, and that the money received in exchange for bonds has been applied solely to satisfy the reserve fund required by law for the redemption of outstanding obligations and the redemption of paper currency. Senator Sherman is reported to have stated that it was a deplorable condition of affairs when national bonds have to be issued to meet the current expenses of the Government. As the President is the responsible party and knows whereof he speaks, his assertion is of more value than that of the Senator who is the author of the law demanding this reserve fund, and he is more worthy of belief. He states in his message that, at the time the first issue of bonds were made, in February, 1894, there was $18,000,000 in the public treasury aside from the reserve fund. In November, 1894, when the second issue was made there was over $42,000,000 of a surplus, and in February, 1895, when the third issue was made there was over $100,000,000. Not one dollar of the money obtained by the sale of bonds has ever been applied to the payment of government expenses. The calamity-howlers, who are so wise and so willing to make wild statements in regard to the administration national affairs, will do well to read this message carefully. By so doing they will ascertain that instead of using the credit of the people in issuing bonds to meet current expenses, the President has only been compelled to do so in order to fortify their credit and prevent a collapse. The law not only provides the manner in which it can be done, but compels the Administration to do so; and also inflicts upon it the necessity of sustaining an indistinguishable class of currency that is used for speculative purposes and the hoarding of gold. In fact, it forces the Executive to meet the demands of the speculators who purchase the greenbacks, which, although purchased in coin, must be reissued and again purchased. The only remedy that can be applied to prevent this speculative scheme is to repeal the law demanding a reserve fund by providing for the destruction of the paper currency when redeemed, and relegate the issue of such money to the banks for inter-commercial purposes. As the Republicans, with John Sherman as their great financial leader, have control of the legislative functions of the government, we shall expect them to devise some wise plan that will lead the country out of the difficulty and President Cleveland has promised to co-operate with them to secure that end. Will they do it?

A good many imperfectly informed McKinleyites denounce the present tariff law because it does not produce enough revenue to pay the expenses of the government, without knowing that it produces more revenue than the McKinley tariff law produced during the last year of its life. It was ingeniously devised to reduce the country's revenues, and in that respect it was a howling success.

Judge Dougherty of Santa Rosa has rendered a decision that county treasurers may deposit county funds in banks under the conditions imposed by the code, but the funds must always be accessible to the district attorney, auditor and chairman of the board of supervisors, whenever it is necessary for them to count the same. The deposits are made at the risk of the treasurer, but they cannot be term deposits and cannot draw interest.

An Arkansas Editor says of his state: "We have mountains so high that you can tickle the feet of the silver angels in heaven, and gorges so deep that you can descend to their homes and hand down ice to the good boys in the internal regions."

MAKING TURPENTINE

AN EXTENSIVE INDUSTRY IN CERTAIN SOUTHERN STATES.

How the Trees Are Tapped and the Resinous Gum Gathered—Departments and Divisions in the Work All Under the Keen Eye of the "Rider."

Dialect writers find a fruitful field among the "Tar Heels" of the Carolinas, Alabama and Georgia. In the cool depths of the turpentine woods, with the gashed trees yielding up their resinous gum, the balmy air and the picturesque "hackers," "dippers" and "scrapers," with the ever vigilant "rider" watching everything, is a phase in southern life which has long been the delight of authors and the pleasure of artists. The crudity of the implements and the stills used in making turpentine and rosin lend additional interest to this old industry, and the gypsylike habits of the turpentine makers add to their ragged, illiterate charms.

Turpentine is the distilled gum of the pine trees of North and South Carolina, Alabama, Georgia and part of Florida. The season begins when the first spring sap rises and ends when cold weather checks the flow of the tree's blood. In January or February the "hacker," with his keen bladed ax, begins the round which ends with the season. He is the expert of the woods and knows his trees and just how much hacking they will stand. His task is to cut the "boxes" in which the thick gum of the wounded tree will collect. A box is a wide incision about six inches deep, a wedge shaped cut in the tree, and he hacks from 50 to 100 boxes a day. The first boxes are cut near the roots of the tree, and they are cut as close together to the height of a man's head as can be done without killing the pine. The hacker leaves a width of bark between each box so as to preserve the vitality of the tree. When the trees are leased to the turpentine makers, the terms of the lease limit the number of boxes to each tree, but when it is desired to work the pine to the fullest extent the gashes are carried up to a height of 20 feet or more.

After the hacker comes the man who "corners" the boxes. This "corner" is a cut in the top of the box to guide the sap into the cavities left for the gum, and the man who "works" the "crop" goes systematically from box to box, starting the sap anew with fresh incisions, working in this way 10,000 boxes during the season. The sap or gum fills the boxes with a clear, sticky, thick fluid, and this is removed by the "dipper." Scattered through the woods are barrels in which the "dipper" deposits the gum, which is then hauled to the still. About a quart of sap is taken from each box by means of the trowel shaped scoop used by the dipper, and then the hacker comes along and starts the flow afresh by wounding the tree again. The turpentine maker watches his men closely, for the Tar Heels are an easy going people and require to be urged by the "rider," who goes through the woods on horseback examining the crop, hurrying the dippers and hackers and sending the barreled gum to the still.

The first or "virgin" sap which flows in the spring makes the best rosin, and the poorest is the product of the hardened gum which is left on the sides of the boxes when the sap "turns down" in the fall. This is removed by the "scraper," who moves through the woods with his scraping tool, gathering the leavings.

The still is a large copper vat hooded with a close fitting cover in which is a funnel which in turn is connected with the "worm" of the still. This worm runs down into another vat near at hand, and in this vat the fumes or vapor of the heated gum is distilled into turpentine. Fire under the copper vat heats the gum, and the volatile parts rise to the funnel, pass into the still and are condensed by the water in the second vat into spirits of turpentine. The residuum left in the vat is the rosin of commerce, which is passed through a series of strainers and sieves to the barrels, which are made on the spot. The turpentine, however, cannot be barreled so easily, for it will work through an ordinary barrel. It is placed in white pine barrels which have been coated inside with several coats of strong, hot glue until the barrel is impervious to the subtle fluid.

The trees are worked for five or six seasons, and then the turpentine maker moves to another part of the woods. He started in North Carolina, crossed over to South Carolina and is still moving toward the gulf. Forest fires destroy the pines faster than the hacker does, for the flames sweep over large areas before they die out. Careful owners of turpentine woods have the pine straw and fallen underbrush raked away from their trees before the season begins, and collecting this material in some safe spot wait for a quiet day when no wind will cool the wet finger, and then they burn the rakings.

Negroes are common laborers of the turpentine woods, but white men are plentiful. They live in rough shanties in the woods, with the stables for the mules and horses near at hand. No work is more healthful than turpentine making, for it is all out of doors in the depths of the balmy, health giving pines, free from the malaria of the swamps and from sudden changes of weather.—Chicago Record.

Horsepower.

The difference between nominal, indicated and effective horsepower often puzzles people. Nominal horsepower is an assumed quantity, used for the convenience of makers and buyers in describing the dimensions of the engines. Indicated horsepower is the amount shown by computations of the indicator diagram. Effective or actual horsepower is the work an engine can do or the difference between the indicated horsepower and the horsepower required to drive the engine when unloaded.—New York Tribune.

A dividend in accordance with law, and an order of the Board of Directors, made on the 5th day of July, 1895, so many shares of each parcel of such stock as may be necessary, will be sold at public auction, at the office of the company, Room 12, Rotunda Mills Building, San Francisco, California, on Wednesday, the 4th day of September, 1895, at the hour of one o'clock p. m. of said day, to pay delinquent assessments thereon, together with costs of advertising and expenses of sale.

W. W. SARGEANT, Secretary.

Office—Room 12, Rotunda, Mills Building, San Francisco, California.

POSTPONEMENT.

By order of the board of directors at a special meeting held at the office of the company on September 4th 1895 the above sale is postponed to Friday, the 4th day of October, 1895 at the same place and time of day.

W. W. SARGEANT, Secretary.

Office, Room 12, Rotunda Mills Building San Francisco, Cal.

POSTPONEMENT.

By order of the Board of Directors at the regular monthly meeting held at the office of the Company on October 3 1895 the above sale is postponed to Monday, the 2nd day of November, 1895 at the same place and time of day.

W. W. SARGEANT, Secretary.

Room 12 Rotunda Mills building San Francisco, California.

POSTPONEMENT.

By order of the Board of Directors at a special meeting held at the office of the company on December 2nd, 1895, the above sale is postponed to TUESDAY the 31st day of December, 1895, at the same place and time of day. W. W. SARGEANT, Secretary.

Office, Room 12, Rotunda Mills Building, San Francisco, California.

NEW ADVERTISEMENTS.

NOTICE OF COMMISSIONER'S SALE ON FORECLOSURE OF MORTGAGE.

SARAH C. F. WRINKLE, Plaintiff, vs. O. I. MAIRS, as Assignee of the Estates of Ambrose W. H. Smith and J. White Smith, Insolvent Debtors, Lucy C. Smith and Henrietta D. Smith, Defendants.

Under and by virtue of an order of Sale and decree of foreclosure issued out of the Superior Court of the County of Inyo, State of California, on the 7th day of December, 1895, in the above entitled action, wherein, Sarah C. F. Wrinkle, the above-named plaintiff, obtained a judgment and decree of foreclosure and sale against O. I. Mairs, as Assignee, etc. et als., the above-named defendants, for the sum of $1,082.51, in United States gold coin, which said decree was on the 10th day of December 1895, recorded in Judgment Book No. 1 of said Court, at page 540, I was appointed a commissioner to sell and I am commanded to sell:

All those certain lots, pieces and parcels of land situate, lying and being in the County of Inyo State of California, and particularly described as follows, to wit: The West half of the South-west quarter of Section 27, North-west quarter of the North-west quarter of Section 34, North-east quarter of the North east quarter of section 33, all in township 8 South, Range 33 East, M. D. M., containing 160 acres. Also an undivided one-eightieth interest in and to that certain ditch and water right situate in said Inyo County, known as the "Rawson, Ford and Connelly Ditch." Together with all and singular the tenements, hereditaments and appurtenances thereunto belonging, or in anywise appertaining.

Notice is hereby given that on Saturday, the 4th day of January, 1896 at twelve o'clock, noon, of that day, in front of the Court House, in the town of Independence, in said Inyo County, I will, in obedience to said order of sale and decree of foreclosure, sell the above described property, or so much thereof as may be necessary to satisfy plaintiff's judgment, with interest thereon and costs, to the highest and best bidder for cash in gold coin of the United States.

Dated at Independence, Cal., Dec. 13, 1895.

J. R. MCOFFETT, Commissioner.

P. H. MACK, Attorney for Plaintiff.

DESERT LAND FINAL PROOF.

U. S. LAND OFFICE
Independence, Cal. December 3, 1895.

Notice is hereby given that Jassie F. McIver, of Citrus, Inyo Co., Cal., has filed notice of intention to make proof on her desert land claim No. 616, on the N½ Sec. 9, Tp. 14 S., R. 36 E., M. D. M. before Register and Receiver at Independence, Cal., on Thursday, the 23d day of January, 1896.

She names the following witnesses to prove the complete irrigation and reclamation of said land: Charles A. Skinner of Independence, Cal., Gilbert Christie, Joseph V. Skinner and John F. Beane, all of Citrus, Inyo Co., Cal.

IRV. H. MULHOLLAND, Register.

TIMBER CULTURE FINAL PROOF.

U. S. LAND OFFICE,
Independence, Cal. December 7, 1895.

Notice is hereby given that William Lester, Executor of the will of John A. Hannah, deceased, filed notice of intention to make final proof before Register and Receiver at Independence, Cal., on Saturday, the 14th day of January 1896, on timber culture entry No. 425 for the S½ of section No. 9 in Township 10 South, Range No. 34 E. M. D. M.

He names as witnesses: James Jones, James Conners, George H. Yarnell, and John Welch, all of Bishop, Inyo County, Cal.

IRV. H. MULHOLLAND, Register.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of the power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY the 8th day of March 1896, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise, acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows to wit:

The South half of the South-east quarter and the South half of the south west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit: Commencing at the South-east corner of the south east quarter of North-east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 38-100; thence North-east following the meanderings of the bed of the Creek along its North branch to Edwards street, in the town of Independence, thence following said Edwards street along its West line to the place of beginning, six and 80-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the county Recorder of said Inyo county, having been the residence of said John A. Hallhah, deceased, at the time of his death.

Lot Nos. 2 and 4, in Block No. 22, in the town of Independence County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided of in and to that certain mining claim, lead or ledge situate lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "Inspiration Lode."

That certain lot, piece or parcel of land situate, lying and being in the County of Inyo, State of California, commencing at a point twelve and nine-twentieths (12 9-20) rods south of the general corner of the fractions of the North-east quarter of Section No. twelve (12) and the South west quarter of the South-east quarter of Section No. one (1) in Township No. three (3) North of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South sixty eight and seven-tenths (68 7-10) rods; thence West twenty-three (23) rods; thence North-westerly along a small branch or swale to a point twenty four (24) rods North of the general corner of the North-east quarter of the South-east quarter, and the Northwest quarter and the North-east quarter of the North-west quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-one and three-twentieths (41 3-20) rods; thence East eighty (80) rods to the place of beginning, containing thirty acres; being the south ten acres of the Capitan lode of the Inspiration Water Company.

Bids or offers must be in writing and will be received at the store of the undersigned, in Georgetown, Cal., and may be left at any place, or at the office of the Inyo Independent, Independence, Cal., or delivered to the undersigned personally or may be filed with the Clerk of said Superior Court at any time before publication of the notice of sale.

The executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, in lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court. Deed at the expense of purchaser.

WILLIAM L. HUNTER.
Executor of the Last Will and Testament of John Allen Hannah deceased.

All are cordially invited to be present at these services.

THOS. H. NICHOLAS,
Pastor.

MARRIED.

JENKINS—SCOVIL—At Georges Creek, December 15, 1895, by Rev. T. H. Nicholas, W. H. Jenkins and Mrs. Isabella Scovil.

Letters remaining uncalled for at the Independence Post-Office, this date.

J. E. Bell.	Fred Bicknell.
Marks Becker	Thomas Brady.
Matthew Duke.	Mary Harbor
I. McLaughlin.	J. M. Mills.
Wm. Robinson.	

This is the shortest day of the year.

E. Robinson visited Bishop last Saturday and Sunday.

R. S. Miner Esq. departed for Bridgeport on Thursday.

Supervisor Eldred came down from Big Pine last Sunday.

Mr. and Mrs. E. M. Clarke returned from Bishop last Monday.

W. R. Tibbetts was down from Big Pine last Wednesday.

Henry Rhine will leave for the city within a couple of weeks.

Miss Maud Cook is expected back from Hawthorne on Monday's train.

Don't forget the ball New Years Eve. Let 1896 begin with a wave of joy.

S. G. Sanders Esq. was down from Bishop a couple of days last week.

Arlie Mairs and Jack Welch got back Wednesday from their trip to Ubaheba.

Wells Barnes will leave for his mine over at the White Hills to-morrow morning.

Mrs. W. T. Bunney and her daughter Maggie arrived home from Los Angeles yesterday morning.

Pat Keys was in from Beveridge the first of the week. Tim Madden and Neel Bell returned with him.

Arthur Robinson has received a handsome silver medal as special correspondent for the Christmas *Examiner*.

J. R. Moffett returned from Bishop last Sunday. Harmon Hankhammer returning with him from Big Pine.

Mrs. Baker, who has been visiting friends in this vicinity for several weeks, returned to her home at Big Pine to-day.

District Attorney Forbes went to Bishop last Friday on business in the Justice's Court of that place, returning Saturday.

Judge Arnot left on last Tuesday morning's train to spend the holidays at home. He will return about the sixth of January.

The first lot of bullion from the Reward Mining Company's new mill over at the Hirsh mine, was shipped the last part of last week from the express office here. The shipment consisted of 178 ounces.

Messrs Hays and Miller arrived here Sunday last from Bishop, where they started with their band of 350 head of beef cattle. They camped here over night and continued south the next morning.

COURT NOTES.

HON. N. D. ARNOT, presiding.

Lucy B. Bell vs. O. I. Mairs; action on foreclosure of mortgage—Decree ordered entered.

Woodin vs. Anthony—Plaintiff allowed judgmemnt for sum of $50.42 and costs.

The Milton Lyceum

The last meeting of the Milton Lyceum was called to order Dec. 14. at seven o'clock p. m. by the President.

The literary exercises opened with music: 'Away down on the Swanee River.' The tragic story of 'Kate Maloney,' as recited by Leon Marks, elicited much applause. The recitation by Miss Elma Parker, entitled 'Friar Philip,' was well received. An essay on the subject of 'Friendship' was read by Mrs. Arthur Bell; the writer has a pleasing style and the composition displayed a careful preparation. Other declamations, essays and readings consumed the time until recess.

The question of high license was ably supported by Miss Maggie Gorman and Carl Walter. Prohibition, as advocated by Arthur Marks, and Mr. H. D. Gill won the approbation of the jury.

The society closed with a chorus.

CARL WALTER, Sec'y.

Fire Fiend

A dastardly attempt at incendiarism was made in town last Friday night about 9:30 p. m. Some miscreant helped himself to a bottle of coal oil from the can used in Rhine's store, and poured the contents over a sack of charcoal, which was lying under and at the back end of the building. A shingle was then placed on the sack of charcoal upon which was set a lighted candle, that was the way the job stood when discovered by Mrs. Rhine at 9:30 o'clock that night. Tracks were found leading from the scene of operations out behind the fence and from that position it was evident the scoundrel waited patiently for the flames to get under headway. The footprints were traced for a short distance further and finally lost among others. So far there has been found no clue to the perpetrator.

Mason Valley News.

Tom Rickey is killing eighteen horses a week and feeding them to the hogs. The meat is boiled in a cauldron with grain and is very fattening. People who have tried horse stakes say they are very palatable, a good deal better than tough beef.—*Times.*

Last Thursday night Henry Krantz living near the creamery lost eight stacks of alfalfa hay by fire, which was discovered just after dark. Mr. Krantz had just made arrangements to feed his hay and was away after stock to feed it to. It is presumed that the fire was caused by the wadding from some Piute's gun, as they had been hunting in that end of the valley that day.—*Rust'er*

Hedges For Barbed Wire Fences.

After a barbed wire fence is made the next point is to prevent injury to stock. A hedge of some kind, with wire running through the hedge, will protect the stock. Even if the hedge is young, it serves to show the animals where to stop. They will not knowingly run against a barbed wire fence, but it sometimes happens that they do not see the wires.

Colder

The following dispatch was received at the Weather Bureau Office this morning at nine o'clock, from San Francisco:

"Rain or snow, warmer to-day followed by cold wave to-night and Saturday."

HAMMON.

The 'cold wave' that arrived last Sunday acted nearly the same as the previous one about three weeks ago; hard gusts of wind commenced to blow about five o'clock in the morning and by noon a light shower of rain commenced falling which continued for a couple of hours, the sky remained cloudy until evening when the clouds broke and the storm hung over the mountains a good part of the night, leaving a fresh coat of snow on the Sierras.

L. Cobarth and Wm. Harkness, mining experts, spent several days last week looking over the Bolinger properties in the interest of Craig Chambers. Some assessment work will be done and two or more of the mines will eventually be patented.

Messrs J. L. Bourland, R. McPherson, A. Harwood and M. C. Hall arrived here last Monday morning at nine o'clock, having driven through from Bishop that morning. They came down on business in the Land Office and returned the next day.

Coolgardie.

Rich new finds are being constantly reported from Coolgardie gold fields. Coolgardie, Australia, is an accessible point, reached by steamer to Fremantle, thence by rail to Southern Cross and team to destination. The trip to Australia on the fine steamers of the Oceanic Steamship Company via Honolulu, Samoa, and New Zealand is pleasure sailing the day long. This line tickets passengers to Cape Town, South Africa. Map of Coolgardie district and Pacific ports reached by the Oceanic Steamship Company is mailed free to any address by the O. S. S. Co. 114 Montgomery St. San Francisco.

Stray Items From Outside Precincts

R. Lockett and his brother Harry have struck a new lead mine three or four miles from Cerro Gordo which assays nearly fifty per cent lead and forty ounces in silver and they are working on it at present and may ship some ore in 1896.

Frank White has quit the soda works and went to Mojave last week en-route to Arizona. He says that some of the Inyo County boys, Max Skinner, Bill Johnson and C. Carrasco and L. Padilla and others may spend the holidays in Inyo this year. The Inyo delagation at Mojave is quite large and respectable.

James Holland has located a mine or relocated an old mine near Swansea and will send three or four men to work next week.

There is considerable sickness at Modock and other points in the mining sections lately. P. Obrien is on the sick list and under the doctor's care at Lone Pine.

The Inyo Marble Quarry has been shut down and it is said that Mr. A. Staudinger has been placed in charge as watchman.

The mercury got pretty low down around the lake the last few days. It registered 20 at Keeler and at Lone Pine it was about 15. The small streams flowing into Lone Pine creek were frozen solid.

Five or six cars of soda a week are being shipped from Keeler to San Francisco. It keeps quite a number of men busy at work crushing the soda with steam crushers.

Mr. and Mrs. E. T. Loy and boy went to near Los Angeles on Monday evening's stage.

Gus Stevens of San Francisco is working for Thos. Boland in the store at present. Also W. H. Lang of Mojave.

Abe Diaz of Lone Pine is on the sick list.

Wm. Arcularius and Fred Strohmeyer of Georges Creek went to Los Angeles last week. D. C. Lane will return to Pomona for the holidays by next stage.

A relic of old times was picked up in Coso district a short time ago. It was a rusty pistol of the old cap percussion style and it was fully loaded. And along side of it was a pair of Sheriffs bracelets one of which was broken and in the other was a piece of human bone. Evidently some prisoner broke jail and got away only to die of thirst and starvation. The two relics were taken to Los Angeles by Mr. E. T. Loy.

W. Butler, lately of Independence has gone to work for P. Clinton at the Newtown mine.

Ben Whitmore of Hawthorne is braking extra on the train this week.

John Shepherd of Georges Creek shipped Sam Thomas a ten ton lot of hay last week. It is fine grass hay and can't be beat.

Wishing all a Merry Christmas,
Yours truly,
NEW YEARS.

Arrangements are steadily progressing to make an enjoyable time for all who attend the Christmas tree next Tuesday evening. There will also be a tree at the Fort on the same evening.

TERRORS OF THE RED SEA.

"The veritable hell of our earth," remarked the Calcutta representative of a New York firm, home on his biennial vacation, the other day when he saw a cable dispatch stating that the invalid soldiers of France's Madagascan campaign would be returned via the Suez Canal instead of voyaging around the Cape of Good Hope. "It is a sea that is literally infernal in its heat. It does not look large on the maps, but it stretches for nearly fifteen hunded miles between the incandescent shores of Egypt and Arabia, and its greatest width is less than two hundred.

"I have traversed it six times, and I have been on the verge of collapse every trip when we reached Aden or Port Said, so I think it likely that many of the French sick and wounded soldiers will not survive the journey.

"The heat is terrible. For nine months in the year the mercury remains at about 98 degrees in the shade, and when there is a breeze from the torrid deserts to the west or east it is hot as the breath of a furnace. A year frequently goes by without a drop of rain falling, and I have heard incredible stories of the heat which the desert sands along its banks seem to store up. I have never cared to land to verify any of them, but an Englishman told me that he put a thermometer in the sand once and the mercury slid up to 178 degrees.

"The water of the Red Sea, as may be imagined, is also very warm, and I have heard it asserted that it loses by evaporation each year enough to make itself an aqueous blanket twenty-three feet thick. Naturally it is one of the saltest bodies of water on the globe. It is really a sort of an arm of the Indian Ocean, you know, and receives no water to speak of from any other source. It has been estimated that if its supply were cut off by closing the Strait of Babel Mandeb and the Suez Canal it would take only a few years for the fierce sun to dry it up entirely.

"It takes the P. and O. steamers about a week to run from Aden, at the southern end, in Arabia, to Port Said on the canal, and going either way the boats always stop at one or the other of these two ports to take on a gang of Arab firemen, for no other race has been found that can stand the awful heat of the furnace room in this torrid climate. These Arabs are thin, muscular fellows, almost as dark as negroes, and it is worth running the risk of fainting to get a glimpse of them when they are at work stark naked down in the boiler-room of the vessel, looking like a band of devils feeding the infernal fires."

THE MAN IN THE TREE WAS CONVERTED

Among the pleasant memories awakened by the approaching camp meeting at Desplaines are some that border on the ludicrous and are in their way amusing. Among others who have begun their life's work at this place is the Rev. Dr. Eddy who preached his first sermon beneath the canopy formed by the trees in the woods surrounding camp grounds. Here also he made his first convert while preaching as he supposed to the flitting birds and climbing squirrels. The way he did it was this:

The Rev. Dr. Eddy was at that time a theological student at the Northwestern University. Accompanied by some of his classmates he went to the camp meeting where he was down on the programme to preach his first sermon. Here they found a young man named Fred Houghton, who was much under conviction because of his sins. Soon all the theological students had surrounded the penitent and were exhorting him to accept repentance. Every influence known to the future divines was brought to bear on Houghton until it became evident that it was becoming somewhat wearisome to him, and he went to the woods. Along toward evening, like Zacheus of old, who climed up into a sycamore tree, he ascended into a basswood tree, whose limbs nearly touched the ground, and there pursued his meditations.

Dr. Eddy was to preach that night, and felt nervous and apprehensive. As the shades of night were approaching he also hied himself to the woods and rehearsed his sermon beneath the tree in which Houghton was ensconced. Thinking himself alone, he warmed up and in eloquent tones exhorted his imaginary hearers to accept the faith. When he had finished great was his surprise when Houghton decended from the tree and said he was at last convinced, and declared that Dr. Eddy's sermon had saved him. In after years Dr. Eddy declared that had Houghton shouted while he was in the midst of his funeral sermon over Houghton's remains he would not have been more surprised than he was when Houghton came down the tree. —Chicago Tribune.

QUITE POSSIBLE.

A correspondent asks if it is not practicable for a person to carry enough electricity and use it for the purpose of heating apparatus placed under the clothing. We resume it is. A few 200 ampere-hour cells scattered among the pockets, connected in series, ought to do the business. They would probably weigh 500 pounds or more, and to this must be added the weight of heat apparatus. The latter need not necessarily be in the from of a street-car heater; it could be spread out on a flat surface. It would not look well, for instance, to carry a box-shaped heater across the stomach. Care must be taken to prevent short-circuiting, which might result in roasting to death.—Electrical Age.

It is little known, even among the Frenchmen, that the anti-anarchism law passed in France in 1892 imposes capital punishment for the deposit with criminal intent of explosives in any pulbic or private places, even when no explosion results.

Those Awful Telegrams.

"What is it, Mamie?"

"It's a boy, mum, with a telegraft."

"A telegram? Oh, ask him if James is killed!"

"He says he doesn't know, mum."

"Ask him what he does know about it."

"He says all he knows about it is that its marked 'collect,' and he wants his money."

"Oh, dear! Oh, dear! What shall I do? Here, Mamie, here's the purse. Pay him. Pay him whatever he asks. Oh, my poor James! I just knew something would happen to him before he went away this morning! Will they bring him home in an ambulance, Mamie?"

"I s'pose so, mum. Maybe you'd better read the telegraft."

"I can't! I can't! Oh, it serves me right for not kissing him three times when he left. And we've been married such a short time too!"

"Why don't you open the telegraft, mum?"

"Well, I suppose I must; but, oh, I can't tell you how I dread it!"

Reads telegram:

Will bring friend home to dinner. JAMES.

"The heartless beast!"—New York Journal.

A Liberal Education.

The late Professor Huxley held this opinion as to what constitutes a liberal education:

The man has a liberal education who has been so trained in youth that his body is the ready servant of his will and does with ease and pleasure all the work that, as a mechanism, it is capable of; whose intellect is a clear, cold logical engine, with all its parts of equal strength and in smooth working order, ready, like the steam engine, to be turned to any kind of work and spin the gossamers as well as forge the anchors of the mind; whose mind is stored with a knowledge of the great and fundamental truths of nature and of the laws of her operations; one who, no stunted ascetic, is full of life and fire, but whose passions are trained to come to halt by a vigorous will, the servant of a tender conscience; who has learned to love all beauty, whether of nature or of art, to hate all vileness and to respect others as himself. Such a one, and no other, has had a liberal education.

Opium Eating In the Orient.

Opium eating, according to the Maharaja Bahadur of Durbhanga, is largely practiced in Rajputana on festive occasions as a token of welcome to guests and friends. When two enemies wish to end a long standing feud, they generally go through the following ceremony: They each drink a small quantity of the preparation of opium called "amulpani" from the hands of the other, and this is regarded as making the ties of friendship inviolable. In certain localities opium is consumed at funerals, marriages, betrothals and other ceremonies. Among the Kathis of Kathiwar it would be considered an offense if the guest refused to take opium on occasions like these. In the Punjab a large proportion of the adult male population take opium in small doses as a stimulant without much or any apparent harm. It is looked upon as a digestive and a very beneficial tonic for a man who has reached middle age.—London News.

Unequal Distribution.

"I've been reading a strange story in the paper," said Miss Sereleaf to her friend, Mrs. Snaggs.

"What is it?"

"It's about a man who came home after an absence of 12 years and found his wife married to another."

"What's strange about that? I've heard of such things."

"Both men claim the woman."

"Well?"

"Well, I think that is very unfair. Some women wait year after year for a husband who never comes, and others have two men claiming her at one time. I think matters are arranged very unequally in this world."

And Miss Sereleaf sat down and wrung her hands.—Pittsburg Chronicle-Telegraph.

Afghan Ways.

The Afghans have a noble maxim, worthy of any stoic: "If thou hast, eat; if thou hast not, die." Unfortunately they do not live up to that, and in practice it becomes: "If thou hast, eat; if thou hast not, take." The ideal of a man is to live on his neighbors. The Afridis of the Khaiber pass lived for centuries upon the plunder of caravans till the British government enlisted these hereditary robbers as regular gendarmes and compromised for their right of plunder by a regular annuity. When a child is born, his mother bores a hole through the mud wall of the hut and makes it pass through, saying, "Ghal zai" (Be a good robber, my child).—Selected Essays of James Darmesteter.

She Tunes Pianos.

Miss Jean Day of Boston is a skilled piano tuner. This young lady is meeting with the opposition which a woman always encounters in entering upon a novel line of work, but she has given complete satisfaction to those who have committed their pianos to her care. Miss Day was being educated as a musician and showed great promise, but was compelled to quit her studies owing to the partial failure of her eyesight.—Boston Letter.

Speaks From Experience.

A lady from South Dakota asks a long list of questions about woman suffrage in Wyoming. It is enough to say that, after trying woman suffrage for 20 years, we here are entirely satisfied with its workings and unanimously incorporated it in our state constitution as the fundamental law of the land. We have never seen one of the evil results predicted by old fogies, and its effects have been only good, and that continually.—Laramie (Wy.) Sentinel.

Fashion is gentility running away from vulgarity and afraid of being overtaken by it. It is a sign the two things are not far asunder.—Hazlitt.

THE DESPISED CENT.

San Francisco Has Always Rejected It, but Is Now Relenting.

Dr. Stebbins of San Francisco, who is counted California's brainiest preacher, spoke for local civilization in an odd way on a recent Sunday, when he was delivering a sermon on the 33 years of his occupancy of the pulpit that was once Starr King's. Our vital need, according to the doctor, is to bid farewell to 1849 and accommodate ourselves to the spirit of 1895. Sober prudence, he thinks, is better than careless lavishness. He would welcome the domestication of the penny because the prevalence of that small coin would impart thought for the little things, due attention of which tends to make life happier and happiness more secure. It is the first time that a San Francisco pulpit has perceived the social and moral significance of the cent, and the sermon has made an impression. It will help toward the acceptance of the penny, which will arrive and stay, as the once equally despised nickel forced itself on us and gave the dime some dignity.

A dozen years ago the nickel was a petty and pride hurting thing. Men were ashamed to be seen with it, though women, less sensitive to the accusation of meanness, employed it freely long before it dared show its face in saloons, restaurants and cigar stands. And the women have been accepting the penny at the grocery and dry goods stores for a good while. Men's attempts on a large and conspicuous scale to introduce it have failed. In 1870, when Henry George started The Post, it was a penny paper, and the uniformed newsboys were supplied with pocketfuls of new coppers to make change. The public declined them, though. Eight years ago The Post, under General Sheehan's management, tried it again, with no better luck. Important retail houses have endeavored to spread the penny, but all these artificial efforts have not converted the public, which, through a queer perversion of the idea of what is open handed, has preferred to go on being overcharged several hundred per cent in small transactions. Customs are not to be created to order. The penny, already in use by careful housewives, especially those in the working people's districts south of Market street, will, I think, be in general circulation within a year or two.—Oakland (Cal.) Tribune.

The Parasitic Growth of Hair.

All of the early writers on the make up of the human frame and its adornments invariably referred to the hair as being an "excrement" and most of them held that it was fed on substances similar to itself. The odd notions of the early anatomists and physiologists, as well as the occult philosophers, respecting the growth and functions of the hair were the basis of many old time superstitions regarding that constituent of the human body. The ancient philosophers declared that the hair "generated in the fuliginous parts of the blood," and that it was "exhaled by the heat of the body," and that it "becomes firm and fibrous on exposure to the atmosphere," presumably in the same manner that the fluid ejected by the spider becomes a "web" as soon as the air strikes it. In modern times, however, every idea respecting the character and growth of hair has changed. The scientists now universally agree that the hair properly and truly lives and receives its nourishment from the scalp and adjoining tissues. It is true, however, that they take upon themselves the nature of parasitic plants.

They grow as vegetation does, and each separate filament has a distinct life and economy. That they derive their nourishment and owe their existence to the juices taken up from the flesh and blood there is no doubt. However, after all, it cannot be that this food is taken up from what the physiologists term "nutritious juices," for we know that hair will live and thrive even though the body starve or be wasted by disease. In many instances, in truth, the hair thrives and becomes most luxuriant when the body is most shrunken and shriveled by wasting ailments. And, furthermore, in rare instances it has been known to flourish after animal life in the body had ceased to exist, and even after decay had set in the skin and flesh to which it was attached.—St. Louis Republic.

Nothing Like Bidding Up.

A lot of people were present at an auction sale of Japanese goods the other day.

"How much am I bid for this exquisite vase?" asked the auctioneer, holding it above his head.

"Ten shillings," responded an elderly lady, sitting in one of the front seats.

"That's a shame," cried the man with the hammer. "This vase, as a work of art, is worth four times the sum. Why, look at it. Will an intelligent audience allow such a sacrifice?"

"Twelve and six," came in the same woman's voice.

"Well, well, well! Can't you see that this is a treasure, and you stand here and allow it to be given away for such a paltry sum?"

"Fifteen shillings." Again it was the same bidder speaking.

"Fifteen shillings! The very idea!" ejaculated the auctioneer. "I never saw the like. Come, good people, what is the meaning of this? One of the mikado's especial designs slighted in such a manner! It is a reflection on your taste."

"Seventeen and six," said the solitary bidder.

"It is too costly, too precious, and too rare in pattern. Wake up, or I'll put it back in the box."

"A pound," the woman said.

"Well, it doesn't seem as if I can get any more, so here goes. A pound—once, twice, three times! Sold to the lady there at that shameful figure."

The lady stepped up, paid for and received her parcel, and departed, apparently without noticing the smiles of the audience.—London Tit-Bits.

A School on Wheels.

A traveling man in the Philadelphia Record tells of a most peculiar school in Kentucky which is built on wheels. "When night comes," he says, "a pair of mules pull it to the home of the trustee, and the next morning it is drawn back to its daytime location. The mules go and come on schedule time, and if the school is a little slow about dismissing in the afternoon the whole outfit is apt to be given a free ride. A day's supply of water and wood is put aboard by the trustee every morning before the schoolhouse sets out upon its journey. The teacher boards with the trustee and needs no carriage. At night a bulldog is chained beneath the little frame building, and a bad man, armed with a winchester, sleeps inside of it. All of this came about because some one threatened to burn the schoolhouse. Why the trustee does not have the building located in his own yard and save the trouble of hauling it back and forth I do not know, unless it is to comply with some legal technicality."

Stamped.

"Grandpapa," asked his inquisitive grandson, "do hens make their own eggs?"

"Yes," replied the old gentleman, "indeed they do, Johnnie."

"And do they always put the yolk in the middle?"

"They do indeed, Johnnie."

"And do they put the white around it to keep the yellow from rubbing off."

"Quite likely, my inquisitive little boy."

"And then, grandpapa, who sews the cover on?"

This stumped the old gentleman, and he barricaded Johnnie's mouth with a lollipop.—Exchange.

SMALL CLAMS.

Size Limited to One Inch in Thickness.

LONG ISLAND DIGGERS IN TROUBLE.

Interesting Suit Involving the Future of of the Luscious and Popular Shellfish—the New Law.

The clam is making any amount of trouble nowadays. It is the topic of a controversy that is well nigh as much unsettled as the Excise laws. The difficulty has been made by one or two short sentences in the new fish, game and forest statutes (1895,) and there are some lively times ahead and much acrimony in the fishing interest.

It is just now the season when the "clammers" on both shores of Long Island Sound and on the Massachusetts Coast are out for their prey. Clamming yields a precarious sort of livelihood at the best, but during certain months of the year there is money in good hauls. Though for the time oysters have again come into favor, there is nevertheless a continued and steady demand for clams on the part of the big hotels and restaurants. What this trade wishes is the very small clam, for fashion has decreed that the smaller the clam as a rule the tastier and more succulent. For large clams there is little or no demand.

There is a general impression that clams spawn most when they are very young, that is when they are very small. Hence, the argument was that clammers ought to be prohibited by law for dragging small clams out of their watery depths. The fishery statute of 1893 therefore prohibited the catching of clams of "less than an inch and a half in thickness." The laws of 1895 went this one better, and said that no clams should be taken "less than one inch in thickness."

The clammers are therefore in something of a predicament. They are prohibited from catching and selling clams of less than an inch across the shell, and yet it is just those fine little clams that their trade requires. The clammers of Connecticut and Massachusetts have no such laws to fight against, and therefore can easily take away the trade of the Long Island clammers. Nor is it at all certain that the new statute is based on anything like reason or common sense, for it is yet to be proved that the clam supply will be injured by all sizes being taken freely as they are caught, and it is also to be proved that clams really do spawn more when they are young and small.

A veteran clammer summed up the situation very concisely the other day. "Clams is like poultry," he said, "in this way. The law says that we shan't take any small clams at all, arguin' that if we do we'll gradually clean out the supply. Why, they might just as well pass a law to say that there shan't be any spring chickens killed, for if they are they won't grow up to be hens. Little clams is that soft an' delicate, comparin' 'em with bigger ones, like spring chickens is to roosters."

Already six Long Island clammers are in trouble. Edward Thompson, the Shell-fish Commissioner of the newly appointed commission, lives down at Northport, Long Island Being an oyster planter himself, he has facilities of knowing just what occurs in the bay in relation to clamming. Six men, Augustus Tuttle, Joseph Soper, Sr., Joseph Soper, Jr., Edward Soper, Seeley Hall and Joseph Conklin, have been arrested for illegal clam catching. Oyster Protector Hicks, who made a raid and arrested the fishermen, will make efforts to secure a conviction, for according to law one-half the fines imposed goes into the pockets of the man who makes the arrest.

But the six fishermen will have a very prtty defense to put up. The new law says: "And no hard or round clam less than one inch in thickness shall be caught or possessed, but, if caught, shall be returned to the water from which they are taken without unnecessary injury."

The defense will be that the small clams, for taking which these men were arrested, were caught in the rakes used with a large number of others, and that instead of sorting them then and there the men intended to wait until a full boatload had been obtained and to sort them afterwards on shore, picking out the clams under legal size carefully, and then rowing back and returning them to their bed. The law does not say that small clams caught should be returned to the water immediately, and so the only way the government may expect to win its case will be to prove that these clams were necessarily injured by being kept out of the water so long.

The statute not only attaches a penalty to the "catching" of very small clams, but also to their possession. That is, if small-sized clams are found in the kitchen or served at the restaurant table of any of the hotels or eating houses, the proprietors can be arrested, providing that it can be proved that they are New York clams. If they are Massachusetts or Connecticut clams they are quite legal, for it has not been suggested that the law can be argued as applying to clams caught in the waters of another State.

This statute only affects hard or deep-water clams, however. There are no regulations of any kind regarding the catching of soft-shell clams. While clams of the hard shell are taken from a boat out in deep water by means of a clam rake, soft clams are invariably dug for. They generally burrow in the sand between high and low tide mark, and men go out in their bare feet and, with trousers rolled high up, dig them up with short handled hoes. It is easy to tell where a soft clam has ensconced himself, for as he burrows he spouts up a little jet of water, and the sands of a beach at low tide are marked with a series of little holes showing each clam's location.

In a tavern at Leer, Holland, a young fool lately bet 30 cents that he could eat a thousand flies at one sitting. The flies were caught and put in a beer glass, and then he won.

PUSHING THE WORK.

But little has been said recently about the work looking to the Southern Pacific coming into San Bernardino, but investigation shows that without much noise of trumpets the work is going on and such work as makes it improbable that what this city may or may not do will affect the situation. A crew of track builders and repairers have been at work beyond Colton, and all the sharp corners between there and Riverside have been straightened out, and made passable for regular passenger trains, and the bridge over the Santa Ana river has been strengthened until it is prefectly safe for heavy engines. In fact, both freight and passenger trains can be run into Riverside from Colton. The haste at that end of the line is evidently for the sake of getting "in" on this season's orange crop, and all the force has been put on on that end of the line to get it into shape. Word came from there yesterday that a party of surveyors were at work laying out a cut-off, which will take the line out of Iowa and Massachusetts avenue, and at the same time shorten the line half a mile.

Fred—"What does the grocer do with the things he sells?"

Ben—"Ties them up."

Fred—"No; gives them a weigh."—Harper's Round Table.

BRUISERS.

No set of men in the world more aptly illustrate a certain important point than prize fighters. The point is with regard to the punishment they give and have to take. Whether victors or vanquished, they come out of a contest bruised from head to foot. That such men should be seen with all the blue spots cured seems marvelous, until we know that they have used St. Jacobs Oil. Everyone knows the virtue of the great remedy and that it will cure bruises, and the moral is all can profit by the example. If the fighter knows he can be so easily cured, it is a lesson to all subject to hurts—they will lose no time from work if they use it.

It is all very well for an engine to have an eccentric rod, but it should not have an eccentric engineer.

WHEN WRINKLES SEAM THE BROW.

And the locks grow scant and silvery, infirmities of age come on apace. To retard and ameliorate these is one of the benign effects of Hostetter's Stomach Bitters, a medicine to which the aged and infirm can resort as a safe solace and invigorant. It counteracts a tendency to rheumatism and neuralgia, improves digestion, rectifies biliousness and overcomes malaria. A wineglass before retiring promotes slumber.

When King Canute ordered the waves to roll back, he thought he was talking to a surf.

DEAFNESS CANNOT BE CURED

by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or imperfect hearing, and, when it is entirely closed deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by catarrh, which is nothing but an inflamed condition of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars, free.

The man who wanted "little here below" went into the newspaper business.

I am entirely cured of hemorrhage of lungs by Piso's Cure for Consumption.—LOUISA LINDAMAN, Bethany, Mo., Jan. 8, '94.

It is clever of us to bury an old animosity, but it isn't the thing to put a tombstone over it.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

Dr. Ludlum Hill, 1443 Market street, near 11th, S. F.; no charge for extracting when plates are made; old plates made over like new; teeth from $8 per set; extracting 50c; gas given.

F. M. Peter, leading costumer, theatrical, masquerade costumes, wigs and play-books. Country masquerade balls a specialty. 729 Market St., S. F.

Buy your Cloaks and Fur Capes at actual wholesale prices. Factory, 20 Sansome street, San Francisco—up stairs. Garments made to order without extra charge.

FITS.—All Fits stopped free by Dr. Kline's Great Nerve Restorer. No Fits after the first day's use. Marvelous cures. Treatise and $2.00 trial bottle free to Fit cases. Send to Dr. Kline, 931 Arch St., Phila., Pa.

Try Germea for Breakfast.

KNOWLEDGE

Brings comfort and improvement and tends to personal enjoyment when rightly used. The many, who live better than others and enjoy life more, with less expenditure, by more promptly adapting the world's best products to the needs of physical being, will attest the value to health of the pure liquid laxative principles embraced in the remedy, Syrup of Figs.

Its excellence is due to its presenting in the form most acceptable and pleasant to the taste, the refreshing and truly beneficial properties of a perfect laxative; effectually cleansing the system, dispelling colds, headaches and fevers and permanently curing constipation. It has given satisfaction to millions and met with the approval of the medical profession, because it acts on the Kidneys, Liver and Bowels without weakening them and it is perfectly free from every objectionable substance.

Syrup of Figs is for sale by all druggists in 50c and $1 bottles, but it is manufactured by the California Fig Syrup Co. only, whose name is printed on every package, also the name, Syrup of Figs, and being well informed, you will not accept any substitute if offered.

FRAZER AXLE GREASE

BEST IN THE WORLD

Its wearing qualities are unsurpassed, actually outlasting two boxes of any other brand. Free from Animal Oils. GET THE GENUINE.

Erysipelas

Has been my affliction from childhood. It was caused by impure blood, and every spring I was sure to have a long spell, and my general health would give way. Doctors did me but little good, and I became despondent. Last spring erysipelas settled in my eyes and I became totally blind for several weeks. Hood's Sarsaparilla was recommended, and after taking one bottle my sight gradually returned, my blood became purified and I was restored to good health. With Hood's Sarsaparilla one is well armed to meet any foe."—MISS LULU LEE, 144 Market Street, Memphis, Tenn. Remember

Hood's Sarsaparilla

Is the Only True Blood Purifier prominently in the public eye. $1; six for $5.

Hood's Pills cure all liver ills, biliousness, headaches. 25c.

PINEOLA COUGH BALSAM is excellent for all throat inflammations and for asthma. Consumptives will invariably derive benefit from its use, as it *quickly* abates the cough, renders expectoration easy, assisting nature in restoring wasted tissues. There is a large percentage of those who suppose their cases to be consumption who are only suffering from a chronic cold or deep seated cough, often aggravated by catarrh. For catarrh use Ely's Cream Balm. Both remedies are pleasant to use. Cream Balm, 50c. per bottle; Pineola Balsam, 25c. at Druggists. In quantities of $2.50 will deliver on receipt of amount.

INDIFFERENCE.

Dear, I can bear your anger patiently,
And all the little pangs that it begets;
There lurks no meaning in your thoughtless threats;
They wound but slightly, though undue they be.
I can but wait your sunny self to see
Returned, and mourn meanwhile when care besets.
You do not find for all your woes and frets
A better exorcist in love and me.

But, dear, I cannot bear your coldness, no'
The cruel line of silent, tight closed lips,
And unlit eyes, as fixed as a stone;
How these do torture me none, none can snow.
I drift unsuccored of all passing ships
Upon a bitter sea, unloved, alone.
—Edward W. Barnard in Kate Field's Washington.

APARTMENTS TO LET

It must be said that Anatole Pluchin was on the eve of getting married. These things may happen to anybody, and I don't mention the fact in order to ask your pity on his behalf, because his intended was a charming girl. Her name was Andree—delightful name! She was blond—agreeable color. She was 20 years and 7 months old—attractive age. She belonged to a family that was worthy of all respect, a fact to be considered.

That rogue Anatole! He knew the young girl was in love with him—madly in love with him. Had she not confessed to him that she would die rather than marry another? I know well that these things are often said and rarely executed. But in this case, although Andree was a blond, she was the owner of an energetic and decided character. Ah! mais oui. When she said things like this, her blue eyes darted terrible lightnings.

Doubtless it was this strong temperament that prevented her parents from making any objections and placing any obstacles in her way. There was no good talking to Andree!

"You know, mamma," she had repeated again and again, "I want this matter to be finished quickly."

"But, my dear child, there are certain delays and certain formalities"—

"The delays can be hurried."

"That is true."

"And the formalities can be simplified."

"I have no objections, dear, if it will give you pleasure."

"Then, mamma, let us consider the engagement as settled."

"Settled! Your lover has only exchanged a very few words with your father."

"You know that my father does what you wish."

"My daughter, you exaggerate."

"It is understood; let us waste no more time discussing it. I shall be married on the 10th of next month!"

"We shall see."

"Not the 11th—the 10th. It falls on a Saturday. I have already looked in the almanac."

"You have thought of everything."

"I'm thinking only of him."

"Well, he is a happy man to be able to inspire such an affection."

"When you were married didn't you have the same feeling?"

"The very same, my child. But perhaps my thermometer—that is the register of my feelings—was not quite so high as yours is."

"Well, now, mamma, let us start the campaign."

"Start the campaign? What do you mean?"

"Find an apartment."

"Is is possible?"

"You do not wish us to live in the street, I suppose?"

"No; but"—

"Tomorrow morning then we will start out."

"The"—

"Tomorrow, directly after breakfast, for apartments are sometimes difficult to find. Now, mamma, let me give you a kiss, you are so good."

She spoke the truth. Her mother was an excellent creature, and Anatole Pluchin was—well, his mother, her future mother-in-law, was of the kind that are nowadays seldom to be found.

The day following at the appointed hour Andree was ready to attack Paris and ransack it from end to end in her endeavors to find the nest—that is, the apartments—of her dreams. Her valiant mother was prepared to accompany her. The poor old woman had burned her throat with her coffee and had nearly choked herself over the sugar at the bottom of the cup.

"Forward march! En avant!" cried the joyous voice of Andree.

Young and inexperienced, she little knew what a terrible thing it is to hunt for rooms in Paris; to climb up dozens and dozens of steps and to undergo the searching questioning of zealous concierges and indiscreet portieres.

After an hour and a half of this exercise the unfortunate girl was exhausted. And her mother! She followed her daughter puffing like a grampus and dragging her legs after her as if they were logs of heavy timber! "Ouf! Ouf! Ouf!"

Then at length, "Mamma, look at that pretty house!"

"So it is."

"With a view from the back windows over the gardens."

"And a sign out"—

"Precisely. 'Apartment to let. Inquire within.'"

"Let us ask the price. I have an idea that it will be just the thing."

The price was just what the girl had judged reasonable for herself and her future husband.

"Let us go up stairs," cried Andree, who was delighted. "We can see over it, can we not?" she asked the concierge.

"Certainly, mademoiselle."

"Is any one living here now?" asked the mother.

"Yes, madame."

"Who?"

There was a second's almost imperceptible hesitation on the part of the concierge.

"A young widow, madame."

"Ah!" remarked the mother, "and doubtless she wishes to leave a house that has painful memories for her."

A flashily dressed girl opened the door in answer to their ring.

"These ladies desire to see the apartment," explained the concierge.

The girl made a remark in a low voice that escaped the other's ears. It was accompanied by an expressive shrug of the shoulders.

"Entrez," she said aloud.

Andree and her mother walked in. Everything most comfortable, ma foi, in this apartment. Quite a discovery, in fact. The furniture was commodious and elegant and placed each piece in the corner where it best belonged. And the appointments! And the cupboards! And the kitchen! And the arrangement of the light! The visitors were completely charmed.

As they turned a corner of the corridor the mother looked in the direction of Andree, who stood behind her, and said:

"Andree, I think it must be your good star that guided us here."

But she stopped suddenly.

"Why, where are you, Andree? Where can she have gone to? Andree!"

A distant and sorrowful cry came in answer.

"Andree. Mon Dieu! what's the matter?" cried her mother, alarmed.

This is what had happened: Andree, inquisitive little girl that she was, had turned down a passage and suddenly opened a door. She was curious to see what the room was like.

The door, it so happened, was that of a private boudoir. Inside, as she stood, pretty as a fairy, in the doorway, she saw a velvet sofa. On the sofa she saw, half reclining, a very pretty young widow with black eyes and a demurely sweet face. Kneeling on the soft Turkish rug beside her, with his hand upon his heart and an expression of eternal love upon his face, was a young man.

Andree heard no words, but the noise of opening the door caused the young man to spring to his feet and face her.

"Ah! Mon Dieu! Andree!"

It was indeed Anatole.

* * * * * * *

Andree possessed a resolute character, as we know. She never saw Anatole again, and the amount the courts granted her for breach of promise of marriage is not exactly known.

In this way a mother-in-law who was anxious to do all she could for her son-in-law only succeeded in bringing about results that were a hundred times worse than the most bitter hostilities.

Such is the irony of fate, and doubtless it was best for the happiness of la belle Andree.—From the French.

Rubinstein Not a Happy Man.

Though his life was full of work and he was ever faithful to duty, Rubinstein was not a happy man. With each succeeding year he grew more and more pessimistic. Life failed to give him the amount of enjoyment he craved outside his art, and except in the society of women he did not seem even commonly happy. But for the fair sex he had ever a joke and a smile. It amused him to shock their feelings, and when they opened their eyes widely at his audacity he never failed to enjoy it. He believed that a knowledge of woman was necessary to an artist, and if a young aspirant to any artistic calling asked his advice his first question was, "Have you loved yet?" For he believed that a man who could not love was incapable of becoming an artist. He himself could not be accused of any failing in this case, for his loves were almost as many and various as his days. He had all the faults and all the virtues of his artistic calling, and in every sense of the word lived for his art and his fancy regardless of all things. His was a true bohemian nature.

There was a certain roughness, want of tact and even brutality in his nature that made itself disagreeably felt at times. His was not a temper to be tried. Up to a certain point he could hold it in check admirably, but anything beyond this caused an explosion of wrath that was terrible. As in his physiognomy, so in his temper there was much of the lion. Those who did not know him consequently feared him, for his personality was one that awed, especially in the latter years of his life.—Alexander McArthur in Century.

Polite Lies.

Soon after Rowland Hill became secretary of the British postoffice he summoned together some of his subordinates—the surveyors, as they are officially called—to consider a paper of instructions on some important matter which he was about sending out. He read it to them to make sure that it covered the ground. One of them was Anthony Trollope, afterward famous as a novelist.

When the reading was finished, Trollope, naturally desirous, as a young man, to show that he had a head upon his shoulders, challenged not the scope and tenor of the instructions, but the literary composition. That, however, was not what the secretary desired to hear.

"I think, Mr. Hill," Trollope is reported to have said, "that the language of paragraph so and so, literally construed, may be held to mean what you do not intend."

Rowland Hill was not a man who loved correction of that sort, and he answered with great slowness and deliberation:

"You must be aware, Mr. Trollope, that a phrase is not always intended to bear a literal construction. For instance, when I write to one of you gentlemen, I end my letter with the words, 'I am, sir, your obedient servant,' whereas you know I am nothing of the sort."—Youth's Companion.

Trouble In the Menagerie.

"You look as if you needed a hair cut," said the elephant, nosing about the lion's cage.

"Before you go around making remarks about other people's appearance you'd better trim down your ears," retorted the lion, shaking his mane. "You show your ivories too much when you talk anyhow."—Chicago Tribune.

DICKENS' BROTHER.

THE STORY OF HIS ERRING LIFE AND DEATH AT CHICAGO.

It Removes a Stain Which Has Rested on the Great Novelist's Name For Many Years—Augustus Was the Pet of Charles Until He Went Wrong.

Charles Dickens' brother, Augustus Dickens, and Mrs. Augustus Dickens lived for some time and until their death in a house on the site of 558 North Clark street, Chicago. Recent inquiries concerning the title to the realty have brought out surprising details concerning Augustus Dickens and his brother. The disclosures now made for the first time not only explain why Dickens would not come to Chicago when reading in this country, but also why he never defended himself against the charge that he had been unnatural and heartless to a member of his own family in indigence.

Augustus Dickens was born in 1827 and was therefore 15 years younger than Charles Dickens. The elder brother became tenderly attached to the younger, who was an infant when he was beginning to take on the responsibilities of a man. The love of Charles for Augustus never suffered interruption. He cared for him until Augustus was able to take care of himself.

Like a taper suddenly blown out, Augustus disappears from the annals of the Dickens family. He had married. Charles Dickens went on working, and his own life became shadowed with domestic grief. One day in the early sixties Augustus appeared among the clerks of the Illinois Central Railroad company in Chicago inert, indifferent and thriftless. He wasted his slender salary on liquor, and the home he occupied with Mrs. Dickens on North Clark street was understood to have been acquired with money given her by her father.

When Charles Dickens came to give his great series of readings in the United States, the fellow clerks of Augustus Dickens, knowing the struggle the hapless man was making against his adopted vice, wrote to the novelist kindly at first, telling him of the distress of his brother's family and gently intimating it would be worthy the fame of the great writer if their condition should be relieved now that it was brought to his notice.

A second letter entreated Dickens to come to Chicago, not only to see for himself the plight of his brother, the original of "Boz," but also to give the people of the city an opportunity to hear and welcome him. Appeal, entreaty, finally protest, brought no sign from Charles Dickens except a brief statement that his American arrangements were in the hands of his agent, Mr. Dolby, and that they did not include a visit to Chicago. Indignation succeeded sympathy among those who knew that Augustus was a brother to the now rich and famous writer. They assumed that he remained away because coming might compel him to make provision for Augustus and his wife, who were both in poor health. The newspapers scored the novelist unmercifully.

Not long after the novelist returned to London Augustus died. On Christmas eve, 1868, Mrs. Dickens swallowed a dose of morphine and died. The empty vial told of suicide. The death of Mrs. Dickens was attributed to grief for her husband and chagrin over the apparent willful indifference of his celebrated brother.

When the question of the disposal of the homestead came up in the probate court, a strange fact was discovered. The property was not in the name of Augustus Dickens nor of Bertha Dickens, but of Bertha Phillips. Mrs. Dickens' friends hushed the matter up at once. It was necessary to send to and receive communication from London. Before the legal details were completed for disposal of the material interest the fire came and destroyed the records of the probate court. The residuary interest that had been acquired was quietly transferred. But for recent tracing of the title probably the truth would never have been brought out, and Charles Dickens would have continued, in the minds of all who thought they knew the facts, little better than a monster toward his own kith.

Bertha Phillips was a daughter of Charles Phillips, for many years one of the most eloquent lawyers in the United Kingdom. Augustus deserted his blind wife, who became a member of the novelist's family. How Augustus Dickens came into contact with the daughters of Charles Phillips is unknown. The family were attractive, and their home was one of the places in London where "everybody who was anybody" was sure to be found. Phillips lived to 1859 and left a fortune estimated at $200,000.

After the death of her father and of Augustus Dickens Bertha found herself hopeless and desolate and killed herself. Perhaps she had ceased to have communication with the surviving members of her own family. Perhaps she had hoped to the last that Charles Dickens, after the death of poor Henriette, would forgive his wayward brother and restore him to the old place in his heart. What the truth was will never be known.

Charles Dickens could neither condone the fault the two erring ones had committed nor could he repair its consequences. He could make no explanation in his own defense that would not have exposed the innocent to shame and inculpated in statutory crime his own brother and one whom that unfortunate man was bound to protect as best he could since they had chosen to cast aside all moral obligations and take the consequences.

Every trace of the blighted household disappeared long since from the city. The occupants of the old site of Augustus Dickens' home are not even aware of the tragic history connected with the past. Recent revelations fortunately will set the famous novelist right and remove the stain that has rested on his name so many years.—Chicago Cor. Boston Paper.

The Spider.

One problem fitted for the zeal of the folklorist would be the tracking back of the spider. There is that nice story about Robert Bruce and his having learned patience from the spider. The Islamites use the web of the spider in the flight of the prophet. Probably the Arabs had it direct from the Jews. There is a Talmudic tradition of David flying before Saul and of David hiding in a cave, and how he might have been discovered had not a spider woven its web across the entrance. This is precisely the same incident as is used in the hegira. The arachnida spins but a flimsy web, but her filaments have been stronger than cables, for they still hold fast to the legends of the past.—New York Times.

Unlettered Dons.

Out of 17,000,000 inhabitants of Spain over 11,000,000 are ignorant of the art of reading or writing.—Journal of Pedagogy.

Explosives and Motive Power.

According to the opinion of Superintendent Barker of the arms factory at Sparkbrook, England, and a prominent expert in that line, the possibilities of the industrial use of high explosives for generating motive power are a fit subject of study. Of the gunpowder engine he thinks only slightly, as such an explosive merely develops in combustion about 280 volumes of permanent gases, while the solid residues are very considerable, soon clogging any machine. Nevertheless one pound of gunpowder is capable of developing 170,280 foot pounds of energy. The new smokeless powders are capable of developing still higher energy and are also more under control, while giving off nearly 1,000 volumes of permanent gases and leaving no solid residue. Though the temperatures developed by all these propellants are high, he thinks it very possible to overcome this difficulty in the same way as it is done with gas engines, or even by making use of the energy of the water so employed when converted into steam. As English "cordite" develops 1,250 calories per gram the possibilities of its employment in some form of "powder gas" engine is remarked upon as not without attractiveness to engineers of a speculative turn. The temperature of gunpowder on explosion is about 4,000 degrees F., and that of the smokeless powder is believed to be considerably higher, though this has not yet been fully determined.—New York Sun.

An Odd Custom.

The oldest temperance society in the world is the abstaining commune in Achlyka, in Siberia, all of whose members are strict teetotalers every day in the year except one. Regularly on the first day of September, year after year, all the adlut members of the commune assemble in the parish church, and every one takes a solemn vow before the altar to drink no wine, beer or spirits "from the morrow" of the following day for the whole year. The clause "from the morrow" is introduced in order to give them a reward for their virtues in the shape of a whole day of drunken carnival. As soon as they leave the church they begin to indulge in a horrible bacchanalian drinking, which continues throughout the day, until neither man nor woman in the village is sober. This is naturally followed by considerable physical suffering, and then by mental remorse, whereupon the penitent parish enters upon its twelve-month of model sobriety, and all live like the Rechabites. Some students imagine that this queer proceeding may be a prehistoric tribal custom.

Animal Humbugs.

In military stables horses are known to have pretended to be lame in order to avoid going to a military exercise. A chimpanzee had been fed on cake when sick. After his recovery he often feigned coughing in order to procure dainties. The cuckoo, as is well known, lays its eggs in another bird's nest, and to make the deception surer it takes away one of the other bird's eggs. Animals are conscious of their deceit, as shown by the fact that they try to act secretly and noiselessly. They show a sense of guilt if detected. They take precautions in advance to avoid discovery. In some cases they manifest regret and repentance. Thus bees which steal hesitate often before and after their exploits, as if they feared punishment. A naturalist describes how his monkey committed theft. While he pretended to sleep the animal regarded him with hesitation and stopped every time his master moved or seemed on the point of awakening.—London Exchange.

Turkish and Russian Soldiers.

The Turkish army is perhaps the only one in the world which has invariably behaved better in the field than the peace conditions of both nation and army led critics to anticipate. The Russian army, so far as the war of 1877-8 is concerned, belongs undoubtedly to the category of armies which have not fulfilled expectations.

The average Turkish soldier is physically, morally and intellectually superior to the average Russian soldier, for three reasons—first, because he is a total abstainer; secondly, because he is religious—that is, intellectually religious, whereas the Russian is ignorantly religious, i. e., superstitious; thirdly, because elementary education is better in Turkey than in Russia. These plain facts should be borne in mind when the next campaign becomes imminent.—"The Defense of Plevna," by W. V. Herbert.

Professor Huxley.

Professor Huxley was a man of very simple and direct manner. In the classroom he made his lectures graphic by finding illustrations for scientific truths in everyday examples, as when, in treating of animals that change their color, he referred to the fact that when he was tired or nervous he fancied he was grayer than usual. He was gallant to the fair sex. One of them, who attended his South Kensington lectures, asked him to introduce her to Herbert Spencer and was amused by his mock serious response, "I thought I was your first love." To this same lady he said, in talking about the death of Agassiz, the news of which he had just heard, "I wonder where he is?" He made the remark in a tone of profound sadness.

Carlyle.

Thomas Carlyle's face is well known, but the pictures do not, it is said, do justice to the sparkle of his eyes when lighted up in conversation nor to the play of his features when interested in the subject under consideration. His face bore little indication of the dyspepsia to which he was the victim. His cheeks were ruddy, and his whole aspect that of a man in excellent health.

John Randolph of Roanoke had a squeaking voice that detracted not a little from the effect of his speeches. When he became angry, as he generally did before he got through a speech, he fairly shrieked in wrath.

An excellent quality of illuminating gas has been made from peat.

MECCA BY STEALTH.

IT WAS THUS THAT A FRENCHMAN SAW THE HOLY CITY.

M. Gervais Courtellemont Made the Perilous Journey on a Mission For the Governor of Algiers—The Second Frenchman to Make the Trip and Return Alive.

M. Gervais Courtellemont told the Geographical society in Paris of his visit to the holy city on a mission intrusted to him by the governor general of Algeria. This gentleman is the author of a series of illustrated works on Mussulman countries, and he was very glad of the opportunity to become acquainted with the center of the Mohammedan world. Only one Frenchman before him has visited Mecca and returned in safety.

"Last year," he said, "the governor general of Algeria intrusted me with a mission to the grand sheriff of Mecca. I succeeded in my difficult enterprise, and I owe my success to my companion, Hadj Akli, who has long been in the service of France, and has made 21 pilgrimages to Mecca. When we embarked at Suez, I was dressed in the garb of a poor Mussulman, and I mingled as one of them with my brother pilgrims. There were merchants from Medina, a devout company from Aleppo, camel drivers from Nedj, and even slaves. I became very well acquainted with many of my comrades during the three days on the steamer before we reached Jidda. Here debark every year the innumerable pilgrims who come by the sea route. I had hardly landed when I was arrested by a Turkish policeman during the momentary absence of my comrade. He plied me with questions, which I answered in good Arabic, and, as my passport was all right, he let me go. I found, however, that I was under suspicion. No one invited me to breakfast or dinner, which is a very bad sign in a Mohammedan country.

"Finally one of the residents, Si Ali, asked me to dine with him, and I nearly spoiled everything by my awkwardness at the table. Hadj Akli had little patience with me. His remarks when he got me alone were not encouraging.

"'You are scarcely intelligent,' he said. 'You do not know how to behave at the table. You will not live to see Mecca.'

"My host, Si Ali, was not more hopeful in his remarks. 'You have broken bread with me,' he said, 'and I am your friend. But do not try to go to Mecca. The sands of the desert are white with the bones of those like you who have tried to reach our holy city. You are throwing yourself into the fire. Allah forbids suicide.'"

The traveler said, however, that he was a good Mohammedan, and that if Allah wished to destroy him in the desert it was his fate. The next day Si Ali assisted him in his religious exercises and expressed himself as little satisfied with his manner of reciting the morning prayer. He was kind enough to assist for two days in the novice's education, and then M. Courtellemont set out for the holy city. His departure was hurried by the fact that he was exciting more and more suspicion. He did not pretend to be anything but a new convert, but even as a novice he was regarded as rather green. So he was glad to get away from Jidda. He made a forced march to Mecca, during which he suffered intensely from the night cold, for he was mounted half naked on a donkey, and his head was shaven and bare. His best friends would not have recognized him. His comrades on the journey, who had not thought it necessary to manifest so much religious zeal, were well wrapped in ample clothing.

"At break of day," said the traveler, "I entered the holy city of Islam. A cloud of pigeons flew around me and even obstructed my path, and I trembled for fear of treading on them. This would be a very grave offense, for they are held in the highest veneration by the people of Mecca. I lost no time in repairing to the great mosque to make my first devotions. The first ceremony, the Tuaf, is to make seven times the circuit of the Caaba, or Bit Alla, House of God, reciting prayers in a loud voice. The Caaba is an edifice in the form of a cube, each side about 40 feet wide and 50 feet high. It is covered with a veil of black silk, with a splendid golden border about four feet wide running around the top, on which are reproduced verses from the Koran.

"After I had made the seven circuits of the Caaba at a rapid pace I was at liberty to embrace the black stone. This stone is about the height of a man, and is set into one of the angles of the Caaba. When the lips are touched to it, it does not give the cold sensation of marble. For protection the most of it is incased in solid silver, and, according to usage, I threw my arms around this glistening covering while I kissed the sacred stone.

"A more arduous ceremonial, the Sai, was to follow. I was required to travel seven times at a very rapid pace over the road between the sacred porticoes Safa and Merua, a total distance of 4½ miles, reciting prayers all the while in a high voice. The ceremony is in memory of the anguish of Hagar when she sought in vain for water for her little son, who was perishing of thirst. The pilgrim is required to make this journey before he is permitted to drink of the miraculous water of the wells of Zem-Zem, to which the angel Gabriel directed the despairing Hagar.'"

Among the interesting things he saw was the ruins of a building erected not long ago for the purpose of disinfecting the clothing of pilgrims as they arrived in the city. The idea was given up as impracticable, and the building was torn down.

"How could they expect," asks M. Courtellemont, "to disinfect the clothing of more than 250,000 pilgrims in a little building that was only 35 by 40 feet square? And why did they erect such an establishment in the city itself, when their sole purpose was to protect the city from epidemics?"

So Mecca continues to be one of the greatest of centers from which the plague of cholera spreads in all directions.—Paris Letter.

Cradle of Indian Babies.

When you go through an Indian camp, you can see red and green sacks standing against the sides of the tepees, carried on the backs of little girls by means of a blanket which is fastened at the waist with a broad leather belt, or being rocked to and fro by the wind in the boughs of cottonwood trees. These sacks are Indian cradles. Sometimes, if the camp is going on a long journey in search of game or for water, or to escape a war party, two of these sacks are fastened together by stout straps and swung over the back of a pony, one dangling on each side, like the baskets on a pack mule. But as a rule the horses are left for the men and boys to ride, and the papooses are either carried by the girls or packed away on a "travoise," which is the only wagon the Indians have.—New York World.

OLD BELLS IN NEW YORK.

Two Metal Messengers Whose Tones Have Sounded to Many Generations.

Whether it be due to patriotic or poetic instincts it is nevertheless true that a famous old bell always arouses a reminiscent feeling. Its very presence suggests a story—the glad cry of liberty, the joyous peals of wedding festivities, the somber tone of funeral processions. Weather stained and hoary, an old bell seems like a messenger of fate.

Hence it is not to be wondered at that the bell in the yard of the Collegiate church, at Fifth avenue and Twenty-ninth street, daily attracts a throng of inquiring faces, closely pressed against the high iron railing surrounding the church.

From the quaint Latin inscription on the bell one learns that it was sent in 1795 by the people of Amsterdam as a gift offering to the North church in New York, then at Fulton and William streets, where it had been erected in 1628.

Hanging high above the city, at Forty-eighth street and Fifth avenue, is another link that binds us to the past. This great bell bears this Dutch inscription:

"Een leegat aan de Nederderdeutsche Kirke, Niew York, 1731."

It appears from the old will of Colonel Abraham de Peyster that he ordered a bell to be made in Holland for the Middle church, then occupying the site of the old fort at the Battery. The people of Holland were so pleased at being thus remembered by one of their number in America that a great number of coins were thrown into the smelting pot which contained the metal for the bell as an evidence of their appreciation. During the Revolution the Middle church was put to strange uses. Removing the pulpit, gallery, pews and flooring, the British dragoons converted it into a riding academy.

John Oothout was granted permission from Commander in Chief Lord Howe to remove the De Peyster bell to a place of safety. Accordingly, in the most unobtrusive manner possible, the bell was sent to Chambersburg, Pa.

When peace was restored, the bell was hung in the steeple of the Middle church, afterward leased to the federal government for postoffice purposes, and which many remember as the old Postoffice building. A little more journeying and the De Peyster bell reached its present haven.

The Collegiate consistory carefully preserve the relics of their several churches. A pewter plate bearing the date 1769 and giving a history of the old North church is stowed away with a charter granted in 1696 by William III empowering them to incorporate themselves in New York. Here, too, is zealously guarded the old will of John Harpending, now yellow with age, bequeathing, in 1723, much of his land to the Collegiate corporation.—New York Herald.

HIS SMILE WENT WITH THE POSE.

The Model In the Life Class Smiled Simply For the Sake of Art.

An amusing incident occurred not long ago in a well known New York art school. The girl students were drawing from life a study of the "Dancing Faun." A good looking Italian boy was the model, and as he assumed the requisite pose his face became wreathed in smiles. He was gazing directly at the class, and each girl imagined the smile was directed at her.

"How very embarrassing," said a Long Island girl. "I wish to goodness he wouldn't grin at me."

In spite of the indignant glances cast at him the son of Italy continued to smile at the blushing girls.

Presently a stolid German girl looked up and noticed the smile, which she imagined was aimed directly at her.

"You schtop dot schmiling. We don't want you to schmile at us." The boy's figure instantly straightened up, and he stood before the class the very impersonation of offended dignity as he said:

"Ladies, I no smile at any one. I pose to you as ze 'Dancing Faun.' Ze smile goes wiz ze pose."—New York World.

The Courtship of Miles Standish.

Encouraged by the hearty welcome given to these two American poems, Longfellow, in 1858, published a third, "The Courtship of Miles Standish." In this he told no pathetic tale of parted lovers, nor did he draw on the quaint lore of the red men. He took his story from the annals of his own ancestors, the sturdy founders of New England. As it happened, he himself (like his fellow poet, Bryant) was a direct descendant of John Alden and Priscilla, the Puritan maiden, whose wooing he narrated. "The Courtship of Miles Standish" is only less popular than its predecessors, "Evangeline" and "Hiawatha." All three have been taken to heart by the American people, all were composed during the brightest years of the poet's life, when his family were growing up about him, when he was in the full possession of his powers and had already achieved fame.—Professor Brander Matthews in St. Nicholas.

Lablache's Voice.

Lablache had the most magnificent bass voice ever known to the lyric stage. It had a compass of two octaves, from E flat below to E flat above the bass staff. He was a man of prodigious size and strength, and his voice was proportioned to his physical dimensions. Nothing was able to overcome or drown it, and through the tones of the largest chorus it boomed out as lustily as though alone. More than once he broke a window pane by the strength of the vibrations caused by his monstrous voice.

How Greensboro Was Named.

General Nathaniel Greene, during his retreat before the British in 1781, fought a battle at a settlement in North Carolina ever since called Greensboro.—Boston Budget.

DIME NOVEL BEADLE.

HE WAS A REVOLUTIONIST IN THE LITERARY FIELD.

How He Started the Salmon Backed "Dimers" That Had Such a Big Run Thirty Years Ago—Notable Authors Who Wrote Stories For Beadle.

A man died almost unnoticed the other day in New York who was, in his prime, a revolutionist in the literary field. I refer to the publisher, Erastus F. Beadle, the father of the cheap novel. Those of us whose memory reaches back to the times before the civil war will recall the fact that the 25 and 50 cent novel was the rule in those days, and the cost of paper and printer's ink, which went up with everything else, soon accustomed the novel reader to the idea of paying even $1 or more for his treat.

But through all the Beadle dime novel held its own. It was a little salmon covered duodecimo, rarely illustrated inside, but often with a startling picture underneath the title. In an informal chat with a visitor about ten years ago, Mr. Beadle told most entertainingly the story of his venture in publishing. The idea of the dime novel occurred to him, he said, in 1859, and he began to act upon it in 1860.

"The state of the book market then," he went on, "was peculiar. Every one was publishing books with thick paper and wide margins—trying to see how little they could give their readers for $1 or $1.50. Publishers exchanged books and took back such as were not sold. Well, I took the other tack, and thought I would see how much I could give for 10 cents—cash sales, no credit. Every one said the project would fail, but it didn't.

"We first published dime song books, cook books, etiquette books, etc., which we bound in salmon colored cover. No 'yellow covered dimes' were ever sent out by me—the color was salmon. The yellow covered ones were imitations and were a bad lot. Well, after awhile I started the dime novel. Mrs. Ann S. Stephens was the author of the first one—'Madeska'—a prize story published 40 years ago in The Ladies' Companion. I paid her $250 for the right to reprint the story. We sold 10,000 copies right off and then 20,000."

Mr. Beadle had an editor in his employ named Victor who used to pass upon manuscripts, order special work and the like, just as the editor of a literary weekly or monthly would do it. He was as interested as his chief in recalling their joint undertaking.

"The authors who wrote for us," said he, "were notable persons in their way. We had, for instance, one book by a man who was once a member of the Ohio legislature, another by an ex-governor of the same state. He never wrote us a bad line. Edward S. Ellis—you know him?—wrote us our most popular novel. He was a Methodist, and he went to his minister to know whether he could write a dime novel. He was a schoolteacher in Trenton and was not 21 when he wrote his first 'dime,' for which he got $85. That was 'Seth Jones.'"

"Yes, I remember," broke in Mr. Beadle, unable to restrain his enthusiasm, "we plastered the country with 'Who is Seth Jones?' and when the excitement ran high we answered the question with that picture you see on that cover—'I'm Seth Jones.' We sold 60,000 copies of that story right off."

"These novels," Mr. Victor continued, "introduced either historical or local characters. They followed right after Cooper's tales, which suggested them. Mrs. A. M. Dennison wrote historic fiction. Judge Jared Hall of Ohio wrote 'The Slave Sculptor,' a story of Mexico in Montezuma's time—good names. Then there was Clara Augusta. She was a Maine lady and a clever writer. Ellis wrote exclusively for us, and we have paid him as high as $250 for a novel of 40,000 words.

"Why, we paid better, in proportion to the quantity of matter we accepted, than The Atlantic Monthly. Our stories were very popular, and our yellow covered rivals—bad books—began to spring up. What did we do then? Oh, we had to kill a few more Indians than we used to, but we held our own against them. Ours were stories of exciting adventure only; there was nothing bad about them. See this article in The North American Review for July, 1864, wherein they are described and criticised. They are pronounced 'exceptionally moral,' and they 'do not even obscurely pander to vice or excite passions.' The so called 'cheap libraries' have sent these old style dime novels into the background, though we keep a stock of the best ones on hand still.

"You ask about Mayne Reid? We have a list of his works. He would have sunk into obscurity if we hadn't sustained him. He has written certainly 50 stories and sketches for us. He was working for us exclusively for eight or nine years. We made a double number of his 'Scalp Hunters,' one of his most popular stories, reprinting it at his request. He retained, of course, the English rights in his works. We never paid him less than $600 for a story; that was the standard price, though we may have paid him more at times.

"I remember he brought his 'White Squaw' down here one morning and said he must have $700 for it, and we gave him a check without reading the manuscript, which contained only about 50,000 words. Reid was always in trouble financially, but he was a prolific writer, and when he got hard up he would dash off sketch after sketch and come down here with his pockets stuffed. Here is a lot of his manuscript now that has never been printed on this side."—Kate Field's Washington.

As They Saw It.

It is noticeable that blind people generally talk as if they had the use of their eyes. A political discussion between two blind men wound up in this fashion:

"I don't look at it the way you do."

"I see you don't. But I've had my eyes opened."

"So've I mine, and I don't think I shall see you pulling the wool over them either."—Youth's Companion.

Secrets Will Out.

"Now, you must not let this go any farther," said Watts to McDavid after retailing a choice bit of scandal.

"Oh, certainly not," said McDavid. "How did you happen to hear it?"

"My wife told me. She is just like any woman—can't keep a secret, of course."—Tit-Bits.

The Correct Term.

"Do you know the count actually addresses her in public as his treasure?"

"Treasure? His English is a little off. He means investment."—Indianapolis Journal.

Nine times out of ten the practical joker ought to be shut up in a lunatic asylum.—Watertown Times.

INYO INDEPENDENT.

V. H. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY DECEMBER 27 1895

A new and sentimental issue has been started and called to the attention of the Governor just as the machinery of our criminal courts has got to work sending murderers to the gallows and the public is given the satisfaction of knowing that occasionally men deserving death can be hanged otherwise than by mobs. Warden Aull and other penologists think a very pretty thing to do would be to turn loose on every Christmas day a murderer from the State's prison who was lucky enough to strike a tender-hearted jury. It is to be hoped that Governor Budd's native good sense will prompt him to put his foot down on any such sentimental nonsense. The association of "the birthday of our Savior" with the releasing of murderers on a people among whom murder is seldom punished, as Warden Aull does, is disgusting. If there are any men in the State's prison who are unjustly convicted—innocent men—let them be turned loose just as soon as their innocence can be demonstrated, whether it is before Christmas or after Christmas, but in the name of security to human life, let's keep all the murderers who are now in prison where they can do no more murdering, and let's hang all others just as fast as they can be caught and convicted. The people have some right in this matter, which ought to be considered. The reformation of murderers who have been convicted and not hanged can be brought about by keeping them where they are safe. There are now fifty five of these in State's prison at San Quentin; there let them live and there let them die.

Another wealthy philanthropist has been heard from. This time it is not a single individual, but an aggregation of individuals known as the Clark Thread company of New York. The concern is about to open a cost price restaurant to furnish lunches for its employes. The company is immensely rich and has, it is almost needless to say, become so by steadily and systematically pressing the wages of its numerous employes down to the lowest point where it was possible for them to live and work at all. Now instead of paying those folks what they really earn and are justly entitled to, the great corporation makes a bid for public approbation by establishing a cost price lunch room for its wage slaves. Any person with an average keenness of perception will understand that this apparent act of philanthropy is nothing more nor less than a shrewd business scheme for advertising the Clark Thread company. And yet there are plenty of sycophants who will fairly eulogize the concern for its pretended philanthropy. If the whole story of that company's accumulation of its immense wealth were told, it would reveal many dark pictures showing how men and women, pinched with cold and hunger, and living in unhealthful conditions, have toiled day after day, year after year, receiving for themselves but a mere pittance—just enough to keep their souls and body from parting company—while their employers were all the time waxing richer and reveling in luxury.

And still the wail of despair comes from Armenia, and it is said the number of people massacred has reached 100,000. It is estimated that there are 500,000 survivors, and they have nearly all fled to the mountains, where many of them perish from cold and hunger. These people are calling upon the civilized nations of the world to save them from hunger, starvation and indignities a thousand times worse than death. And during all this time—and some months have passed—England and Russia have calmly looked upon the butchery of men, women and children as a matter that did not interest them only so far as they were concerned in keeping peace among themselves. It is an insult to the human family to say that such barbarism as is being practiced by the Turks and Kurds cannot be stopped. Turkey is only allowed to exist by the grace of England, and to think the latter government will countenance such horrible work is enough to make a man lose faith in mankind. And what is the matter with this country taking a hand in the matter and calling a halt on the brutal warfare of the Turk? We shall have to fight England before long anyway—to gain our independence again—and the rupture can just as well come now as later on.

LOVE AND PROPOSALS.

How Men and Women Act In This Interesting Juncture.

There is a clever statistician who could teach a thing or two to the novelist. This statistician has attempted to classify the action and methods of proposals, and as a result has presented tabulated figures extremely interesting to psychologists. Out of 100 cases 36 gentlemen take lady in arms, 67 gentlemen kiss lady on lips, four gentlemen kiss lady on cheek, three gentlemen show very good taste by kissing lady on eyes, and two gentlemen kiss lady on hand. It is to be presumed these two out of 100 are the timid, diffident kind, though it is possible that they might be of the quietly sentimental nature. One gentleman kisses lady on nose. It must be added that the statistician is careful to insert the saving clause of "by mistake."

There is even a record of a man kissing a lady on edge of shawl, but, thank goodness, there is only one in 100, and the chances are that this man is peculiar.

Seventy-two hold lady's hand, 17 hold it very tightly, 14 have lumps in their throats, and nine exclaim aloud, "Thank God!" Only seven out of 100 declare themselves to be deliriously happy, and five are too full for utterance. Three out of 100 stand on one foot when they make proposal, and two go down on one knee, while nine make a formal prelude—something like the slow music at the play, we suppose, when the villain appeals to heaven to witness the consuming flame of his affection for the heart he plots to ruin, etc.

The behavior of the lady under the circumstances is equally entertaining and instructive. Out of 100 cases 81 sink into the arms of gentlemen, 68 rest their heads on gentleman's breast, and only one sinks into the arms of a chair. Eleven clasp their arms around the gentleman's neck, six weep tears of joy silently, and 44 weep tears aloud—whatever that means. Seventy-two have eyes full of love, and nine out of 100 rush from the room to tell somebody. Only four are greatly surprised, and 87 of 100 knew that something was coming. Five giggle hysterically, and one even sneezes. Only one of 100 struggles not to be kissed, while six kiss gentleman first. If we believe the statistician, one out of 100 women will say, "Yes, but don't be a fool."—Philadelphia Times.

ABLE TO TRANSFER LUNACY.

Uncanny Result of an Experiment In Hypnotism Made by a Paris Doctor.

A series of very wonderful experiments which have just been concluded by Dr. Luys of Paris, whose observations and discoveries in connection with magnetism and electricity in relation to hypnotism made a profound impression upon the scientific world some time ago, has led to a remarkable result. The latest discovery establishes the fact that cerebral activity can be transferred to a crown of magnetized iron, in which the activity can be retained and subsequently passed on to a second person. Incredible as this may seem, Dr. Luys has proved its possibility by the experiments just referred to.

He placed the crown, which in reality is only a circular band of magnetized iron, on the head of a female patient suffering from melancholia, with a mania for self destruction, and with such success was the experiment attended that within a fortnight the patient could be allowed to go free without danger, the crown having absorbed all her marked tendencies.

About two weeks afterward he put the same crown, which meanwhile had been carefully kept free from contact with anything else, on the head of a male patient suffering from hysteria, complicated by frequent recurrent periods of lethargy. The patient was then hypnotized and immediately conducted himself after the manner of the woman who had previously worn the crown. Indeed he practically assumed her personality and uttered exactly the same complaints as she had done. Similar phenomena have, it is reported, been observed in the case of every patient experimented upon. Another experiment showed that the crown retained the impression acquired until it was made red-hot.—London Telegraph.

Seedless Fruits and Vegetables.

Writers often express wonder that any fruit or vegetable should be found without seeds, the acme of surprise seeming to be with respect to the seedless orange. The fact of the case is that such examples are met with in almost every variety of fruits and in several kinds of vegetables. An instance which can be cited in the apple is Mennecher's Nocore, so named because of both "core" and seed pits being entirely absent.

The Rutter pear is a so called seedless variety of that species of fruit, but I believe that abortive seeds are occasionally found in isolated specimens. The "zante," or seedless currant of the grocery stores, is not a currant at all, but a small species of seedless grape.—St. Louis Republic.

A Clever Dog.

Mr. Stacy Marks' anecdote of the money finding dog, which he attributes to Landseer, is a very prince among all stories of the kind. The dog's master, in the presence of a skeptical friend, hid a £5 note in the hole of a tree when the dog was paying him no attention. "Go, fetch!" he said, some time afterward, while returning by another road, without further explanation.

The dog trotted off, and it was a few hours before he joined the two at home. As there were no signs of a note, the skeptical friend grew satirical. But the host opened the dog's mouth, and 5 sovereigns were concealed under his tongue. He had found the note, been to the banker's and exchanged it for gold.—Spectator.

Clean Sweep.

"I don't see why they say the De Spug girls got their beauty from their mother."

"They probably took all there was."—Detroit Tribune.

THE QUEEN BEE.

As the Foundation, the Life and Soul of a Hive Colony.

A queen bee is essential to the colony. She is readily picked out, but by a close observer by her great length. She lives generally for about five years, but her term of life varies in different individuals from two to five or six and in rare instances even to seven years. A queen is fed with the daintiest and best all through her embryo stage, and when hatched comes out a full queen. If any other queen is hatched—and sometimes one or two more are, pretty soon after—the rightful ruler assails the rival claimant in a life and death battle, the "stinger" being plied vigorously like a death dealing sword by both contestants, while the hive looks on in mute interest to see the issue of the battle. This is almost decided in favor of the assailant. She is then the undisputed queen and is so regarded. Yet the great company of "workers" are in some senses the real governors, and the hive is a great social democracy. If by any mischance the queen is killed, then the "workers"—who are undeveloped females—go to work to produce a new one. The egg they select for the trial is attended to with the same care, and the embryo bee is fed with the same selected food, as in the case of the egg that had produced the legitimate queen. It makes a queen, and she serves in that capacity.

Except in swarming time, the queen never leaves the hive, only on the one occasion of her bridal tour. Selecting some one for her husband, she invites him out to go with her—and their connubial relations are carried on entirely while on the wing in the air—like the chimney swallow's. The bridegroom never returns. He drops dead, and the queen returns from her one and only aerial excursion a fully fecundated bee, ready to begin her great life work of egg laying. Some days she will lay as many as 2,000 eggs; in all, about 20,000 eggs.

In "swarming" a large part of the whole crowd goes out. They leave behind the remains of the old colony, which had grown too numerous, thus compelling the "swarming" or seeking a new home by a great part of the hive. The queen goes with the swarmers, and here they follow closely. If she alights on a branch or other place, they all settle there, clinging closely together in a great mass, by much the same method as a mass of burdock burs will stick together, and the farmer's wife and "all hands" used to bang away on tin pans to govern the movements of the swarm by fright if possible.

So close does the swarm follow the queen that when once in flying over a lake the queen became weary and dropped into the water every bee went down with her to death by drowning.—New York Dispatch.

Northwestern flaxseed from the 1894 crop is turning out much poorer in quality than promised earlier in the season. This trying crop has long since been banished from the soil of Ohio and adjoining states and pushed to the new countries.

Alfalfa is having a tremendous boom in the central west, and especially in Kansas and Nebraska.

Over much of the great corn belt the season was exceptionally favorable for the preservation of corn fodder and stover.

The average yield of tobacco is nearly double that of last year and the average quality good.

A SHATTERED IDOL.

Each week I saw him take an X
And put it in a letter
And mail it, and for that I own
I liked him all the better.

I thought of some dear country home,
A patient mother bearing
A burden lightened by the thought
That he for her was caring.

His surly ways and hardened face
I easily forgave him,
Because of this, his weekly gift,
One virtue that could save him.

But oh, alas! One fateful day
I asking for a loan he,
With awful oaths, declared he met
Scold on that attorney.

NOTICE BY CLERK ON APPLICATION FOR DISCHARGE.

IN THE SUPERIOR COURT OF THE COUNTY OF INYO, STATE OF CALIFORNIA.

In the matter of P. Peveye and Francois Hugats, parties doing business under the firm name and style of P. Beveye & Co., Insolvent Debtors.

NOTICE IS HEREBY GIVEN to all the creditors of the above named insolvents, who have proved their debts, that said insolvents have this day applied to this Court for a discharge from their debts, and that Saturday, the 7th day of December, A. D. 1895, at 10 o'clock a. m., at the Court room of said Court, at the Court house, in Independence, County of Inyo, has been fixed as the time and place for said creditors to appear and show cause, if any they have, why said insolvents' application should not be granted, and they be discharged from all their debts in accordance with the statutes in such cases made and provided.

Witness my hand and the Seal of said Superior Court this 8th day of November, A. D. 1895.

[SEAL.] D. J. HESSION, Clerk.
By ..... Deputy Clerk.
Dated November 8, A. D. 1895.
P. H. MACK, Attorney for Insolvents.

NEW ADVERTISEMENTS.

NOTICE OF COMMISSIONER'S SALE ON FORECLOSURE OF MORTGAGE.

SARAH C. F. WRINKLE, Plaintiff, vs. O. I. MAIRS, as Assignee of the Estates of Ambrose W. H. Smith and J. White Smith, Insolvent Debtors, Lucy C. Smith and Henrietta D. Smith, Defendants.

Under and by virtue of an order of Sale and decree of foreclosure issued out of the Superior Court of the County of Inyo, State of California, on the 7th day of December, 1895, in the above-entitled action, wherein, Sarah C. F. Wrinkle, the above-named plaintiff, obtained a judgment and decree of foreclosure and sale against O. I. Mairs, as Assignee etc. et als., the above-named defendants, for the sum of $1,082.61, in United States gold coin, which said decree was on the 10th day of December 1895, recorded in Judgment Book No. 1 of said Court, at page 540, I was appointed a commissioner to sell and I am commanded to sell:

All those certain lots, pieces and parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit: The West half of the South-west quarter of Section 27, North-west quarter of the North-west quarter of Section 34, North-east quarter of the North east quarter of section 33, all in township S South, Range 33 East, M. D. M., containing 160 acres. Also an undivided one-eightieth interest in and to that certain ditch and water right situate in said Inyo County, known as the "Rawson, Ford and Connelly Ditch." Together with all and singular the tenements, hereditaments and appurtenances thereunto belonging, or in anywise appertaining.

Notice is hereby given that on Saturday, the 4th day of January, 1896, at twelve o'clock, noon, of that day, in front of the Court House, in the town of Independence, in said Inyo County, I will, in obedience to said order of sale and decree of foreclosure, sell the above described property, or so much thereof as may be necessary to satisfy plaintiff's judgment, with interest thereon and costs, to the highest and best bidder for cash in gold coin of the United States.

Dated at Independence, Cal., Dec. 13, 1895.

J. R. MOFFETT,
Commissioner.
P. H. MACK, Attorney for Plaintiff.

DESERT LAND FINAL PROOF.

U. S. LAND OFFICE
Independence, Cal.
December 3, 1895.

Notice is hereby given that Jessie F. McIver, of Citrus, Inyo Co., Cal., has filed notice of intention to make proof on her desert land claim No. 616, for the N½ Sec. 9, Tp. 14 S., R. 36 E., M. D. M. before Register and Receiver at Independence, Cal., on Thursday, the 23d day of January, 1896.

She names the following witnesses to prove the complete irrigation and reclamation of said land: Charles A. Skinner of Independence, Cal., Gilbert Caristie, Joseph V. Skinner and John F. Beare, all of Citrus, Inyo Co., Cal.

IRV. H. MULHOLLAND,
Register.

TIMBER CULTURE FINAL PROOF.

U. S. LAND OFFICE,
INDEPENDENCE, CAL.
December 2, 1895.

Notice of Executor's Sale

NOTICE IS HEREBY GIVEN THAT IN pursuance of a power to sell, contained in the Last Will and Testament of John Allen Hannah, deceased, (which last will and testament was duly admitted to probate,) the undersigned, the Executor of the last will and testament of said deceased, will sell at private sale, to the highest bidder for cash, lawful money of the United States, and subject to confirmation by the Superior Court of the County of Inyo, State of California, on and after TUESDAY, the 8th day of March, 1892, and within six months thereafter, all the right, title, interest and estate of the said John Allen Hannah, deceased, at the time of his death, and all the right, title and interest that the said estate of John Allen Hannah deceased, has, by operation of law or otherwise, acquired other than or in addition to, that of the said John Allen Hannah at the time of his death in and to those certain lots, pieces, or parcels of land situate, lying and being in the County of Inyo, State of California, and particularly described as follows, to wit:

The South half of the South-east quarter and the South half of the south-west quarter of Section No. 10, and the North-east quarter of Section No. 15, all in Township No. 10 South, Range No. 34 East, M. D. M., containing 320 acres.

An undivided one-half interest of in and to that certain lot, piece, or parcel of land situate, lying and being in the said County of Inyo and particularly described as follows, to wit: Commencing at the South-east corner of the south-east quarter of North-east quarter of Section No. 18, in Township No. 13 South, Range No. 35 East, M. D. M., and running thence West eleven chains and 98-100; thence North-east following the meanderings of the bed of the Creek along its North branch to Edwards street, in the town of Independence, thence following said Edwards street along its West line to the place of beginning, six and 89-100 acres; also lot No. 4 in Block No. 9 in the town of Independence, all constituting what is known as the Reddy place.

Lots Nos. 2, 4, 6, 7, 8, 9, 10, 11 and 12, in Block No. 29, in the town of Independence, the said County of Inyo, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of said Inyo county, having been the residence of said John A. Hannah, deceased, at the time of his death.

Lots Nos. 2 and 4, in Block No. 22, in the town of Independence, County of Inyo, State of California, as the same appears by the official plat of the said town of Independence, now on file in the office of the County Recorder of the said Inyo county.

Two hundred feet undivided, of in and to that certain mining claim, lead, or lode, situate lying and being in the Cerro Gordo Mining District, County of Inyo, State of California, known and designated as the "La Dispiedada Lode."

That certain lot, piece or parcel of land situate, lying and being in the County of Ventura State of California, commencing at a point twelve and nine-twentieth (12 9-20) rods south of the general corner of the north west quarter and the North east quarter of Section No. twelve (12), and the South west quarter and the South-east quarter of Section No. one (1), in Township No. three (3) North, of Range No. twenty-one (21) West, San Bernardino Base and Meridian, running thence South sixty-eight and eleven-twentieth (68 11-20) rods; thence West twenty-three (23) rods; thence North-westerl along a small branch or swale to a point twenty four (24) rods North of the general corner of the North East quarter and the South east quarter, and the North-west quarter and the North east quarter of the North-west quarter of Section No. twelve (12), in Township No. three (3) North of Range No. twenty-one (21) West; running thence North forty-four and eleven-twentieth (44 11-20) rods thence East eighty (80) rods to the place of beginning, containing thirty acres; Together with ten shares of the Capital stock of the Highland Water Company.

Bids or offers must be in writing, and will be received at the residence of the undersigned at Georges Creek, Cal., and may be left at said place, or at the office of the District Attorney at Independence, Cal., or delivered to said Executor personally, or may be filed in the office of the Clerk of said Superior Court, at any time after the first publication of this notice and before the making of sale.

The Executor reserves the right to reject any and all bids.

Terms and conditions of sale: Cash, lawful money of the United States, ten per cent. of the purchase money to be paid to the said Executor when the sale shall be made, balance on confirmation of sale by said Superior Court. Deed at the expense of purchaser.

WILLIAM L. HUNTER,
Executor of the Last Will and Testament of John Allen Hannah deceased.

Happy New Year to all.

1896 will be a Leap Year.

Two full moons will occur this month.

J. R. Moffett visited Lone Pine yesterday.

Remember the dance next Tuesday evening.

Leon Marks returned from a visit to Bishop last Saturday.

John Showalter was a visitor from Big Pine the first of the week.

The water in Town creek has been freezing solid the past few nights.

E. A. Reddy came in from Darwin last Sunday and will spend the holidays here.

Sam Yandell has returned to the Darwin country to remain for a short time.

I. H. Mulholland visited Bishop last Saturday and Sunday, returning Monday.

Mrs. J. R. Moffett of Independence is visiting friends and relatives at Big Pine.

Miss Clara Eldred went to Big Pine last Saturday to spend the holidays at home.

Harry Cook went to Big Pine last Tuesday to attend the dance Christmas eve.

A number of school districts up the valley celebrated Christmas eve with a tree.

Under-sheriff E. M. Clarke and Deputy Ed. Rose left for Death Valley and vicinity last Saturday.

The Beekeepers have received a partial return on their shipment of honey of a couple of months back,

Miss Lula McLaren, who has been visiting Mr. Bunney and family for the past two weeks, returned to Bishop last Tuesday.

County Clerk D. J. Hession went to Big Pine last Tuesday to spend Christmas with relatives and friends. He will also visit Bishop.

R. S. Miner Esq. left for the city last Saturday, where he intends to spend the holidays. He boarded the train at Benton station.

Thos. Ferguson was in from Mazourka last Friday, bringing in a little gold. He says the ground is damp and very little work is being done.

Mrs. S. W. Austin and child were passengers on Monday's train for Lone Pine from Bishop, to spend the holidays with her husband, Supt. Austin.

W. A. Lamar Esq. left for San Jose on last Satuadry's train to spend the holidays with his sisters at his former home. He intends staying two weeks.

B. H. Yandell Esq. and his mother returned to Bishop on last Saturday's train. Ben's many friends will glad to know that he is able to travel again.

Christmas Eve.

At the Church last Tuesday evening was enjoyed as well as an occasion of that kind could be. The committees, Misses Blanche Bunney, Edna Matlack and Minnie Levy, who had charge of arranging the tree, and Mrs. F. E. Densmore, Miss Elsie Eibeshutz and Mr. H. E. Wilkinson, who trained the little folks for the literary programme must have worked most nobly toward that end to produce such pleasing results. Visitors upon arriving found the room and tree most artistically decorated to suit the occasion. The exercises commenced quite early to allow plenty of time for Santa Claus to pay his visit before the little folks should become sleepy. The room was well filled by seven o'clock, the exercises commencing shortly after consisted of the following programme, which was most excellently presented:

All Hail the Power of Jesus Name ..... CONGREGATION
Invocation ..... REV. T. H. NICHOLAS
Anthem ..... CHOIR
Recitation ..... EFFIE ROEFER
Song, Chimes of Bethlem ..... CHILDREN
Song, By the Dolls, solo ..... IRMA WEBB
Duet ... MISSES NETTIE AND ROSA ROEFER
Recitation ..... WINIFRED NICHOLAS
Solo ..... BLANCHE BUNNEY
Recitation ..... ESTELLA F. ROBINSON
Solo ..... MISS MARY MULHOLLAND
Song, Sweet is the Song, solo ..... IRMA WEBB, CHILDREN
Duet ..... MISSES ELSIE AND VIVA GILL
Recitation ..... LOUELLA ROBINSON
Solo ..... MISS ELSIE EIBESHUTZ
Remarks ..... H. E. WILKINSON
Anthem ..... CHOIR

Santa Claus then made his appearance and the presents, which were numerous, he and his assistants soon had equally devided among the little folks, three or four of the older people being remembered at the same time. Much credit is due the committee for their untiring effort in making the evening a success.

AT CAMP INDEPENDENCE

On Tuesday evening the school house at the Fort was thronged with the most numerous and enthusiastic gathering in many years. A Christmas tree, decorated with artistic skill and laden with presents, charmed the little folks, while it recalled many pleasant associations in the minds of parents and friends.

The following literary program was called by Miss Lena Thompson:

Music ..... CHOIR: MISSES MAGGIE GORMAN, LENA THOMPSON, ANNIE SCHABBELL MESSRS LEON MARKS F. MOORE, CARL WALTER.
Recitation, The Two Beggars ..... ANNIE HARBOUR
Declamation, Hello! .... HOWARD GILL
Christmas Recitation ..... RITA AGUIRRE
Recitation, Sealed Orders ..... CARRI SCHABBELL
Recitation, Christmas Tree ..... EDITH GORMAN
Music ..... CHOIR
Declamation, Christmas Gifts ..... GLEN BREEDING
Recitation, Christmas Times ..... DORA SCHABBELL
Recitation, Noble Men ... ALICE MCGANN
Recitation, Jim ..... LEMA GILL
Declamation, Santa Claus .. VAL GORMAN
Music ..... CHOIR

Hardly had the last strains of music died away when, from the crisp air outside, came the echo of whistles and jingling bells. Just then Santa Claus made his appearance as the guest of the evening. His comic attitudes and humorous speeches kept the audience bubbling with laughter and occasional waves of exuberance. Candy, nuts, popcorn and apples were dispensed with a lavish hand. Mr. F. Moore was called upon for a speech and responded with an historical sketch of Christmas in other countries.

Much credit is due Miss Lena Thompson and Miss Maggie Gorman for their able management and personal supervision of the aarrangements.

As the wax candels burned low and distribution of presents concluded the people dispersed wishing many a "Merry Christmas. SPECTATOR.

LIBERTY.

A Christmas tree was held in the school house at Liberty District on Christmas night for the benefit of the school children.

A short literary and musical programme preceded the distribution of presents. Many visitors were present and a 'good time' was had by all. G.

BIG PINE.

Christmas was celebrated in Big Pine by a tree for ihe little folks at the school house and a dance for the big folks at the hall. A literary programme was rendered after which the children were made happy by the distribution of the gifts. The dancers supped at the Big Pine hotel and danced until four o'clock Wednesday morning. Miss Ida Hall and Mr. Thomas Callow furnished the music.

LONE PINE.

On Christmas night there was a grand ball held at the Town hall. M. Castro and Jas. Holland furnished the music. Dancing was kept up until 12:30 and a splendid supper was served at Mrs. Wilson's and the Lone Pine hotel. A mos delightful time was reported.

Sentons—Msysan

On the 19th of this month Miss Zelia Meysan and Mr. Vincent Sentons both of Los Angeles were married in that city. The bride is the daughter of Charles Meysan of Lone Pine, and the bridegroom is a well known Los Angeles business man.

Free Lecture.

The Rev. J. Walter Morris, the Principal of the Inyo Acadamy will deliveer a lecture at the M. E, Church on Sunday, December 29, to commence at 7 o'clock p. m. All are cordially invited.

Thos. H. NICHOLAS, Pastor.

Elton Baker came down from Big Pine last Friday, returing the next day, accompanied by Mrs. D. J. Hession and children, who will spend Christmas with friends and relatives at Big Pine.

Operations over at the Hirsh mill are attended with some difficulty at present, the water in the ditch freezes every night and it is quite late in the day before a start can be made, some days it being impossible to start the mill.

Clippings From Black Rock.

Christmas passed very pleasantly with the people of the Taboose District.

Mr. Luke Smith has recently erected a new dwelling on the site of his old one.

Mrs. J. J. Jones of Mono is visiting her parents Mr. and Mrs. Calvert.

On Christmas Eve the citizens with their family came together in the new store building of A. A. Neil. There a tree had been prepared for the benefit of the little folks. All came to enjoy themselves and they were not disappointed. The tree was loaded with gifts for young and old, and all hearts were gay and light. It was a late hour when the partisipants dispersed, all voting that the first Christmas tree in the Black Rock was a grand success.

Miss Mable Doss, teacher in the Taboose District is spending her vacation with friends at Bishop.

The erection of the new school house is begun, and Mr. Prahm, the contractor expects to have it ready for occupency by January 15th.

Observer.

Assessment Work.

Holders of unpatented mining claims should bear in mind that by the 31st of this month they must be able to show $100 worth of work or improvements done on the claim since January 1st 1895; any claim on which such amount has not been expended during the year is liable to relocation. It should be remembered that an affidavit of such work or improvement should be filed with the Recorder of the mining district before January 1st, 1896.

The Fire Fiend At Lone Pine

The fire fiend has been at his demonical work in Lone Pine. On Christmas night Julian's hay stack was found to be on fire. Near by two empty coal oil cans were found. The stack was promptly cut in two and the fire started at the other end of that portion already on fire. In this manner half the stack was saved. Had there been a wind blowing the town would have gone.

Coolgardie.

Rich new finds are being constantly reported from Coolgardie gold fields. Coolgardie, Australia, is an accessible point, reached by steamer to Fremantle, thence by rail to Southern Cross and team to destination. The trip to Australia on the fine steamers of the Oceanic Steamship Company via Honolulu, Samoa, and New Zealand is pleasure sailing the day long. This line tickets passengers to Cape Town, South Africa. Map of Coolgardie district and Pacific ports reached by the Oceanic Steamship Company is mailed free to any address by the O. S. S. Co. 114 Montgomery St San Francisco.

Notice of For closure Sale

Lucy B. Bell, Plaintiff vs. O. I. Mairs, as Assignee of the estate of J. White Smith, an Insolvent debtor, O. I. Mairs, as Assignee of the estate of Ambrose W. H. Smith an Insolvent debtor, Sarah C. F. Wrinkle and L. F. J. Wrinkle, her husband, Defendants.

Order of Sale and decree of Foreclosure of Sale.

Under and by virtue of an order of sale and decree of foreclosure of sale issued out of the Superior Court of the County of Inyo, State of California, on the 16th day of December, A. D. 1895, in the above entitled action, wherein Lucy B. Bell, the above named plaintiff, obtained a judgment and decree of foreclosure of sale against O. I. Mairs, as Assignee of the estate of J. White Smith, an insolvent debtor, and O. I. Mairs, as Assignee of the estate of Ambrose W. H. Smith, an insolvent debtor, one of said defendants, on the 16th day of December, A. D. 1895, for the sum of Two Thousand Three Hundred and Seventy-four ($2374.00) Dollars, Gold Coin of the United States, which said decree was on the 17th day of December, A. D., 1895, recorded in Judgement Book 1 of said Court, at page 569, I am commanded to sell all those certain pieces or parcels of land, situate, lying and being in the County of Inyo, State of California, and bounded and described as follows, to wit: The West half of the South-west quarter of Section 13, and the west half of the North-west quarter of section 24, all in Towaship 12 South of Range 34 East M. D. M. Together with all and singular the tenements, hereditaments and appurtenances thereunto belonging or in anywise appertaining.

Notice is hereby given, that on Wednesday, the 22d day of January, 1896 at 2 o'clock p. m., of that day, in front of the Court House door of the Court House of said County of Inyo, in the town of Independence, I will in obedience to said order of sale and decree of foreclosure and sale, sell the above described property, or so much thereof as may be necessary to satisfy said judgment, with interest, costs, etc., to the highest and best bidder for cash, gold coin of the United States.

JOHN ALEXANDER,
Commissioner.

Dated this 20th day of December, 1895
Ben. H. Yandell, Attorney for Plaintiff.

FARROW'S MILITARY ENCYCLOPEDIA.

This is the Standard Military Encyclopedia of the world and the only work of its kind in the English language. It has the endorsement of the War Department and the leading military commanders of America and Europe. It is issued in three large octavo volumes of about 1000 pages each, printed on fine paper, from new electrotype plates, profusely illustrated and handsomely bound. It is a complete library of military information both for military and non-military people. Every library should have it. Circulars sent on application. Good agents wanted.

MILITARY AND NAVAL BOOKS.

All the leading, up-to-date military and naval books. Price list furnished on application.

ABSOLUTELY PURE

THE DAFFODILS.

And then my heart with pleasure fills
And dances with the daffodils.
—Wordsworth.

Oh, the laughter of the lilies in the sun!
Purer joy and deeper gladness there is none;
When they hear my lady's feet,
As she hastes the sun to greet,
How they shake with golden laughter every one!
Oh, the laughing—oh, the dancing daffodils!
Shaking in the breeze
Under budding trees
By the lake that lies below the silent hills.

Oh, the trooping of the lilies on the sward
Golden trumpet, saffron surcoat, spear and sword;
Knight and squire with waving crest,
Waiting for my lady's best,
To achieve some daring deed she may applaud
Oh, the laughter—oh, the dancing daffodils!
Shaking in the breeze
Under budding trees
By the lake that lies below the silent hills.

Oh, the silence of the lilies as they pray,
When the night mist steals up softly from the bay,
And my lady's name is there,
In the solemn vesper prayer,
As the twilight on the hillside dies away!
Oh, the laughing—oh, the dancing daffodils
Shaking in the breeze
Under budding trees
By the lake that lies below the silent hills.
—T. Bruce Dilks in Temple Bar.

THE SPIDER'S WEB.

Rosy complexioned and in her fresh spring toilet, she was truly beautiful. Under her long silky lashes her azure eyes had a soft caressing light that illumined her face with kindliness. The form, though somewhat slender, was well modeled, and the lines of the neck set off all the attractiveness of a head encircled by a profusion of blond locks.

This was the beautiful and graceful Paoletta, Giorgio's young wife. In a carriage the newly wedded pair were proceeding rapidly along the sun filled river bank, thinking of some way of employing the day.

The carriage paused to allow them to admire the flowers upon a spur of the incline, where the vines, like wild nests, stretched from distance to distance, half concealed by the trees.

"Do you wish to go up there?" asked Paoletta.

She pointed with her delicate hand, from which she had drawn her glove, to the heights of Bellevue.

"For what?" Giorgio asked.

"We might see a house that would suit us—you know we ought to be looking for one," said Paoletta. "We can inquire at the inn."

Giorgio hesitated.

"What of our journey to St. Cloud?" he asked.

"Let it be postponed for awhile."

He did not answer immediately. Finally he said half reluctantly: "As you will. It really makes no difference where we live so long as we are together."

She looked at him brightly, and they descended from the carriage and took their way toward the bank of the Seine. The inn was deserted.

"Let us mount into that little balcony," she said. "There is a fine view from there."

"As you please."

Soon the sun shone less brightly, for a space shone pallid, then vanished. Great clouds heaped themselves up about them, rapid and compact. A strong wind blew, and large drops of water began to fall.

Where should they take refuge?

"There!" said Paoletta.

With her hand she indicated a cottage, upon the threshold of which an old woman stood.

Giorgio suddenly blushed crimson, but accompanied his wife in silence.

"It is for rent; it can be looked over," said the woman, who hoped to find tenants in this handsome young couple.

Giorgio did not respond, but while Paoletta examined the apartments he regarded with interest this slight, box-like construction, so simply made.

As soon as his wife called him he entered the house. A vision of the past rose in his mind. He saw the garden, the arbor, the honeysuckle and ivy, now nothing more than a mass of green foliage, under which was hidden a little bench covered with moss and gone to decay. A marble dove, blackened by moisture, had been for long years the sole spectator of this devastation.

"It is ten years since the house was left tenantless," prattled the old woman. "The proprietor, who was eccentric, did not wish to let it. But now he is dead, and I have been directed to have a card put up. The necessary repairs will be made."

Paoletta laughed aloud with happy, childlike pleasure.

"Are you willing to rent this house, Giorgio?" she asked.

"The air might be too bracing for you, my dear."

"But not more so than everywhere in the country," put in the old woman. "Besides, the rent is so little—400 francs a year."

"It is very reasonable," said Paoletta. "I shall be delighted to live here. Come, let us visit the rooms. I am charmed with the whole place."

He followed her, examined some apartments decorated with gray paper and red flowers, looked into the dining hall with windows looking upon the Seine, and as he glanced about all the past returned to his memory. No longer was it Paoletta who was before him, but Chiara, the girl he had first loved, and whom he had often seen seated in this little hermitage, to which he had by chance returned.

He had lost her while the cup of love was still full. But he forgot her in time and married the pretty Paoletta, whom he loved. Yet frequently when with her a shadow passed before him—the shadow of a young and lovely woman.

A week later found them settled in the cottage. The outdoor life was a great benefit to Paoletta, who had been something of an invalid. It was arranged that they should pass the winter in the country.

Every day Giorgio went to business in the city, leaving Paoletta alone. The young wife, busy with her new cares, was happy and contented. She adored music and played a great deal in her hours of solitude.

By and by she noticed that a large spider came out of his lurking place to listen to her. Joined by a long and slender thread to the back of a mirror, he got himself well in evidence upon a decorated cornice, with his keen eyes, his long legs and remained immovable, as if hypnotized by the soft harmonies of Chopin.

Paoletta gradually ceased to fear him. But when to this great spider were added several others she resolved to remove this large family, domesticated no doubt for a number of years. She called in a carpenter to take down the mirror, laughing to see the tribe scampering.

Suddenly she uttered a cry of surprise. Wrapped up as in a net, invested with a great mass of cobwebs, a letter sealed with black fell from behind the mirror.

The workman, no less surprised than the young lady, presented the letter to Paoletta, who took it, trembling. On the outside she read:

"To be delivered to Signor Giorgio Dorval after my death."

The young wife's heart beat fast. This letter was directed to her husband. What could it contain?

"It must have been written a long time ago," said the workman.

"It is directed to my husband," responded Paoletta. The man smiled musingly.

"A letter from a woman," he thought. Should she burn this letter unopened? What might it contain? Should she give it to Giorgio?

No, no; certainly not.

After a long time she broke the seal, and this is what she read:

"My dear Giorgio, I am sick and sad. The house is a prison. I seem to find in it something tragical, leading to revenge and death.

"Although it is ended, completely ended, do not doubt but we shall see each other again. Is our love to endure but one season? Do you not remember your oath of eternal fidelity?

"I have not forgotten and have returned to our nest. Now I would like to die, surrounded by the things you care for.

"I have re-entered this room, filled with tokens of your love. That reclining chair has seated you frequently, when, returning from a long excursion in the woods, I came to rest my head against your knees, while you touched the brown locks which fell over my forehead. I have reviewed all that year of happiness day by day and only desire to die in this house where you and I have loved."

Paoletta gave a loud cry and fell to the floor. When she returned to her senses, the sun had set, the day was slowly departing, the horizon, tinted with purple, forming a luminous garland. Nothing was changed in the life of the world about her. There was the same azure sky, the same strident shriek of the railway train, the hilarious shouts of the children released from school.

Was what had passed a dream, some strange fancy? No, the letter was there at her feet. It recalled her to reality. It was true—all was true! And suddenly she felt within her heart an enormous weight, and upon her shoulders something laid almost insupportable.

She remained for a long time motionless and silent, making a thousand projects. Then gradually her nerves gave way and tears flowed from her eyes.

When Giorgio returned, he found her calm, but a little nervous.

Several days passed, then Poaletta took to her bed.

A malady which had not been able to carry her to the tomb a year before reappeared. The physician announced that all was over; she would not outlast the fall of the leaves.

She treated Giorgio with coldness, of which she gave no explanation. He attended her, watched over her, supplicated her to tell him why she had changed, but she remained silent, and her calmness made him almost insane.

One morning she said to him, "You will return early today, will you not, Giorgio?"

He bent over her, kissing her tenderly.

"Yes, my darling," he said.

That evening, when he returned, she was dead. She held in her rigid hands a letter—the letter of Chiara. In pencil she had added these words:

"I am jealous of this woman, and of jealousy die. Adieu, Giorgio!"—From the Italian.

Women's Editions.

In speaking of the fad of women's editions of newspapers, The Kingston Freeman says: "It is remarkable that this kind of enterprise is confined to newspapers. Why not let the Bricklayers' union run a big hotel one day for the benefit of charity? Or the West Shore railroad might be turned over to the Y. M. C. A. for a day. It would be interesting to let the W. C. T. U. take charge of a bank for one day and show how it ought to be run. Then there is an opportunity for some pastor to let a half dozen newspaper men manage his church for a week or so, just to let people see what they would do. Another good idea would be for a watchmaker to turn over his shop to the Horseshoers' association. In fact, there is no limit to these schemes, and this ought to be a big year for charities of all kinds."

Loved His Fellow Men.

Diggs—Scribulous must be a very sympathetic man.

Figgs—What makes you think so?

Diggs—He was asked to send a copy of his latest book to the hospitals, and he wouldn't do it.—Pittsburg Post-Dispatch.

It has been found that the growth of lettuce subjected to the rays of the electric light is considerably hastened, but unfortunately the operation of the electric light on other useful plants is not uniform.

Sun spots, now believed to have an effect on meteorological phenomena, were first observed in 1611.

IDEAL AND REAL.

He was a reader of Shakespeare,
And longing a poet to be.
She was a student at college,
In quest of an M. D. degree.
They stood in the pale, silent moonlight,
He holding her soft, dimpled hand.
A happier lover than he was
Sure never lived in the land.
For she had just told him, the darling,
A secret he'd long sighed to know.
Ah, lady, you'll guess what the thing was—
That is, if you e'er had a beau.
"My loved one," he murmured in rapture,
With a fine touch of dramatic art,
"Are you sure that those words you have uttered
Come straight from your warm, tender heart?
She answered—her full tones were sweeter
Than tones from ten nightingales' tongues—
"Ha, ha! From my heart? How absurd, dear
The voice always comes from the lungs."
—Pharmaceutical Era

Southern Dainties at Atlanta.

In one division of the Louisiana section there are the delicacies for which the creole kitchen is famous and which are beginning to be appreciated in all the great cities of the world. There are the Barrataria shrimps, which are as large as prawns and ten times as delicious. They are harmless little crustaceans, which neither sting, scratch nor bite, and which seem to have been made by kindly nature for an ideal food. We prosaic people of the north boil them and eat them with great delight and give them no more thought, but not so with the gentle Acadian of the southland. He grates them into wonderful bisques, makes them into marvelous sauces, pastes them together with batter and fries them into wonderful rose colored little cakes; makes them into salads and stews, stirs them into a chicken soup with gumbo and sassafras and produces a marvelous gumbo filet. He stuffs a pompano with 100 shrimps, a little chopped fat pork, bakes the dish and has for a result a dainty which would have pleased Brillat Savarin. He spits them on a skewer with mushrooms, and has a brochette which is a revelation; he chops them up with a little pork and spices, stuffs them into a skin and has a shrimp sausage that will make your eyes bulge with delight.

I was told by a good old New Orleans mammy, who presides over the kitchen: "They are a good many ways of cookin the shrimp, honey. I can cook 'em 200 ways myself, and I don't know much about it sure."

Another matchless delicacy are young ripe figs preserved in maraschino. It is the first time I ever saw this preparation, and I hope it is not to be the last. The raw fig has a certain rawness about it, the dried fig is too sweet and cloying, the ordinary preserved fig is too pulpy and sticky, but the young fig preserved in maraschino has every advantage of all the rest without a single defect. Besides there are creole pepper sauce, gumbo filet powder, preserved okras, all sorts of exquisite liquors and cordials and a great variety of fine canned vegetables and fruits.—New York Mail and Express.

Two Interesting Casts.

The United States National museum has two Persepolitan casts of great interest. Professor Cyrus Adler tells how they came to the museum. In 1892 the Hon. Truxton Beale, United States minister to Persia, obtained permission of the Persian government to remove certain objects from Persepolis for the United States National museum. The weight of the objects and the difficulties of transportation made this impossible. When at Persepolis, Mr. Herbert Weld Blundell "was already engaged in taking molds of the bas-reliefs and cuneiform inscriptions on the walls for the British museum." Two molds were presented by Mr. Blundell for the United States National museum. One of the casts is the copy of an inscription in Persian cuneiform characters, made at the command of Artaxerxes (III) Ochus, who reigned 358-44 B. C.

This inscription has been often translated. The text tells of the great god Auramadza, the creator of mankind; then follows the genealogy of the king. The conclusion reads: "Thus speaks the King Artaxerxes, 'May Auramadza and the god Mithras protect me and this land and what I have made.'" The second cast represents one of the bodyguards of the king. It is a figure, in drapery, with peculiar headdress, bearing bow and quiver and holding a staff, which is probably a spear. Herodotus described these bodyguards. The height of the cast is 8 feet 8 inches by 3 feet 8 inches. Around both the inscription and the figure there is a frame, ornamented with rosettes. "In the Louvre," writes Professor Adler, "there is a frieze of enameled bricks found by Dieulafoy at Susa, with figures on it closely resembling the Persepolis one."

Mixed Metaphors.

A year or two ago Sir John Lubbock gave a public lecture on his "personal and political reminiscences." In this discourse the famous lecturer upon scientific and historical subjects showed his versatility and his sense of humor by telling some amusing stories. He dwelt in particular upon the funny things which he had heard in the house of commons.

One honorable baronet from the south of Scotland was speaking on the proposition to vote £2,000,000 toward the expense of the Afghan war. Wishing to show how inadequate this sum would be, he described it as only a "flea bite in the ocean."

On the same occasion the same gentleman was advocating an increase in the number of European troops to be employed in India. In the course of his argument he said, "You may depend upon it, Mr. Speaker, that the pale face of the British soldier is the backbone of the Indian army."

Sir John does not regard the Irish members of the present generation as very amusing. The examples given above of what we should call Hibernicisms if we did not know their origin, it will be remembered are instances of Scotch blundering. The Irish drollery may be conscious or unconscious. In either case it is inimitable.

On a certain occasion a member from Ireland was arguing against the imposition of a gun tax. The ground upon which he based his argument was this—that every man had the "divine right to carry a gun."—Youth's Companion.

The Usual Mistake.

The officer had arrested a prisoner for drunkenness, and the judge, for some reason, dismissed him, the officer not being present when the case was called. Later he met the late prisoner on the street.

"Hello!" he exclaimed in astonishment. "What are you doing out here?"

"On my way home," smiled the prisoner.

"How did you get out?"

"The judge discharged me."

"How did that happen?"

"I don't know," and the offender smiled again. "I guess he didn't know I was loaded."—Detroit Free Press.

Mrs. Harrison's Ring.

Mrs. Burton Harrison has and wears a very old fashioned ring, which she calls her "southern" ring. It is of gold enameled in black, with the tiniest of tiny negro figures in the center, made of black diamonds. The whole ensemble is more than unique, and Mrs. Harrison, whose husband during the war was private secretary to Jefferson Davis, is very fond and proud of it, for it was given her just after the war by a northern friend who knew her tendencies in favor of secession.—Detroit Tribuna.

FISHERMEN OF LABRADOR.

They Have Picturesque Little Boats With Reddish Brown Sails.

A Labrador fishing stage usually consists of a long, low frame house and little one room huts, or "tilts," as they are called. The house is used as a store and dwelling for the agent of the Newfoundland merchant who has fitted up the stage. All the fishermen who occupy the tilts work for the merchant and are paid for their fish in provisions from the store.

The tilts are like those seen in the Newfoundland fishing and mining outposts (every settlement in Newfoundland except St. John's is an outpost). The sides are logs set upright and supporting sod covered roofs—wretched abodes at the best. Along the straits of Belle Isle the Labrador coast is fringed with a strip of coarse grass land, and here you may see an occasional small vegetable garden surrounded by a fish net for a fence. At Blanc Sablon I saw a desolate little burying ground amid the swaying rushes. Near by lay a couple of wornout boats, bottom up, and nets spread over the ground to dry. Here, too, I saw for the first time the dapper little Labrador gasher—a small fishing craft not much larger than a dory, but with sharp prow and stern and two masts fitted with reddish brown sails. These are telling bits of color when the gashers skim over the deep blue water, with the foam streaking along their quarters and glittering in their wake.

Altogether it was a varied scene. The headland, from a staff on which there fluttered the flag of the merchant who owned the "outfit," the gashers dashing in and out among the punts and jacks (stoutly built two stickers larger than the gashers), a fishing schooner with furled sails, but with toil stained nets streaming from her spars in an endless variety of lights and shadows, according as the meshes twisted or bulged in the breeze, and in the distance the exquisite green and white spires of an iceberg.

A note of toil drones through it all, however, for women are sawing and chopping wood while the men are hauling the nets. A curious implement of fishing in these waters is a spyglass with plain window glass in place of a lens. A man in the bow of a fishing boat thrusts the glass in the water, and peering through it discovers whether there are fish enough on the bottom to make it worth while to anchor, for anchoring in deep water is a toilsome matter.—Gustav Kobbe in St. Nicholas.

DANGER FROM LIGHTNING.

Is It Increased or Diminished by the Presence of Many Telephone Wires?

There is a somewhat widespread impression that the use of so much wire for telephone and other electrical purposes in cities and towns largely increases the danger of lightning strokes. The notion is based upon the concentration within certain limits of a great quantity of conducting material, which, it is assumed, attracts the electricity and thereby increases the danger from it.

While it is true that the increase of conducting material increases the attraction, it is not true that it increases the danger. As a matter of fact, it decreases the danger, for the more surface electricity has over which to spread the more rapidly and quietly it is carried to the earth. A house with a metal roof is not often struck by lightning, for while the metal may attract the electricity it also gives it room to spread out, and its force is thus dissipated.

This fact was demonstrated by Franklin with his kite long ago, and lightning rods are put on buildings to give storm clouds a means of discharging their electricity into the earth. This discharge takes place without the report that we call thunder, for electricity makes no noise unless it meet some resisting medium.

It is a well known fact that there is less danger from lightning in cities than in the country, and this is due to the general use of iron, steel and other metals in city buildings. The buildings are tall and would seem, therefore, to be specially attractive to the lightning. Indeed they are often struck, but the metal in them dissipates the force of the fluid and carries it harmlessly and quietly to the earth. The effect of telephone wires upon atmospheric electricity has been under official investigation by the German department of telegraphs, and statistics from 900 cities show that the danger from lightning strokes is four times as great in towns that do not have the telephone as in those that have it. The conclusion of the whole matter, therefore, is that an abundance of wires gives protection from lightning instead of increasing the danger.—Philadelphia Times.

Silverware Cheaper Than Dollars.

"You can now purchase solid silverware made up into forks, spoons, etc., which will weigh much more than the silver money you pay for it," said a jeweler yesterday. "In other words, you can buy silver with less silver than is contained in your purchase, notwithstanding the fact that a certain amount of labor has been put upon it to shape it into forks, spoons, etc. Silverware was never cheaper than it is today. Why, the prices are so far down that it is almost folly to buy plated ware, as you can purchase the sterling article for the same price.

"In eastern houses all flat ware is being sold by the ounce. If you ask the price of forks or spoons, the dealer does not name the figure per dozen, but tells you that the ware is so much per ounce. We are now selling spoons which formerly sold for $12 a dozen for just one-half that price. Plates and platters which are made of the best grades of white metals must now compete with solid silver goods, for their prices are nearly the same. The fact of a person using solid silver upon his table is now no criterion of his circumstances, for it is almost as cheap as any other."—Pittsburg Dispatch.

Some Railway Mapmaking.

"This won't do," said the general passenger agent in annoyed tones to the map maker. "I want Chicago moved down here half an inch, so as to come on our direct route to New York. Then take Buffalo and put it a little farther from the lake.

"You've got Detroit and New York on different latitudes, and the impression that that is correct won't help our road.

"And, man, take those two lines that compete with us and make 'em twice as crooked as that. Why, you've got one of 'em almost straight.

"Yank Boston over a little to the west and put New York a little to the west, so as to show passengers that our Buffalo division is the shortest route to Boston.

"When you've done all these things I've said, you may print 10,000 copies—but, say, how long have you been in the railroad business, anyway?"

PRACTICAL LOGIC.

To reason from cause to effect is very good logic in its way, but to practice on physical conditions in seeking the cause first, is a very slow process indeed. All ailments seem to give an expression in pain, and especially in rheumatism where it takes hold deeply. This is an effect, whatever the cause may be, and pain would become intolerable if one waited to find out the cause. Hence sufferers are bent on curing the pain promptly, and for this reason know, or soon find out, that St. Jacobs Oil is surely the best remedy. People seldom have reason to hunt further, for once this ailment is cured by it, it stays cured, and thus puts an end to argument and pain at once.

NERVOUSNESS.

THE CLASSES OF PEOPLE WHO SUFFER FROM IT.

Brain Workers, People who Worry, and People who Endure Long-Continued Physical Strain.

From the Examiner, San Francisco, Cal.

It is generally agreed that a man's physical condition is dependent, to a great degeee, upon the nature of his employment. Men whose occupation necessitates the constant use of the brain, without any opportunity for physical exercise, are generally nervous, while men employed at manual labor requiring no exercise of the brain function, are almost universally posessed of sound nervous systems, not easily disturbed by exciting events.

A striking illustration of this principle is found in the case of Professor George E. Coleman, who is a professional pianist, and who was until within recent years, a druggist. Professor Coleman lives at 1339 Buchanan street, San Francisco. He is well known here as a pianist, having played at some of the most popular music halls in the city. Mr. Coleman is not a man of strong frame, and he has been an easy prey to the severe, nervous tension of his work at the piano. He has had to play continuously for several hours during every evening for five years, and his nervous system finally gave way under the strain. He was forced to retire from regular work at the piano, but that did not have the effect of improving his condition. Upon the contrary, he steadily grew worse. His nerves had been shattered, and in addition he discovered that one of his lungs had been affected by his having been exposed to counter draughts in poorly ventilated halls. His condition soon became such that he was confined to his home, and finally gave himself over to the care of a physician. Mr. Coleman's experience as a druggist had given him an acquaintance with diseases and their remedies, so he had a full knowledge of just what was necessary on his part to effect a cure.

"After several weeks' careful treatment by the physician," said Mr. Coleman. "I could notice no improvement in my condition. If anything, I think I was considerably worse. The action of my lungs had become so weak that I was afraid to walk any distance unassisted for fear of falling, through loss of respiration. My nervousness had advanced to an alarming stage. I was not able to contain myself for even a short time, but had always to be fumbling with something or moving nervously about the room. It was while I was in this condition that I noticed in a paper an article on Williams' Pink Pills. I determined to try them, even though they killed me. Well, they didn't kill me, but I'm not going to tell you that they cured me immediately—my case was much too serious for that. But I had not taken a full box before I felt a great relief. My respiration was more certain, I was gradually regaining control of my nerves and my condition was generally improved. I kept right on taking the pills and getting well. Now, I had taken just three boxes of them when I considered myself a cured man. And I was right, for although I quit taking the pills, I did not relapse into my former condition, but grew stronger daily.

"It was truly a marvellous cure, and I will say that I think Williams' Pills possess remarkable curative properties, and I would recommend them to the use of the thousands of people of this city who are nervous wrecks, or who are suffering from diseases of the lungs."

Dr. Williams' Pink Pills for Pale People are now given to the public as an unfailing blood builder and nerve restorer, curing all forms of weakness arising from a watery condition of the blood or shattered nerves. The pills are sold by all dealers, or will be sent postpaid on receipt of price (50 cents a box, or six boxes for $2.50—they are never sold in bulk or by the 100) by addressing Dr. Williams' Medicine Company, Schenectady, N. Y.

How Flies Walk on Window Panes.

The microscope reveals the neat contrivance which enables a fly to walk up a window pane or defy the laws of gravity by gliding along, back downward, on the ceiling. The magnifier shows the foot to be made up of two pads covered with fine, short hair, each pad having a hook above it. Behind each pad is a bag filled with a sticky liquid which oozes out whenever the fly puts his foot down. The amount which is pressed out of each foot is very small indeed, but taken all together it is amply sufficient to hold the insect in any position he chooses.—St. Louis Republic.

Nero's Appearance.

In his youth Nero was remarkably handsome, but early in manhood his habits of dissipation made him exceedingly corpulent. To judge from his medals and the descriptions left of him he must have weighed over 200 pounds. His features were regular, but his eyes were so protuberant as to be almost a deformity, and he was nearsighted, so much so that he could not recognize his acquaintances across the street.

DEAFNESS CANNOT BE CURED

by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or imperfect hearing, and, when it is entirely closed deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by catarrh, which is nothing but an inflamed condition of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars, free.

F. J. CHENEY & CO., Toledo, O.

Sold by Druggists, 75c.

Turn your back on borrowed trouble and you will be better prepared to face the real.

Piso's Cure for Consumption relieves the most obstinate coughs.—REV. D. BUCHMUELLER, Lexington, Mo., Feb. 24, 1894.

It makes no difference what a man's first impulse is in an argument with a woman, his last is to run.
